Recently, it was my privilege to attend a meeting of Moral Rearmament at Mackinac Island where representatives of various nations attended. There were some very dramatic and inspiring incidents reported there. There was the incident in our own country where a president of a great business organization and a leader of a labor union both told the story of how they had gotten together. How did they do it? They recognized what has been called the four absolutes—honesty, purity, unselfishness, and love. All religions teach these great moralities; but these two men showed how when they applied them in the management-labor relationship, they found a solution that worked so well that the efficiency rating went up from 60 to 120 percent. But more than that, harmony prevailed and life became worth while.

HOW RIGHT IDEAS HAVE BEGUN TO WORK IN GERMANY

An incident was told, too, as regards Germany where the Communists had taken over great labor unions. There, when these four absolutes of honesty, purity, unselfishness, and love became vital in the minds of the labor leaders and management, not only was the strike situation improved and industrial production raised, but the impact of Communist ideas was to a considerable extent antidoted. These incidents could be multiplied many times. They indicate how all of us can make a contribution to the safety, the efficiency, and the worth whiteness of our own American life.

WHAT TRUE LEADERSHIP CONSISTS OF

According to my "book," this kind of higher thinking and acting which has been demonstrated between labor and management here in America and in Europe—clearly indicates the type of higher leadership that is needed so much here and elsewhere. After all, I am speaking to leaders—to men and women, respected in your communities, men and women to whom other officials and private citizens look for guidance. Remember, too, a leader is one who in a crisis can keep his head clear and who when a problem arises, can arrive at the solution of that problem—getting at the solution promptly. We do have problems in this wonderful America of ours, as you so well know. In many of our communities, as indicated by the recent crime exposé, there is need for this morality rebirth to which I have referred. Yes, on every level of our society, there is a call for rededication to these principles.

I should like now to quote from Senator J. WILLIAM FULBRIGHT of Arkansas. He had been commenting on the corruption in some of our sports, and he had reported that the inquiry into the RFC had revealed conditions that were terribly unwholesome. Senator FULBRIGHT said:

"It is not unreasonable to ask of men in public office that high standards of conduct be required. It is not too much to ask of them that they do not use a Government lending agency as a dumping ground for their own mistakes in judgment. Is it too much to ask of them that they behave with simple honesty?"

Then he continued with this significant statement:

"The vast majority of great civilizations which have been destroyed was not as the result of external aggression, but as the consequence of domestic corruption. A democracy can recover quickly from physical or economic disaster, but when its moral convictions weaken, it becomes easy prey for the demagog and the charlatan. Tyranny and oppression then become the order of the day."

And so, my friends, you and I know that callousness, smugness, yes, moral blindness, never point toward economic and political health. You and I must therefore become alerted to these dangers. The remedy is to be found in the individual accepting the fact, that his is a position of leadership. I repeat that there is no one here but what in time of crisis, folks will look to you and see what you think, and how you act. We are facing just such a crisis now. I am not in this particular instance talking about the international situation. I am talking, for example, about the danger to our youth, resulting from the impact of the drug peddler—he who would have our youngsters use marijuana, heroin, and morphine. I am talking about our condoning and accepting as inevitable immoralities in our communities and our condoning of looseness and corruption in public officials.

WE NEED MEN OF STRONG CONVICTIONS

Let us return to the days when men had strong convictions. "Convictions on what?" you ask. Convictions about the worth-while-ness of the Republic. Convictions about the worth-while-ness of our economic system. Our economic and political systems are, after all, the best that have ever been evolved by the human race. But the best systems or the best mechanisms do not operate smoothly if they are operated by poor mechanics.

THREE WAYS OF BECOMING AND REMAINING A LEADER

I was talking not long ago to a group, and after I had concluded someone said, "But how does a leader really become a leader?" I told how Lincoln and how thousands of others who had never been known publicly (like these young men that brought about

improvements in labor relations in Germany and elsewhere), how in the midst of critical challenges, they would tell a funny story and get release for their tense nerves and muscles. They understood the value of humor. They were men, too, who didn't hesitate to pray for guidance. They knew that God is available. Remember, Lincoln once said, "When I have no other place to go, I go to my knees." They were men who selflessly, not selfishly, had a great purpose. They were men who dealt honestly with themselves and with others.

We need but look about us today to note this imperative challenge of leadership.

FOILING THE KREMLIN'S PURPOSES

As we view the international situation, we recognize of course that there is a continuing evil attempt on the behalf of the leaders in the Kremlin to take possession and to tyrannically rule the peoples of the earth. The eyes of all of us should by now have been opened as to Politburo's diabolic methods. Americans, some with doctor's degrees and masters degrees, have fallen for their evil line, and have become traitors to their native land. Now, it is our job, yours and mine, to see to it that this America of ours grows in strength—physical, economic, and spiritual—so that the Kremlin's evil purposes will not be accomplished. There is indeed a great goal—a great challenge for each of us. To do that we must become adequate personally, and if we follow these four absolutes or directives—honesty, purity, unselfishness, and love—we can't help but become better citizens. And if we become better citizens, we can't in turn help but become more adequate in our day-to-day relations. If this happens to you and me, then opportunities open up to us to serve God and country. This Nation has been called to a position of high leadership. Whether we will be competent in that leadership depends upon whether 154,000,000 people will raise not only their economic standards, but their moral and their spiritual standards. If those standards are raised, then direction will be given us and we will maintain our leadership and our freedoms. If we fail to grow in grace, then that which happened to other nations that were called unto leadership—but which were not adequate—may happen to us.

I HAVE FAITH IN AMERICAN PEOPLE

I have faith that just as when we are challenged to war, we center our energies and our all to fight the aggressor, so too, I have faith that the American people are becoming alerted to this challenge. They recognize the need of not only rededicating their physical energies to make America adequate, but of rededicating themselves to a spiritual rebirth so that true leadership will be ours.

Speech by Hon. Harold H. Velde, of Illinois, on Communism in UE and FE Labor Unions in Chicagoland

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to set forth the speech of my colleague, Representative HAROLD VELDE, of Illinois:

Mr. Speaker, the Un-American Activities Committee has, during the past 2 years, con-

ducted many hearings on the subject of the Communist infiltration into labor unions. These investigations and hearings have in the past been greatly concerned with the United Electrical Workers Union, formerly of the CIO. The testimony of Matt Cvetic, of the Pittsburgh area, along with several other reliable witnesses, proved definitely to the committee that the leadership of the UEW was almost entirely composed of members of the Communist Party. In spite of the fact that extensive publicity was given to this Communist conspiracy, the UEW union still flourishes in many sections of the country. One of its strongholds is in the Chicago area, where big industry flourishes, and there are a great number of farm machinery and electrical industries.

Our committee has previously studied the influence of this Communist-infested union in the New England States, Pennsylvania, and New York, but has not at this time made any extensive investigations into the union's manipulations in the Chicago area. I am happy to report that such investigation will shortly be under way. I hope that the investigations carried on will be followed by public hearings of the Un-American Activities Committee. Our committee investigators will also look into the manner in which elections for union representation are held and methods used by the United Electrical Workers Union in campaigning for these plant elections. It is interesting to note that both the UEW Union and the Farm Equipment Workers Union were, on November 2, 1949, expelled from the CIO by its executive board as Communist-infested unions, but neither this action nor the action of the Un-American Activities Committee has effectively stopped the actions of the Communist Party in seizing control of the labor movement. In addition to the widespread publicity given to these hearings, Congress cited for contempt several of the leaders of the UEW Union. It is difficult for me to understand, in view of all the evidence of subversive activity in these unions, why they are so successful in winning plant elections in the Chicago area.

One of the most effective workers in carrying on the Communist Party doctrine in labor unions in Chicago has been Grant Oakes, former president of the Farm Equipment Workers Union which has merged with the United Electrical Workers Union. The special Committee on Un-American Activities in 1944 published the following report on Mr. Oakes:

"Sidney Hillman has enlisted the aid of Grant Oakes, president of the United Farm Equipment and Metal Workers of America, in support of the CIO Political Action Committee. Oakes was among those who addressed the national conference of the CIO Political Action Committee on January 14, 1944, at the Park Central Hotel in New York City, which was organized by Hillman and at which he was the keynote speaker.

"From his experience as Associate Director General in the Office of Production Management, when Grant Oakes led the disastrous strike in the International Harvester Co., handling millions of dollars worth of war contracts, and from his experience as one of the founders and leaders of the Congress of Industrial Organizations, Hillman must be fully aware that Grant Oakes has consistently carried out the biddings of the Communist Party.

"Grant Oakes was elected to the national council of the American Peace Mobilization in Chicago in September 1940 on a program which called for 'repeal of the Conscription Act,' 'repeal of the Alien Registration Act,' 'defeat of legislation to outlaw strikes,' 'keeping the United States out of war,' and 'withdrawal of all aid to Great Britain. The Communist Party of the United States launched this organization in accordance with the

pact of 1939 between Stalin and Hitler. Oakes and his associates incited the strike at the International Harvester Corp plant which produced tractors for the United States Army in order to cripple the national defense program which was in keeping with the policies of the American Peace Mobilization and the Communist Party during that period.

"Describing the strike at the huge tractor plant at 2600 West Thirty-first Street, employing 6,500 men, the Chicago Daily News of January 29, 1941, page 1, declared: 'The walk-out began when the Farm Equipment Workers Organizing Committee (CIO) broke off negotiations * * * No formal strike call accompanied the walk-out, but pickets with placards and flags began a march in front of the plant's gates as the men walked out.'

"Grant Oakes, the leader of the International Harvester strike, was following a carefully prepared plan to stop production in the plant. When the company sought to continue negotiations, Oakes scornfully rejected 'endless conferences.' He issued the following warning to Government officials who sought to end the strike: 'It should be clearly understood that the strikers will strongly resent any repetition of the one-sided mediation such as occurred in the Vultee strike * * * (Daily Worker, February 7, 1941, p. 1).'

"He even went so far as to warn President Roosevelt of violent consequences if the plant was opened, holding out the possibility that these workers will 'line the morgue tomorrow, with their blood on Chicago streets,' and held out the gruesome prospect of 'mass murder' (Daily Worker, March 22, 1941, p. 5).

"The Daily Worker spoke in glowing terms of the strike led by Grant Oakes. In an editorial on February 1, 1941, page 6, the Communist organ declared: 'In the snowy winter morning pickets parade before the strike-bound Chicago Tractor Works of the International Harvester Co. * * * This pageant of the militant labor movement is a reply to the prevalent war economy.'

"Grant Oakes and his fellow strikers, who formed a delegation to the meeting of the American Peace Mobilization, which took place on April 5, 1941, in New York City, were hailed as veritable heroes by the thousands of Communists there assembled (Daily Worker, March 29, 1941, p. 2).

"Almost simultaneously with the German-American Bund, the McCormick local of the Farm Equipment Workers Organizing Committee 'adopted a scorching resolution against the Roosevelt war-dictatorship bill (H. R. 1776), which declared that the measure would give the President more power than Benito Mussolini' (Daily Worker, February 7, 1941, p. 3).

"The Daily Worker of March 9, 1941, page 3, reported an interview with Oakes in which he 'hinted that strikes may be called in other Harvester plants,' with the added explanation that 'leaders of the Farm Equipment Workers Organizing Committee were inclined to think that the strike will be won on the picket line and called for mass mobilizations * * *'

"The American Youth Congress was outstandingly active in the American Peace Mobilization against conscription and the national defense program. The executive board and the shop stewards of local 101 of the Farm Equipment Workers Organizing Committee expressed 'both sympathy and support for the program of the American Youth Congress' (Daily Worker, January 25, 1941, p. 5).

"The Communist Party has organized a number of May Day parades in Chicago during which it mobilizes its full support behind its current programs and slogans. Grant Oakes was a member of the provisional May day committee in 1929 and a speaker during the parade and the demonstration which

followed (Daily Record, April 15, 1939, p. 3; April 29, 1938, p. 1).

"Grant Oakes endorsed the Daily Worker in its most recent drive for readers (Worker, January 9, 1944, p. 6). From the exceptionally large number of Hillman's CIO Political Action Committee associates who have recently joined the drive to spread the Daily Worker, it is apparent that they look upon this Communist newspaper as one of the CIO Political Action Committee's house organs.

"Oakes was a delegate to the 1943 CIO convention in Philadelphia."

Following this report I am reminded that in the spring of 1948 Grant Oakes, acting as president of the Farm Equipment Workers Union was busily engaged in my home district of Peoria, Ill., managing a strike at the huge Caterpillar Tractor Co. there. Working in connection with local Communist Party members who were likewise officials in the FEW local, which was then the bargaining representative at the Caterpillar plant, he was able to tie up operations of this plant for a considerable period of time. An investigation into the manipulations of Grant Oakes and his cohorts will certainly lead to the uncovering of several Reds and subversives in the Peoria area.

An investigation into the Communist activities in labor unions in the Chicago area cannot help but lead up to an investigation into communism in education and other fields in that area. The Communist Party of Illinois has, for a long time, been attempting to extend its operations into State government and many of the Federal agencies located in Chicago as well. In this connection I am reminded of a speech I made here on the floor of the House in December 1950 in which I advised the Members that Communist propaganda was being issued and distributed by the Communist Party of Illinois with headquarters at 208 North Wells Street, Chicago. This literature was being distributed to young men of draft age, chiefly among college and university students. The literature was designed to leave the impression with all readers that our entry into the Korean conflict was a mistake, and advocated that our Government desist from its imperialistic act of aggression. In that speech I asked that an objective study and report of the extent of communism in the State of Illinois be made. Shortly thereafter I received a communication from my good friend Illinois State Senator Paul Broyles, stating that he was contemplating introducing several bills of anti-Communist nature in the State legislature upon its convening in January of 1951. Among these bills was one to establish an antiseeditious investigating committee, the purpose of which would be to investigate communism and other subversive activities in the Illinois colleges and universities, as well as other institutions in the State of Illinois. Senator Broyles did introduce such a bill and it was passed by both branches of the Illinois State Legislature, only to be vetoed later by Gov. Adlai Stevenson.

Although I had received many requests from citizens in the State of Illinois asking that an objective investigation of communism be made by the Un-American Activities Committee, I felt that this was a matter which could properly be handled by the investigating committee which was to be set up under Illinois law, had such legislation been approved by Governor Stevenson. Now, the Governor having seen fit to stymie such an investigation by his veto of the Broyles bill, it becomes incumbent upon our congressional committee to make the much-desired investigation.

Chicago has long been recognized as the midwestern headquarters of the Communist Party, and a great many nefarious operations of that party have been promoted by those in charge at the Communist Party

headquarters at 208 Wells Street in Chicago. I had the opportunity to witness the manipulations of the Communist Party of Illinois when I was assigned to the Chicago field office of the FBI as a special agent in 1945. While I played only a small part in counter-espionage and sabotage activities there, I learned that much of the investigative work carried on by the Chicago field division under the very able direction of J. Edgar Hoover was directed toward countering the activities of the Communist Party. A good many agents were assigned at that time to investigate the activities of Soviet espionage agents working to obtain secrets from scientists at the University of Chicago.

Chicago is a great industrial center. Chicago is also a great educational center, containing more than half of the student population of the State of Illinois. The University of Chicago was designated by the Manhattan Engineering Project as a center for research on the atomic bomb during World War II. It was here that the now-famous espionage agent, Arthur Adams, concentrated a great many of his espionage activities on behalf of the Soviet Government. It was at the University of Chicago where Clarence Hiskey was employed under the supervision of Dr. Harold Urey, an atomic scientist working there. A great deal of information is already in the records and files of the Un-American Activities Committee regarding the case of Clarence Hiskey. There is also a great deal of information concerning the Communist-front organizations of Dr. Harold Urey. Then, too, we note that in the famous Canadian and English espionage case involving Dr. Allan Nunn May that the University of Chicago was frequently mentioned. It is believed by many that the pure uranium which was stolen by Dr. May came from the University of Chicago laboratories.

In speaking of communistic influences at the University of Chicago, I want to make it clear that it is not the only major American university which has been a subject of the vicious schemes of the Soviet and American Communist Party. We know that the Communist Party made attempts to obtain secrets from the University of California which was also designated as a center of atomic research by the Manhattan Engineering Project. Practically every college and university in the country has felt the impact of Communist manipulations. The Communists have been especially adept at infiltrating into educational centers where the policy has been to allow the utmost latitude and liberality in teaching and learning. Officials of the University of Chicago have, in the past, brought out the fact very plainly that the policy of the university is to allow such latitude and liberalism. The officials have sought to bring the broadest interpretation of the freedom-of-speech clause of our Constitution to bear in its educational processes. No one can blame any college official, instructor, or student for furthering such a policy. It occurs to me, however, that ever since the famous Alonzo Stagg left the University of Chicago as its head coach, and the athletic program was relegated to a practical nullity, that left-wing and pseudo-liberal teaching and thinking has flourished. The Communist Party of America and the Soviet representatives in this country have used this so-called liberal and free-thinking policy of the University of Chicago, as well as other famous American universities such as Harvard, to further their plans for political and economic revolution in America. I do not mean to indicate by my remarks that the general run of students at the University of Chicago are at all disloyal. I do feel certain 99 percent of the faculty, students and alumni of the University are sincere, patriotic Americans. We have in the past, however, witnessed the sad spectacle of an extremely small and a parently harmless element of Soviet-inspired citizens taking

control of whole segments of our American society. I want to make sure that it doesn't happen again, and especially to one of the greatest American educational institutions in existence.

In 1949 the Illinois Seditious Activities Investigation Commission made an attempt to investigate and study the influence of the Communist Party at the University of Chicago and Roosevelt College. This commission held hearings from March 9, 1949 until May of that year. During this time the following persons were called to testify: Dr. Robert Maynard Hutchins, chancellor of the University of Chicago; John Madison, Jr., a newspaperman, Paul Lerman, a student at the University of Chicago; Elias Snitzer, president at that time of the Communist Club at the University of Chicago; Dr. Edward J. Sparling, president of Roosevelt College in Chicago; Dean John B. Thompson, dean of Rockefeller Chapel at the University of Chicago, Representative G. W. Horsley of the General Assembly of the State of Illinois; Howard Rushmore, magazine and newspaper writer; Mr. Laird Bell, chairman of the board of trustees of the University of Chicago; Prof. Ernest W. Burgess, Prof. Robert J. Havighurst, Prof. Malcolm Sharp, Prof. R. G. Tugwell, and Prof. Harold C. Urey, all of the University of Chicago.

Time will not permit me to go into all of the testimony that was adduced by this commission; however I should like to briefly comment on the testimony of Dr. Hutchins, who in his very first statement says: "The subpoena which I have received summons me to testify concerning subversive activities at the University of Chicago. This is a leading question and the answer is assumed in the question. I cannot testify concerning subversive activities at the University of Chicago because there are none." Subsequently this once-famous educator admitted that there had been chartered by the university what was known as the Communist Club. Later, relative to this Communist Club, Dr. Hutchins states: "The real purpose of the Communist Club is to subvert the Government of the United States and it is inconsistent with the purposes of the university. Then too, the purpose of the Communist Club is to come together and study and discuss communism and the university believes in free discussion and study of all important subjects." It is interesting to note that during the Illinois commission hearings Senator Broyles received a telegram from the then president of the Communist Club, dated March 10, 1949, which reads as follows:

"In a Communist club meeting of over 40 students of University of Chicago a unanimous vote was taken to protest both the Broyles bills and the investigation of our university. The members of the Communist club along with hundreds of students on our campus cannot accept the idiotic definition of communism stated in the bill. We wish to emphatically state that no commission will ever 'wipe the Communist club off the campus of the university.' We will continue to fight for students' rights as laid down in the National Students Association Bill of Rights and continue to bring Marxism, Leninism to the campus. Your intended smear campaign will only make us fight harder and more consistently toward the fulfillment of our goal. We further realize that you are not coming to our campus merely to destroy the Communists club but also to destroy all overprogressive elements on our campus. This fact is fully realized by most of Chicago's students who have formed a campus-wide coalition at a meeting of over 1,500 students to protest the Broyles bills and the activities of your commission

"ELIAS SNITZER,
"President of the Communist Club."

Now, I ask you, was Chancellor Hutchins' statement that he knew of no subversive activities on the University of Chicago campus correct? In all credit to Dr. Hutchins, who shortly after these hearings resigned his position, I must say that every attempt was made to disenfranchise the Communist club at the University of Chicago. I hope that if an investigation is made by our Un-American Activities Committee, our committee will be able to issue a report saying that Communist and other subversive activities at the University of Chicago are on the decline or have been totally suppressed.

The great majority of loyal students and alumni of the University of Chicago desire that their Alma Mater be again looked upon as one of the great American universities. They feel, I am sure, that the true facts of Communist infiltration should be brought out into the open in a manner consistent with the right of free speech, and the freedom of academic thought and teaching being fully protected. While I received a great number of letters requesting such an investigation, I believe that the following excerpt from a letter of a student at the University of Chicago illustrates the attitude of most students there. I cannot reveal the name of this student as he asked that it be kept confidential, but here is an excerpt from his letter.

"Let me say that as a student in the university I think that such an investigation is long overdue and a surprising number of students agree with me. It is not so much the fact that there are a lot of Communists on the campus, for in reality I think that there are very few; but rather, that the entire campus is geared to a socialistic atmosphere. This permeates the faculty and is forced upon the students at every turn. It is especially dangerous because of the fact that we have a great many very young students (14 to 18 years) in the undergraduate school. I could supply you with reams of material bearing out what I have said should you desire it; however, in the meantime I am enclosing under separate cover, a copy of the Maroon, the university student newspaper. I will leave it to your discretion to determine of what 'rainbow-omic' view this publication is. I am only writing this letter because I can see that the seeds which are being sown here at the university, if permitted to go unchecked, could grow and undermine the very foundation of this Nation."

I sincerely hope that the proposed investigation by the Un-American Activities Committee of communism in Illinois will have the support of the patriotic citizens of that State who have knowledge of subversive operations. I am particularly anxious to secure the cooperation of the board of trustees of the University of Chicago, Roosevelt College, and all the other educational institutions in the State of Illinois. I feel certain that such cooperation will be forthcoming as it is certainly to the best interest of all citizens that such an investigation be made.

Condemned to Perpetual Warfare

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. HARRIS. Mr. Speaker, according to reports, eight members of the joint committee of the Senate have issued a

statement concerning the long-drawn-out hearings on foreign policy, emphasizing some of the very important issues and particularly with reference to far-eastern policy.

Many of us have watched with great interest the developments and the discussions that have occurred as a result of the hearings.

There have been many issues pointed up as a beacon light because of their importance to our future welfare, as well as the differences of opinion that apparently exists. That this whole discussion has been brought before the American people as a forum seems to me to be invaluable. It is obviously the best way to bring these various issues into the open and before the people.

An appropriate and pertinent discussion of some of these issues in this eight-man document occurred in an editorial of the Washington Post today. In that it discusses so clearly the facts, I ask unanimous consent to include it in the RECORD:

EIGHT REPUBLICANS

A few of the outstanding points in the eight-man Republican document on the MacArthur hearings which call for correction are:

1. That the failure of the United States promptly to deliver arms and munitions to Chiang Kai-shek was responsible for his downfall. This is a travesty of the history which is now part of the record. Much American material was left to pile up in Shanghai, and much of the remainder was bartered to the Communists in return for safe surrender. In other words, Chiang became the "supply sergeant" for the Communists, as he was called in China. Even General Wedemeyer said the Communists could have been stopped at the Yangtze "with broomsticks" if there had been any will to fight on the part of Chiang's Nationalists.

The point is extremely important in connection with future policy. On analogy the fresh supplies that are being sent to Chiang Kai-shek are likely as not to have much the same fate as the old supplies. This would be inevitable if there were an invasion of the mainland. And that is what Chiang wants—as a Chiang-American operation. Our policy does not yet envisage this, yet—again on analogy—the possibility exists of such a development in our Formosa policy. Policy on Formosa started out as neutralization and shaded quickly into defense, and, before we know it, the defense policy may shade into support of a Chiang landing.

It will be a sad day when our country helps peoples or governments who, as has been proved by Chiang's government, cannot or will not help themselves. The United States will wind up with "old men of the sea" on its back crushing the life out of its taxpayers.

2. That there is authoritative evidence of Russian domination of Communist China as far back as 1945.

Nothing of the sort. Everything that Gen. Patrick Hurley said contradicted this thesis. The authoritative evidence all jibes with Col. Robert R. McCormick's testimony on his visit to China in 1947. The rebellion against Chiang Kai-shek, he said, "is falsely called a Communist insurrection. Although Communist backed, it is still a bona fide insurrection against a government which is little more than an agency of the Soong family."

Nobody can be positive about the present tie between Moscow and Peking, but a tenable theory on the part of the officials in close touch with the negotiations at Kaesong is that there are the beginnings of a rift.

General Ridgway furthermore has gone so far as to say, in a talk with Bert Andrews of the New York Herald Tribune, that our national destiny depends upon our driving a wedge between Peking and Moscow. It would be the height of folly on the part of our policymakers, at any rate, to go on the assumption that Moscow and Peking will always be one and indivisible.

3 Any settlement south of the Yalu would constitute a Communist victory.

Nonsense. The purpose of the military action taken under the aegis of the United Nations was to defeat aggression—to push the aggressor back where he came from. When that is accomplished, and a satisfactory agreement on such a basis achieved, the aims of the UN action will have been accomplished. General Ridgway has said that that would be a tremendous victory, and those who are not suffering from a partisan myopia will agree with him.

The reverse side of this eight-man comment—namely, that victory is the end of this or any other war action—is equally fallacious. By this is meant that only unconditional surrender can mark the end of hostilities. Battles are fought to victory, but a war should be fought to a settlement if we are going to have a world fit to live in. It was the cardinal mistake in the First and Second World Wars that we forgot this golden rule. Under such a contrary policy as the GOP members advocate, the world would be condemned to perpetual warfare.

The Plight of Lithuania

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. KENNEDY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include a resolution which was unanimously adopted at a mass meeting held at the Municipal Building in South Boston, Mass., by the Boston Chapter of the American-Lithuanian Council, on June 16, 1951.

The resolution follows:

Resolution unanimously adopted at a mass meeting held at the Municipal Building, South Boston, Mass., on June 16, 1951, under the auspices of the American-Lithuanian Council, Boston Chapter, in protest and commemoration of the following tragedies which have befallen Lithuania and its people: (1) Eleventh anniversary of the re-subjugation of Lithuania; and (2) decennial of the first horrible deportations from Lithuania, when, during one night, the bolshevik secret police—NKVD—arrested and carried off to the frigid wastes of Siberia 40,000 innocent Lithuanians:

"Whereas the Soviet Union, relying upon the spurious Ribbentrop-Molotov pact of August 23, 1939, and in disregard of all treaties and agreements with Lithuania, including the peace treaty of 1920, the non-aggression pact of 1926, and the Mutual Assistance Pact of 1939, did occupy Lithuania by most brutal means and did subject Lithuania to a most cruel oppression; and

"Whereas the Soviet Union, in furtherance of its designs to implant communism in Lithuania and throughout the world, and being unable to bend the resistance of Lith-

uania to its will, has embarked upon a relentless and unprecedented policy to eradicate the Lithuanian Nation, as attested by the fact that it has already deported or annihilated over 800,000 Lithuanians, which constitutes over 30 percent of the entire Lithuanian people: Now, therefore, be it

"Resolved, That said re-subjugation and genocide being practiced in Lithuania is sorely protested, decried, and deplored; and further be it

"Resolved, That the attention of the United Nations, and of the whole cultured world be directed to the plight of blood-soaked Lithuania, and all effective means be solicited to block the ravisher of Lithuania and to expose him to the nations of the world; and further be it

"Resolved, That copies of this resolution be forwarded to the President of the United States, to all Congressmen and Senators of the United States, to the representatives in Washington, D. C., of the Governments of Great Britain, France, Italy, Poland, Estonia, Latvia, Finland, Norway, Sweden, Denmark, Spain, Portugal, Belgium, and to the press."

AMERICAN-LITHUANIAN COUNCIL,
BOSTON CHAPTER.

ALEXANDER CHAPLIK, *Chairman*.
J. JANUNIN, *Secretary*.

Farm Management Aspect of Variety Selection in Rice Production in Louisiana

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. LARCADE. Mr. Speaker, in the August issue of the Louisiana Rural Economist, published by the department of agricultural economics, Louisiana State University, Baton Rouge, there appears an article by Mr. Troy Mullins, which will be of much interest to the rice industry in which my congressional district in Louisiana has a major role. The article follows:

FARM MANAGEMENT ASPECT OF VARIETY SELECTION IN RICE PRODUCTION IN LOUISIANA

(By Troy Mullins)

The choice of varieties of rice to plant is an annually recurring question confronting rice farmers. As is true of other management problems the amount of consideration given this question varies widely among operators. Force of habit and personal likes are the principal determinants for some operators, whereas other operators closely observe the results of experimental tests and of farmers' experience with new varieties or strains and take immediate advantage of those which have superior qualities. Fortunately, the trends in the production of various varieties during recent years as well as information obtained from farmers indicate that the latter is more common among rice farmers in Louisiana.

In the selection of rice varieties consideration must be given to such factors as relative yields, insect and disease resistance, milling quality, consumer preference, prospective prices, comparative costs of production, and to timeliness in the performance of key operations such as seeding, watering, and harvesting.

An analysis of the more important aspects of this problem, and an appraisal of the effects of different varieties on incomes, under varying situations relative to source of water and tenure status of the operator, are presented in this report. Data obtained for the 1949 crop season for 208 rice farms of various sizes throughout the rice area of Louisiana provide the basis for this analysis.

VARIETY CHARACTERISTICS RELATED TO MANAGEMENT PRACTICES

From the standpoint of management practices the important variety characteristics are related to: (1) time of maturity, (2) type of grain, and (3) adaptability to harvesting with a combine.

MATURITY DATES

The length of time required from seeding to maturity is largely an inherent characteristic which varies considerably by varieties. However, the date of seeding a given variety will have some effect on the date of maturity. Varieties of rice may be grouped into three major classes in regard to the usual time of maturity—early, intermediate, and late. In Louisiana, Zenith, which requires an average of 125 to 130 days between seeding and maturity, is the most popular early variety. Fortuna, Bluebonnet, and Blue Rose, which require about 140–155 days, are the main intermediate varieties. Rexoro, which requires about 170 days to mature, accounts for practically all production of late rice in Louisiana.

During recent years the proportion of acreage devoted to early- and late-maturing rice has increased, while the midseason varieties have declined in importance. During the 1935–39 period only 11 percent of the Louisiana crop was seeded to early varieties, whereas in 1950 these varieties accounted for 52 percent. The proportion of the acreage seeded to late varieties for these respective periods was 8 and 25 percent.

The usual relation of planting and harvesting date for the different varieties is presented in figure 1, which shows the period during which a large proportion of the acreage of each group of varieties was planted and harvested in 1949. This chart was compiled from the reported planting and harvesting dates for the acreage of the different varieties grown on the farms surveyed. The planting dates for a particular group of varieties were spread over a somewhat longer period than were the harvesting dates for the same group of varieties. This is because early seedings require a slightly longer growing period than do late seedings. For example, experiments at the Rice Experiment Station, Crowley, La., in which seedings were made at approximately 15-day intervals between March 17 and June 15 during the 6-year period 1933–38, show that Early Prolific rice reached maturity within an average of 119 days when seeded on June 15 compared with 143 days for March 17 seedings, or an average difference of 24 days. Other varieties showed similar variations in length of growing periods. Therefore, special attention must be given to selection of varieties, time allowed between seedings, and order in which the early, midseason, and late maturing varieties are seeded so as to spread the harvest season and yet permit timely harvest. This problem applies primarily to medium-sized and large farms.

GRAIN TYPES

Practically all of the rice produced in Louisiana is of the medium- and long-grain types. This has been the situation since rice production was started in the State. Zenith is the major medium-length grain variety, and Rexoro is the principal long-grain variety.

During recent years a marked shift has occurred in the relative importance of the

medium- and long-grain types. During the 1935-39 period 87 percent of the Louisiana crop was of the medium grain types, whereas in 1950 they made up only 54 percent of the acreage. The proportion of the acreage devoted to the long-grain varieties increased from 13 percent during the 1935-39 period to 46 percent in 1950.

Several factors have contributed to these shifts in production. Price differentials, which vary because of changes in market conditions, frequently are relatively favorable for certain varieties. For example, during the 1948 marketing season the price of rough rice for Rexoro averaged about 50 percent above the respective price for Zenith. In 1949 prices for Rexoro averaged about 32 percent above prices for Zenith, which is considered more nearly the normal relationship between the prices of these varieties. Distribution of the acreage of rice in 1949 by varieties on the farms surveyed is shown in table 1. About 80 percent of the farmers interviewed planted part or all of their acreage of rice to Zenith and about 30 percent planted Rexoro. Approximately 55 percent of the rice acreage on these farms was in early-maturing varieties, 23 percent in mid-season varieties, and 22 percent in late varieties. A large proportion of farmers, especially operators of medium-sized and large farms, seeded more than one variety.

RELATION OF VARIETIES TO METHOD OF HARVEST

During recent years the adaptability of varieties to combine harvesting and artificial drying has been of increasing importance in the farmers' choice of varieties. For example, the experience in drying Blue Rose has not been entirely satisfactory and the recent decline in acreage seeded to it is largely attributable to this fact.

The relation of harvesting method to the distribution of varieties according to time of maturity is shown in table 2. Farmers who have shifted to the combine method of harvesting apparently have increased the proportion of their acreage seeded to the late-maturing varieties primarily at the expense of midseason varieties.

New varieties are being introduced after they have proved satisfactory in the intensive breeding program carried on at the Rice Experiment Station located at Croyley, La., and at similar stations located in other rice-producing States. For example, the Zenith variety was introduced about 12 years ago and because of its earliness, its adaptability to artificial drying, its milling qualities, and favorable per-acre yields, it has practically displaced the early prolific variety throughout the southern rice-producing areas.

ECONOMIC ASPECTS OF VARIETY SELECTION

The previous discussion was concerned mainly with varietal characteristics as they relate to management problems. Other factors are important, however, particularly the prospective market outlook for rough rice of the different varieties as reflected in prices received, the average yield relationships; and the relative costs of production. The effects of any one of these factors alone cannot be determined, but in a general way the approximate combined effect of all of the factors may be estimated. The difference in income from different varieties will depend upon the tenure status of the operator both from the standpoint of ownership of the land and the water used for irrigation. Approximately 70 percent of the rice acreage surveyed was grown by operators who paid a fifth of the crop as land rent. About two-thirds of the rice acreage was operated under contracts requiring a fifth of the crop in payment for water.

The estimated returns from a representative medium-grain early-maturing variety

(Zenith) and a long-grain variety (Rexoro) for operators having different tenure status with respect to both land and water are presented in table 3. This summary is applicable to the 1949 season and is based on the information obtained from 208 farmers. It takes into account yields, prices received, labor costs, and pumping costs (for operators who own their water supply).

Production for each variety is based on average yields, at the Rice Experiment Station during the 8-year period (1941-48), of 13 barrels for Zenith and 11 barrels for Rexoro. In addition to land and water rent, the direct operating expenses—which include costs of materials, services, and labor—were included in these calculations (see table 3, footnote 2). Overhead costs such as depreciation on buildings and machinery, interest on capital invested, taxes, management services, and miscellaneous items have not been accounted for. However, the cost of these items would not vary by varieties.

After deducting the land and water rent and the materials and labor costs, the estimated per acre returns to share tenants for management and overhead, based on 1949 price-cost relationships, is \$16.80 for Zenith rice and \$18.98 for Rexoro, or a difference of slightly over \$2 an acre. The value of the shares going to the land and to the water also is increased by about 10 percent. If the operator owns the land he farms and pays a fifth of his rice for water his estimated returns to land, management, and overhead would be slightly over \$32 per acre for Zenith and about \$36 for Rexoro.

If the operator pumps his irrigation water from a well on his farm he receives an additional one-fifth of the crop but the advantage to growing late-season rice is slightly less than \$3 per acre compared with \$3.63 per acre when the operator pays a fifth of the rice for water. This difference results from the fact that it is necessary to keep the late-maturing varieties flooded about 130 days, compared with 85 days for early maturing varieties. The estimates of operating costs for maintaining water on the rice are based on the use of fuel-burning engines. This type of power unit is used on a major portion of the wells in the area.

This analysis relates to relative prices of Zenith and Rexoro for the 1949 crop. The differences would vary by season. Farmers can use this analysis to determine the most profitable variety by adjusting these estimates to fit their individual situations.

TABLE 1.—Distribution of farms and acreage of rice, by varieties, classified by time of maturity¹

Varieties by length of growing season	Farms reporting		Acres of rice	
	Number	Percent	Number	Percent
Early—125 days				
Zenith	171	82	16,155	46
Magnolia	38	18	3,146	9
Other	8	3	222	0
Subtotal	217		19,523	55
Mid-Season—140 to 155 days				
Blue Rose ²	39	19	2,698	8
Fortuna	34	16	2,681	8
Bluebonnet	24	12	1,781	5
Other	10	4	621	2
Subtotal	107		7,784	23
Late—170 days Rexoro	64	30	7,506	22
Total			34,849	100

¹ Based on data obtained for the 1949 crop from 208 farmers in Louisiana.

² Blue Rose matures in approximately 155 days. All other varieties in this group mature in about 140 days.

TABLE 2.—Relation of method of harvest to varieties classified by time of maturity

Method of harvest	Proportion of acreage by variety [Percent]			
	Early	Mid season	Late	Total
Binder	60	35	5	100
Combine	55	19	26	100

TABLE 3.—Estimated relative returns per acre for an early and a late maturing variety of rice

Item	Variety of rice		Difference Rexoro over Zenith
	Zenith	Rexoro	
Income			
Gross value of production ¹	78.00	85.25	7.25
Costs			
Land rent (one-fifth of crop)	15.60	17.05	1.45
Water rent (one-fifth of crop)	15.60	17.05	1.45
Materials, services, and labor costs ²	30.00	32.17	2.17
Estimated returns to—			
Tenant operator renting land and water ³	16.80	18.98	2.18
Owner operator renting water only ⁴	32.40	36.03	3.63
Owner operator renting neither land nor water ⁵	43.53	46.39	2.86

¹ Based on average yields during 8 years (1941-48) at rice experiment station of 13 barrels for Zenith and 11 barrels for Rexoro (see table 2, Louisiana Experiment Station Bulletin 436) and average prices received for these varieties by 208 farms during 1949 season (\$6 per barrel for Zenith and \$7.75 per barrel for Rexoro).

² Includes materials such as seed, fertilizer, herbicide, fuel, oil, grease, service fees (drying seed treatment, etc.) and labor valued at prevailing wage rates but does not include a charge for interest and depreciation on machinery, other overhead items and management. Harvesting performed by operator owned combine.

³ Return to tenant for management and overhead.

⁴ Return to operator for land, management and overhead.

⁵ Return to operator for land, water, management and overhead. Estimated operating cost for pumping and spreading water (does not include depreciation or interest on investment in well and pumping equipment) \$4.47 per acre for early rice and \$6.69 per acre for late rice.

Flags Aid Russian Propaganda

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Drew Pearson, from today's Washington Post:

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

FLAGS AID RUSSIAN PROPAGANDA

EN ROUTE THROUGH EUROPE.—Europe today is a study in contrasts—contrasts between east and west, contrasts between this continent and the United States of America. Here are some scenes which, though I have left them, remain vividly etched on my mind.

Scene I—East Berlin: As you walk behind the Iron Curtain through the bomb-ridden city of East Berlin you are struck with the way Moscow has played up the thing that appeals most to men's hearts.

Flags are everywhere. Between every German, Chinese, Czech, Korean, Hungarian

flag is the blue and white flag of peace. Atop every pillar also squats the dove of peace—a plump, dumpy dove, a little too smug and self-satisfied to sit surveying the stark remnants of what was once Berlin—but nevertheless, a constant reminder that the Soviet Union supposedly craves peace.

And at the base of every pillar are featured the international words for peace—"paz—mir—paix—beke—peace."

Over and over again are repeated these words, the words every soldier loves, the words every nationality can read and understand—peace.

In telling contrast are featured the words of President Truman, Secretary Marshall, Dean Acheson, warning of the danger of war, warning that we must prepare for war.

It was international propaganda at its most effective, most deceptive best. And despite the State Department's valiant though limited counterpropaganda, hundreds of thousands of the two million youngsters who attended the Berlin youth rally must have gone home with the impression that the United States of America was the big bad ogre of the world today, with the U. S. S. R. their only hope for peace.

Scene II—The United States Senate. Senator McKELLAR, Democrat of Tennessee, aged 88, chairman of the Senate Appropriations Committee, is listening sleepily to State Department testimony regarding its budget. George W. Perkins, aged 56, son of a J. P. Morgan partner, Chief of European Affairs, and not exactly the Communist-type McCarthy alleges runs the State Department, is testifying regarding the need for more funds to run the United States Embassy in Communist Poland.

The Senators want to know why it will cost more next year than last. Perkins explains that the battle against communism has become more intense, also that the Embassy lost money last year through the depreciation of the Polish zloty.

"Young man," glowered Senator McKELLAR, "will you tell me under what article of the United States Constitution or by what law of Congress you have the right to go out and tamper with another nation's currency?"

It is this same Senator McKELLAR, using his deep insight into international affairs, who influences how much money the State Department can have to combat communism.

Scene III—Also the United States Senate: Senator McCARRAN, Democrat, Nevada, aged 75, is listening to Assistant Secretary of State Barrett testify regarding the Voice of America and the importance of selling the United States to the rest of the world. McCARRAN keeps wider awake than his colleague from Tennessee. He even admits that Barrett puts up a plausible argument. Finally, however, he concludes:

"I would hate to answer for the spending of all this money to prevent war, when I feel sure war is inevitable."

Scene IV—Back in Berlin: The studio of radio station RIAS, operated by the State Department in the western sector:

A group of East German youngsters have crowded into the RIAS studio. Supposedly Communists, and attending the Communist youth rally, they want to see the radio station they have been listening to across the iron curtain in East Germany.

Before the microphone come various RIAS radio performers—first a singer. She gets a terrific round of applause. Then comes a political commentator who every night takes gibes at Soviet operations in East Germany. He too is gleefully recognized by the youthful audience.

They know their RIAS radio performers as an American audience knows its Jack Benny or Milton Berle. It's a recognition that can come only from listening.

These youngsters are the future generation of Germany—the kids who will really decide whether communism stays or goes, who will fight or fraternize with American boys in the war that Senator McCARRAN says is inevitable.

Yet Senator McCARRAN, an old man of 75, who won't have to fight, and Senator McKELLAR, now 88, say the State Department's radio program is wasted money, poured out on empty ether.

1876 Diamond Jubilee—1951 What You Should Know About Colorado

EXTENSION OF REMARKS OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. ASPINALL. Mr. Speaker, if majestic splendor alone would strike music from rock and rill, Colorado, in its lofty grandeur up near the clouds, would have no need for the feeble voice of man. However, not even the peerless vistas of the mother of mountains has voice to sing, so antlike man, awed and inspired by the green carpeted uplift of snow-capped mountain and white water rushing to the plain beneath, must give vent to praise.

Man stands at first spellbound amid Colorado crag and dale, hushed by the bounty and beauty of God's handiwork which dwarfs all the stone piled upon stone by which man has measured his advancement from the garden of nature. Yet, the matchless pattern before his eyes moves his voice to songs of praise. One such song, inspired by Colorado's beauty, from the pen of the late Carrie Jacobs Bond, comes to mind:

Oh beautiful, for spacious skies,
For amber waves of grain,
For purple mountains majesty above the
fringed plain

Under leave to extend my remarks, I include an article from the Middle Park Times, of Kremmling, Colo., and I call it to the attention of the Members as an accounting of that which is Colorado as the Centennial State celebrates 75 years of statehood:

WHAT DO YOU KNOW ABOUT COLORADO?

1. Colorado Territory was formed in 1861 and Lincoln appointed William Gilpin as first Territorial Governor. The population then was 25,331. In the Civil War Colorado Territory supported the Union cause.

2. On August 1, 1878, Colorado became the thirty-eighth State to be admitted to the Union and John L. Routt, last Territorial Governor, became first Governor of the State. Because it was admitted on the one hundredth anniversary of the Declaration of Independence in 1776, Colorado was called the Centennial State.

3. The famous Four Corners meeting point is at the southwestern corner of Colorado where Colorado, Utah, Arizona, and New Mexico join corners.

4. The northern boundary of Colorado is about 560 miles from Canada; the eastern boundary about 1,450 miles from the Atlantic Ocean; the southern boundary about 430 miles from Mexico; and the western boundary about 780 miles from the Pacific Ocean.

5. Colorado is the seventh largest State in the Union with an area of 104,247 square miles. It is 387 miles from east to west, and 276 miles from north to south.

6. The six States larger in area than Colorado are Texas, California, Montana, New Mexico, Nevada, and Arizona.

7. Colorado is seventh from the last State in water area, having only 280 square miles of inland water.

8. Colorado is larger than Illinois and Indiana combined, 12 times as large as Massachusetts, 9 times as large as either Holland or Belgium, 6 times the size of Denmark or Switzerland, and it lacks only nineteen one-hundredths of being as large as the total British Isles.

9. The largest county in Colorado is Las Animas, with an area of 4,794 square miles; the smallest is Denver County, with 58 square miles; and Grand County has an area of 1,867 square miles.

10. Colorado is divided into three great natural regions: the Great Plains or Eastern Slope; the Rocky Mountain region that straddles the Continental Divide and includes North Park, Middle Park, South Park, and San Luis Park; and the plateau region of the western slope.

11. Fossil remains of sea animals in Colorado (also found here in Grand County) indicate that this region was once covered by the sea, and that ice sheets crept down from the north and then retreated.

12. The basic mountain structure of Colorado is now believed to have been formed about 80,000,000 years ago near the close of the Mesozoic Era.

13. Skeletons of prehistoric monsters, dinosaurs, huge turtles, rhinoceros, giant pig, mammoth, and the sabre-toothed tiger have been found in various parts of Colorado.

14. Colorado has 54 mountain peaks 14,000 or more feet in elevation out of the 80 highest in North America. There are 583 other peaks more than 12,000 feet high in Colorado.

15. The highest mountain peaks are Mt. Elbert, 14,431 feet, and Mt. Massive, 14,418 feet, both in Lake County near Leadville. Mt. Harvard is 14,399 feet in Chaffee County. Pikes Peak, in El Paso County, near Colorado Springs, perhaps the best known, is twenty-ninth in rank at 14,110 feet.

16. The lowest point in Colorado is near Holly, 3,385 feet.

17. There are 26 important State and Federal highway passes in Colorado, the two highest being Trail Ridge between Grand Lake and Estes Park at 12,183 feet on U S 34, and Independence Pass at 12,095 feet on Colorado 82 between Leadville and Aspen.

18. There are 14 national forests in Colorado with a total area of 13,697,257 acres, or 20 percent of the State's area; 2 national parks—Mesa Verde and Rock Mountain, and 8 national monuments.

19. Colorado is famous for its clear skies and brilliant sunshine. The yearly average for sunny days is 304, with an average yearly rainfall of 16.5 inches. The sunshine, the very low humidity, and the light air pressure make the climate most beneficial for persons with lung diseases.

20. Colorado is known as the mother of rivers since more large rivers rise in the State because of our heavy snowfall on the Continental Divide than in any other State. The largest is the Colorado (first called the Grand, meaning large in French) which rises in Grand Lake in Grand County and goes on down to form the Grand Canyon. Other large ones are the Rio Grande, San Juan, Arkansas, Cimarron, North Platte, South Platte.

21. Colorado has about 3,000,000 acres of irrigated land, but already two-thirds of the water which originates in Colorado has been given to other States.

22. Gold was first discovered in 1858 near Denver by Green Russell, but the large silver

mines in the State caused it to be called the Silver State.

23. The State flower is the lavender and white columbine (adopted 1889); the State bird is the lark bunting (1931); the State tree is the Colorado blue spruce (1939).

24. The Colorado flag has three equal stripes—two blue and 1 white for the blue of the skies and the white of the snows; at left is a large C in red for the name of Colorado, meaning "colored red"; and within the C a golden disk for the golden sunshine. The flag was adopted in 1911.

25. The State song was written by Dr. A. J. Flynn, of Denver (1915), and is called *Where the Columbines Grow*. The State motto on the great seal is "Nil Sine Numine", meaning "Nothing Without the Deity."

Synthetic Liquid Fuels

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. HESELTON. Mr. Speaker, in connection with the executive session of the Interstate and Foreign Commerce Committee on Wednesday afternoon to hear officials of the Department of the Interior on the subject of synthetic liquid fuels, I want to make available three articles from the *National Petroleum News* of August 15. The articles follow:

CHAPMAN IGNORES PAD, NPC ADVISERS IN DEMAND FOR SYNTHETIC FUEL PLANTS

WASHINGTON—Without regard for the Petroleum Administration for Defense or the National Petroleum Council, Interior Secretary Chapman has launched a drive to borrow \$455,000,000 from the Federal Treasury to underwrite the creation of a commercial synthetic liquid fuels industry.

Mr. Chapman made his move in a letter to the Defense Production Administration, asking for the money to guarantee private promoters against loss in the construction and operation of a 30,000 barrels per day coal-to-oil plant and a somewhat smaller shale-to-oil facility.

PAD was not consulted by the Secretary prior to his request to the DPA, it was said here. Neither did Mr. Chapman confer with NPC, which, like PAD, is under his immediate jurisdiction.

Although not consulted, PAD is understood to have communicated to Mr. Chapman, subsequent to his letter to DPA, its view that encouragement of commercial size synthetic plants cannot be justified at this time. NPC has under way a detailed study of synthetics, but its report probably won't be forthcoming until this fall.

Brown won't comment: The Secretary's top assistant in PAD, Deputy Administrator Bruce K. Brown, has refused to comment on the \$455,000,000 proposal, but NPN was told that it would be fair to assume that he is as opposed now to building commercial size plants as he was when he so testified before a congressional committee in 1948.

At that time, Mr. Brown told the committee it just didn't add up to burn 45 tons of solid fuel—coal—to make 1 ton of synthetic liquid fuels.

What Chapman wants: If DPA goes along with his idea, Mr. Chapman intends to—

1. Use \$400,000,000 of the total to guarantee Government purchases of the output, and thus the profits, on the proposed investment by a private group in a 30,000

barrel-per-day coal hydrogenation plant, to be located probably in southern Illinois; and 2. Underwrite in similar fashion the construction of a \$55,000,000 shale oil plant of a "few thousand" barrels daily capacity.

His request seeks to invoke authority for such deals set out in the recently amended Defense Production Act. That law, as amended, makes a total of \$2,100,000,000 available to Government departments and agencies to encourage expansion of productive capacity and supply to aid the mobilization program.

Mr. Chapman is understood to have sought to justify his request on the grounds that the United States must immediately take out "insurance" against the day when the petroleum industry can no longer keep pace with mounting demands.

Opposite view: This view has opposition within his own bureaus and agencies. For instance, some officials in the Bureau of Mines believe, and have so reported, that the current costs of producing synthetic liquid fuels are too high to make a start at this time.

And in PAD there is the unshakable opinion that far from running out of oil, this country is still a long way from reaching its productive peak of crude petroleum. In fact, it is said that if the 1951 drilling rate is continued in future years the crude productive capacity of the United States should increase by around 250,000 barrels per day annually for years to come.

The agency is also said to have the opinion that it would be much less expensive and wasteful of heat to hydrogenate residual fuel oil into lighter products than it would be to produce liquids from coal by the same process. Methods of hydrogenating residual oil have been developed by the oil industry, but these are reportedly not now economical.

The forthcoming NPC study on synthetics will analyze the cost estimates for synthetics which Mr. Chapman's own synthetics chief, Dr. W. C. Schroeder, claims now show commercial synthetics production to be competitive with petroleum.

Known to be interested in building a coal hydrogenation plant is a group represented by Ferdinand Eberstadt, New York investment banker and formerly a vice chairman of the War Production Board of World War II. It has estimated \$400,000,000 as the cost of a 30,000-barrel-per-day plant.

A crude petroleum refinery of like capacity now costs about \$45,000,000.

Word of the Chapman request to DPA also brought with it reports of internal dissension at Interior, with Dr. Schroeder taking over from Dr. James Boyd as head of the Defense Minerals Administration. The latter now goes back to his old job as Director of the Bureau of Mines.

The dissension was said to have revolved around Dr. Boyd's opposition to the synthetics-now policy. However, an Interior spokesman denied this, declaring Mr. Chapman and Mr. Boyd were not arguing over this subject.

Mr. Boyd's confirmation by the Senate was held up for more than a year by the opposition of John L. Lewis. During that time Mr. Boyd worked without pay, but when finally confirmed by the Senate collected back pay. Dr. Schroeder undoubtedly will have the support of John L. Lewis and coal operators, in view of his synthetics-now stand.

This Interior spokesman also denied another report that Dr. Boyd called in an outsider to check Dr. Schroeder's cost estimates on synthetics.

However, the departmental official conceded there were differences of opinion within the Bureau of Mines on synthetics. For example, an official of the Bureau's experimental station at Bruceton, Pa., sent a memorandum to Washington recently recommending strongly against starting commercial production at this time.

BUREAUCRATS SNEAK ANOTHER GRAB FOR OIL

It is truly incredible and terrifying to American citizens who believe in Government by the people and for the people, the lengths to which the Truman bureaucrats, nationalizationists and other extremists go to impose complete Government control on American industry.

Let NPN say that this is not just a "squawk" by NPN—which has been fighting nationalization of industry by government for years—because the day that this editorial was first planned, and to be concerned solely with the Trumanites attack on the oil industry, John L. Collyer, president of the B. F. Goodrich Co., of Akron, issued a statement saying flatly that the Federal Government has succeeded in nationalizing the rubber industry. He said the Government now controls the industry, buying crude rubber for it, deciding how that rubber will be gathered or manufactured, and how it can be used. The rubber industry, he said, is now completely under Government control, and where is it and other American industry going under these totalitarian plans?

It was a coincidence that Mr. Collyer's statement came the day it leaked out that Interior Secretary Chapman and head of PAD, sneaked—and we emphasize the word "sneaked"—a recommendation to the Defense Production Administration for \$455,000,000 out of a \$2,100,000,000 fund just released to this agency by government to permit the Government, at Truman's approval, to go into any kind of a business he wants to in the name of producing defense materials against war.

The money Chapman asked for is to be spent, if he gets it, in building a 30,000 b/d coal-to-gasoline plant, something that he and at least one member of his Bureau of Mines, has long been wanting to do. This amount is a bit of a come-down for Chapman who in 1948 campaigned loudly for a 2,000,000 b/d gasoline-from-coal plant even though that amount would take at least two-thirds of the maximum amount of coal that this country ever produced in a year, to say nothing of an amount of steel that would have shut down a large percentage of the then development of the rest of the country. This current Chapman request would also hog a large amount of steel, more than twice the allocation to the oil industry for refining for this last quarter of 1951.

That Chapman and his nationalization cohorts would put their own political growth ahead of the country's good is further shown by the fact that converting coal or shale to engine fuel is still in a development stage so far as reasonable costs go and also even as to some features of the processes. This then is still an experiment both as to supply and quality of materials as against the sure thing of getting more crude oil and converting by well-established techniques into the products the country most direly needs, and at relatively low cost.

But for the details of this back-stairs manipulation see pages 11 and 27 of this issue as supplied by our Washington news bureau, and we here return to the indictment of Chapman and the nationalizationist crowd.

The Interior Department has long been a hothouse for socialization of American industry using natural resources. Ickes during the last war tried to hold up American oil companies and force them to sell their Middle East interests to the United States Government. He and Roosevelt tried to grab control of all oil and gas in this country under an utterly socialistic conservation law and this with downright falsehoods by Ickes and others. Krug, his successor, took up the fight—after speaking kind words about how he loved private enterprise—for the 2,000,000 b/d synthetic gas venture. Chapman continued it when he succeeded Krug.

The industry found after Chapman took charge that he was not a very good keeper of his word. There were some stormy battles to get him to abide by his word that oil men would run the present war mobilization effort. Then the industry got his word that he would not put the Government in this synthetic business, at least not until after Chapman's National Petroleum Council and others had made a thorough study which may be finished in a week or two or by October.

After thus giving his word that he would await reports from his own selected advisers, Chapman rushes this recommendation for this big venture of the Government into the synthetic-fuel business and he does it in secret. Neither the Interior Department nor the Defense Production Administration issued any publicity release. From all indications they had no intention of so doing until the money had been given Chapman. When Oilgram broke the story last week there was much muttering by the nationalizationists at Washington. The inside conspirators belligerently inquired of the Oilgram where did it find out Oilgram of course told them it was none of their business, that this is a public matter, with public money, that it is not enveloped in any war security secrecy and that no public official had any right to try and slip it over in secret.

So far as can be learned neither Chapman nor any of his people spoke to the National Petroleum Council nor his oil advisory associates who have been appointed from the oil industry about this new effort to get money to build a Government synthetic-fuels plant which would be the Government's big entry into the oil business as an owner and competitor to privately owned oil companies.

Chapman has done a good job on some things in standing up against some of his associates and the totalitarians in the administration. He has done a good job in fighting the unconstitutional and totalitarian efforts of the Department of Justice to make it the last judge of what an industry can or cannot do in conjunction with Government, but he still shows that he is either afraid of this totalitarian and anti-private-ownership crowd in Government or he has no idea what they are up to. This last is unbelievable in regard to this big synthetic plant and in view of what Chapman has recently said for it and in view of the fact that he had to make the application for the money.

Smelling to high heaven is the row now on in the Bureau of Mines, wherein Chapman is obviously trying to force the resignation of the present head because, although Chapman fought tooth and nail to get him there some years ago, the Director of the Bureau could not go along with Chapman's present favorite on this big synthetic fuel plant. Present Director Boyd, of the Bureau, has challenged the cost figures of the chief promoter of this Government synthetic business, Dr. Schroeder. Schroeder evidently has the inside track, because he is getting Chapman's backing and Boyd is not.

Not only Boyd but everyone in the oil industry we have heard from says that Schroeder's figures as to costs are entirely wrong. As some companies in the oil industry are spending upward of \$10,000,000 a year of their own money trying to develop better synthetic processes, and all told the oil industry is and has been spending a few times more money on this subject than Bureau of Mines, the oil industry ought to be entitled to have some opinion on the cost feasibility of synthetic processes.

Some readers may ask why print this inside Government row, what good does it do? Is NPN seeing ghosts under the bed?

The answer is that official Washington wants to operate in secrecy until it has a victory or a success to announce, and then

no publication should question the terms of the announcement of the success.

In other words, despite all the press agents in Washington, the officials do not want the public to know any more than those officials wish it to know. Hence the Interior Department wants this half a billion dollars in hand, and probably would like to get it all spent before the public or Congress knows about it. This has been the policy of nearly all administrations, but it has been especially the policy of the planners since they got such a hold on Government starting with the New Deal.

Further, if the public was not told of these sneaks to put over nationalization, the country would wake up some day and find it completely nationalized just as President Collier, of Goodrich, says is the case with rubber, all done by many little moves before any number, even in the rubber industry, woke up to what was going on.

And once a thing is accomplished in government control it is never undone.

The oil industry has not done a good job in fighting this threat of government entering the oil business under the guise of doing a research job and needing a fair-sized research plant. The threat has been with the industry ever since the early days of the Roosevelt administration. But the oil associations have pretty much ignored it.

In February 1948, when a bill to give former Secretary of the Interior and Chairman of the Petroleum Board Krug the millions to build a 2,000,000 b/d synthetic plant was before Congress, some of the industry got much exercised and some top oil men including Bruce Brown, then with Standard of Indiana and now Deputy Administrator for PAD, Chairman Wilson, of the Indiana Co., Dr. Murphree, of the Jersey's Development Co., and several others, gave strong testimony against it before a congressional committee. Then, when the subject came up this spring, the National Petroleum Council took up the fight through a special committee. But in the main it can fairly be said that the industry has slept on its rights, that the industry should have recognized years ago that the bureaucrats were working all the time to get into the oil business, and that properly to contend with them the industry should have had a group also at work all the time if necessary with a full-time paid expert.

There has been too much regard for dignity and a high-level approach to these politicians by the oil industry as well as by other big industries. It is to be hoped that this synthetic plant threat and other experiences will now cause our industry leaders to realize that force exemplified through a vigorous and public licking is all that those seeking to impose socialism, nationalism, and communism on this country have any respect for and there are times when that force has to be exercised in a real knock-down and drag-out fight right out in the middle of the road.

The sooner the oil industry gets out into the road and gives that kind of a fight with all the vigor that so many of its top executives used in their younger days out in the oil fields, the better for the industry and for all the freedoms of the American people.

CHAPMAN SYNTHETICS PROGRAM COULD BE LOOKING MORE FOR VOTES THAN FOR OIL

(By Herbert A. Yocom)

Secretary Chapman's attempt to foist a synthetic liquid fuels production program onto the country at this critical juncture smacks more of politics than of good judgment.

He says the country must take out insurance against the day when the supply of oil may ultimately drop behind in the race with demand. He hasn't the slightest notion

when. It's just something that's bound to happen—eventually.

Hence, the Secretary is insisting on having the authority to spend \$455,000,000 of the public's money—plus the Lord only knows how much later on—to launch a commercial-size plant building program here and now.

The petroleum industry does not quarrel with the idea that it may some day be necessary to turn to synthetics.

It, in fact, endorses the idea, has spent literally hundreds of millions in furtherance of its own research in that field and rather generally supported governmental efforts along the same line.

But it disagrees vehemently that commercial production can be justified now, economically or otherwise.

Nor does it see any probability or even a possibility, over the near future, certainly, of a dearth of supply occurring that can be attributed to failure of the industry to find and develop crude oil in expanding quantities.

Least of all can it see the wisdom now, when steel is so scarce that the Secretary himself has to beg and plead for an increase in oil's restricted allotment, of expending great tonnages of that same material in a venture that is economically so palpably unsound that no private persons will have anything to do with it unless Government guarantees them against any and all loss.

Why then, knowing the valid, contrary views of the oil industry and of his own expert and supposedly respected advisers in both PAD and even the Bureau of Mines, does Chapman choose to go galloping forth on his shiny white charger at this particular time?

Of course, his answer no doubt will be that someone has always to take the first step; that, while he may seem to others to be stepping out way too soon, he nevertheless, as a public official, has a responsibility for protecting the national security which he does not intend to shirk.

No one would quarrel with him in that if it could be shown that security of our country actually is endangered because we are about to run out of oil.

Obviously, however, the Secretary cannot so contend.

So, after all, is the national security really Chapman's primary reason for seeking to launch now a Government-subsidized synthetic liquid fuels program?

There is a very strong feeling here that it is not, that the main motivation is political and that the Fair Dealers mean to dangle synthetics before the coal and oil-shale States as a lure for votes in 1952.

They are not above it, certainly. Nor is Secretary Chapman, who is first and foremost a politician. As a matter of fact, we seem to recall him going out to Columbus, Ohio, last June 7 and addressing a Jefferson-Jackson day dinner.

That was an occasion on which the Secretary indicated as plain as could be an awareness of the vote-getting possibilities in synthetics. Because he rather went out of his way, we thought, in relating—at this political shindig—how Ohio has "12 suitable general areas for synthetic liquid fuels plants," plus a supply of coal which represents "a liquid fuel" reserve of 12,200,000,000 barrels of finished products, chiefly "gasoline" and which could be produced "at any rate up to 834,000 barrels per day with 40 years' coal supply for each plant." Also, that Ohio's "potential" of 12,200,000,000 barrels of "conversion products" is only a little under half the total proved United States crude-oil reserves, thus adequately demonstrating "Ohio's potentiality in this new industry."

This is the sort of stuff calculated to make the voters go bug-eyed—and the same sort of stuff can be dished out elsewhere than just Ohio to make votes for the Fair Deal, they hope.

Even down South, maybe, where on last May 19, Chapman could be heard telling the Junior Chamber of Commerce at Asheville, that development of synthetic fuels capacity is a very striking and important example of the sort of thing which needs to be done—an example which will ultimately have an immediate, practical effect here in North Carolina.

World Assembly of Youth

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. JAVITS. Mr. Speaker, the problems of our time are so difficult that the ideas and outlook of our young people are of the most critical importance to the future. Almost at the same time there took place a world youth assembly at Cornell University at Ithaca, N. Y., of the youth Communist Youth Festival of enslaved youth in East Berlin. The comparison between these two events is so striking in terms of its implications to the future of our world that I believe the Members will be interested in the appended newspaper articles. The report in the New York Times so well refers to the Communist youth festival as this organized mass madness which mocks the Soviet peace professions and says of the World Assembly of Youth that it is pledging itself to peace without hate and misunderstanding. The dignity and the informed character of the reports from the World Youth Assembly at Cornell are to be compared with the mass frenzy and hate preachments at the Communist youth festival. The articles follow:

[From the New York Times of August 7, 1951]

THREE YOUTH RALLIES

The struggle for the minds of the younger generation of this world destined to shape the future is being symbolized this week by three international youth rallies. Of these, the most elaborate and most costly but also most ominous is the Communist youth festival in East Berlin, where a quarter of a million boys and girls from Soviet-occupied Germany and more than 10,000 delegates from 38 countries are being regimented in a Hitler-like demonstration to pledge in the name of peace undying loyalty to Stalin and undying hatred for the United States and the whole free world. Once again uniforms and parades, waving banners, and the contagion of mass contact are being utilized by a totalitarian regime to raise robots ready to immolate themselves at their master's bidding in a cause that spells slavery and death. The frenzied enthusiasm of a large part of the demonstrators too young and too ignorant of the rest of the world to know what it is all about shows that this educational method is not without success.

In happy contrast to this organized mass madness, which mocks the Soviet peace professions, are the two other rallies—the first World Assembly of Youth meeting on the Cornell University campus at Ithaca, N. Y., and the World Boy Scout Jamboree at Bad Ischl, Austria. The first, consisting of 500 delegates from voluntary youth organiza-

tions in threescore countries, is dedicating itself primarily to search for ways and means of making the United Nations declaration of human rights a living reality throughout the world. The second, consisting of more than 15,000 delegates representing millions of free youths, is pledging itself to peace without hate or misunderstanding. The keynote of both gatherings is liberty.

Judged by mere size, the Communist rally dwarfs the others, and the significance of its mass aspect, which the Communists spent millions of dollars to create and which gives the youngsters a flattering sense of participation and self-importance, must not be underestimated. It provides an impressive captive audience for the pronouncements of the Communist chieftains who seek to inflame it against the defense preparations of the west.

But it is significant that once mass contagion and mass discipline are broken the participants appear more than apathetic, and that thousands defy punishment to slip into free Berlin, some to seek refuge there, most merely to view its wonders, which, despite the remaining ruins, form such a welcome contrast to the Communist slums. Therein lies hope that Communist propaganda is overreaching itself—that a good part of the participating youths are not quite so gullible as the Communists would have them, and that the Germans in particular, having marched in so many bad causes, have learned to march with tongues in their cheeks.

[From the New York Times of August 14, 1951]

YOUTH, 1951

It is discouraging to see another generation of youth repeating the tragic folly of their fathers. What does it matter that the million youngsters who walked shrieking through the streets of East Berlin on Sunday wore blue shirts instead of the brown of the Hitler Jugend or the black of the Italian Fascists? It is history repeating itself, but a mad and vicious history. It was the youth of the twenties and thirties that carried the world into the holocaust of 1939 and we who were young then—or at least younger than we are now—are, no doubt, open to the jibe that we could do no better. Perhaps today we deserve the reproach that we have failed to catch the imagination and the ideals of youth the way the Chinese and German Communists have done. That, however, depends on who has the boys and girls to educate, to indoctrinate, to fill with high ideals or with the hate and militancy of totalitarianism. It stands to reason that if Hitler could train and win over a generation of youth to Nazi doctrines, the German stooges of Stalin could do the same to a new generation of boys and girls.

These are bitter thoughts, but the bitterness is not directed at the youth. The young Americans who are fighting in Korea, the young Frenchmen who die in a charge across an Indochinese paddy field, the young of all lands who are now meeting at the World Assembly of Youth in Ithaca, N. Y., are proof enough that the fault is not and never could be in youth itself. The criminals are those who inspire the young to serve their wicked purposes. They create a militant mass that knows not what it does, because its individual parts lack the experience and the judgment to make a decision that has moral validity. The mass then becomes a force going on its own momentum. Both Mussolini and Hitler were like Phaetons trying to drive the chariot of the sun, they could not control the forces they set in motion and so they were carried to disaster. The Russian Communists, to be sure, have proved that they can mold, indoctrinate, and control their own youth. But we have yet to see an ability to hold in check the youth of a newly Communist country such as China, or of a people

with the bitterness and shame of defeat in their hearts such as the Germans and Japanese. In such countries youth is an electric, explosive force that can be directed toward good or evil and that will go toward one or the other with the inexorability of a juggernaut.

That is why the Communist demonstration in Berlin was frightening. The Reds are unleashing the impulsive power of youth and directing it toward their evil ends. We can pity the young men and women who are so misled. If only we could teach them the lesson contained in Secretary Acheson's message to the Ithaca assembly yesterday: "The path of regimentation can lead only backward—to tyranny, to servitude, to the degradation of man."

[From the New York World-Telegram and Sun of August 9, 1951]

THE WFYSP VERSUS THE WAY

The World Festival of Youth and Students for Peace and the World Assembly of Youth, meeting simultaneously on opposite sides of the iron curtain, present a striking contrast.

The Commie-led WFYSP sessions in the Soviet sector of Berlin are beating the drum for Uncle Joe Stalin. They are distinguished chiefly by the parroting of party-line propaganda. So long as he stays on that line, any Tom, Dick or Harry can mount the rostrum and spout to his heart's content in the name of any youth group he elects to represent.

Participants in the WAY conference, being held at Cornell University, are in a different boat. They come as accredited representatives of specific groups whose seriousness in support of democracy has won them official membership in this world body. They may speak only for the groups whose credentials they bear.

The WAY delegates move about as they please, see this country as it is, and have samples of American hospitality pressed upon them from all sides.

The WFYSP youths must get their sample surreptitiously. Many of them, venturing into West Berlin for a taste of the democratic life, found it so palatable that they wouldn't go back. As a result the Commies clamped down on such visits.

It is easy to see what the results of these contrasting procedurs will be. Youths of the Communist world will return home with nothing but a richer store of vituperatives to hurl at the free world. Those at Cornell will carry to all corners of the democratic world the realization that only from a free exchange of ideas and knowledge can come the real understanding on which peace must depend.

[From the Brooklyn Eagle of August 7, 1951]

LESSON OF EAST BERLIN YOUTH RALLY IS DEMOCRACY MUST FIGHT TO LIVE

It is a sobering experience to read about the East Berlin Youth Rally, where more than 100,000 young men and women from all parts of the world are being inflamed by Communist oratory and join in singing the praises of Josef Stalin and proclaiming their open dislike for the United States. Some might say that after all only six Americans participated in the parade, so why get upset? But it is frightening to know that any citizens of this Nation marched under such auspices.

The lesson of the meeting is plain and no phase of it is beyond the understanding of anyone anywhere who prefers freedom to serfdom. This spurious demonstration is indeed an effective means of bringing home to people the grim necessity of accepting the true nature of Russian intentions and of making plans to combat it intelligently and without thought of small capitulations to gain time. The truth is time has run out, in spite of recent Russian gestures of desiring to be friendly with America and the

democratic world. The latter are obviously phony. The crisis is here, and the broad question of survival is revealed with stark realism.

These misguided young people who have been converted into unthinking talking machines to parrot the Red lies can do great damage when they return to their respective countries. Each will be a disciple of a doctrine that says the Soviet conception of peace and her foreign policies must prevail. To be caught unawares will be to swell their ranks with new recruits. The youth meeting should heighten our determination to create an effective defense of Europe and conclude the Korean truce talks on a note that makes it plain that Communist aggression has been defeated. Anything less could have tragic results.

Meanwhile, there is some comfort to be had from the first World Assembly of Youth at Ithaca, where 500 representatives of 63 nations are studying the problem of attempting to make human rights universal. There no frenzied oratory is present, no concentration on promoting hate. It is a sharp contrast to its Kremlin counterpart in East Berlin and living proof that regard for democratic processes is a potent force if we see that it receives proper emphasis.

[From the Brooklyn Eagle of August 10, 1951]

BERLIN YOUTH RALLY FED RED SLOGAN DIET
Youth of the free world are meeting in Ithaca, N. Y. Youth following the Communist line are meeting in East Berlin. Geographically, the two groups are about 4,500 miles apart. In ideas they are worlds away. The United Press carries the following dispatches from Berlin and Ithaca to illustrate differences.

"BERLIN, August 10—Thousands of East German Communist youths poured into Berlin today to reinforce 500,000 youth delegates already assembled here for a gigantic peace parade Sunday.

"The Communists estimate 1,000,000 youths from 70 nations will march down the Unter den Linden in the high spot of the world festival of youth and students for peace.

"Sunday's parade—complete with shouted slogans against the American warmongers, banners, flags, blaring bands, and uniformed youths packed into solid masses—follows the pattern already set.

"The delegates—some as young as 10 years old—have been demonstrating for peace for almost a week. They have shouted and sung propaganda slogans taught them by Communist teachers.

"The main object of the mass rally is propaganda—in favor of communism and against the west.

"Sunday's parade may see the unveiling of a sideshow allegedly planned by the Communists—a group of 50 American prisoners captured in Korea.

"But parades and rallies have not been able to fill the stomachs of the young delegates nor make them comfortable sleeping on straw in tents or crowded East Berlin homes.

"Approximately 40,000 of the delegates are living in youth camps or tent cities erected in the parks of the city. The largest is the Ernst Thaelmann camp where 20,000 delegates from 10 to 20 years old are quartered. The camp is surrounded by a thatched fence and a heavy police guard.

"Hunger has been a major problem for the rally organizers. Leading Communist youth officials have been fired and arrested for the breakdown in the food supply at the camps, according to press reports in West Berlin."

"ITHACA, August 10.—Four hundred young lawyers, doctors, economists, and students from 63 non-Communist nations met today

in a scholastic atmosphere in this quiet university town to discuss the problems of youth in the free world and how they can be solved.

"A Junior United Nations, the youths, ranging from 18-year-olds to those in their early thirties, sit solemnly in a dozen workshops at Cornell University and discuss youth and human rights.

"Delegates from Pakistan, Sweden, Great Britain, France, Italy, the African Continent and Japan, among other nations, are preparing resolutions for a general assembly which will meet August 14 and 15.

"SUBJECTS COVER WIDE RANGE

"Their subjects cover a wide range: Discrimination, juvenile delinquency, family life, freedom of movement, freedom of youth organizations, world citizenship, social security, conditions of work, leisure time, education and the duties and responsibilities of youth.

"Solemn and serious as the assembly's work may be they live well.

"They sleep in the dormitories of Cornell, on a campus considered one of the most beautiful in the United States.

"FOOD GOOD, CHEAP

"Food, always an important item in the life of a youth—even if the weight of the world's problems rest on their shoulders—is good and cheap. A complete dinner served in the university's cafeteria costs about \$1.06.

"After the assembly winds up many of the delegates will make tours throughout the United States visiting some 40 cities.

"Maurice Sauve, 28-year-old Canadian lawyer, president of the group, said, 'we don't need bands and noise to stir up this group. The people here are national youth leaders * * * not a bunch of kids picked up off the street.'"

Robert Gardiner Wilson, Jr.

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. KENNEDY. Mr. Speaker, on July 12 of this year Robert Gardiner Wilson, Jr., was elected imperial potentate of the Shriners of North America.

A great and deserved honor was thus paid to a man of whom Massachusetts is justly proud.

Descendant of an illustrious American family line, Judge Wilson's background, training, and record are linked and interwoven with the finest traditions of New England.

After graduating in 1910 from the oldest public school in America, the Boston Public Latin School, he received his degree with distinction from Harvard College in 1914. Then followed 3 years at Harvard Law School.

In the autumn of 1917 he entered the practice of law, but before long his attention turned to politics. In 1925 he was elected city councilor of the city of Boston, and served six terms, a total of 12 years, under four successive mayors, until his voluntary retirement in 1939.

In December of 1940 his legal training and deep understanding of the problems of his fellow man were recognized by the then Governor of Massachusetts, LEVERETT SALTONSTALL, now senior United States Senator from Massachusetts, who

honored him with a life appointment as judge of probate.

The Shriners of North America, who have contributed so much toward helping the crippled and the sick, and who have brightened the lives of so many unfortunate children, can be indeed proud of their new leader.

The first imperial potentate in the 75-year history of the Shrine to come from Massachusetts, Robert Wilson has earned for himself a high place in the history of his home State.

New Global Commitments Enmesh United States

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a timely article by Mr. David Lawrence which appeared in the Washington Star on August 22. The critical situation described by this outstanding writer is little understood by the people in the country and it can be rightly said that too few Members of Congress understand the situation.

The article follows:

A NEW MILESTONE IN HISTORY—UNITED STATES TIED UP IN NEW COMMITMENTS AROUND THE GLOBE AS BRITAIN IS UNABLE TO HOLD UP HER INTERESTS

(By David Lawrence)

Slowly but surely the United States is finding herself tied up in new commitments and new obligations around the globe.

Latest dispatches from London by the United Press indicates the understanding there that the United States has recognized the importance of the Suez Canal area in Western defense and has agreed to share with Britain the burden of middle-eastern security.

The statement is further made that the United States has accepted the British contention that the Suez Canal zone is a vital bridge between Asia and Africa and the best site for bases to defend the oil-rich Middle East against possible aggression.

This means that, just as Great Britain in 1947 abdicated full responsibility for Turkey and Greece and the eastern Mediterranean and persuaded America to take over, so today the area of American interest has been extended to include the Suez Canal.

This is a new milestone in world history. For it shows either that the British Empire is no longer capable alone of holding up her interests in the Middle East or that she would rather spend her money for the socialistic pursuits of a labor government.

In any event, the United States is about to provide \$415,000,000 worth of military aid and \$125,000,000 of economic aid to the Middle East out of the Mutual Security Act fund.

The United States is to be a part of the Middle East defense council, soon to be established, which includes Britain, France, South Africa, Australia, New Zealand, and Turkey.

Not long ago, when the late Admiral Sherman proposed that an American naval officer become the commander in chief of Allied naval forces in the Mediterranean, there was

a protest in the House of Commons. But, subsequently, when it was pointed out that the heavily preponderant number of naval vessels now in the Mediterranean were those of the United States Navy, there was a tapering off of the criticism. For the truth is, Great Britain is not spending anywhere near the sums she used to spend on her navy and is relying to a large extent on the American Navy to protect her dominions and colonies.

There is no doubt that, if American funds and American military forces are to be furnished in larger quantity than those of any other nation or combination of nations, then it is logical for American officers to be in command. But there's another and much more vital question. It is to what extent the policies of the United States must go along with the Imperialistic programs of the British in the Middle East.

The Iranian dispute is a case in point. Iran not only wants to nationalize her oil properties but she wants to reserve the right to operate them. The United States, through W. Averell Harriman, has been trying to mediate in the dispute. But it looks now as if the prolonged negotiations have been forced to a crisis point by the refusal of the British to give up an indirect hold on the Iranian oil fields. While there is an apparent desire on the part of the London government to accept the principle of nationalization, the way it works out Iran feels it will not have freedom of action in managing the property it now owns. Britain may soon withdraw her technicians. Does this mean American technicians must keep out?

Another question is: Will the United States become involved in supporting British policies in the Near East where the tales of exploitation of the impoverished peoples have long caused concern here and have added fuel to the Communist inflammatory attacks?

American oil companies in the Near East have pursued a far better policy than the British and have been willing to share on a 50-50 basis their revenues with the native owners. There are ways, of course, to resolve these oil crises but, if the United States is to put large forces in the Middle East, it will correspondingly introduce the query as to whether America should not have something to say about the British policies that are provoking discord now in Iran and may lead to Communist invasions later on.

It is doubtful whether the full meaning of the casual way the United States is being eased into more and more global responsibilities is fully realized by the American people—or by Congress.

News Columns Distorted To Serve Administration Propaganda Purposes

EXTENSION OF REMARKS OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. BUFFETT. Mr. Speaker, a recent distortion of news in the Washington Star, a paper with an historical reputation for fairness, indicates the alarming tactics of the attempt to shackle America with economic regimentation.

On August 11, a Star headline at the top of page 1 proclaimed, "Prices Turn up as Pressure on Controls Mounts." Following was an 8-inch news story to

the effect that the wholesale prices were turning up. The obvious effect of the story was to give people the impression that the new OPS law had promptly started prices up.

The next day, on page 18, section E, a small-type news item in the Star told a different story. That inconspicuous item on the financial pages recorded that the Associated Press weighted wholesale price index of 35 commodities had declined that week for the fifteenth week in a row. The following Tuesday a new 1951 low mark was reported.

COMMODITY PRICES

NEW YORK, August 14.—The Associated Press weighted wholesale price index of 35 commodities today declined to 191.72, new 1951 low. Previous day, 192.43; week ago, 192.25; month ago, 195.53; year ago, 184.61, based on 1926 as 100.

The contrast of emphasis in this second instance is also amazing. When the BLS wholesale index went up one-tenth of 1 percent in the week ended August 7, a headline on page 1 resulted. When a similar index made a new 1951 low mark 3 days later, the news was buried in small type on page 11.

Ill-conceived "scare stories" on page 1 may sooner or later cause another frantic scramble to turn money into goods. Such an hysterical rush now would serve well the collectivists, who want it so they can blame the rise on the price law passed by Congress—a non sequitur of the first order.

It is disturbing to find the Washington Star collaborating, undoubtedly innocently, in this evil strategy.

Unless sound money is restored, prices are going much higher. But the cause will not be the absence of allegedly strong controls, it will be the long-continued cruel and dishonest financial policy that generates unending inflation.

Help Liberate the Peoples of the Soviet Union—Peoples of the Soviet Union Back Move for a New and Positive Foreign Policy

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, on April 3, I introduced House Concurrent Resolution 89, and on April 17, I introduced House Concurrent Resolution 94, to assist in the liberation of the Russian and non-Russian peoples, respectively, of the Soviet Union from their present Communist enslavement and for the early restoration of their basic human rights and freedoms.

I wish to set forth herein excerpts from some of the many responses I have received to these resolutions:

CHICAGO, ILL., August 5, 1951.

Please accept our most heartfelt congratulations for submitting House Concurrent Resolution 94.

Your resolution, if acted upon, can be more powerful than a hydrogen bomb, 200 military divisions, or a 200-group Air Force.

PROKOP MATIJICW,

President, Organization for the Defense of the Four Freedoms for the Ukraine, Inc.

NEW YORK, N. Y., June 20, 1951.

Please accept our best thanks for sending us your concurrent resolution and for the CONGRESSIONAL RECORD and our sincere congratulations for the most excellent Resolution No. 89.

SERGE BELOSSELSKY,

President, Russian Anti-Communist Center.

CHICAGO, ILL., July 4, 1951.

This resolution is a great step toward helping the Byelo-Russians obtain their independence. The White Russian American National Council most heartily thanks you.

The name of CHARLES J. KERSTEN shall never leave the hearts of the Byelo-Russian people.

T. LOBATCH,

Secretary, White Russian American National Council.

CAMP ATTERBURY, IND., July 9, 1951.

From very good friend of mine in Detroit I got your address and had chance to read your very interesting and valuable CONGRESSIONAL RECORD.

You are really well informed about the life and condition behind the iron curtain. It makes me very happy that the people in Washington know the truth.

I am one of the non-Russian nationalities—Ukrainian. I was born there and I know all about Communist terrorism in Ukraine, therefore I would like to repeat again—your CONGRESSIONAL RECORD is very important and valuable bulletin.

In the service, in the colleges, and some other organizations I always have speeches about communism and the life in the best country in the world—Russia.

I would like to ask you kindly, if you can, to send to me some copies of CONGRESSIONAL RECORD. I will use it for my anti-Communist propaganda activity and to give to read for my friends in the service.

Pfc POTIENKO JURIJ.

MUNICH, GERMANY, June 8, 1951.

From the great public assembly of the Anti-Bolshevik Bloc of Nations (ABN) on June 3, 1951, in Munich we, the representatives of our oppressed nations and 2,000 participants of the assembly, send you our warmest thanks for the understanding and sympathy you have shown our hard struggle for freedom and the national rights of our nations.

FURST N. NAKOESCHIDN,

Anti-Bolshevik Bloc of Nations Central Committee.

EDINBURGH, SCOTLAND, July 16, 1951

We read with very great satisfaction your remarks on May 9 on Non-Russian People in U. S. S. R. Our Potent Ally in Defeat of Soviet Imperialism.

In June last year we called a Congress in Edinburgh of those who we knew were the actual delegates outside the iron curtain of the actual fighting men and women in the underground forces on the other side of the curtain. It did not obtain much support at the time, but it was the first time that any opportunity was given to these delegates to put their views before an English-speaking audience, and since then understanding and support have grown very largely and our views are now taken up in highly responsible quarters.

JOHN F. STEWART,

Chairman, Scottish League for European Freedom.

LACHEMONT, N. Y., April 23, 1951.

The Ukrainian officers and soldiers present you expressions cordial gratitude for your resolution.

Lieutenant General SHANDRUK.

COLUMBUS, OHIO, July 24, 1951.

A copy of your resolution of May 9 has been received and I want to commend you on it.

This is a fundamental step that is no doubt one of many that your Department of State should have been taking in order to assure world peace.

WILLIAM E. WARNER,
Executive Director for Civil Defense.

CHICAGO, ILL., July 15, 1951.

I thank you with all my heart for your the Kersten resolution, which I will always remember as the finest and most pleasant surprise I have met at my arrival to the United States of America.

Being deeply convinced in undeniable correctness of your resolution and of that the very greatness of our country is due in no small measure to its variety of the help to the subjugated nations by Russia especially to the Ukrainian.

JURIJ ARTIUSZENKO.

CAMBRIDGE SPRINGS, PA., May 1, 1951.

Please accept the profound thanks of all true friends of America for your Concurrent Resolution No 94 introduced into the House of Representatives on April 17, 1951.

By now it is obvious to most of us that we cannot win a global war with our own manpower. We must have the help of our friends in satellite countries and most of all in the Soviet Union itself. Your historic resolution, if carried into the field of American foreign policy would save many American lives and would win for us the victory.

ARTHUR P. COLEMAN,
President, Alliance College.

NEW YORK, N. Y., April 28, 1951.

Accept expressions deepest gratitude on behalf North Caucasian nationalities.

TAMERLAN SALATY.

BROOKLYN, N. Y., April 26, 1951.

The executive board and members of Byelo-Russian-American Association, in U. S. A., Inc., extend their spontaneous and whole-hearted congratulations to you on your Concurrent Resolution 94, submitted to the House of Representatives on April 17, 1951.

Unquestionable principles for which you stand have strengthened our hopes of early liberation of our people. We assure you that Byelo-Russian people will never forget your magnificent deed on its account.

NICHOLAS HOROSHKO,
Chairman, Byelo-Russian-American Assn., Inc.

MUNICH, GERMANY, July 11, 1951.

We would like to express our deep gratitude for your aid to the non-Russian nationalities of the Soviet Union, especially for your moral support.

Our people was the first of the non-Russian nationalities who initiated to fight against the bolshevism already in 1917 and they fought continuously for more than 3 years. This was not just the fight against the bolshevism but also against the power, which tried to destroy the young Cossack Republics of Don Kuban and Terek, established by the expressed wish of the Cossack people in December 1917. These three Cossack Republics unified on January 5, 1920, into a "Federation of Don Kuban, Terek, Steppe and Mountain peoples," called now by all Cossack patriots—Cossackia. But the Bolsheviks had overpowered our armies which have been forced to retreat to the Crimea

Peninsula and then as final result had no alternative left but to flee from the homeland and emigrate to Constantinople.

If there would be an all-out conflict against the Bolshevik, the Cossack nationalist fighters would be a powerful factor from out of all the other non-Russian nationalities of Soviet Union in the struggle against a common enemy and the free world must not overlook such an ally.

WASSILY G. GLASKOW,
President, Cossack Supreme Representative.

ANKARA, TURKEY, June 5, 1951.

I have brought the text of House Concurrent Resolution 94 to the attention of my compatriots with whom I am in contact. This resolution which emphasized that the Red Russian imperialism is a force that respects neither human rights nor liberties, and which proposed courageously and with understanding the measures necessary to save the civilized world, has evoked in each of us a profound sentiment of gratitude toward the author.

With all the nations slaves of Russia and in the name of the members of the National Movement of Azerbaijan, who for more than 30 years have been struggling against bloody communism threatening the whole world, and against Bolshevik genocide, for national independence, for the defense and revitalization of human rights, and the principles of the Atlantic Charter and the United Nations and for the high ideals of the western democracies I thank you very cordially and hope that your proposals may be accepted by the authorities of the United States.

MEHMET EMIN RESULZADE,
President, National Assembly of Azerbaijan.

LONDON, ENGLAND, May 29, 1951.

We have a copy of the concurrent resolution which you presented in the House on April 17, 1951, and which we understand referred to the Committee on Foreign Affairs.

May we take this opportunity to congratulate you most sincerely on the excellent presentation of policy which is concrete, to the point and very proper.

G. B. R. PANCHUK,
Ukrainian Canadian Committee.

PASSAIC, N. J., May 8, 1951.

I appreciate your Concurrent Resolution No 94 and wish for it the fulfillment.

Rev. NICHOLAS LEFETZKI,
Chairman, Byelo Russian-American Relief Committee.

SOUTH RIVER, N. J., May 7, 1951.

Byelo Russian Congress Committee of America presents our cordial expression for your resolution.

Dr. NICHOLAS SCORS,
President, Byelo Russian Congress Committee of America.

NEW YORK, N. Y., April 24, 1951.

On behalf of Russian scholars accept our heartfelt thanks for your resolution.

Professor STANKIEVICH,
President, Byelo Russian Scientific Society.

NEW YORK, N. Y., April 16, 1951.

We wish to thank you for a copy of your resolution. We fully agree with you that a free union of the American people and the peoples of the U. S. S. R. is a prerequisite for the successful outcome of the struggle against communism.

N. IRGIZOV,
Chairman, Association of Former Political Prisoners of Soviet Labor Camps.

MILWAUKEE, WIS.

The Wisconsin branch of the American-Ukrainian Congress Committee presents you our most sincere thanks for your excellent resolution regarding the oppressed nationalities of the Soviet Union.

G. K. PAWLATZ,
President, Wisconsin Branch, UCCA.

SAN FRANCISCO, CALIF.

The Ukrainian Congress Committee, San Francisco branch, extends you its heartfelt greetings and pledges support of your House Concurrent Resolution 94.

M. MELNIK,
President, San Francisco Branch, UCCA.

KANSAS CITY, MO., April 30, 1951

I am impressed with the text of your resolution (H. Con. Res. 89) and it would seem that you have well pointed up the real issues between the United States and Soviet Russia, together with a definite approach which should be made in solving these problems.

OMAR B. KETCHUM,
Director, Veterans of Foreign Wars of the United States.

MEXICO CITY, MEXICO, May 11, 1951.

May I, by these lines, extend to you my deep appreciation of and my gratitude for your interest and your effort for those who are suffering under the oppression of the Russian giant which, I am afraid, will be the same whatever the political system in Moscow.

H. J. PROCOPE,
Former Finnish Minister of Foreign Affairs and Envoy to Washington.

[From the weekly Posev (newspaper) of April 15, 1951, printed in Germany, circulated behind the Iron curtain]

Congressman KERSTEN submitted the House of Representatives of the United States a resolution requesting Congress to declare the friendship of the American people for the Russian people and to lend assistance to the Russian people in its fight against the Bolshevik enslavers.

As yet not the whole democratic world comprehends the problem in the same manner as does the author of the draft of the resolution concerning friendship for and assistance to our Nation. Not all see clearly as yet that only in this friendship and assistance lies the salvation of the world from the threat of Communist slavery, from the horrors of a new war. It is not yet generally understood that one cannot light-heartedly enjoy freedom and well-being as long as hundreds of millions of men live in misery and slavery.

It is up to us to promote in every possible way the victory of the only true outlook on the future of mankind. Freedom and peace cannot exist only for a portion of mankind.

One conclusion only can be drawn from what we have said before. The nations under the yoke of communism must be given every possible help in their struggle for liberation. Such help must come as soon as possible, fully and with the time when complete victory of freedom will be forthcoming. One cannot stop half way.

If KERSTEN's resolution will be passed communism will be dealt one of the severest blows ever suffered.

Yet this is not enough. The Russian people must know not only that friendship is being expressed but also that it is given factual assistance. The assistance the Russian people need most is the help to the revolutionary forces which are engaged in the struggle against the Bolshevik dictatorship. The American Nation has the duty to lend assistance to these forces because their struggle is the concern of the entire world.

Every free and freedom-loving nation is under the obligation to support our Nation in its struggle. Words of friendship and of recognition must be endorsed by deeds.

The Halogeton Menace

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, August 23, 1951

Mr. MALONE. Mr. President, recently Senate bill 1041 was passed by the Senate, after being reported from the Committee on Interior and Insular Affairs, with reference to the poisonous weed known as halogeton, which is spreading through the eastern part of Nevada and parts of Utah, Idaho, and other States. A certain amount of money was appropriated to eradicate this weed.

I ask unanimous consent to have printed in the Appendix of the RECORD a joint statement by the Nevada State Farm Bureau and the Nevada State Cattle Association with reference to this subject.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE HALOGETON MENACE—JOINT STATEMENT,
NEVADA STATE FARM BUREAU, NEVADA STATE
CATTLE ASSOCIATION

RENO, NEV., August 1, 1951

The poisonous weed Halogeton is spreading throughout the State of Nevada and surrounding States at an alarming rate. In 15 years of reported history it has been discovered in ever larger stands in widely divergent areas.

Along the highways, byways, roads, and wherever disturbed earth furnishes a receptive bed to the wandering seed this poisonous weed flourishes to threaten the livestock of the area.

We the farmers and ranchers of Nevada are aware of our responsibility to warn the Nation of this creeping danger. We do not wish to cause undue alarm as losses from Halogeton poisoning to date have not yet assumed the proportions of a disaster, although they have been severe in certain localities. However, if geometric expansion is allowed to continue and changing conditions such as drought or unforeseen circumstances in varying regions may multiply its threat to our national meat and wool supply.

It is our considered opinion that now is the time to halt the spread of this dangerous weed. A program for the eradication of Halogeton now may do the job that one 10 times its size would fail to accomplish in a few short years.

Our recommendation does not include the establishment of new agencies or bureaus to be supported by tax moneys or to expand into various projects of a continuing nature. We believe that existing agencies are fully qualified to do the job on a short-term basis with additional funds earmarked for the specific purpose of Halogeton control.

RUDOLPH H. SCHWARTZ,
President, Nevada State Farm Bureau.

FRED H. DRESSLER,
President, Nevada State Cattle Association.

Lustron-Commercial Home Equipment Deal

EXTENSION OF REMARKS

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. MEADER. Mr. Speaker, on April 19, 1950, the Reconstruction Finance Corporation formally submitted to the Department of Justice evidence of a \$500,000 mail fraud and asked for prosecution. The RFC said the fraud took place in the execution of a contract between the Lustron Corp. and the Commercial Home Equipment Corp. of Chicago.

I can find no evidence of any action on this request by the Department of Justice.

On August 11, 1950, the Fulbright committee of the Senate filed a report recommending that the Department of Justice investigate the Lustron-Commercial Home Equipment deal.

Again, I can find no indication of any action by the Justice Department.

On June 28, 1951, interested in the matter because I was formerly counsel for the Fulbright committee, I wrote the Justice Department and asked for a report on any action "taken or contemplated by the Department of Justice with respect to the recommendation" of the Fulbright committee.

On July 11, the Justice Department finally answered my letter. Deputy Attorney General Peyton Ford said an investigation had recently been completed and an examination of the voluminous investigative reports is now under way.

I believe that the handling of the Lustron-Commercial Home Equipment investigation should be probed by Congress. In an effort to initiate such a probe, I have written to the chairman of the House Judiciary Committee, the House Committee on Expenditures in the Executive Departments, the Senate Judiciary Committee, and the Senate Committee on Expenditures in the Executive Departments. In these letters I have attempted to bare the record of 17 months of procrastination by the Justice Department. I have called attention to unusual pressures which were brought to bear on the members of the Fulbright committee on behalf of the individuals involved in the Commercial Home Equipment Corp. and said:

I do not believe that I am merely engaging in wild speculation when I say that I suspect similar efforts have been made with respect to the investigation and action by the Department of Justice.

Mr. Speaker, I believe that all Members of the House should know the facts connected with the Lustron-Commercial Home Equipment Corp. mail-fraud case and so that they may have an opportunity to learn of them, I would like to include as a part of remarks, my letter to the Attorney General of June 28, the Justice Department reply of July 11, and

the letter to the four congressional committees dated August 21:

DEPARTMENT OF JUSTICE,
Washington, July 11, 1951.

HON. GEORGE MEADER,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: This is to acknowledge your letter of June 28, 1951, asking to be informed of the action taken by this Department with respect to the recommendations of the Reconstruction Finance Corporation Subcommittee of the Senate Committee on Banking and Currency as contained in its preliminary report of April 19, 1950, a copy of which was made available to this Department. As you state, the mentioned report of the committee called attention to the half-million dollar mail fraud alleged to have been perpetrated on the Lustron Corp., growing out of the transportation contract that company had with the Commercial Home Equipment Corp.

Based on the information supplied in the committee's report, as well as that obtained through other sources, an investigation was requested to be made by the Federal Bureau of Investigation. That investigation has recently been completed and an examination of the voluminous investigative reports is now under way. When that review is completed and the evidence evaluated, a decision will be made regarding criminal prosecution. You will be informed of the Department's decision in this matter.

Yours sincerely,

PEYTON FORD,
Deputy Attorney General.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., June 28, 1951.

HON. J. HOWARD MCGRATH,
Attorney General of the United States,
United States Department of Justice,
Washington, D. C.

DEAR MR. MCGRATH: On August 11, 1950, the Reconstruction Finance Corporation Subcommittee of the Senate Committee on Banking and Currency filed its report on the Lustron Corp. transportation contract. This report was based upon public hearings held June 26 to 30, 1950, subsequent to executive hearings and staff investigations. This matter was first brought to the attention of the committee by the Reconstruction Finance Corporation Investigation Division. On April 19, 1950, a preliminary report was furnished to that committee. This report, in effect, charged that a half-million dollar mail fraud had been perpetrated in connection with the Lustron Corp. transportation contract.

The same report was furnished at the same time to the Department of Justice.

The committee's report referred to above recommended as follows:

"1 The subcommittee does not undertake to pass upon the legal consequences of the evidence. That task is one for the Department of Justice. The Department of Justice should therefore promptly investigate the circumstances surrounding the transportation arrangement between Commercial Home Equipment Corp. and the Lustron Corp. for the purpose of ascertaining whether there is probable cause to believe that an offense has been committed against the laws of the United States."

As you probably know, I served as counsel for the Fulbright committee at the time of the hearings and the report referred to above.

I would appreciate your informing me of the action taken or contemplated by the Department of Justice with respect to the recommendation of the committee quoted above.

Sincerely,

GEORGE MEADER.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., August 21, 1951.

Hon. EMANUEL CELLER,
Chairman, House Judiciary Committee,
Hon. WILLIAM L. DAWSON,
Chairman, House Committee on Ex-
penditures in the Executive Depart-
ments,

Hon. PAT MCCARRAN,
Chairman, Senate Judiciary Commit-
tee,

Hon. JOHN L. MCCLELLAN,
Chairman, Senate Committee on Ex-
penditures in the Executive Depart-
ments

MY DEAR COLLEAGUES: I wish to bring to your attention a situation in the Department of Justice which I believe merits exploration by the Congress. I am addressing this letter to the Judiciary Committees of the House of Representatives and the Senate and the Expenditures Committees of the House of Representatives and the Senate because, in my judgment, all of those committees have jurisdiction over the subject matter, and it is my hope that at least one of the committees will take sufficient interest to pursue this investigation.

April 19, 1950, the Investigations Division of the Reconstruction Finance Corporation formally referred to the Department of Justice for prosecution an instance of a half-million-dollar mail fraud. The Reconstruction Finance Corporation charged this fraud had been perpetrated in connection with the Lustron Corp. transportation contract with the Commercial Home Equipment Corp., of Chicago, Ill.

The alleged fraud consisted in false representations by Commercial that it had furnished 200 tractors to Lustron whereas, in fact, it had furnished only 160. Rental payments of minimum monthly amounts were based on the number of truck-tractors furnished.

This matter subsequently was investigated by the Fulbright committee of the Senate through preliminary staff investigation, executive hearings, and public hearings. August 11, 1950, the Fulbright committee filed a report recommending that the Department of Justice investigate this case for the purpose of determining whether or not an offense had been committed against the laws of the United States.

It was my privilege to serve as counsel for the Fulbright committee at the time of this investigation of the Lustron Corp.-Commercial Home Equipment Corp. transportation contract. I continued to follow the matter informally from time to time to ascertain what progress was being made by the Department of Justice. Finally, on June 28, 1951, I addressed a formal inquiry to the Attorney General of the United States, a copy of which is attached hereto. On July 11, 1951, Peyton Ford, Deputy Attorney General, acknowledged my inquiry. A copy of his letter likewise is attached hereto.

I am not one to minimize the difficulty of examining the facts in preparation for a criminal prosecution. I favor careful and thorough investigation before a case is presented to a grand jury. However, it would seem on the surface that 16 months would be adequate time within which the Department of Justice could complete its investigation, and either proceed to present the matter to a grand jury or else determine that there was no probable cause to believe that a criminal offense had been committed.

This is particularly true when it is considered that the Department of Justice has had the advantage of outside investigative work. The Investigations Division of the Reconstruction Finance Corporation employed the talents of at least three able investigators over some period of time. The Fulbright committee staff developed additional facts.

Further documentary evidence and testimony was accumulated in the executive hearings and public hearings of the Fulbright committee. All of this material was made available to the Department of Justice. I would doubt that there are very many cases before the Department of Justice which have been so completely documented by outside sources as the instant matter.

There are additional circumstances which seem to me to indicate that what appears to be delay and procrastination on the part of the Department of Justice is not wholly ascribable to the difficulty of the case. I believe these matters should be called to the attention of your committee.

1. Although the Reconstruction Finance Corporation formally urged the investigation by the Department of Justice on April 19, 1950, no action was taken on that request until the Fulbright committee announced its intention of holding public hearings on the Lustron Corp.-Commercial Home Equipment Corp. transportation contract on Friday, June 23, 1950. On this date, the Department of Justice, through Mr. Peyton Ford, Deputy Attorney General, advised the Fulbright committee informally that the alleged mail fraud in the Lustron Corp. transportation contract was being referred to the Federal Bureau of Investigation for investigation. At the same time, he requested the Fulbright committee to suspend its public hearings on this subject. The Fulbright committee arranged to hear the representative of the Department of Justice in executive session but refused to call off its hearings. Monday, June 26, 1950, Mr. Raymond Whearty appeared before the Fulbright committee in executive session and advanced his reasons on behalf of the Department of Justice why public hearings on this matter should not be held. The committee decided to proceed with its hearings, which were held during the entire week commencing June 26, 1950.

2. During the preparation and consideration of the report, unusual pressures were brought to bear upon the members of the Fulbright committee and the members of the Fulbright committee staff by and on behalf of the individuals involved in the Commercial Home Equipment Corp. and their attorney, Mr. Joseph E. Casey. These pressures, I am proud to say, did not succeed in suppressing the committee's report, nor in softening the language of that report, although the report was somewhat delayed and the members of the committee and the staff leaned over backward to avoid any reflection upon the individuals or upon the Commercial Home Equipment Corp. not fully substantiated by the facts in the committee's record.

Having witnessed these efforts, through political influence, to affect the action of the Fulbright committee, I do not believe that I am merely engaging in wild speculation when I say that I suspect similar efforts have been made with respect to the investigation and action by the Department of Justice. It is this aspect of the matter which, in my judgment, warrants the attention of the Congress.

One of the foundations of any social organization is confidence in the integrity of its rules of conduct and the agency responsible for enforcing observance of those rules of conduct. The Department of Justice holds this responsibility with respect to the Federal Government. It is idle to talk of establishing a code of ethics for the conduct of Government officials if the criminal laws of the United States are permitted to be flouted with impunity. It is essential that the Department of Justice act vigorously, forthrightly, and promptly in the prosecution of offenses against the United States.

I sincerely hope that any congressional investigation will disclose that the Depart-

ment of Justice is meeting these responsibilities. However, from the facts and circumstances I have recited, and from the public record and the report of the Fulbright committee on this subject, it seems to me that sufficient doubt is raised to warrant congressional exploration.

The Department of Justice may be able to satisfy any thorough, impartial congressional inquiry that its handling of this matter has been exemplary. If that is so, a public service will have been done by dispelling the doubt in the minds of the American people which naturally arises when the Department of Justice permits 16 months to elapse without taking action after responsible Government agencies have formally and solemnly urged investigation with a view to prosecution.

I wish to assure any committee undertaking this matter of my full cooperation in assembling all facts pertinent to the inquiry. A copy of the Fulbright committee hearings and report are enclosed herewith.

Sincerely,

GEORGE MEADER.

Tidelands

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. HÉBERT. Mr. Speaker, one of the finest jobs being done in American journalism today is being done by two great New Orleans newspapers, the Times-Picayune and the New Orleans States.

These two newspapers are in the forefront of the fight to prevent the theft of the tidelands of this country by the Federal Government. From time to time the ace reporters of these great newspapers have been assigned to write stories about the machinations and chicanery behind the proposed tidelands grab. From time to time I have brought these pieces to your attention.

Today I direct your attention to two editorials which have appeared in these newspapers. From the editorial side they present undisputable logic and inevitable conclusions as a result of a recent story on the tidelands grab, which appears elsewhere in the CONGRESSIONAL RECORD of today.

The editorial from the New Orleans States is entitled "The Case of the Cooperatives," and the editorial from the Times-Picayune is entitled "Tideland Grabbers Multiply."

I commend both of them to you for your study:

[From the New Orleans States]

THE CASE OF THE COOPERATIVES

In the mind of the average person, a cooperative is a nonprofit enterprise entered into by a small group of farmers, say, to pool their resources and market their goods. Or an arrangement whereby they purchase together machinery none would be able to purchase alone. A co-op can buy seed in bulk, or feed or tools or fertilizers.

Generally speaking, co-ops are nonprofit making and they pay no taxes. Still generally speaking, the money they make is paid

out to members as dividends on shares. That makes them nonprofit.

That is what people think of when they hear of co-ops.

But there are co-ops and co-ops.

The Sunday paper, in a story by Mr. David Kleck, oil editor of the Times-Picayune New Orleans States, told us the story of a co-operative, headed by Mr. Howard A. Cowden, of Kansas City, Mo., which is doing its best to grab off large portions of the tidelands of Louisiana if the rape of States' rights plotted by the Fair Deal centralized Government proponents is not stopped by the Congress. This cooperative is named the Co-operative Refinery Association.

Mr. Cowden is also president of the Consumers Cooperative Association, domiciled in Kansas City.

This cooperative operates in Missouri, Kansas, Iowa, North Dakota, South Dakota, Nebraska, Oklahoma, Colorado, and Wyoming.

It owns in the neighborhood of 1,000 oil wells.

It owns around 1,000 miles of pipeline.

It operates four oil refineries and has an interest in a fifth.

And it doesn't pay taxes.

Oil, however, is not the only interest of this giant tax-free enterprise. It also mills lumber. It manufactures fertilizer. And it is in the wholesale business, selling to its local member co-ops groceries, farm machinery, motor-car tires and accessories.

This behemoth business, composed of 1,500 local cooperatives in 9 States, is only 1 of 18 farmer cooperatives which are laying siege to Louisiana's tidelands as well as those of Texas. These cooperatives claim a fair and equitable portion on the marginal seas in order—as Representative Charles LaFollette of Indiana said on the floor of the House—not to “deprive the farmers of Indiana and of the 32 other States involved . . . of their share in that wealth and of their right to join together cooperatively in its development.” Their idea of a fair share was 1,800 square miles.

This legal tax dodger is connected with other interlocking co-ops. Their webs stretch from Canada to the Mexican border, from ocean to ocean, dodging taxes all the way. They exist, legally, without paying taxes. Their share of the costs of Government, costs of defense, costs of European aid, costs of welfare, are paid by other businesses, large and small, and individuals who cannot escape through the cooperative dodge.

Cooperatives are big business. As an example Mr. Cowden's Kansas City Consumers Cooperative did \$62,428,460 business last year, expected to have done \$75,000,000 as of the end of its fiscal year August 1.

How much business can you do without paying taxes?

[From the New Orleans Times-Picayune]
TIDELANDS GRABBERS MULTIPLY

The attempted Federal grab of the tidelands to which the coastal States have held constitutional and judicially confirmed title for more than a century, has generated an army of civilian grabbers for leases to these areas. Their activities, described in yesterday's Times-Picayune New Orleans States, supply a fantastic sequel to the all-but-incredible adventure launched by Interior Department bureaucrats. Private applications for leases on the oil-bearing offshore areas are being filed by individuals, organized groups, and even by “farmers' cooperatives” whose lawyers claim the Federal Government must hand them out to speculators lured by dreams of easy profits running high into the millions.

It is stated that the coastal areas of California, Louisiana, and Texas have been blanketed by these claims. Filings cover, for

example, the entire 811 miles of water front of Long Beach, Calif., and likewise all of that municipality's harbor facilities and recreation and park improvements, constructed by the city at a cost exceeding \$25,000,000. Oil developments on which hundreds of millions have been invested under State leases are demanded by the private grabbers from the Federal grabbers, under an act permitting leases at 50 cents per acre.

It is noted further that former Secretary of the Interior Ickes, who helped engineer the Federal tidelands grab, now supports the lease claims of private speculators. Other former Federal officials, including an ex-United States Senator, are connected with this greedy scramble which might, if successful, dwarf in its easy-profits killings that earlier product of Federal maladministration, the Teapot Dome scandal.

Whether child or parent of the Federal grab, this huge private-grab project obviously is violative of sound public policy and destructive of the public interest. Its exposure should insure prompt enactment of the measure already passed by the House to restore the tidelands to the States whose titles and rights to them were constitutionally established and steadily maintained by the land's highest Court from the Republic's beginning until a few years ago.

Common Sense Ideas for Flood Prevention

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. SCHWABE. Mr. Speaker, we have had so many recipes, prescriptions, and theories handed to us on the subject of flood control during recent years, that I fear we have almost lost sight of what is really involved. Sometimes we can listen to the scientists and the experts so much that we fail to see the fundamental concepts to be considered. We may not be able to see the woods for the trees.

I am not so much interested in flood control as I am in flood prevention. If we are to conserve the precious soil up on the watershed on the uplands and the slopes, we must take those steps which will result in contour farming, terracing, gulley plugging, and the damming of the branches, creeks, and small streams, tributary to the larger streams. The trouble has been that apparently we have begun at the wrong end of the stream. We have constructed large dams, which inundate and put out of production forever so much of the best land and the most highly productive lands of the country.

If we begin up on the watershed and conserve both the precious soil and the moisture, we can prevent to a remarkable extent the occurrence of floods downstream, and we can almost assuredly prevent flood disasters on a large scale. It does look like poor judgment to take out of production the best land in order to put some of the marginal and submarginal lands into production, when we know that we can depend upon a reasonable return and in most instances

a bountiful return from the fertile bottom lands along the larger streams, if we prevent floods from above. But the marginal and submarginal lands must constantly be treated, petted, pampered, and then we cannot count upon bountiful yields such as we can obtain from the rich bottom fields downstream.

Hence I say we should use common sense ideas for flood prevention. I realize that this will not result in the construction of large dams downstream which may serve as monuments to the memory of dead engineers or politicians. But it will surely be to the best interests of the people as a whole and will insure the expenditure of the taxpayers' dollars in places and in the manner that will produce the best results in the long run.

The following is a very interesting, illuminating and convincing letter which I received from the Konawa Lions Club of Konawa, Okla. It shows that this group has the proper understanding and conception of what should be done. They compare the results of constructive thinking and efforts where flood prevention has been begun and installed on the watershed, with the improper method of constructing large dams downstream, resulting in such serious mistakes, and they point out vivid instances and illustrations in our own State of Oklahoma. I trust that this letter will be read with much interest and edification by all who are interested in the problem of genuine flood prevention:

KONAWA, OKLA., July 31, 1951.

HON. GEORGE B. SCHWABE,

Member of Congress,

Washington, D. C.

DEAR MR. SCHWABE: You are familiar with the tremendous losses in northern Oklahoma and eastern Kansas resulting from the recent rains. Newspapers in Oklahoma recently quoted the Corps of Army Engineers as stating such losses could have been avoided had the Congress provided sufficient funds, to the amount of hundreds of millions of dollars, to construct necessary big dams for flood control. You will likely be called upon in the near future to use your influence and cast your vote toward appropriating huge sums of money for such a needless expenditure. The experience of Miami, Okla., proved that construction of big dams did not avert flood damage. Release of the floodwaters from Canton Dam in the North Canadian River has resulted in more crop damage and damage to highways than was experienced before the dam was constructed for flood-control purposes.

Before you cast your vote to spend a lot more of the taxpayers' money for something that will be only a mud flat in 20 years, as one Army engineer described the proposed Eufaula Dam, we urge you to give serious thought to the real flood-control program as established on Cloud Creek in Washita County, Mill Creek in Johnston and Murray Counties, East Owl Creek in McClain County, Sandstone Creek in Beckham and Roger Mills Counties, and Barnitz Creek in Custer County. All of these watersheds received more than twice the rainfall as watersheds where extensive engineering structures failed to control floods and still none of these watersheds suffered any flood damage. Also, adjacent untreated watershed, with similar slope, erosion, soil, and farming conditions, were severely damaged by flood conditions. Further, large structures result in inundations of some of the most fertile farm lands in the world, while the agricultural flood-control program that is being established on

the Washita River watershed protects the fertile bottom soils for continued production at a much less cost of taxpayers' money for each acre protected. Some would have us believe that time is too short for watershed treatment for flood control and that big dams are the only alternative. We believe if you will compare time used in the two treatments that you will find very little difference in total time necessary to establish control.

We urge that you use your influence to appropriate the taxpayers' money for flood control by treating the watersheds where the floods originate and not wait until the uncontrolled waters are in the major streams.

Sincerely,

KONAWA LIONS CLUB,
JACK DAVIS, *President*.
BURWELL M. BATES,
Secretary

Truman's Way

EXTENSION OF REMARKS OF HON. CLARENCE J. BROWN

OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 23, 1951

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a recent issue of the Wall Street Journal:

TRUMAN'S WAY

EDITOR, THE WALL STREET JOURNAL:

In recent months we have heard a lot of criticism of the Congress for not letting Truman have his way. In the words of the "Happy Warrior," let us look at the record and see what would have happened to our country if Congress had given Truman everything he asked for.

If Truman had had his way, every farm in America today would be operating under the Brannan plan—socialized agriculture. If Truman had had his way, the country would today be saddled with socialized medicine under that great medical genius, lawyer, Oscar Ewing.

If Truman had had his way, under his four point program, every nation in the world would today have a direct call on the United States treasurer for technical assistance and economic development loans.

If Truman had had his way, there would today be no Taft-Hartley provision requiring official registration of Communists and labor unions.

If Truman had his way, every major river in America today would be a part of some TVA with State and local government submerged by Federal bureaucrats.

If Truman had his way, every school in America would today be under direct supervision of the Washington bureaucracy—socialized education.

If Truman had his way, there would have been no investigation of communism in the State Department and other Federal agencies. His red herring statement of August 1948 would have ended the Alger Hiss case.

If Truman had his way, total Federal spending since 1946 would have been about \$75,000,000,000 more than it has been to date. That is the accumulated cost of all the new programs Truman proposed which were turned down by a resolute and wise Congress.

Had it not been for the defenders of constitutional government in the House and the Senate Truman would have had his way in all these things. He urged each of these programs at least once; some several times.

GEORGE E. STRINGFELLOW.

WEST ORANGE, N. J.

Division of Water Between the United States and Canada

EXTENSION OF REMARKS

OF

HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. D'EWART. Mr. Speaker, I think I should call to the attention of the Congress a development that has come to my attention in our negotiations concerning division of water between the United States and Canada along the border north of Montana.

The government of the Province of British Columbia in a statement: "In the matter of the application of the Government of the United States to the International Joint Commission dated January 12, 1951, for approval of the construction and operation of the Libby Dam and Reservoir on the Kootenay River near Libby, Mont., March 8, 1951," requests that any order of approval should include certain conditions, one of which is:

(c) That in recognition of the physical contribution of British Columbia to the project, there shall be delivered from the power developed as the result of the proposed works to a point on the British Columbia border for use in British Columbia such amount of electrical energy as the Commission shall deem appropriate.

I have information that the Province of British Columbia, in recognition of its physical contribution to the Libby Dam and Reservoir, expects to demand under this provision one-third of the electric power generated at the Libby project. Such a grant of power to Canada would be contrary to the best interests of the State of Montana, the United States which is making such a huge investment, and contrary to existing law.

I would further like to call the attention of the Congress to an extract from the Calgary-Albertan entitled "Across the Divide," dated July 25, 1951.

Three power projects have been considered above the Grand Coulee. One, on the Kootenai at Libby in the extreme northwest corner of Montana, has already been approved by engineers and only a few political considerations stand in the way of actual construction. The Libby Dam would form a lake reaching far up the Kootenai River and extending 42 miles into British Columbia to a point near Cranbrook. More than a quarter of a million horsepower would be developed, a third of it earmarked for British Columbia. Fifteen thousand would be a gift, another 73,000 at a very cheap rate. Final terms are now being negotiated.

Mr. Speaker, let me especially call your attention to the above article. You will note it says:

Final terms are now being negotiated.

I would like to call attention to certain facts that have been brought to light in these negotiations which are exceedingly disturbing.

First, the Province of British Columbia has asked to be paid in power rather than in money as recompense for the

utilization of her natural resources. Heretofore, it has been the policy to make settlement in such cases by cash payments—never by the allocation of a block of power.

Second, section 5 of the Flood Control Act of December 22, 1944, reads, in part, as follows:

Electric power and energy generated at reservoir projects under the control of the War Department and in the opinion of the Secretary of War not required in the operation of such projects shall be delivered to the Secretary of the Interior, who shall transmit and dispose of such power and energy in such manner as to encourage the most widespread use thereof at the lowest possible rates to consumers consistent with sound business principles, the rate schedules to become effective upon confirmation and approval by the Federal Power Commission. Rate schedules shall be drawn having regard to the recovery (upon the basis of the application of such rate schedules to the capacity of the electric facilities of the projects) of the cost of producing and transmitting such electric energy, including the amortization of the capital investment allocated to power over a reasonable period of years. Preference in the sale of such power and energy shall be given to public bodies and cooperatives.

Granting a third of the power generated at Libby Dam to Canada as indemnity would be contrary to this provision of law.

Further, Public Law 329, Seventy-fifth Congress, chapter 720, first session, section 4, reads as follows:

In order to insure that the facilities for the generation of electric energy at the Bonneville project shall be operated for the benefit of the general public, and particularly of domestic and rural consumers, the Administrator shall at all times, in disposing of electric energy generated at said project, give preference and priority to public bodies and cooperatives.

Again, in this section, in the Bonneville Act, there is a definite mandate that the project shall be operated for the benefit of the general public, and particularly of domestic and rural consumers. That the Administrator shall at all times, in disposing of electric energy generated at said project, give preference and priority to public bodies and cooperatives.

This section of the law would be violated in the granting of one-third of the power of Libby Dam to the government of the Province of British Columbia.

Article VIII of the treaty between the United States and Great Britain relating to boundary waters and questions arising between the United States and Canada states, in part:

In cases involving the elevation of the natural level of waters on either side of the line as a result of the construction and maintenance on the other side of remedial or protective works or dams or other obstructions in boundary waters or in waters flowing therefrom or in waters below the boundary in rivers flowing across the boundary, the Commission shall require, as a condition of its approval thereof, that suitable and adequate provision, approved by it, be made for the protection and indemnity of all interests on the other side of the line which may be injured thereby.

It is not contemplated that in carrying out this provision of the treaty there should be a violation of either the Flood Control Act of December 22, 1944, or Public Law 329, Seventy-fifth Congress.

The Department of the Army, Office of the Chief of Engineers, under date of December 1, 1950, submitted to the Secretary of State a report on the proposal for construction of the Libby project. On page 6 of this report, the Libby project is described as follows:

The Libby Dam site is located about 11 miles upstream from Libby, Mont., at river mile 213. At this site and for a great proportion of the length of the proposed reservoir, Kootenai River flows in a deep U-shaped rock-walled canyon.

A project at this site, as constructed to the forebay elevation of 2,459, as recommended by the International Columbia River Engineering Board, would create a reservoir approximately 100 miles long and from one-half to one and one-half miles wide. The reservoir would extend 42 miles into Canada, to the tailwater of the Bull River Dam site, which is about 5 miles upstream from Wardner, British Columbia. With a full Libby Reservoir, the depth of water at the international boundary would be 150 feet. The reservoir will occupy approximately 51,500 acres, of which 17,700 acres are in Canada. Improvements in the United States portion of the reservoir are a transcontinental railroad, a State highway, a few logging communities, and a few farms. In the Canadian portion the reservoir would flood a few small communities and farms, and some secondary roads. In addition, it would necessitate the raising of the Canadian Pacific Railway Crows Nest line and No. 3 Highway for short distances. The reservoir would have a gross storage capacity of 6,730,000 acre-feet, of which approximately 1,000,000 acre-feet would be in Canada. The usable storage capacity at 35-percent draw-down (128 feet) would be 4,620,000 acre-feet, of which 980,000 acre-feet would be in Canada.

The report goes on to say that there will be a power installation of 10 units of 103,000 kilowatts each, or a total installation of 1,030,000 kilowatts. The estimated cost of the construction is \$242,000,000, of which approximately \$5,500,000 is the estimated cost of providing the portion of the reservoir in Canada, and approximately \$236,500,000 is the cost of the dam and the portion of the reservoir in the United States.

With regard to flood controls, the report says that flood-control benefits from the project are estimated at \$1,165,000 annually in the United States and \$30,000 annually in Canada. The estimate of the flood-control benefits in Canada is confined to estimated reduction in pumping and maintenance costs in existing diked areas, and is based on an assumption, by Canadian authorities, that the existing dikes give essentially complete flood protection.

Page 8 of the report states:

In summary, the effects of the Libby project in Canada which are particularly pertinent to consideration of this application are that the water surface at the international boundary would be raised approximately 150 feet and the reservoir pool would extend into Canada some 42 miles, inundating 17,700 acres of Canadian land, displacing the population of a few small communities and farms, and requiring short lengths of a main railway line and highway to be raised. The project would provide benefits in Canada by almost entirely eliminating flood damages along the Kootenay upstream from Kootenay Lake and by making possible an increase in power output along the lower Kootenay of 172,000 kilowatts. The estimated annual monetary benefits in Canada are \$4,502,000. In addition, the regulation and stabilization of stream flows should

provide substantial intangible and unevaluated benefits throughout the affected area.

In other words, the benefits to Canada because of the construction of this dam are very material. The demand of the Province of British Columbia of one-third of the power generated at Libby Dam would be in addition to the benefits mentioned in the Army engineer's report.

This grant of power, in addition to other benefits, is unjustified.

Mr. Speaker, the granting of any such terms by the United States to Canada, as I have indicated, is contrary to the best interests of the United States, contrary to precedent, and I feel very strongly should be opposed by the American section of the Joint International Commission representing the United States. It will, I am sure, be opposed by the citizens of Montana.

It is my belief, Mr. Speaker, that this whole matter should be examined carefully before it proceeds further and that it should be made clear to our friends across the border that such terms as they demand would be unlawful and that our Government, under existing law, does not have the authority to concur in such terms.

Mr. Speaker, I sincerely hope the Secretary of State will take note of these negotiations and adequately protect the best interests of the United States, by supporting Senator Stanley and the American section of the International Joint Commission in their efforts to protect the interests of our country.

MacArthur

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. KENNEDY. Mr. Speaker, I have been requested by one of my constituents, William H. McMasters, of Cambridge, Mass., who is a former newspaperman and presently an instructor in journalism at Mount Ida, in Newton, Mass., to insert in the CONGRESSIONAL RECORD the following lines which he has written, and which were published in the Boston Evening Globe on July 25, 1951:

MACARTHUR

Serene and dignified, he stands erect
Amid vast throngs who wildly cheer his name.

Like some sequoia, calm and proudly decked,
He wears his silver stars that but proclaim
The fulgent service of a soldier, brave
And unafraid to speak the truth for all
His countrymen to hear While critics rave,
He smiles, unmoved, his back against the wall.

Deep planted in his patriotic soul,
He knows that blood-cemented wall is strong,
Built stone on stone, a bulwark and a goal
That holds the line where right shall challenge wrong.

God grant his strength that he do well his part

To flood the life-tide of our Nation's heart.

—William H. McMasters.

Supreme Court's Problem With Relation to the Public Schools

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. DAVIS of Georgia. Mr. Speaker, pursuant to unanimous consent granted, I insert an article by Hon. Durwood T. Pye, a member of the Atlanta bar, entitled "The Supreme Court of the United States Problem With Relation to the Public Schools."

Mr. Pye is a prominent member of the Atlanta, Ga., bar, where he has practiced law since his admission to the bar in 1929. He has served as assistant solicitor general of the Atlanta judicial circuit, and as assistant county attorney for Fulton County.

Mr. Pye has also served in the capacity of law school lecturer and is the author of papers dealing with the Georgia law of negotiable instruments and the Georgia law of corporations.

The article above referred to is as follows:

THE SUPREME COURT OF THE UNITED STATES
PROBLEM WITH RELATION TO THE PUBLIC
SCHOOLS

(By Durwood T. Pye, of the Atlanta bar)

In the recent book by Prof. Mitchell Wendall (Columbia University Press, 1949) entitled "Relations Between the Federal and State Courts," attention is called to the neglect heretofore given the governmental significance of the Federal court system.

This neglect is now being rapidly dissipated in the South. The recent decisions of the Supreme Court of the United States upon the subject of public schools and colleges focused attention upon the governmental significance of the Supreme Court of the United States. This tribunal has become public problem No. 1.

The decisions referred to are those in the cases of Sweatt against Painter et al and McLaurin against Oklahoma State Regents for Higher Education et al, both decided June 5, 1950.

In the Sweatt against Painter case Negroes were ordered admitted to the University of Texas Law School (established for white students) although the Court of Appeals of Texas and the Supreme Court of Texas had adjudicated that the privileges, advantages, and opportunities for the study of law afforded white students at the University of Texas Law School were substantially equaled by those afforded Negro students at Texas State University for Negroes.

In the McLaurin case the Negro student there involved received the same instruction, from the same professors and the same books and at the same time and place, as the white students. He was merely required to observe separate seating and eating arrangements.

These decisions make plain the purpose of the Supreme Court of the United States: to require that there be no separate education of the white and colored races in public schools and colleges; to require that the two races be integrated in such institutions; that only mixed schools of the white and colored races may be maintained and supported by the States. Or to put it more concretely, separation of the races by law is forbidden, there must be a forcible amalgamation of the races, and we will begin at the most effective point.

This construction of these decisions is that adopted by the Democratic Party of Georgia in its resolution of August 9, 1950, refusing to abide by the same, in which it was stated: "Under the doctrine of these decisions the races must be educated together in the public schools beginning with the first grade."

This is the same construction as that of the Harvard Law Review (vol. 64, No. 1, p. 130) in which it is stated: "If the approach adopted by the Court is consistently followed, it would seem unlikely that equality will be found to exist under any system of mandatory segregation."

And this is precisely the construction placed by the Supreme Court of the United States upon its own decisions in these cases, for in the *McLaurin* case it says: "We hold that under these circumstances the fourteenth amendment precludes differences in treatment based upon race."

This is an extraordinary statement. It is extraordinary not only because of its construction of the fourteenth amendment, but because of the conciseness of treatment in reference to such construction. The amendment is not quoted. None of its language is referred to. No language thereof sustaining the position taken is substantially stated.

If the fourteenth amendment to the Constitution of the United States sustained the proposition that Georgia could not have separate schools for the white and colored races it would not be morally binding upon the people of Georgia.

The fourteenth amendment was submitted for ratification to the Southern States after the War Between the States upon the theory that they had no right to leave the Union and had been at all times members of the Union. It could not have been ratified without the concurrence of the States of the South. These States (except Tennessee) refused to ratify. Then, at the point of the bayonet, with the respectable white people disfranchised, they were forced to ratify. Such ratification is contrary to law, and if the Supreme Court of the United States were to pass upon this question of ratification in an impartial manner, it would so hold, but it refuses to say whether this amendment was or was not ratified, and construes the United States Constitution as though ratification were not in question.

But the fourteenth amendment does not in any way support the proposition that Georgia may not have separate schools and colleges for the white and colored races.

That amendment merely provides so far as is here relevant: "No State shall . . . deny to any person within its jurisdiction the equal protection of the laws."

The entire claim to Federal interference in the schools of Georgia is based upon this provision.

Is a white student denied equal protection of the laws when he is required to attend a white school? Is a colored student denied equal protection of the laws when he is required to attend a colored school? If there be no colored school within the graduate class which the colored student desires to attend, is he denied equal protection of the laws if his expenses in a school without the State be paid in lieu of providing a school within the State?

In short, may the State have separate white and colored schools? Is equal protection of the laws denied because the races are separated in the schools?

There is no such language in the fourteenth amendment. Deliberate consideration of this amendment by the Supreme Court of the United States in former years reached no such construction. On the contrary, that Court then determined that this amendment did not prevent separate school systems for the two races in those States which desired such systems.

However plain it may be from its language that the fourteenth amendment gives the Federal Government no jurisdiction over the separation of the races in public schools and colleges, it is equally plain from the *Sweatt* and *McLaurin* cases that the Federal Government proposes to integrate the races in the schools and destroy separation of the races therein.

In *Plessey v. Ferguson* (163 U. S. 537), decided October term, 1895, the Supreme Court of the United States distinctly ruled that the fourteenth amendment did not prevent the individual States from recognizing that there are differences between the white and colored races, and that the States might lawfully and in full keeping with all provisions of the Constitution of the United States, provide for the two races separate and substantially equal public schools.

Why the different rulings in the *Sweatt* and *McLaurin* cases? The Constitution of the United States has not been changed. Congress has passed no laws on the question. Indeed Congress has time and time again refused to enact such laws.

The different rulings result from a different Court and a different national administration. The refusal of the people to change the Constitution of the United States, and the refusal of Congress to pass laws on the subject, have brought about a determination on the part of the present personnel of the Supreme Court of the United States and a determination on the part of President Truman to take the law into their own hands—to do illegally and unlawfully what they may not legally and lawfully do. That is, to depart from the rule of law and resort to the rule of force—the last resort of tyrants—as the kings of France knew when they carved those words upon their cannon.

Apologists for the President and his Court claim that they merely desire good schools for the colored race. That equality of opportunity is all that is wanted. The Supreme Court makes no such claim. It indulges in no such hypocrisy. It uses no such weasel words. It frankly states its fiat: "We hold that under these circumstances the fourteenth amendment precludes differences in treatment based upon race." Those circumstances were that the colored student received the same instruction, from the same professors and same books, and at the same time and place, and he and the white students observed separate seating and eating arrangements.

President Truman and his Court well know that the South is the great obstacle to national socialism in America. While Georgia and the other States of the South have no monopoly on the love of liberty and freedom, they know from hard experience that liberty and freedom require vigilance, and they are cold to the idea of the control of all life from Washington. They are too close to ancestors who carved this land from out the wilderness.

To break this hard core of opposition to a central state it is necessary to break the South. And the purpose is to break it. To break it at its heart. The body will then be pliable. When pride of ancestry and hope of posterity are gone from the white people of the South, there will be no resistance to the tide of national socialism, and the central state may engulf for good or ill the economic and social life of the Nation.

While the Court does not have absolute power, the Court and President Truman together, acting in concert, do have power approaching the absolute. The decrees of the Court enforced by a President willing to use military force to that end approximate the absolute power referred to by Lord Acton.

This combination of President Truman and his Court is more dangerous to Georgia and the South than John Brown and his

band. John Brown plotted to slit throats of individuals. What he could hope to do was limited by small numbers. The President and his Court aim at the jugular vein of a great section of the Nation. What they hope to accomplish is without limit. John Brown was a traitor and an outlaw, and he swung from the gibbet for his treason. The President and the Court represent the majesty of the Nation, and their decrees are taken as "the law."

This is not to be understood as making any invidious comparison. But it does point up the greater opportunity for evil, without risk to themselves, of those who hold in their hands the instruments of public power and are willing to make unrestrained use of them.

Mr. Conrad Richter, in his essay entitled "That Early American Quality" (the Atlantic, September 1950), in lamenting the decline of that quality says: "So the later Romans, looking back on the days of Caesar and Pompey must have spoken longingly and tragically to each other at some steep and dangerous dip in their decline. Our fault has not been so much the betrayal of our forefathers as the short-sighted abandonment of a vital thing that might have kept us on the track. Some of the bounties of those early Americans we try to keep alive today . . . But the most precious thing, the temper of the men who produced and established these bounties and privileges, has been ignored."

Mr. Truman and his Court think this is true of the South. They will find it is not true of Georgia. The temper of freedom and the will to maintain it still live in Georgia. Georgia is determined to resist the destruction of her laws and institutions.

President Truman and his Court are detected in their plans. Their purposes are understood. The educational leaders of the State are aroused. Important sections of the clergy are aroused. The anger of the people rises in every section of the State.

Article VII, section II, paragraph I, of the constitution of Georgia expressly limits the taxing power of the General Assembly to nine stated purposes, the second of which is "For educational purposes." "The General Assembly has only those powers of taxation over the State which it is permitted to exercise under the grant of power contained in the constitution. . . . (In the above parts of) the constitution of the State are specified the purposes for which the power of taxation may be exercised by the General Assembly, and it can be exercised by that body only for the purposes specified." (*Brown v. Martin* (162 Ga. 172, 175).)

The words "For educational purposes" are limited and defined in article VIII, section I, paragraph I. "The provision of an adequate education for the citizens shall be a primary obligation of the State of Georgia, the expense of which shall be provided for by taxation. Separate schools shall be provided for the white and colored races."

The provision for adequate education and the provision for separate schools are not distinct and separable parts of the constitution so that one may stand while the other falls. On the contrary, these provisions are inseparable parts of one distinct and entire constitutional law providing for adequate education in separate schools. If one part fails the other fails likewise in the common disaster *Reynolds v. State* (181 Ga. 547, 551).

It is true beyond cavil that if the separation of the white and colored races in the schools of the State be destroyed, the same blow will destroy all taxing power of the General Assembly for educational purposes.

This is not to say that a decision or decree of the Supreme Court of the United States striking down the separation of the races in the public schools of the State will destroy

all taxing power of the General Assembly for educational purposes. But when a colored student enters any white school, or a white student enters any colored school, then such taxing power will terminate.

The above states the plain law of the State not only as respects the taxing power of the General Assembly for the support of the common schools, but likewise the university system. Article VIII, section I, paragraph I, is not confined to "common schools for the education of children," as was its predecessor section in the constitution of 1877, but in terms relates to "adequate education" for "the citizens." It covers the whole field of public education.

Thus upon the entry of a colored student into any white college of the university system, professional, graduate, or otherwise, all officials of the State are immediately prohibited by the constitution from expending any tax funds of the State for the support of any public school or college of any grade or class.

Nor may the counties under such circumstances levy taxes or expend county tax funds for school purposes.

The taxing power which the general assembly may delegate to counties is expressly limited to the 16 purposes stated in article VII, section IV, paragraph I, the third of which is "for educational purposes upon property located outside of independent school systems, as provided in article VIII of this constitution." The words "for educational purposes" as here used have the same meaning as those same words in article VII, section II, paragraph I, relating to the taxing power of the general assembly. "The provisions for establishing and maintaining public schools and allowing taxation by counties for educational purposes are not distinct and independent constitutional provisions. They bear upon and have relation to the same subject" *Brown v. Martin* (supra, at p 177). In addition, the power of counties to tax for educational purposes is only "as provided in article VIII of this constitution," which is the article authorizing taxation only for schools which are separate.

Nor may municipal corporations, cities or towns, independent school districts, local school districts, or trustees under such circumstances levy taxes or expend tax funds for school purposes.

All such school systems derive their existence and authority from article VIII of the constitution, and are created by it or as to those antedating it are thereby continued. Article VIII authorizes but one system of schools within the entire State, and that is a system in which the white and colored races are separately educated. No act of the general assembly could authorize these local school systems to levy or expend tax funds for mixed schools. The general assembly cannot authorize a local subdivision of the State to exercise an authority which the general assembly itself could not exercise.

Efforts to force mixed schools will therefore fail in Georgia. Persistence in such efforts will result in no public schools in which to mix.

There can be no public schools without public school funds. Neither the President of the United States nor the Supreme Court of the United States may levy taxes. The Constitution of the United States forbids. If this does not deter, the lack of tax machinery does. Only Congress can provide tax collectors. Those who would force mixed schools are thus effectively deterred—they are stopped in their tracks.

The general assembly of the State has authority to save many of the schools against foreseeable contingency. Two simple laws are required. One dealing with all public schools outside the university system; and the other dealing with the schools,

colleges, and departments of that system. The first would provide that when separate schools came to an end in any school system, the schools of that system would simultaneously cease to be a part of the public school system; that the Governor shall make proclamation of the fact and assume charge of the facilities of the system for the purpose of care and preservation of the school property. The second of such laws would make like provision respecting any school, college, or department of the university system.

These laws are required to preserve the existence of the remaining schools, colleges, and departments. Without them the entire structure of public education falls with the collapse of any part, for all are parts of one component whole under article VIII of the constitution of the State. With these laws the educational structure must be assaulted system by system, college by college; for each school system and each school, college and department is a citadel which must be separately assailed.

With these laws on the statute books any mandamus, injunction or like order of the Supreme Court of the United States would be fruitless. It is settled law that such writs will not issue in cases in which the plaintiff would not be aided thereby. It is not suggested that the Supreme Court of the United States would follow this law. But it is suggested that with the enactment of the two mentioned statutes, there would be little incentive to litigation.

Once again the system of Government set up by our forebears is our protection. Once again the Constitution of the United States deserves the veneration which Georgians have always given it. That Constitution may be twisted and distorted by those who would have it serve their ends—its plain terms and provisions may be violated—but so long as that Constitution stands the States have their internal governments. The internal governments of the States are their defense against Washington dictation.

Doylestown, Pa., Small-Business Firm Teams Up for National Defense

EXTENSION OF REMARKS

OF

HON. ALBERT C. VAUGHN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. VAUGHN. Mr. Speaker, on Tuesday, August 21, there appeared in the Washington, New York, Philadelphia, and Camden newspapers an RCA full-page advertisement outlining the major role played by small business in our national defense program. This advertisement particularly called to the attention of the readers of these newspapers the contribution Mr. K. A. Swanstrom, owner of the Penn Engineering & Manufacturing Co., of Doylestown, Pa., and its 26 employees are making to the production of an important military instrument—the new portable walkie-talkie. Our leaders of national defense may never have heard of Mr. Swanstrom's small company or of many other small companies which are contributing so much toward the defense effort.

The job of providing our Armed Forces with all the things they need to keep this country strong and safe is a big one.

To do this job well, our country needs the scientific research, engineering know-how and mass production facilities of great companies like RCA, but we also need the skilled performance of thousands of small companies like the Doylestown company. As a result of this type of cooperation between big and little business, the Army was able to obtain the lightweight walkie-talkie it wanted when the hour of need came.

RCA is to be commended not only for the large part it plays in our defense program but also for calling attention to the public of the magnificent role that thousands of small concerns like the Penn Engineering & Manufacturing Co. are playing in making America strong.

Hard-Core Revolt Wins

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article from the Washington Daily News for August 21:

HARD-CORE REVOLT WINS

(By John Cramer)

While we've been dozing, Government personnel practice has been going through a major revolution—perhaps the biggest and most important in the history of the civil-service system.

It's a revolution which most of us have failed to recognize, even those who urged it.

But it's here just the same, or 90 percent here, and it seems almost certain to stay, and remake the whole face of the Federal civil service as we've known it.

It's a revolution in the direction of what is called the hard-core system.

Under the hard-core system, the number of permanent employees in all agencies, and in Government as a whole, would be severely limited.

But permanent employees would be really permanent—instead of permanent in name only, as was the case with so many career workers during the immediate postwar years.

They would be untouchable or almost so, when Government went through a period of lay-offs.

When an agency expanded, it would do so by hiring new temporary employees.

When it was forced to trim its staff, it would do so by firing temporary employees.

I first heard about the hard-core system about a year ago from the Navy's Charles Plozet, a veteran Government personnel officer. I've rarely heard it discussed since. There has been no particular campaign behind the idea.

Yet it's a fact that Government right now is operating under rules which need only minor polishing to become a bona fide hard-core system.

It's a further fact that the Civil Service Commission soon will send Congress proposed legislation which will accomplish the greater part of this polishing.

BY ONE MAN

And it's a good guess that this legislation, though submitted originally as only temporary legislation, eventually will become permanent.

All this has come about, or is destined to come about, mainly by the efforts of one man—Representative JAMIE L. WHITTEN (Democrat, Mississippi).

I doubt if even Mr. WHITTEN realizes the full significance of the revolution he has set in motion.

Nevertheless, as a result of his so-called Whitten rider, Government, for all practical purposes, is under a hard-core system right now.

We're told it's a temporary system, that it will go out the window when the national emergency ends.

But as of now, the odds are heavy it will become a permanent system. The odds are heavy, because:

1. Congress finds much to praise in the personnel controls laid down in the Whitten rider.

2. Many Government administrators, especially those whose agencies went through the rapid expansions and contractions of the '940's, find the hard-core system attractive.

3. Because Civil Service Commission and Budget Bureau officials, who have such a big voice in making personnel rules, are known to be leaning increasingly toward the hard-core concept.

ON TEMPORARY BASIS

Under the original Whitten rider, most Government job appointments and all promotions and transfers were put on a temporary basis for the duration of the emergency. The idea was to prevent any increase in the permanent staff of Government, and prevent, too, any repetition of the excessive promotions which occurred in World War II.

The revised Whitten rider, as approved Friday by the House Appropriations Committee, makes sweeping changes in the original:

There still could be no increase in the permanent staff of Government.

But permanent employees could be given permanent transfers—provided the transfer does not involve a promotion.

And any permanent employee who transferred, regardless of whether the transfer is permanent or temporary, would be given reemployment rights in his original agency.

MACHINERY NEEDED

The one thing needed to convert this revised Whitten rider into a bona fide hard-core system is machinery for giving qualified temporary employees a chance to become permanent members of the hard core as vacancies occur.

In this connection, I'm told:

1. That Civil Service Commission already has ample power to set up such machinery.

2. That it will send Congress soon its own proposals for a new revision of the Whitten rider.

3. That these proposals probably will include a formula for feeding temporary employees into the hard core as vacancies occur.

4. That Representative WHITTEN has told Commission officials he will not object to a revision of his rider—provided the revision incorporates his basic concepts of holding down Government's permanent staff, and preventing excessive promotions.

Along with making it easier for Government to expand and contract its staff in periods of emergency, the hard-core idea has one other big advantage.

Over the years it would immeasurably raise the quality of Government's permanent staff.

Employees would have to take the customary civil service exams before they could get even temporary Government jobs.

But to advance into the hard core, they would have to meet the tests of experience, of careful screening, and, very possibly, even new exams.

Thus, only the most outstanding employees could become members of the hard core.

The big disadvantage of the hard-core system is that it would help crystallize what already is a growing caste system in Government.

On the one hand there would be the elite—the fortunate ones with permanent appointments in the hard core.

On the other would be the unfortunates—those with mere temporary appointments.

The British have used a hard-core system for years. And the British civil service is supposed to be a model.

The Ultimate Defeatism Is To Deny That Two Opposed Systems Can Exist in Same World

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. HAYS of Arkansas. Mr. Speaker, the Wall Street Journal of August 17 carries an excellent article by Joseph E. Evans denying the inevitability of war.

One of the most significant aspects of the great address made by the gentleman from South Carolina, the distinguished chairman of the Committee on Foreign Affairs, in opening the debate on the mutual-security bill, was his forthright and convincing rejection of the theory of an inevitable war, which unfortunately had found expression on the floor of this House.

I was gratified to read about the same time the thoughtful statement of the Wall Street Journal which underlined again the danger of defeatism in this respect. We cannot responsibly give up the hope that the great powers of the world will exist peacefully on the same planet.

Under leave to extend my remarks, I include Mr. Evans' article as follows:

As part of their current peace offensive, the Soviets are once again professing their belief in the peaceful "coexistence" of Communist and capitalist states. It is natural that this should be greeted with sniffs of suspicion in the United States and the west, but there is some danger that suspicion of the source may lead to rejection of the principle.

The principle of coexistence has been pounded by Stalin at various times before. It stands in glaring contradiction to many of his actions as well as in contradiction to the theories of other Communist dialecticians. Hence the suspicion. But it should be noted that coexistence not only was the basis of United States policy during and after World War II, but presumably still is. What is more important, it is the only possible basis of a reasonable policy.

The danger is that by dint of constant demonstration of Soviet perfidy the United States may gradually—and perhaps subconsciously—be abandoning belief in the possibility of coexistence. While continuing to pay it lip service, the United States may in fact be constructing effective policy on other and contrary bases. More and more, attacks are being made on the very concept of coexistence.

One such appeared in a recent issue of the New York Times magazine. In this case the absorption of Czechoslovakia into the Soviet

sphere is taken as evidence par excellence of the unworability of coexistence.

BETRAYAL AND ENSLAVEMENT

The democratic Czech politicians, it is correctly related, sincerely tried to practice coexistence and were cupped, betrayed, and finally enslaved by the Communists. The clear implication is that the same fate awaits the United States and the west in general if it operates on the theory of coexistence. The analogy is superficially impressive, but it is highly doubtful that it will bear examination.

In terms of its relations with the Soviet Union, perhaps the most important facts about Czechoslovakia are that it adjoins the Soviet Union and that it is relatively small. In addition, it emerged from the war militarily weak, unprotected by the United States and in the shadow of the Red Army. Its statesmen at that time could not honestly see how they could ignore, economically or politically, the new colossus the war had created to the east. But being western by tradition and ideals, they hoped to effect, insofar as their own country was concerned, a compromise between east and west.

It is easy enough to say that they should have known better—and it is true that in the show-down many of them proved weak. But it is not so easy to see how they could have done much else than they did even had they known better. They were doomed to be swallowed up as soon as the Soviet realized it had come out of the war the most powerful nation outside the United States; the Czech politicians' short-lived experiment in coexistence merely facilitated the process.

The connection between this kind of situation and the United States, together with the potentially massive military coalition it heads is tenuous at best. The United States is obviously not condemned to Soviet absorption by geography or military weakness. Neither are its western European allies so long as they remain under the great shield of United States protection which is the Atlantic Pact.

Furthermore, coexistence as between the Soviet empire and the west does not mean, as it did in the case of Czechoslovakia, any acceptance by the west of Soviet-type political and economic institutions. It does not mean giving local Communists toe-holds in governments. It does not imply that the west has to assume the Soviet is activated by good will.

THE PRINCIPLE IS NOT DISPROVED

What the principle of coexistence does require the west to accept is the premise that the Soviet empire and the free nations can continue to occupy the same planet without being irresistibly impelled to mutual annihilation. Neither the specific case of Czechoslovakia nor the degeneration of east-west relations generally disproves the principle. But for it to work, it is necessary in the first instance that both east and west accept it.

Now it is admittedly impossible to know whether or not the Soviet actually does accept coexistence as a practicable modus operandi. It usually appears not to, but it is conceivable it does. That its ultimate ambition is world domination does not necessarily prove that it intends to plunge the world into total war to achieve it—especially since that course is becoming increasingly risky and since the Soviet has accomplished so much in the way of territorial aggrandizement without it. It still has fertile fields to work in by means short of total war.

For it goes without saying that if the Soviet does in fact accept the principle it would continue—indeed, more actively than if it were preparing total war—its attempts to subvert or otherwise annex non-Communist countries. Such countries would always

have to be on their guard. But then, that is a proper and reasonable position for a free country to be in anyway.

As long as there is room for doubt about Soviet intentions, however, it would be risky—and it could be fatal—for the United States and the west to reject the principle of coexistence either directly or indirectly. A direct repudiation would of course leave only one alternative for the United States—to go to war with the Soviet Union. For if the two systems cannot coexist, then obviously they must clash, and the sooner, it would seem, the better.

UNINTENDED CONCLUSION

Stating the matter thus at least reveals the logical conclusion inherent in any contention that coexistence is necessarily and automatically unworkable. The United States is hardly likely to put itself in that position as a matter of official policy. But it might nonetheless do so unintentionally. The almost exclusive emphasis its policy now puts on military might and the danger of war could all too easily lead both policymakers and people generally to the conviction that war is inevitable.

That would be not only to repudiate coexistence, it would be to deny the validity of the western way of life. It would be to assume that that way of life can triumph over Soviet totalitarianism only by force of arms and not by virtue of its intrinsic superiority. In short, the denial of the principle of coexistence is the ultimate in defeatism.

Socialism Blights England

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an article by Sir Ernest Benn which appeared in the current issue of *Freeman* entitled "Killing With Kindness." The results of our support of a bankrupt Socialist government in England are now becoming apparent to all who want to see

KILLING WITH KINDNESS

(By Sir Ernest Benn)

The road to hell was never so well paved as with the good intentions of Uncle Sam toward John Bull. Loans, gifts, and Marshall aid have all, unwittingly, robbed the English nation of the need to pull itself together and justify the victory so arduously and gloriously won. The very idea of self-help, the basis of John Bull's philosophy, has gone for the time being, and in its proud place we have "full employment," "social security," "fair shares" and other political deceptions. These fictions have, for five full years, successfully masqueraded as facts, until the recollection of such disagreeable things as individual duty and responsibility have almost ceased to trouble us.

In broad outline the story of the economics of the last 10 years can be put into a few sentences. When the fall of Norway made desperate measures needful, the Trade Union Congress blackmailed its way into the Government, in return for a promise to allow the workers to work. Mr. Churchill handed over the key offices, other than war, to the Socialists. Men who a few months previously had opposed every effort at arma-

ment, assumed effective control of the country's domestic affairs. Then, while the Tories were busy with the war, there began a stream of reports drafted by the Socialists, but issued in the name of national government.

The Beveridge plan was only one of many proposals to destroy personal responsibility and private enterprise. Our daily war news was interlarded with the most tempting and detailed particulars of what each member of every family would receive when the war against nazism and fascism was won; and Cabinet Ministers did not scruple to make clear their view that capitalism and nazism were one and the same thing.

When in May 1945 the American armies got to Leipzig, and Montgomery was on the Baltic, a weary, bombed, and undernourished people were caught in the mood to sit back and let Beveridge and all the other planners implement their fantastic promises.

Since then we have lived in a veritable fool's paradise. No penalty for failure and no adequate reward for success; wages for everybody measured not by the value of the work but by the need of the worker; no competition, no market, no choice. As a safeguard against the machinations of those who do not believe in these Utopian absurdities, the system of wartime control has been perpetuated and private enterprise, insofar as it is possible at all, must work in chains made of red tape.

In this respect Britain suffers a handicap from which the rest of Europe is happily free. Norway, Denmark, Holland, Belgium, and France were all "controlled" by the occupying Germans, who were never able to put a foot on British soil. In consequence, resistance to the very idea of control is ingrained in the hearts and minds of all these peoples as a positive patriotic duty, while the British are still afflicted with the degrading notion that control is for their good. American visitors to Europe who compare the drab shabbiness of English cities with the smarter appearance of continental places must notice the striking difference in the workings of the two points of view.

Americans should spare no pains to inform themselves of the results of nationalization, the outstanding achievement of the believers in socialistic dogma; for a goodly proportion of all American aid is balanced by the losses on British Government trading. The Bank of England has become a mere part of the machinery of official monetary manipulation and has lost its world position as the central repository of credit and confidence.

Mines, railways, aviation, and other industries, all of which made substantial contributions to the national tax revenues, now have heavy losses and are thus a double debit upon the taxpayer. In every one of these industries the charge to the consumer has been substantially increased, and there is no pretense of giving to the public such good service as private enterprise was expected to provide. The last justification for all this madness is now disappearing, for the comfort and content which the workers thought to obtain has so disappointed them as to justify demands for still higher wages, without regard to the source from which the money is to come.

The framework of this dismal picture is made of 60 years of Fabian theory and 50 years of an organized Labor Party, preaching damnation to private enterprise and capitalism. All the ills to which flesh is heir were laid to the charge of private property and the profit motive, and the cure was the ownership and control of the instruments and means of production and exchange. That ownership and control has at long last been achieved, but the dupes of this false doctrine have yet to learn that utopia is not a sort of improved convalescent home. Meanwhile they go merrily along, many of them doing less and less work for more and more money,

the deficit coming from the charity of the United States and the Empire. To stifle doubt and suppress criticism, there is an army of boosters styled public relations officers, costing £15,000,000 a year, who fill the air and the newspapers with the joyful news of the next plan to undo the trouble caused by the last.

One must go back to Uncle Sam and John Bull to get the measure of the tragedy of a lapse in mind and morals which must end quickly, or end us. The vast expenditure of the United States to keep this sort of thing going may prove a good investment if it saves America from a similar experience.

It is not fair to put the whole of the blame on the Socialists; they have built a great edifice of error upon a foundation of falsehood laid by Lloyd George and "Ninepence for Fourpence." Franklin Roosevelt's New Deal, unless England's warning is heeded, may well serve the same sordid purpose.

Some 20 years ago I paid a visit to a small Communist settlement run by Russian Jews a few miles from Jerusalem. There were up-to-date farm buildings half finished, land ploughed but not sown, and everything begun and halted. The Russian Commissar was in despair, because the financial crisis had cut off the flow of American capital. Something of the same kind, on a much bigger scale, is about to happen to the British utopia unless John Bull awakens and, having lost six good years, starts again on the hard but worthy road of work and duty.

Consumers' Research, a Long-Time Crusader for Low Prices, Points Out Administration Determination Not To Halt Inflation, But Just To Talk That Way

EXTENSION OF REMARKS OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am including this excerpt from the August issue of *Consumers' Research*:

OFF THE EDITOR'S CHEST

Although there has been vociferous propaganda emanating from Washington, D. C., that make out the chief enemy on the economic front to be inflation or high prices, there is a growing recognition in informal economic circles that lower prices or deflation is the last thing Washington officialdom wants.

Hardly had the New York City price war made headlines throughout the country when Senator JOHN SPARKMAN of Alabama announced that his Committee on Small Business would immediately institute hearings on the effects of this "cross-fire of a vicious price-cutting war." That doesn't sound like administration enthusiasm for the lowering of prices to consumers or a belief in the wisdom of the Supreme Court's decision.

The price war also came at a most inopportune time for those officials who have been pushing actively for more stringent price controls and the power to set ceiling prices on nearly all essential consumer commodities. What various dealers in many lines of goods sold to consumers wanted was not ceiling but floor prices, to prevent spectacular below-cost sales that threatened them with insolvency if the tendency should continue or extend.

To reverse suddenly their position of ostensibly favoring the lowering of rental prices would make ridiculous the pronouncements of those in Washington officialdom and sympathetic economists in recent months, who had loudly cried that "inflation is coming."

The recently announced OPS ceiling prices on clothing and textiles, for example, simply gave the clothing trade an expensive job of paper work to do.

It is no secret that the textile trade has been in the doldrums for many a month. Women who had been counted on to buy anything put on the clothing racks—as they did in the scarcity days of World War II—have stayed away from dress departments in droves and nobody has yet been able, in print at least, to figure out why; ignoring, of course, the obvious conclusion that prices were too high for the quality and style offered. Some attempt has been made to explain away the lack of clothing sales by blaming consumers' constant attention to their television receivers.

Television, however, is also having its troubles. One informed observer reports that there are enough television sets now in warehouses to provide all the sets consumers are likely to buy during the coming Christmas season and even to carry stocks over into next spring. Appliances also are plentiful.

The chief shortage is in the wool field where the world supply does not equal the demand and prices are still very high. Synthetic fibers, however, are making great strides in their development and may be expected to supplant wool in the low- and moderate-price ranges in many cases.

The well-known preference of most men for wearing their old clothes will undoubtedly be a factor in easing the buying pressure in this field. In short, it looks as if, barring the major outbreak of an armed conflict over a wide area, consumers will not need to worry too much about shortages.

Whether prices come down will depend on a wide variety of economic factors including reduction of taxes, refusal of public officials to lend political support to influential labor groups in their efforts to force wage increases at the expense of others less strategically situated with respect to the seats of power, and the institution of a rigorous program of governmental economy which Congress can require and enforce whenever it receives the necessary backing of public opinion.

These factors all involve political hazards, and no party will undertake to advocate any of them unless forced to do so by informed public demand.

The smaller dealer far from New York City without Macy's and Gimbels' tremendous resources cannot afford to match their price cuts even if he needs to raise money to carry his inventory. Prices are determined by many factors in which taxes, wages, pensions, transportation costs, subsidies to producers of raw materials, elaborate bookkeeping and accounting practices, such as are required by the Office of Price Stabilization and other Government bureaus, are important factors.

The consumer who looks at the retail price of a product he wishes to purchase and complains that it is high simply because the retailer is making a large profit will be applying his pressure at the wrong point.

Our economic system of mass production is capable of turning out tremendous quantities of consumer products at very reasonable cost, but when one or more groups, strategically placed with respect to the assembly line, and in respect to Government policies or officials, takes advantage of the need for smooth meshing of each operation to hold up the process by demanding a larger cut, the final cost to the consumer is bound to reflect the shake-down.

The expansion of American industry in the last war was so great that unless a monkey

wrench is thrown in the works, it shows every evidence of being able to provide all the products that the consumer can absorb at the prices now being charged and still produce all the war material that can be used by our forces or given away abroad to countries that are presumed to be our allies in case of world conflict.

To take a common-sense approach to preparedness is to incur the unpleasant accusation of giving aid and comfort to the enemy.

On the other hand, the suspicion has already been voiced in several circles that the Washington-induced war economy is looked upon with favor by those who prefer a high-price scarcity economy to one in which consumer goods are abundantly available at lower prices and competition among manufacturers and merchants for the consumer's favor is keen.

Unthinking consumers who have supported measures for price control in the belief that price control is synonymous with or makes for lower prices will do well to look beyond the claims made for such measures and examine carefully their actual working out in operation.

They should especially consider the quick reaction of the Senate committee, already referred to, that price cutting is a bad thing and must be discouraged. It is well to remember that one of the most marked effects of governmental price fixing in World War II was that the process of trying to hold down the price to an uneconomic level resulted in many cases in the elimination of the product from the market, since farmers, manufacturers, and dealers simply would not produce or distribute a item on which they could not make a living or receive customary returns.

As with many advertising claims, the benefits to be derived from such promised protection are almost certain to be greatly exaggerated. (Consumers' Research Bulletin, August 1951.)

Government by Crisis

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. GOODWIN. Mr. Speaker, the following editorial from the Wakefield (Mass.) Daily Item of August 16, 1951, is included herewith under leave to extend these remarks:

GOVERNMENT BY CRISIS

Bruce Barton asserts the late Franklin Roosevelt during his first 5 years in the White House declared no less than 49 emergencies. Every time a new law was drafted, says Barton, there was a demand to hurry up and legislate it to avoid a national peril.

Mr. Truman has tried to follow in his predecessor's footsteps. "Emergency" bureaus are never abolished. Taxes, which the Democrats told the American people long ago would be reduced as soon as the emergency was over and prosperity established, have risen higher and higher. The Government payroll, which the Democrats promised to cut, is now astronomical, and every day sees additional thousands recruited. Controls that include programs for Government buying and building, and socialistic schemes not only for agriculture but now for business, medicine and industry, are demanded.

All this in the name of "emergency"—with an eye cocked to the 1952 election.

Only by a complete change in administrations can the American people, after 20 years, hope to rediscover peace in the world, at home, and of the mind.

Administration Might Follow Army Example in Handling Ethics

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, August 23, 1951

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Humboldt Star, of Winnemucca, Nev., entitled "Administration Might Follow Army Example in Handling Ethics." It explains the various machinations and manipulations that have gone on from the White House, the RFC, and other important Government organizations.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ADMINISTRATION MIGHT FOLLOW ARMY EXAMPLE IN HANDLING ETHICS

The fabulous era of the mink coat, 5-percenters and the deep freeze now has a slogan which can be inscribed, heraldic fashion, above the symbol of an outstretched hand.

"I did nothing that anyone else wouldn't have done," it reads. "Only someone caught me at it."

Those frank words came from Brig. Gen. David J. Crawford. What he was caught at was accepting gifts and hotel entertainment from defense contractors, using Government lumber to build himself a couple of sailboats, and hauling some trees for his front lawn halfway across the country in an Army truck.

Having been caught at it, the general was relieved of his command at the Army's Detroit tank arsenal and publicly reprimanded, a penalty just short of court martial.

This prompt action by the Secretary of the Army is highly refreshing. It is also somewhat surprising when you consider the current attitude of the administration in Washington toward similar cases that have come up, they have been brushed off as if such things were no more serious than catching junior's hand in the cookie jar.

Another general, name of Harry Vaughan, is still at the White House, for instance, his bemedalled chest untarnished by the taint of a couple of remarkable moral lapses regarding frozen food lockers and five percent influence peddlers. The State Department is keeping one or two of Vaughan's foreign medals in escrow, but same seems to be all that's happened.

A fellow fixture at the White House is Donald Dawson, a Presidential adviser. He's the one who got free hospitality from a plush Miami hotel which had obtained an RFC loan. The congressional committee which found out about the hotel said Dawson apparently exerted considerable influence over certain directors of the Reconstruction Finance Corporation.

Along with the famous pastel mink coat and the imported Wedgwood china, all these things have been looked into. And in the atmosphere of an easy-going code of ethics that seems to prevail, they have been shrugged off.

General Crawford, who not only was caught but punished, had been doing an outstanding job at the Detroit arsenal. But it was a job

of important public trust, and the crackdown was commendable.

We suspect it would be more than difficult at the moment for a contractor to pass off so much as a cigar on any other Army officers engaged in spending the taxpayers' money.

But it may be too much to hope that the administration will follow the Army's example and give the Nation a change in the loose moral and ethical atmosphere that is clouding Washington.

Dehydration of Sweetpotatoes in Louisiana

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. LARCADE. Mr. Speaker, my congressional district in Louisiana is the sweetpotato capital of the United States and in this connection the dehydration of sweetpotatoes has grown into a very important industry.

I desire to call attention to the following very interesting article on dehydration of sweetpotatoes in Louisiana, 1946-51, by Mr. Randall Stelly, which appears in the August issue of the Louisiana Rural Economist, published by the Department of Agricultural Economics, Louisiana State University, Baton Rouge:

The dehydration of sweetpotatoes on a commercial scale in Louisiana began during World War II when several canning plants contracted with the Army to supply dehydrated sweetpotatoes for food purposes. The program met with considerable success and dehydrated sweetpotatoes were considered by military personnel to be one of the more palatable and desirable dehydrated foods. As demobilization took place and Army food needs declined, the demand for dehydrated sweetpotatoes for food purposes largely disappeared. But the experience gained with dehydration during the war, combined with the development and adaptation of satisfactory dehydration machinery, a growing demand for carbohydrate feeds in Louisiana, and the availability of nonmarketable sweetpotatoes together formed a favorable setting for the development of commercial dehydration of sweetpotatoes for livestock feed. The value of dehydrated sweetpotatoes already had been proven in experimental feeding tests.

NUMBER AND LOCATION OF PLANTS

By the end of the 1946-47 season, 54 dehydrating plants were in operation in the State. These plants provided a market for sweetpotatoes not suitable for shipping or canning, aided materially in weevil and disease control, and made available consider-

able quantities of good feed for the State's growing dairy and livestock industries.

Many of the sweetpotato dehydrating plants established during 1946, 1947, and 1948 did not remain long in active operation. The number operating has decreased from a total of 54 in the 1946-47 season to 22 in 1950-51. There were 39 dehydrators in the State during the 1950-51 season, but only 22 were active.

About half of the plants established from 1946 to 1948 were concentrated in the South Louisiana commercial sweetpotato area of St. Landry, Lafayette, and adjoining parishes. The remainder were fairly well distributed throughout the State. Many of these latter plants were on the fringes of commercial sweetpotato producing areas, or in those areas where production had expanded during the war or where expansion was anticipated.

In some areas sweetpotatoes replaced part of the cotton on many farms because they appeared to be more profitable. More recently, however, the comparative advantage has again shifted to cotton in many of these areas, with the result that the acreage and production of sweetpotatoes has declined. Year-to-year changes from cotton to sweetpotatoes, or vice versa, are possible in those sections adapted to both crops because both require approximately the same amount of labor for their production and can be grown with the same type of cultivation equipment.

VOLUME AND VALUE OF PRODUCTION

Louisiana dehydrators processed 9 percent of the 1946 Louisiana sweetpotato crop, 10 percent of the 1947 crop, close to 11 percent of the 1948 crop, slightly over 7 percent of the 1949 crop, and approximately 8 percent of the 1950 crop (table 1). The volume of sweetpotatoes dehydrated has ranged from 974,000 bushels in 1946-47 to 636,460 in the 1949-50 season. From the 1950 crop 779,350 bushels were processed, the largest amount since 1946. The output of dehydrated material has varied from 170,000 hundredweight in 1946-47 to 111,075 in 1949-50, and amounted to 136,010 in 1950-51.

While volume has undergone moderate changes from year to year, the number of active plants has decreased sharply. Therefore, volume per plant has increased, nearly doubling from 1946-47 to 1950-51. In the latter year the average per plant was 6,182 hundredweight. This change has resulted from the discontinuance of a large number of plants located outside the major commercial sweetpotato producing areas. These small plants could not obtain raw materials for processing economically, and did not have sufficient volume to operate profitably.

CAPITAL INVESTMENT

The original investment in dehydrating plants averaged about \$10,000 each. The largest item of cost is the drying unit which alone accounts for approximately 90 percent of the cost of all plant equipment. Since the life of the unit is usually estimated to be 7 to 10 years, depreciation costs are appreciable. Therefore, costs of operation per unit of output are determined to a great extent by volume of production.

OPERATING PRACTICES

Dehydrating plants obtain from two-thirds to four-fifths of their raw sweetpotatoes from growers on a custom basis. Under such an arrangement the plant processes the product for a specified charge per hundredweight, or retains half of the dry material. Other sources of raw sweetpotatoes are purchases from farmers, packing shed and cannery culls and waste, and those grown by the dehydrator operator for processing.

Farmers have retained about two-thirds of the dry material produced by dehydrators in most years. This material is mainly used for feed on the farms where the sweetpotatoes were grown. Of the dry material kept by the plant operators, a half to two-thirds is sold directly to dairymen and other farmers. The remainder goes to feed dealers and manufacturers, industrial plants, and other less important outlets.

COSTS OF OPERATION

The total cost involved in the operation of sweet potato dehydrators averaged \$6,924 per plant in 1946-47, \$6,783 in 1947-48, \$6,842 in 1948-49, and \$7,490 in 1950-51. Items of cost were divided into general overhead, operating costs, interest, sweetpotatoes purchased for dehydration, and purchases of sacks. The largest overhead cost for all the seasons studied was depreciation which averaged more than \$1,100 per plant annually.

The largest single item of operating cost was labor, amounting to an average of \$1,449 per plant in 1948-49 and \$2,001 in 1950-51. Fuel for furnace heat was the second largest operating item. Other costs of substantial size included the cost of sweetpotatoes purchased for dehydrating and sacks for bagging the dry material.

Costs of repairs to equipment and buildings were negligible during the 4 years studied. Most repair costs reported were incurred for maintenance of the dehydrating unit and to keep other equipment in proper operating condition. Those plants operating a longer period of time and having a larger volume of output per season, required a greater amount of upkeep and repair.

The direct effect of volume on cost per unit of output is shown in table 2. Plants producing 6,000 or more hundredweight in 1950-51 had an average total dehydrating cost of about 89 cents per hundredweight, while plants producing an average of from 2,500 to 5,999 hundredweight had an average total cost of \$1.68 and those plants processing less than 2,500 hundredweight reported an average total cost of \$2.54. The total overhead and operating cost for all plants averaged approximately 71 cents per hundredweight of dry material processed during 1950-51, compared with total costs of 99 cents in 1946-47, \$1.01 in 1947-48, and 82 cents in 1948-49. Most items of cost decreased as volume of output increased, and substantial reductions in per unit costs occurred in depreciation and other overhead, labor, and fuel. The volume of production is the greatest single factor affecting the per unit cost of dehydrating sweetpotatoes. Other factors include: (1) Efficiency in the use of labor and equipment, irrespective of volume; (2) the type of fuel used for furnace heat; (3) the length of life of the dehydrating unit, and (4) the condition of the raw sweetpotatoes processed.

FINANCIAL RETURNS

Gross returns from dehydration operations averaged \$9.172 per plant in 1948-49 and \$10,724 in 1950-51. Returns to dehydrating plant operators accrue from sales of dehydrated sweetpotatoes, cash charges for custom work, and value of the dry material used by the operators in feeding their own livestock. In most years sales have made up more than half of their income, and cash charges have accounted for slightly more than a third.

TABLE 1—Sweetpotato dehydration in Louisiana, 1946-50

	Unit	1946	1947	1948	1949	1950
Total production.....	Bushel....	10,800,000	7,470,000	7,315,000	8,700,000	10,200,000

Other.....	.005	.022	.003	.005	.006	.006	.006	.000
Total.....	.449	.817	.502	.394	.432	.937	.411	.383
Other:								
Sacks.....	.064	.030	.068	.064	.082	.078	.069	.081
Interest.....	.062	.242	.090	.028	.035	.137	.070	.022
Sweetpotatoes purchased.....	.209	.160	.385	.209	.249	.283	.606	.273
Total.....	.425	.432	.543	.361	.366	.498	.745	.379
Total costs.....	1.19	2.36	1.47	.97	1.04	2.54	1.68	.89
Net gain or loss.....	.40	-.95	.22	.51	.44	-1.07	-.09	.57

Net income varied directly with volume of production in each of the 4 years studied. In 1948-49, plants processing 6,000 or more hundredweight of dry material had an average net income of \$5,248, while the average net income of plants processing from 2,500 to 5,999 hundredweight was \$918, compared with a loss of \$1,141 per plant processing less than 2,500 hundredweight. In the 1950-51 season plants processing less than 2,500 hundredweight suffered losses amounting to \$1,322, while plants processing 6,000 hundredweight or more realized average net profits of \$8,656 each.

The effect of securing adequate supplies of raw sweetpotatoes to permit a full operating season upon net returns per unit of output is shown clearly in table 2. Plants processing less than 2,500 hundredweight of dry material suffered an average loss of 95 cents per hundredweight in 1948-49 and \$1.07 in 1950-51, while plants processing 6,000 hundredweight or more realized net profits of 50 and 57 cents per hundredweight in the two seasons. In general, those plants not located near the concentrated areas of production were the first to cease operating during the period 1948 to 1950. Those plants located at the fringes of producing areas generally are forced to operate at only fractional capacity, and even with a decline in the number of plants operating in the State from 1948-49 to 1950-51, some plants were unable to secure adequate supplies of raw material for efficient and economical operation and operated at a loss.

Conditions necessary for economical operation of sweetpotato dehydrating plants and favorable net returns include: (1) a large volume of sweetpotatoes for processing to permit near-capacity production; (2) the use of natural gas for furnace fuel; (3) clean, dry sweetpotatoes, free from decay; and (4) efficient use of labor and equipment. Efficiency is improved when labor can be used full time by continuous operation of the dehydrator or in other work, such as in a storage house or packing shed.

Honesty in Government Is the Only Issue

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, David Lawrence in the August 17 issue of United States News and World Report has written a telling editorial which points out that the only issue before the American people is honesty in Government:

HONESTY THE ONLY ISSUE

(By David Lawrence)

The subject before the House is "honesty." The origin of the debate is the scandal at West Point, where cheating in examinations was exposed and the guilty cadets were promptly punished.

But what did Members of Congress say—that is, the few who were articulate?

Some said the guilty deserved the punishment.

Some said it was just too bad and that the punishment should have been much lighter.

Some said honesty is a difficult standard to maintain anyhow and that there ought to be something done about it.

Some said the thing to do is to abolish sports.

Some said the thing to do is to abolish the Military Academy itself, along with the Naval Academy at Annapolis.

Some said the idea of putting a man on his honor not to cheat is a terrific strain, that the students ought not to be subjected to it, and that monitoring the students during exams is the better system.

Some said it is all due to the lack of morality in this age—and they mentioned mink coats, deep freezes, and other violations of the code of ethics recently noted

in the headlines in connection with RFC scandals and the like.

Some thought the occasion opportune to take a swipe at everything and everyone they didn't like—from legislators to lobbyists.

Some thought the cadets should have been given another chance—and that there ought to be a law or something.

Some said there should be a congressional investigation—but just how, after you investigate dishonesty, you legislate honesty in its place was not explained. Hardly a word was said about the failure of the home environment to teach honesty to the boys in the first instance.

What is beginning to be significant is not merely the guilt of the cadets at West Point—deplorable though that is—but the amazing comments by persons on the outside generally who, because they feel sorry for the dismissed cadets, allow pity to sway their judgment.

It seems incredible that a simple issue of dishonesty should evoke such diverse reactions.

Who will arise in Congress to point to the remarkable work being done by character-building agencies among our youth, like the Boy Scouts—and who will note the indignation of the more than 2,400 cadets at West Point who didn't cheat and who seem to be forgotten in the melee? Who will point to the success of the honor system at Princeton, at the University of Virginia, and a host of other schools and colleges?

The problem is not complex. Dishonesty arises every day on the competitive front in business, in the professions, in public life. It isn't to be excused because it is prevalent. But it will not be solved by abolishing the stakes in such competition—or by denying to youth the chance to engage in intercollegiate sports.

What of the colleges which have winning teams whose members get top scholastic honors despite the long hours of football practice? The cases are legion.

What shall we say of the overenthusiastic alumni who, in violation of intercollegiate rules and agreements, help to recruit football talent by mercenary methods? Will alumni dishonesty be cured simply by abolishing football?

Back in prohibition days there were conscientious people who thought the way to cure drinking was to prohibit the manufacture and sale of all liquor. This only created a worse evil—the bootlegger and vice rings.

The fight against temptation is won not by removing the liquor bottles from the shelf but by being able to be temperate in habit even though the shelf is full.

The fight is won when the individual learns the oldest lesson of experience—there are no compensations which dishonesty can possibly give that are worth the tortures of conscience coming afterward.

The fight cannot be won by Army regulation—or by legislation.

The fight can be won when the individual discovers some day, as so many of us do, even belatedly in the twilight years, that the defeats in life, no matter how large they loom in lost pride or treasure, are more than offset by victories won over self in obeying the code of the Master.

The churches of all creeds open the doors to the peace the human mind strives for—the doors which only the changed individual with an instinctive or acquired sense of moral values can bring himself to enter.

The honor system is the honesty system. The Secretary of the Army and the Military Academy authorities did their duty in dismissing those who failed to put honesty above all else. There can be no compromise with dishonesty. That was and is the only issue at West Point.

Cutting Iron Curtain Not Hard**EXTENSION OF REMARKS
OF****HON. VICTOR L. ANFUSO**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. ANFUSO. Mr. Speaker, more convincing proof comes from abroad that we must encourage and not cripple our State Department program of reaching the people within the iron curtain through the Voice of America program. This time this proof comes from a first-hand report from one of our foremost columnists who is touring Europe, and who managed to get behind the iron curtain.

Berlin today seems to be the stage for all kinds of propaganda. We cannot afford to let the Communist get the jump on us there.

Opportunity presents itself for the coordination of the activities of our Central Intelligence Unit, the State Department, and our occupational forces in Berlin to penetrate the iron curtain with American ideals and principles, and stir up the youth within the iron curtain to overthrow communism. Our hope to save the world lies in our youth of today.

Under leave to extend my remarks in the RECORD, I wish to include the following article which appeared in the Washington Post on Monday, August 20, 1951, entitled "Cutting Iron Curtain Not Hard":

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

CUTTING IRON CURTAIN NOT HARD

I have just spent an evening behind the iron curtain. It's not hard to do here in Berlin where no guards patrol the line between the Russian and American sectors and where, if you flash a White House press card and look reasonably important, you can attend even the most exclusive of the Communist youth shows.

Berlin tonight is a city of vivid dramatic contrast—miles of bunting and flags everywhere, flags of every nation but particularly and ironically the flags of peace. Sandwiched in between almost every national flag is the blue and white emblem of peace. Standing out against the gaunt bomb-gutted ruins of Berlin, they made a genuine appeal to the tired population which never wants to see war again.

Across from the Kaiser's once ornate palace which the Russians tore down and removed piece by piece, a great platform stood in front of the bomb-battered museum. The inside was an empty shell but outside a Russian ballet, a girl in Georgian costume, and Finnish folk dancers all performed. It was Russia's youth exhibition and you had to admit it was good.

Red's youth rally no flop

Reading the headlines in American newspapers you got the impression that the Berlin youth rally was a flop. It wasn't. No rally which brings 2,000,000 youngsters together from all parts of the world is a flop and it's no use kidding ourselves.

The State Department, with a meager budget, did a miraculous job of attracting a quarter of a million German youths into the western sector, giving them food, literature, and a sight of the vastly better living standards on our side of the iron curtain.

But when the rally was only half over, orders came to close up certain youth

depots. The food was costing \$12 per day at one center and the State Department's budget was exhausted. Congressman TABER, Republican, of New York, CLEVENGER, Republican, of Ohio, and other economizers had pinched too many pennies and a great opportunity was thus snuffed out.

"Ami, go home"

If you arrived early enough and flashed a White House press card, a United States military pass or even a District of Columbia police pass, an American could get into the most popular and packed performance of all—the North Korean. Seeing the Korean show gave some idea of the propaganda barrage this youth congress was subjected to.

The highlight of their performance was a dance operetta in which a Korean mother, her child killed by Americans, is the heroine. The scene which really brought down the house was that in which she throws three grenades into an American camp. Three Americans then tear her clothes half off and take turns beating her while she takes from her blouse the flag of the Peoples Republic. Then, just as the Americans tie her to a tree preparing to shoot her, a shot rings out and Korean guerrillas come to her rescue. The heroine then shoots an American officer at point-blank range.

At this point, the audience goes wild; there is 20 minutes of applause; the Korean actors get curtain call after curtain call and Russian ladies rush up to embrace the embarrassed but happy Korean orchestra leader. The audience then leaves, chanting "Ami, go home," the slogan of derision for Americans thrown at us from the Adriatic to the Baltic.

This is a sample of the propaganda drilled in on the youths at the rally and there's no use in kidding ourselves about its effect.

What we could do very easily and where we have been missing the boat is to sell both an idea and bread—the idea of uniting Europe and preventing war.

The Cost of Truman's War**EXTENSION OF REMARKS**

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from a recent issue of the Wakefield (Mass.) Daily Item:

THE COST OF TRUMAN'S WAR

The war in Korea—or do we still regard it as a minor police action?—has cost \$5,000,000,000 to date, Congress has been officially told, and may cost as much more in the next fiscal year, ending June 30, 1952.

And, of course, this takes no account of the cost of American men killed, wounded, or missing in action.

All this is without victory, because, no matter how the negotiations turn out (if they result in anything but resumption of war) we have definitely failed to stop communism, we have been unable to win anything approaching a decision, and we have laid waste the south province of Korea.

And, of course, we will be expected to restore the property we and our enemies have destroyed.

All this because Mr. Truman and his advisers went into the wrong war, at the wrong time, at the wrong place.

If Mr. Truman thinks he can get elected on this record, the American people are crazier than we think they are.

**Address of Lt. Gen. Graves B. Erskine,
USMC****EXTENSION OF REMARKS**

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I wish to insert in the Appendix of the RECORD an address by Lt. Gen. Graves B. Erskine before the annual meeting of the President's Committee on NEPH Week in the Departmental Auditorium, Washington, D. C., August 17, 1951.

As Director of Retraining and Reemployment Administration, General Erskine had "general supervision and direction of the activities of all existing executive agencies—except the Veterans' Administration—in the fields of retraining, reemployment, vocational education, and vocational rehabilitation for the purpose of coordinating such activities and eliminating overlapping functions of such agencies." RRA was also authorized to "confer with existing State and local agencies and officials in charge of existing programs relating to retraining, reemployment, vocational training, and vocational rehabilitation for the purpose of coordinating the activities of existing Federal agencies with the activities of such State and local agencies."

In accepting General Erskine's resignation from the position as Administrator of the Retraining and Reemployment Administration, President Truman wrote:

You have met the difficult responsibilities of your post with a singleness of purpose and a devotion to the interests of our returning veterans which will command the respect and grateful appreciation of the American people. No task was ever more important than that of assisting our veterans to resume civilian life and the Retraining and Reemployment Administration, under your direction, has played a significant part in the combined efforts of the Federal Government, the States, and the local communities toward this end.

The address follows:

REMARKS OF LT. GEN. GRAVES B. ERSKINE, USMC, BEFORE THE ANNUAL MEETING, THE PRESIDENT'S COMMITTEE ON NATIONAL EMPLOY THE PHYSICALLY HANDICAPPED WEEK

Mr. Chairman, distinguished guests, ladies and gentlemen, it is good to be back among so many friends. It is an honor to address this gathering of the President's committee. During the past 4 years, I have watched with interest as my many friends and associates of Retraining and Reemployment Administration days worked so successfully to improve employment opportunities for the handicapped.

Wherever my Marine Corps duties have taken me, I have followed with interest your plans and programs. It has been a source of real personal satisfaction to watch the growth of this truly important organization from the cooperating committee we formed back in 1946 when National Employ the Physically Handicapped Week was scarcely 1 year old to its present status.

It was a distinct privilege this morning to hear the President of the United States lend the dignity of his high office and the strength of his personal efforts to this great program

of helping the handicapped to help themselves. I heard with interest the words of the Secretary of Labor and the Federal Security Administrator as they outlined for us the plans and projects of the Federal and State governments in employment and rehabilitation. I enjoyed Admiral McIntire's fine review of what has been done and what lies ahead. It is left for me, therefore, to speak briefly to you this afternoon as a military man.

Like Admiral McIntire, I have been interested in people with disabilities ever since World War I. A man cannot command troops and not be interested in the wounded he has led into battle. During the days of peace between our two world wars, we of the military have known first hand of injuries, accidents, and disabilities. During the last great war in the Pacific, one of the first responsibilities of a field commander was to make every prudent effort to assure his troops the best medical attention in the shortest possible period of time. The record of the Navy's doctors, corpsmen, and nurses under Admiral McIntire during World War II leaves little doubt that almost superhuman effort was made to assure those who suffered wounds a fighting chance to survive.

The lessons we learned from Guadalcanal to Okinawa are paying off daily in Korea. And, today, Admiral McIntire is again making a great contribution to his country and the century in which he lives by assuring a steady supply of whole blood and blood plasma to Korea via Red Cross collection centers across our country.

The First Marine Division which today is fighting in Korea is made up of many of my friends and comrades of many years. Some are today among our Nation's hero dead. Others are among our handicapped veterans. I had the honor to command and train the First Marine Division until shortly before Korea, so I have a more than casual interest in today's wounded and disabled veterans of Korea.

Actually, however, I am not too concerned about the future of the disabled veterans of Korea. I believe that they will give just as good an account of themselves on the home front as they did on the battle front. You cannot train and work and plan and prepare for battle for weeks and months on end without establishing certain patterns of behavior and character which will carry over into whatever you do later on.

Once a man learns his job, whether it is firing a bazooka or driving an ammunition carrier, he has established confidence in his ability to perform efficiently under almost any possible condition. That is one of the most valuable assets a man can have, confidence in his ability to perform a given task despite obstacles.

I realize that there are a few jobs in our civilian economy calling for bazooka experts or ammo carrier drivers, however, the important point which I wish to emphasize is that today's disabled veteran entering the labor market after bullet or bomb has cut short his Korean fighting has a great potentiality of becoming just as valuable on the home front as he was on the battle front.

Therefore, while reminding you that there are many things that the people back home can do to make employment easier for the disabled veteran as he leaves his hospital or special training, I should like to emphasize to our employers that they will be doing themselves a great service by making places in their firms and businesses for today's wounded who are going to be tomorrow's workers.

Before I close, I would like to review with you something that I said many times during 1946 and 1947 when I was Administrator of the Retraining and Reemployment Administration. I pointed out that the battlefield casualties of the Normandy invasion beachhead were less than our violent highway deaths during a similar period of time at

home. I also mentioned that civilian amputations during the entire period of the war were 10 times greater than service amputations.

These figures which I used in 1946 and 1947 to illustrate yesterday's problem are just as important today. They serve to focus our eyes upon today's real problem, the civilian handicapped. As a man in uniform, it may seem strange for me to be emphasizing the civilian handicapped. However, we who wear our country's uniform are first of all Americans and rightfully concerned with the welfare of all our people. Aside from this, however, the civilian handicapped are vitally important to any military man who understands even the basic essentials of supply.

It takes men and women to provide our armed forces with the tools of war and the replacements for sustaining a victorious campaign. A man would be a fool to focus all his attention upon 10 percent of the available manpower while overlooking or slighting the other 90 percent. So, since the civilian handicapped outnumber the disabled veterans by some 10 to 1, they are of prime importance to our country and to her fighting forces whether in peace or war.

We of the Armed Forces appreciate everything that has been done and will be done for our wounded comrades who have returned to civilian society. But we most respectfully ask for the sake of national security and the war effort that you give the civilian handicapped their chance to help us win this struggle.

Wanted: A Leader

EXTENSION OF REMARKS OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial published in the Reading (Mass.) Chronicle August 9, 1951:

WANTED: A LEADER

I suppose it is permissible for a dyed-in-the-wool Republican to admit to himself at least that he is a bit fed up with the Republican Party, but it is probably rank heresy for him to admit it to others.

But it is difficult to find that the elephantine party has had an original idea, at least nationally, in the past 20 years. About all we get is "whatever the Democrats can do we can do better and cheaper" but during that period of time there has been no opportunity to prove the assertion.

As a matter of fact politics from any angle is sort of a mixed up mess at present what with Dixiecrats, Democrats, Stand-patters and progressive Republicans.

Congress is spending more time investigating than legislating, witness the MacArthur hearings, the crime hearings, the proposed investigation of cribbing at West Point and the investigation of this and that, all of which appear to be designed to promote publicity for Congressmen rather than to promote the good of the country.

The control measure recently passed by Congress is a case in point. Instead of getting down to brass tacks it appears that the lobbies are dictating what legislation shall be passed. The farm lobby, the meat lobby, the manufacturers lobby, organized labor, the cotton lobby and all the rest don't want their particular commodities touched and lo and behold they aren't.

The demand for economy lops a few percent off security measures but little is done to stop the bureaucracy which is growing to gigantic proportions in Washington and nothing at all to the pork barrel where every Congressman wants to get all he can for his own district.

The necessity of raising new taxes which is still under discussion so far has failed to hit the sources which are the cause of inflation but attempts to get more out of those sources of revenue which are already being taxed to the point of saturation.

Maybe the Republicans wouldn't do any better but they couldn't very well do worse.

What is really needed is a leader such as this country has had in the past who, by the force of his personality, knowledge and leadership, could show the way to a sane and sensible economy. But have we such a man?

There is one and it will be a grievous blow to the Republicans if he turns out to be a Democrat.

President George Willis Diemer, of Central Missouri State College

EXTENSION OF REMARKS OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. BOLLING. Mr. Speaker, under unanimous consent granted me, I include a tribute to President George Willis Diemer, of Central Missouri State College, Warrensburg, Mo.:

ALWAYS A LEADER

(By George S. Reuter, Jr., former superintendent of schools, R. VIII, Henry County, Mo., and Laura E. Reuter)

President George Willis Diemer, of Central Missouri State College, is in Frankfurt, Germany, conducting an extensive one-man education mission. Not only is he studying the German teacher-education system, but he is organizing a 1952 workshop dealing with guidance and evaluation in German education.

Mr. Diemer is the only Missourian to serve on three United States education missions abroad since World War II. In 1946 and 1950, he served on missions to Japan. Dr. W. W. Carpenter, professor of education, of the University of Missouri, who spent 2½ years in Japan, was a leader in developing the new system between the two missions.

This is another example of our outstanding bipartisan foreign policy in action. Mr. Diemer is an independent Republican, much like Missouri's late Congressman, T. J. Halsey, of Holden. In these missions, he is working closely with Secretary Acheson and Secretary Marshall—two of the greatest Cabinet officers in American history.

President Diemer, who was born in Arkansas City, Kans., December 11, 1885, was the son of the late John Perdue and Amelia L. Sylviem Diemer. He married Miss Myrtle S. Caselboit on June 15, 1916. Their children are: Dorothy Elizabeth (now the wife of a Tennessee educator), George Willis, Jr. (killed in action in World War II), John Irving (a music educator in Illinois), and Emma Lou (organist for the Wornall Road Baptist Church in Kansas City, Mo.).

He was president of the Kansas City Teachers College from 1923 to 1937, and he has been president of Central Missouri State College at Warrensburg since 1937. Mr. Diemer has the following degrees: Bachelor of pedagogy, Northeast Missouri State College, Kirksville, 1911; bachelor of science, Central

Missouri State College, Warrensburg, 1917; and master of arts, Teachers College, Columbia University, 1925. He also studied at the University of Missouri.

Mr. Diemer has also found time to write two books, serve as a deacon in the Disciples of Christ Church, be a governor in the Rotary, and hold membership in: Kappa Delta Pi, Phi Sigma Pi, Phi Delta Kappa, the Masons, and the Knights Templar, the Shriners, and the Eastern Star. Yes, he is always a leader. All Missouri salutes him.

Statement of John Geoffrey Will on H. R. 5102

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 21, 1951

Mr. ASPINALL. Mr. Speaker, I believe it was Mark Twain who once commented that those who bypassed the truth needed a wonderful memory so that they could recall what story they had used for what purpose. Today, under leave to extend my remarks, I am happy to insert a statement given by John Geoffrey Will, secretary and general counsel for the Upper Colorado River Compact Commission, before the Armed Services Committee of the House in support of H. R. 5102 to authorize the Navy to improve the water-supply facilities for the San Diego, Calif., area. As he mentioned very pointedly in his statement, it is a soundly conceived and badly needed project and one which he, and the organization of which he is the official representative, is glad to support fully in demonstration of the friendship both he and the organization have for the great State of California, which would be somewhat less great without Colorado River water—practically all of which water arises within the jurisdiction of the upper Colorado River Basin.

Now, going back to this matter of consistency in what one says or the need for a terrific memory, I could refer the Members to two articles in the Appendix of the RECORD inserted by two of my distinguished colleagues from California in which Mr. Will is unmercifully panned and his ability and purpose questioned and found wanting, and, where careful phrase making and sly digs leave the impression that possibly he should be hung by the neck until dead for having ventured to say a kind word for another project in another great State needing Colorado River water in order to become still greater.

Since it has never been my policy to engage in puerile and useless controversy which merely allows the parties to give fullest vent to their silver tongues and Thesaurus-aided pens, I shall not name these colleagues, but I am quite sure they shall be aware of what I mean and the articles to which I refer. I also trust that charity will jog their memory if the exigencies of the moment again make it seem politic to use people, who

after all are merely carefully filling out their jobs, as whipping boys to reach some goal which they see as being more desirable than accuracy itself.

STATEMENT OF JOHN GEOFFREY WILL, SECRETARY AND GENERAL COUNSEL, UPPER COLORADO RIVER COMMISSION, BEFORE THE ARMED SERVICES COMMITTEE OF THE HOUSE OF REPRESENTATIVES, REGARDING H. R. 5102, A BILL TO AUTHORIZE THE SECRETARY OF THE NAVY TO ENLARGE EXISTING WATER SUPPLY FACILITIES FOR THE SAN DIEGO, CALIF., AREA IN ORDER TO INSURE THE EXISTENCE OF AN ADEQUATE WATER SUPPLY FOR NAVAL AND MARINE CORPS INSTALLATIONS AND DEFENSE PRODUCTION PLANTS IN SUCH AREA

I am deeply grateful for this opportunity to appear in support of legislation to authorize the construction of works to enable the city of San Diego, and its environs in the State of California, to receive an additional water supply for municipal and agricultural purposes. I am grateful also for this opportunity to demonstrate by act and deed, both officially and personally, that long standing friendship which the Upper Colorado River Commission and I feel toward the great State of California, one of the community of States in the Colorado River Basin—a feeling of friendship that has endured notwithstanding those occasions that have found us at times not seeing eye to eye with our friends. In that connection, Mr. Chairman, I venture to express the hope that the time is not too distant when some means will be found whereby all of the Colorado River Basin States can once more gather together under one banner to discuss their several plans and long range objectives and find those respects in which agreement lies. I am confident that, had those means existed before the introduction of H. R. 234, the original bill to authorize these works, much of the regrettable delay that has since occurred could have been obviated.

Preceding bills to authorize construction of the works that would be authorized by the enactment of H. R. 5102 have been viewed by the Upper Colorado River Commission with some lack of enthusiasm. H. R. 5102, however, goes far toward meeting those objections to which preceding bills gave rise. I congratulate Congressman McKINNON on the inclusion in H. R. 5102 of section 6 which provides, in effect, that all works constructed thereunder shall be subject to and controlled by the Colorado River Compact, the Boulder Canyon Project Act, and the California Limitation Act and that no right or claim of right to the use of the waters of the Colorado River shall be aided or prejudiced thereby. Some such assurance is needed in the light of the statement contained in the 1948 report of the San Diego County Water Authority on the "need and feasibility of increasing the capacity of the San Diego aqueduct" that "in the meanwhile, the metropolitan water district's water rights can either be strengthened by a policy of diverting and using increasing amounts of Colorado River water in communities where the need exists, or such rights may be weakened by pursuing a policy of restricting further use of Colorado River water until the decision of the (Supreme) Court has been received." I understand that the foregoing statement from the 1948 report of the San Diego County Water Authority no longer represents the official position of that body. Nevertheless, the fears engendered by that statement remained. Section 6 of H. R. 5102 will tend to dispel them. A few additional amendments upon which, I understand, agreement has been reached will complete the job.

The project proposed to be authorized by H. R. 5102 is soundly conceived and badly

needed. It would make a good project for authorization and construction under the Federal reclamation laws. In purpose, for instance, it is similar to a little project in Colorado, known as the Colbrann project, upon which hearings were recently held before the Irrigation Subcommittee of the House Committee on Interior and Insular Affairs. Procedures called for in connection with the authorization of flood control and Federal reclamation projects are admittedly somewhat burdensome. Reports on such projects are required to be circularized among affected States for 90 days, and the comments of such States, received within that time, must be transmitted to the Congress along with the report on the project. In the case of the Colbrann project that procedure was adhered to strictly, notwithstanding the fact that one of the principal purposes of the project is to provide an additional municipal water supply to a city which is becoming known as the uranium capital of the world and in which vital national defense activities are centered. That procedure has not been followed in the case of the project proposed to be authorized by H. R. 5102. In view of the need of San Diego and San Diego County and their environs, and in view of the lapse of time, it has been concluded that, so far as the Upper Colorado River Commission is concerned, there will be no insistence upon that procedure in this case. I point to this conclusion as another bit of evidence of friendship for our California neighbors. The policy represented by existing statutory procedures in connection with the authorization of water resource projects is wise. The present departure therefrom in H. R. 5102 ought not, therefore, to be deemed a precedent.

I am constrained to advise that there is disagreement as to the legal availability of water from the Colorado River system for the city of San Diego and its environs. I do not for one moment suggest that, because such disagreement exists, the project to transport water to the San Diego area should not be authorized. I do think, however, that this committee and the Congress ought to be fully advised in the premises. The disagreement to which I refer is one in which two States, Arizona and California, are generally considered to be primarily concerned. It involves construction of the documents and statutes described in section 6 of H. R. 5102 as well, perhaps, as the Mexican Water Treaty. If one view should prevail in all or virtually all respects and if the present California priority agreement should remain unamended, then it seems doubtful that Colorado River water will be available for transportation to San Diego. Should another view prevail in all or virtually all respects, there will probably be sufficient water legally available for transportation to San Diego.

The question here is similar in a sense to questions posed other committees of the Congress in connection with the proposed authorization of the central Arizona project. In that case, the Senate has twice resolved to authorize the project notwithstanding disagreement on the legal availability of a water supply therefor. The House, on the other hand, has not finally taken a position. Action taken by this committee and by the House on H. R. 5102 may, therefore, constitute an interesting precedent in that respect.

I have deliberately left untouched the question whether the existing priority agreement among California agencies, regarding their use of waters of the Colorado River system, should be amended. Just as the States represented on the Upper Colorado River Commission might resent suggestions from outside regarding their purely internal affairs, so might California properly object to any suggestions from me in that regard.

I refer to that priority agreement only for the purpose of pointing out to this committee that it could be so amended as to foreclose any doubts regarding the legal availability of water for San Diego and her environs whatever view may finally be taken on larger questions.

As I said a moment ago, the project proposed to be authorized by H. R. 5102 is soundly conceived and badly needed. I would be happy to see it authorized, subject only to such minor amendments as will fully protect the interests of the States concerned.

Why Should We Be Fighting in Korea?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. JUDD Mr. Speaker, I have recently received a letter which in graphic and inspiring language reveals what has happened in the mind and heart of one high-grade American youth as he struggled with the question: Why should he be fighting in little, relatively unimportant Korea?

A first lieutenant in the United States cavalry division fighting Communists in Korea, he wrote the following letter to his parents. It does two things which the President and Secretary of State have failed to do adequately.

It states clearly the reasons for American participation in the struggle in Korea, and defines specifically the objectives which we hope to gain through the fighting there.

Mr. Acheson had opportunity to clarify these issues recently when he wrote, for publication, his reply to a young marine's suggestion that our foreign policy was more than a little mixed up. The marine's chief objection to our involvement in Korea was because he doubted that America had a just cause there.

However, the first lieutenant sees what is at stake, and clearly states what we stand for as well as what we are against. He wrote his letter while hospitalized in Tokyo following an emergency operation in a tent just behind the front lines in Korea. He was awarded the Bronze Star medal for heroism displayed last November when during an attack by superior enemy forces he organized flank and rear-guard security, heedless of heavy enemy mortar, automatic weapon, and small arms fire, and inspired his men to beat off the enemy and hold their position.

Here is this young American's letter:

TACHIKAWA, JAPAN.

DEAR FOLKS: Quite often in Korea I used to become very depressed, and had all but convinced myself that it was wrong (strategically, not morally) for us to tie up so much of our Army in so remote and untenable a spot when the decisive portion of the earth seemed to be the Western European-North African sector. I could not help but feel

that we were doing little more than bringing the misery, poverty, and carnage of war upon the Korean people, who after all seemed to care little about the processes of legislation and government. All their principal cities—Seoul, Pyongyang, Inchon, Chungju—have been gutted, pillaged, burned, destroyed—crops went unharvested in the fields; homes by the thousands were burned, women and children, clinging desperately to their pitiful possessions clogged the roads and fields as our forces met, and were killed and maimed by shells and bombs from both our own and the enemy's weapons.

I could not see how all the devastation visited upon them could possibly be justified by any amount of political independence which might be the end result of it all. But, because I was so close to the scene of this havoc, I suppose I was blinded to everything else taking place in Korea. I lost sight of the fact that the fight is for not only political freedom, but freedom of mind, and freedom of soul, for the people of Korea. Are there not hundreds of thousands of ROK's fighting beside us, and fighting valiantly when equipped? No one will ever know how many of them have died in battle and lie in unmarked graves—and many more thousands will die before their soil is free of Red troops. So, if these sons of the Korean land find liberty worth fighting for, and if need be, dying for, then surely we cannot be wrong in helping them. I have only seen the harder phases of the struggle, and the struggle is a hard and vicious one. But throughout the history of mankind, liberty has never been bought cheaply. We paid for our own at Valley Forge and at Yorktown, not in silver and gold, but in blood.

But, whereas there are unspeakably painful aspects in the contest, there are also those which make it worth while and wholly justifiable. Free elections are being held; schools are opened again, and the children are taught the humanities instead of communist ideology; churches are rebuilt and there is freedom of worship once more. And not unimportant, there is freedom of enterprise, which means freedom from poverty and economic enslavement.

Now that I have been out of the midst of the turmoil for a few weeks, my mind has been cleared and I have been enabled to view objectively the whole of the struggle, untainted by difficult and unpleasant conditions which of necessity must exist before the goal is reached. I have been able to analyze and reason out and determine to my own satisfaction why we must fight communism—not only in Korea, but wherever it exists and challenges us. To achieve liberty we had to fight, and now that we have it, we must keep it at all costs, keep it though we must fight and die to possess it.

A poet once wrote these lines—

"Yet still am I a slave

When banners flaunt and bugles blow,

Content to fill a soldier's grave,

For reasons I shall never know"

But we do know why we must fight, and we know what will happen if we do not. We know now what we are for and what we are against.

We, and in this case we are the great majority of men—are against the domination of the world by a gang of self-maddened technicians of power. We are against enslavement of nations and peoples, counter to their will, by corruption, lies, and conquest. We are against the reduction of society to the uniform pattern of a spy-ridden slave camp. We are against the strait-jacketing of science and art and invention in the rigid bindings of a banal and degrading dogma. We are against the torture and sacrifice of human beings on the bloody altars of these faceless

gods of communism, historical necessity, and the revolution of society. We are against the sapping and mining and smashing of every institution and human relation which men have so long and so painfully fitted together in their never-ending contest against the mysteries of nature. We are against power which is legitimized only by power.

And in knowing what we are against we are also defining almost directly what we are for. We are for the restraint of power by custom, moral principle, and by law. We believe individual human beings to be of an infinitely higher moral worth than any secular end or goal. We believe in an open, not a closed society, in the right of men and nations to be different, and we believe in the right of man to explore varied routes to earthly and eternal heavenly salvation. We are for, specifically, the liberty of those nations that have been subjected to the Communist tyranny, and for the removal of the threat to the freedom of all other nations. We are for a world order, based on law and Christian principles, which will permit men to advance creatively without the threat or existence of war, and the paralyzing weight of fear and systematic terror. We are for freedom—freedom of mind, freedom of body, freedom of soul, and freedom to determine the restrictions to be placed upon that freedom, lest it destroy itself.

And so I have determined why in my own mind I know that we must conduct our campaign in Korea, and any place else on earth where the need of militant resistance arises. May God grant to our statesmen and soldiers and people the foresight and wisdom which they so sorely need to meet the crises which will come.

Give us more guns, more ammunition, more troops, and more of your prayers, and with God in close support, freedom again shall rise up from the dust.

Love to all

In Memory of Hersey Egginton

EXTENSION OF REMARKS

OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. LEONARD W. HALL. Mr. Speaker, under leave granted me I include the following poem by James Patrick McGovern in memory of the late Hersey Egginton, formerly a district attorney of Kings County and leader of the bar in the State of New York:

IN MEMORY OF HERSEY EGGINTON

Broken is our sacred friendship,
Fifty years of brotherhood,
Which time had always turned more mellow,
Which death alone had not withstood.

Gone our bond transcending selfhood,
Happy in each chance to give,
Consecrated by each service
With which the pulse would beat and live.

Brother quick to help all suffering
Of sick and poor wherever known,
Feeling for the hearts of others
By Christian spirit in your own.

Death? Your friendship is undying
In myriad lives your deeds still shine;
In them your memory is immortal,
To me, our love must be divine.

—James Patrick McGovern.

Address of Hon. Edward J. Reagan,
Member of the California State Senate

EXTENSION OF REMARKS
OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. MILLER of California. Mr. Speaker, the Honorable Edward J. Reagan, a member of the Senate of the State of California, representing the fifth senatorial district, delivered a stirring address at the California State convention of the CIO on July 28 last.

It has been my privilege to know the senator for many years and I am very happy to have the privilege of including in my remarks his splendid speech.

We are nearing the end of the sixth year since the Empire of Japan sued for peace in the Pacific and the victorious United Nations Allies entered upon what we confidently hoped would be an era of lasting world peace.

Objectives of any people in international relations are determined by their desire to carry out the principles and purposes to which they are supremely devoted.

Americans have a rich heritage of moral and political principles which we have always conceived as applying equally to all the people of the world. This tradition is rooted in the belief in the dignity and supreme worth of every individual human being. States and governments have to us never been ends in themselves but only the means through which men could secure their individual liberties and carry out their moral purposes.

Americans possess a fundamental love of freedom which we believe is common to all the people of the world. We believe that every man should be free to think for himself, to worship his God in his own way, to express his convictions and to act either alone or in association with others in accordance with what he believes to be the highest good.

Americans believe that everyone in the world has a right to a sufficient quantity of material goods to enable him to live in a way that is consistent with his dignity as a human being. Americans believe that everyone in the world should be enabled to live in peace, secure from the threat of war and violence which always deprive men of their dignity, life, and well-being. The kind of world in which every human being can live in peace and can think and act with the dignity which befits a man is the kind we seek to achieve, and cooperation with all men—everywhere—in the creation of such a world constitutes the highest ultimate objective of our efforts in international affairs.

Beset by fear—angered by the tactics of the Soviet Union—and impatient in the failure of peace to emerge from the wreckage of World War II—the United States has embarked upon a vast rearmament program designed to protect the freedom and our own security. But America needs to try to formulate her policy with the wisdom of maturity, the temperance of perspective, the humanity of greatness.

America must reassess her objectives and examine the impact of her policies on the rest of the world. Are they moving us toward our objectives or away from them? We approach the world problem with confidence, with a hope for peace and security.

That confident hope has been sobered in 6 years. We are today sadder, perhaps, but rather considerably wiser and more realistic

in recognizing that peace is not a thing cheaply to be purchased, nor easily to be maintained. We have learned that preservation of peace requires much the same kind of effort we have already learned to put into raising the living standards of our people. Success is not automatic—efforts cannot be relaxed—and the results we achieve are in more or less direct proportion to the work and thought which we collectively contribute to the whole.

Perhaps it will help if I put this in concrete terms familiar to all of you. It has often occurred to me that the development of organized labor provides a striking parallel to the efforts by nations to develop an organization capable of bargaining collectively for peace.

The individual employee is, for the most part, in a poor bargaining position. To succeed in the short run for himself he frequently finds that he is bargaining with his employer against the interest of his fellow employees. Under a system of individual bargaining, the employer is almost certain winner in each case—at least to the extent that anyone may be the winner in a situation in which the result is a continually depressed living standard.

The emergence of effective organization within the labor force has brought with it victory for everyone concerned. The steady rise in living standard which has accompanied the maturing system of labor-management relations under collective bargaining has confirmed what the early theorists of the labor movement predicted. There has been more of everything for everyone—employers and employees alike—and ever less of hardship, misery, and strife.

I trust you will forgive my reminder of these familiar things which you already know so well, but as I remarked earlier, I believe there is a close parallel between organization for a better living standard and organization for the preservation of peace.

So, with these thoughts in mind, let us take a look at what we are trying to do in making this a peaceful and decent world. I take it to be the objective of the United States that we should assist in creating, within the family of nations, an organization which will work collectively to keep the peace. Such an organization of individual nations should be governed by an understandable, understood, and agreed upon system of law and order.

Within our own communities, our States, and our Nation we have achieved a system of law and order recognized and enforced throughout the country. While we must concede that even our own national system does not produce perfect justice, it does have perfection as its goal. And I believe the history of the United States demonstrates that we have steadily approached a closer approximation of absolute justice between citizen and citizen, and the citizen and his government.

But this is a slow and difficult process into which constant effort must be poured.

I think it is perfectly clear that the task of instituting a system of law and order to control conflicts between sovereign nations is a much more difficult one. It is complicated by long-standing jealousies and antagonisms: of the Irishman against the Englishman—of the Frenchman against the German—the Pole against the Russian. Religious differences intervene. So do racial differences. So do political theories, and social theories, and economic theories.

Yet overriding all these differences, jealousies, suspicions and antagonisms is the still larger concern of all men to work out means for peaceable solutions to their conflicts.

So great in fact is this demand for peace that we grow impetuous for immediate re-

sults. We forget all the differences and the difficulties. We grow impatient, and seek after some magic way to peace that would be quick and cheap and easy.

Naturally, where there is such a great demand for instantaneous results bought at bargain-counter prices, there are those who pretend to offer us an easy way out. The Kremlin, for example, tries to market the thought that if the nations of the world will appease the ravenous Soviet appetite for conquest, there will be no war. In the Communist view, there would be one world—a Soviet world—in which no possible force could arise to begin another war. What the Communist omits from his argument is any reference to the price we would pay for such appeasement. Down the drain would go all our cherished freedoms, our standard of living and all the other great things which we presently have and for which we continue to strive.

But the Communists aren't the only ones who offer what is supposed to be an easy way out. We have what might be called the go-it-alone plan, perhaps more accurately, a whole group of plans that operate more or less on the go-it-alone theory.

Basic to all of these go-it-alone schemes are most of the familiar arguments against joining a union. Why spend money on union dues to help somebody else? Why aren't you good enough to take care of yourself without calling on others to help? What difference does it make to you what happens to the other fellow? Why get in an organization where the other fellow gets to vote on what happens to you?

Well, you know the answers to all those questions—and those answers pretty well apply in the field of foreign policy. Perhaps the worst feature of go-it-alone is its rejection of the whole idea that we will try to build a system of law and order among nations. Instead, we would try to protect ourselves under go-it-alone on the idea that might makes right, and that it doesn't matter what happens to the other fellow.

Well, what happens to the other fellow does matter in this world. Quite apart from the complete immorality of the might-makes-right idea, and quite apart from the rejection of trying to create a family of nations that can settle its differences by collective bargaining, we need the other fellow just as much as he needs us.

I don't think it's necessary to argue the immorality of might-makes-right, or that it's necessary to develop the advantages of a system of law and order among nations. But I would like to discuss briefly why it is that we can't go it alone, why it is that we do need the other fellow.

Take industrial production, since it is an all-important factor in modern war. There are four great industrial areas in the world. The largest, of course, is here in North America. Next is the area of free Europe, then the area in Russia and her Eastern European satellites. Last on the list in size, and considerably smaller now than it was before the war, is in Japan.

Steel capacity is a good illustration of the relative size of these industrial areas. For every 10 tons of steel that we can produce in the United States, free Europe can produce a bit more than 6 tons—and the Soviets can produce almost four. Now the mathematics of this 10-to-6-to-4 ratio of steel capacity is of utmost importance. Add the 3 tons from free Europe to our 10, and the result is 16 tons on our side to 4 tons on the Soviet side—a 4 to 1 advantage for us.

Now add these up another way. Add free Europe's 6 tons to the Soviet 4, and the result is 10, which is then equal to our capacity.

Is there any doubt in your minds, then, as to why the Kremlin has sought, through every kind of sabotage, infiltration, and threat, short of war itself, to take over five

Europe? With that single stroke, world communism could acquire a total steel capacity equal to our own—and with this newly acquired Soviet might, Japan, separated from us by the width of the Pacific, would find itself constantly under the Soviet gun—either neutralized, or taken over altogether.

Now without attempting to overburden you with argument here, I would like also to point out that if Europe were lost to the Communists, we would actually be in worse shape than the approximate equality in steel capacity would indicate. There are a dozen or more critical, strategic materials which the United States must import from outside the Western Hemisphere in order to keep this giant industrial machine of ours running at anything like its present levels. Perhaps 15 pounds of manganese go into every ton of steel—and for this manganese we depend overwhelmingly upon supplies in India and Africa.

To maintain, and for that matter, to increase as we would have to do, our industrial output in the event Europe fell to the Communists, we would necessarily have to keep India and Africa out of Communist hands. And this task, accomplished without allies, would be an enormously difficult one for us.

Now in developing this industrial picture to show a practical reason for our need of allies, I am perfectly well aware that former President Hoover reminded us last winter, during the great debate over troops for Europe, that the United States could, "with proper safeguards," as he put it, be self-sufficient and independent of imports from places such as India and Africa. As an engineer and former Secretary of the Interior, as well as a former President, he should know. What he did not point out, however, was that our industrial output would be seriously curbed if we were compelled to depend exclusively on the Western Hemisphere.

With this review of some of the essential facts which must be considered in discussing our foreign policy, the course of action followed by the United States in the past 6 years becomes more readily understandable.

We have invested heavily in building the machinery for international collective bargaining in the interests of peace. The "union dues," as it were, that we have contributed to this collective effort have been high. But the stakes involved are incomparably higher. We hope to achieve out of it a union of nations dedicated to peaceful and lawful settlement of disputes. To be effective, this union of nations must resolutely act collectively to assist any nation threatened by aggression. This union must be strong enough—militarily and economically—that its collective action can prevent an aggressor from achieving his objective. This union of nations must make it forever impossible for any aggressor to get away with the old Hitler trick of picking off free countries while other nations stood helplessly by until the Nazis had amassed such power that only a world war could halt their conquest.

Thus it is that the United States has stood by the United Nations through Soviet veto after Soviet veto of proposals aimed at making world peace more secure. We have put billions of dollars into Europe in the form of economic assistance needed to restore the vitality of its industrial and agricultural productivity. From the levels of starvation and hopelessness that existed in postwar Europe, production is now well above prewar levels.

The European people themselves have created from their war-decimated population a new generation of democratic leaders in whom they have faith. They have discarded the old leadership which in the 1930's had counseled appeasement and led them into war and an occupation from which they have had to be liberated. The local Communist movements in the free countries of Europe, who hoped to parlay the postwar

misery and despair into a rejection of democracy and the institution of a Soviet Europe, have been steadily beaten back at the polls, losing more ground in each election. The danger of internal overthrow of Europe's democracies by communism has now largely passed.

The steady build-up in Communist military strength which began even before Europe's economic recovery was well under way has, of course, opened the new danger of outright Communist aggression, for we must conclude that the Kremlin still sees the necessity for taking over free Europe's industrial capacity if it is to succeed in world conquest.

Military conquest, as part of Communist strategy, had made its first postwar appearance in Europe when the Kremlin directed and supplied guerrilla warfare broke out in Greece in 1946. We poured military and economic aid into Greece, and into Turkey and Iran as well, beginning in 1947. The result was the survival of the elected government of Greece and the stamping out of the guerrilla movement. It also resulted in a greatly strengthened Turkey and in the withdrawal of Soviet troops from the northern province of Iran.

In 1949, the broad blueprints for the collective military defense of Europe were laid down in the form of the North Atlantic Treaty under which 12 nations of the Atlantic community agreed to work together in their common defense. Also in 1949, the program of supplying our free allies with military equipment and with machinery for the production of military supplies was also put into operation. The result, in terms of Europe, has been the creation of an international army under the command of General Eisenhower. Free Europe already has more than 2,000,000 men under arms, and has a large and growing supply of trained reserves. Her defense budgets have mounted steadily, and we are looking forward to the day when this force is sufficiently strong that no aggressor will dare launch an attack against it.

The full significance of the North Atlantic defense force strikes us when we realize that the bulk of Western Europe's armed forces are committed to General Eisenhower's command. When we consider the extent to which this has required the free European countries to submerge their long-standing national rivalries in order to work together for a common purpose, we can be heartened to see ourselves moving toward the desired goal of a united and peaceful family of nations.

Turning away from Europe now to Korea and the Far East, everything I have said about the establishment of collective action to preserve peace applies with equal force. As a question of principle, aggression is aggression wherever it occurs. If the union of free nations is to be dedicated to the proposition that no aggressor shall succeed in depriving an independent country of its freedom, this principle must be applied whenever and wherever an aggressor seeks to violate it.

On June 25, 1950, the North Korean Reds set out to conquer Korea south of the thirty-eighth parallel. If this conquest had succeeded it would have resulted in the destruction of the free and independent Republic of Korea which the United Nations itself had helped to create.

Thus, the military objective of the United Nations in Korea has been to prevent the Red aggressor from succeeding in this conquest and thereby forcing him to abandon his attack. With the Korean war now into its second year, it is perfectly apparent—and this should now be clear to the Communists, too—that the U. N. forces will not permit the conquest of South Korea.

So far as the Communists are concerned, the question in Korea is whether they have

had enough. Physically, they are further from the conquest of South Korea than they were on June 25 of last year. The whole purpose of the Red aggression—conquest—has been thwarted. Worse still from the Communist view, they have suffered staggering casualties in terms of trained troops. For those who point out that China has a seemingly endless supply of manpower, it is important to recall that there is a vast difference between unskilled and illiterate coolie and the soldier trained in the techniques of modern warfare. And the best armies of Red China have been plowed under by superior fire power and almost unchallenged air supremacy over the Communist lines which the U. N. forces have possessed.

Perhaps the Reds have not yet had enough. Or perhaps events of the next few weeks will prove that they have. Whatever may be the short-run result in Korea, we may be absolutely certain that the free world cannot drop its guard.

We must never lose sight of our basic objective: peace. We must continue to work at this in a hard-headed and realistic fashion. There is no cheap, easy, or quick way to achieve it.

I believe we are at a point where we can see that our global efforts are beginning to pay off. Military conquest by an aggressor is being stopped, and stopped very effectively, in Korea by a group of nations convinced that peace is everybody's business. You may be sure that this denial of conquest in Korea is not being lost upon Soviet satellites. If Red conquest had succeeded in Korea, satellite enthusiasm for similar adventures might be considerably higher than it is today. U. N. action in Korea has made aggression a somewhat unattractive proposition.

Our global efforts are paying off in another sense as well. The union of free nations is now greatly stronger than it has ever been in the past. This is true in a military sense and in an economic sense. But most important of all, this free world union is constantly broadening its foundation of understanding and agreement. We are making real progress in resolving the jealousies and differences which in the past have wrecked efforts at cooperation between nations.

In short, a system of law and order—agreed upon and understood—is emerging. We are building a basis of enforcement for that system by a community of nations learning to bargain collectively in keeping the peace. The union dues are high. The amount of effort involved is immense. But the stakes are higher still. We need the other fellow. He needs us. And we all need peace.

In closing, I would ask. Is our present policy winning for us the friendship and confidence of other peoples and nations around the world? Is our policy advancing the cause of human freedom and welfare? Does our policy give promise of providing us and other nations with a measure of security? Have we exploited to the fullest extent the essential role of the United Nations, namely the strengthening of the peace-making functions of that body? Have we explored to the fullest extent those conditions under which the nations of the world can work together to help themselves in the struggle for food, for freedom, for justice, for security? Have we given the world the benefit of a great demonstration through our deeds of the effectiveness of the democratic process?

An international program embodying these concepts requires intergovernmental action. We must—as the first and most effective step—unite American opinion behind a coherent program of private and public action—national and international—motivated by a concern for the general welfare.

America now finds herself in an unusual position. She was brought into being as a nation by men who had a deep awareness of the value of the individual and deep and pervading confidence in the Supreme Being.

America is no longer an infant republic but a powerful nation. We must meet the test of world opinion which seeks to determine whether our physical strength will tempt us to depend on it alone rather than have it tempered with moral and spiritual values.

We should be sensitive to the needs of the other peoples of the world and we then become in a much surer position as a powerful nation to be trusted. May we bring a vigor, a resoluteness and all-pervading sense of the spiritual values into our dealings with the world about us. Then perhaps we will justify the faith in America as set forth by Prime Minister Nehru of India in April 1940: "India is far from America, but more and more our thoughts go to this great democratic country which seems, almost alone, to keep the torch of democratic freedom alive in a world given over to imperialism and fascism, violence and aggression and opportunism of the worst type."

The world about us would like to reach toward us with high expectation. Do we, will we, meet the challenge?

Undercover Communist Agents in Government—Reply of Senator McCarthy to President Truman

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, August 23, 1951

Mr. MALONE. Mr. President, recently the Senator from Wisconsin [Mr. McCarthy] replied to President Truman on a Nation-wide network over the facilities of the American Broadcasting Co., with reference to undercover Communist agents in government. I ask unanimous consent that the address be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, my deepest thanks to the four radio networks for giving me time to speak for those of us who are engaging in the difficult and unpleasant task of digging out the dangerous and undercover Communist agents in government. If we are to succeed, we must first break through and destroy the smoke screen of smear which is the Communist method of discrediting those who are willing to do this task.

The occasion of the four networks so generously giving me this time is that the President himself the other night joined in this smear and shouted all of the same names that have been coined by the Daily Worker and the left-wing elements of the press and radio. The terms are familiar—"character assassins," "unproved charges," "slander monger," "hate monger," "irresponsible accusations," "destroying unity," "tearing up the Bill of Rights," "the big lie," etc. The President also added his voice to the left-wing chorus: "No proof, no proof, no proof."

Well, the 15 minutes I have tonight will not allow me to give you even a fraction of the proof we have begged the State Department and Mr. Truman to take. But I shall give you the evidence tonight in one or two typical cases and then you decide whether those people should be doing our planning and handling top-secret material. You decide whether enough evidence was given against them.

But before I do that I would like to discuss briefly with you why it is so difficult to produce evidence against Communists and fellow-travelers. For example, I have in my hand testimony given before Senator PAT MCCARRAN's committee. General MacArthur's chief intelligence officer, General Willoughby, was testifying. On page 744, he was asked to give information which he had about some State Department employees from the Far East who were suspected of Communist activities. Listen to his answer. Here is what he said:

"Mr. Chairman, as a citizen, I am naturally most desirous to assist this important committee. However, as an Army officer, I am expected to observe Army orders and Presidential directives.

"No information of any sort relating to an employee's loyalty shall be submitted to a congressional committee.

"Any individual who may appear or be a witness before a congressional committee will respectfully decline to testify concerning the loyalty of any person and will state that he is forbidden to answer such questions by pertinent directives of the Army."

This same order prevented Maj. Leslie Groves from giving the Un-American Activities Committee the facts which he knew about atomic spies.

Can any one of you think of one reason on God's earth why Mr. Truman has issued this order making it an offense against the Government to give Congress the truth about Communists who are in our Government? Is not this order an admission that they know about and are trying to protect the Communists in government? Otherwise, why forbid the 2,000,000 Government employees to tell what they know about Communists?

Let us see when that incredibly fantastic order quoted by General Willoughby was first put into effect. It was issued to Army officers on August 21, 1948—just 17 days after the Hiss case broke. President Truman had just made his famous statement that the Hiss case was a "red herring" and that those who uncovered Hiss were seeking publicity and "endangering unity."

The President then says, "But why doesn't McCarthy produce the evidence which I, the President, have ordered withheld?"

Now on this question of proof, we might well spend a minute on the ill-famed Tydings committee which was appointed to investigate the men I had named. I hold in my hand the hearings of that committee which shows that Tydings was offered the names of a large number of witnesses who would give the evidence on the Communists and fellow travelers whom I named and what happened? The answer was No. Tydings with the administration blessing said, "Oh, no. We will not hear these witnesses. We will close the case and report that McCarthy produced no proof."

To give you a better idea of how phony and dishonest is this claim of no proof, let me read from the Tydings hearings:

On page 2521, the minority counsel, Robert Morris, said:

"I have gone and gotten some witnesses together who will testify that he (former State Department employee at that time employed in another Government office) was a member of the same Communist Party unit as they were, and I think that we would be delinquent if in the face of this evidence that is now on the record—"

Senator Tydings interrupted and said, "Turn it over to the FBI or do something else with it. I would like to get a decision here. We don't want to waste this afternoon."

That is from pages 2521 and 2522 of the hearings.

In view of the fact the Truman-Acheson axis shouts that there is no evidence against any of the people who McCarthy considers

so bad for this Nation and that McCarthy is afraid to give the evidence off the Senate floor outside of congressional immunity, let's take the evidence in a typical case of a high State Department planner tonight, a planner who has been so often found where disaster hits America and success comes to Soviet Russia. Let's take the case of the President's Ambassador at Large, Philip C. Jessup.

Now as I give you this evidence, remember that every left wing writer and radio commentator has been screaming that McCarthy has been naming these people under congressional immunity. Well, there is no congressional immunity on this radio program tonight. I am sure you will agree with me that if what I tell you is untrue, then this man Jessup is being grossly libeled and should at once start one of those lawsuits that they threaten so often. If, on the other hand, what I say is true, then I am sure you will agree that this man is not good for America and should be taken out of Government.

As I give this evidence, I ask the President what more evidence does he want on this man—what more must I prove on Philip Jessup before he will get rid of him—or is this Truman's and Acheson's idea of no evidence? If this is not evidence, then there is no such thing as evidence.

And remember that we have given equally convincing evidence on a vast number of State Department employees.

But let us get down to the evidence. Any of you can have a copy of this evidence if you want it—by merely dropping me a line.

I hold in my hand the photograph of a document showing that Mr. Jessup had editorial control of the official publication of an organization named as the front for and doing the work of the Communist Party. I have in my hand the pictures of checks representing thousands of dollars of Communist money which were accepted and cashed by Jessup's organization. I have the photostats showing that Jessup was affiliated with not one, not two, not three, not four, but five organizations that were officially named as fronts for and doing the work of the Communist party—not named as Communist fronts by McCarthy, you understand, but named by the attorney general or legislative committees. I have in my hand a copy of a petition—and listen to this if you will—a petition signed by Jessup urging that we destroy all atomic bomb material—and I quote—by appropriate means such as dumping it into the ocean. This was at a time when undercover Communists were stealing our atomic bomb secrets and sending them to Russia.

I have in my hand also the court record of Hiss' second trial in which Jessup swore that Hiss had a high moral character and high integrity and a great reputation for truth and veracity—a man who was convicted as being a Communist perjurer.

While Jessup was chairman of the Pacific Council of the Institute of Pacific Relations, which is being investigated by the McCarran committee, he had for 4 years as his staff, 23 individuals. Ten of them have been named under oath as Communists; three of them named as espionage agents, and three have been named as probable Communists.

I ask the President to stand up and tell you what part of this evidence is untrue. Let him tell you that Jessup was not in editorial control of a Communist front publication. Let him tell you that Jessup's publication was not supported by Communist money. Let him tell you that this publication did not follow the Communist Party line in Asia. Let him tell you that it did not hire well-known Communist writers. Let him tell you that Jessup was not affiliated with five organizations which were officially named as fronts for and doing the work of the Communist Party. Let him tell you that

Jessup did not petition that we destroy atomic bomb material by dumping it into the ocean. Let him tell you that Jessup, as chairman of the Pacific Council of the Institute of Pacific Relations did not employ on his staff of 23, 10 people who were not named as Communists, 3 as espionage agents, and 3 as probable Communists. Let him tell you that Jessup did not come to Hiss' defense and did not testify to Hiss' reputation for loyalty, truth, and veracity.

Incidentally, when I first gave this evidence to the President, what do you think he did? He gave this man top secret clearance to all atomic and hydrogen bomb information. Of all the stupidly stubborn and stubbornly stupid playing with the lives of American boys that I have ever seen, this tops the pinnacle of them all.

I see my time is up. I will continue this on another network, Friday night.

What Communists Call "Spying" Is Routine Work for Russians Here

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article appearing in the August 24, 1951, issue of United States News and World Report entitled "Communists Get Free News Here":

COMMUNISTS GET FREE NEWS HERE—UNITED STATES PRESS IN SOVIET AREAS: HAND-OUTS OR JAIL

(United States is wide open to Moscow newsmen. What Communists call "spying" by Americans is routine work for Russians here. Stalin's reporters attend all press conferences, have access to all agencies, have rights Voice of America men can't get. Little that they write appears in print. But they keep a detailed account of United States affairs moving out—direct to the Kremlin.)

In Prague, an American newspaperman is in jail for doing the everyday, routine work of a reporter. He was charged with spying and sent to prison for 10 years. In Washington and New York, reporters for Communist newspapers in Russia and other countries behind the iron curtain do their jobs with all the privileges and rights enjoyed by Americans.

When George C. Marshall, the United States Secretary of Defense, holds a press conference to tell of military plans, Communist reporters are present. Within a few hours a report of what he said is on the desk of Joseph Stalin. President Truman's ideas, outlined to American correspondents, are in Moscow about as soon as they are on the streets of American cities. These reports often are more detailed than those printed in America. They tell how the President looked, what he meant, give background interpretations of what he said.

The situation is the same all through the Government. Communist reporters for Russian newspapers have full freedom. They carry the same press cards as do American reporters. The Voice of America, a Government agency, is barred from membership in congressional press galleries. But correspondents for foreign Communist newspapers are admitted.

Reporters for the Soviet news agencies have cards that admit them to the White House offices. They have working space in the State Department pressrooms, lunch with State

Department officials, and listen in on press conferences of Secretary of State Dean Acheson.

All around Washington the Soviet reporters rub shoulders with American newsmen. They move in and out of newsrooms, pick up the same hand-outs, attend press conferences with officials of the Defense Department, the Atomic Energy Commission, and other agencies. They are members of the National Press Club and attend its social gatherings. And they may travel freely about the country and talk to anyone.

If American reporters are spies—as William Oatis, the Associated Press reporter, was accused of being in Czechoslovakia—then Communist correspondents are able to do a full job of spying in the United States with the aid of United States officials and long-standing policies.

Seven employees do the work for Tass, the Russian news agency, in the United States. Three of them are in New York, four in Washington. Of them, only two are Russians. The others are American citizens. There are no reporters from the satellite countries in the United States except for two Polish newsmen who are accredited to the U. N. and whose activities are confined to the New York area.

Like the 2 Poles, the 16 Russian reporters accredited to the United Nations are restricted to work in the New York City area, including Flushing and Lake Success. If one of them should go to Albany to cover a session of the legislature, or to Philadelphia for a Communist meeting, he might be deported. But in New York City they travel freely and talk with whomever they wish, ask all sorts of questions. Many of them spend much of their time in Wall Street and on local assignments for the Soviet agency.

The seven Tass reporters assigned to general work in the New York and Washington offices, and accredited as correspondents, may travel where they wish and write what they will. Those in Washington are free to range through the Government departments. There is no censorship over their activities or what they send out of the United States.

From the New York office, Ivan Beglov and his two American aides send Russia far more material than ever appears in Russian and satellite newspapers. They send the texts of speeches, governmental announcements, business and technical reports, all kinds of useful information. In Moscow, this is passed around among trusted officials. The dribbles that get into the newspapers are distorted versions of American happenings.

Much of this material comes from Washington where the bureau is operated by Mikhail Fedorov and his three American helpers. Fedorov, 30, was an aeronautical engineer before the Soviet Government decided to convert him into a newspaperman.

Fedorov's three helpers are Laurence Todd, Miss Jean Montgomery, and Miss Euphemia K. Virden. Miss Montgomery is the daughter of a Pittsburgh architect. Miss Virden's father is a Cleveland industrialist, once an official in the Department of Commerce.

Todd, 68, preceded Fedorov as chief of the Tass bureau. He is an old hand in Washington. A New Englander, Todd has an ancestor who fought in the Revolution. Another helped to start the Republican Party. Todd has many news sources in Washington. In the past, the Russian Embassy has relied heavily on his advice.

Instructions from New York and Moscow flow into the Washington office of Tass without question. But one of the points raised against William Oatis was that he worked under orders from his New York office.

The congressional press galleries, whose rules are administered by newspapermen, refused to grant membership to reporters for the Voice of America because it was a Government agency. Tass reporters were held to be representatives of a press service and admitted.

But, among satellite countries, one Government put Tass in a different light. An American correspondent in that country protested to Foreign Office officials that he was being compelled to submit his dispatches for censorship but that Tass men did not have to do so. He got back a formal letter telling him that Tass reporters had diplomatic rank but that he did not.

Adoption of the same point of view in Washington would ban Tass men from congressional press galleries on the same ground as that on which membership was refused to the Voice of America.

Few reporters from the United States remain in either Russia or the satellite countries. There are only four American reporters in Russia. No others are being admitted.

One American correspondent, recalled to the United States recently, was kept waiting 7 months before the Soviet Government would permit him to go back to Moscow. He had worked in Russia almost 10 years, was married to a Russian woman and had left his wife and two children in Moscow.

Another American newspaperman, seeking admission to a satellite country, was told over the telephone that if he would call at the Embassy in Washington, he could get an entry permit. At the Embassy, he saw men inside, but no one would answer the doorbell. For several days, he got more assurances by telephone that he could get an entry permit; but no one would come to the door at the Embassy. He is still waiting.

In Russia and most of the satellite countries, a reporter can make no move that is not reported to the police. There are no governmental news sources, no press conferences, no uncensored newspapers from which to pick up news. And many of the citizens are afraid to talk with reporters. They, too, are being spied upon. The only news source is newspapers that print officially approved news. Often dispatches themselves are censored before being sent; they may be held up at any time.

The general disposition is to treat newspaper reporters as spies. And, around Washington, since the Oatis incident, the suggestion is being raised that Russian reporters be treated the same way.

The Case of the Confused Cougar

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the RECORD, I bring to the attention of the House The Case of the Confused Cougar.

This interesting story comes from the Tennessee Citizens' Committee for the Hoover Report, of Nashville, Tenn.:

THE CASE OF THE CONFUSED COUGAR

The bureaucrat and the taxpayer are not alone in their confusion over duplication and overlapping among Federal agencies.

Even the animals in the forest lands owned by Uncle Sam are slightly puzzled—or should be, anyway. Take the case of the cougar (or mountain lion). If a cougar is killed on Park Service land, the hunter is held under Park Service regulations to have destroyed wildlife in a national park. He is liable to a fine and imprisonment or both.

However, if the cougar passes up the Park Service land for a better hunting preserve in the Forest Service land, the hunter who kills him is treated from an entirely different standpoint—but also by Federal standards.

The Forest Service rules contain no provision for punishing a cougar killer. Rather, he is rewarded, for the State in which the Forest Service preserve lies will pay the hunter a \$75 bounty for having destroyed a predatory animal.

In this fashion, under Federal laws, one bureau hails the hunter as a benefactor of mankind and he is rewarded accordingly, while another agency of the same Government holds that the hunter is a criminal and can send him to jail.

It is confusing, to say the least—confusing to the hunter and maybe even to the cougar. If the cougar is not confused, then the taxpayer, at least, should be freed from the confusion and duplication of overlapping Federal agencies.

Rational Adjustments to Uncertainty

EXTENSION OF REMARKS OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address entitled "Rational Adjustments to Uncertainty," delivered by Dr. William A. Neiswanger, professor of economics at the University of Illinois, to the 1951 graduating class of Washburn University, on June 3, last.

Dr. Neiswanger, a graduate of Washburn University, has not only had a distinguished career as university professor, but has spent considerable time in the Government service as an adviser on important problems involving monetary and economic questions. At these commencement exercises he was awarded the honorary degree of doctor of laws.

While directed particularly to college graduates about to face the realities of life in these trying and uncertain times, the address of Dr. Neiswanger contains so much that is wise, thoughtful, and constructive that it might well be read and heeded by every American. For that reason, I have felt that it should be placed in the CONGRESSIONAL RECORD.

RATIONAL ADJUSTMENTS TO UNCERTAINTY

President Stoffer, members of the boards of regents and trustees, faculty, members of the graduating class, distinguished guests and ladies and gentlemen, as you must know, I am very pleased to return to my alma mater for the purpose of greeting this graduating class, congratulating each of you on the successful completion of a course of study and wishing you well.

As a faculty man myself, I should like also to congratulate the faculty of Washburn on the graduation of this class. I know something of what you, the faculty, have been through in bringing these students so far. For if they are like those I meet in class, it is quite a task seeing them to graduation. Some it is possible to inspire—these, of course, run the risk of becoming professors themselves some day. Others yield only to cajolery—athletes are occasionally like that. A few it is necessary to intimidate—these usually have a convertible parked outside.

Then there are those who come to class to be entertained. These last are a great frustration to us professors—they respond so nicely to our every humorous sally, yet they often show an acute allergy to learning. To avoid this frustration, I sometimes pass them on general good nature and then advise them to follow another curriculum.

It must have been much the same when I was a student in Washburn, and I must say I, when a student, had but little conception of the role the faculty plays in higher education. Now, however, I have a real sense of gratitude to the inspiring teachers of my day at Washburn. I know now, also with what benign tolerance they observed our immature attempts at self-expression and with what restraint they refused to interfere with those occasional atavistic displays of youthful exuberance such as hobo day celebrations and sack scraps. I have no doubt such exhibitions have long since been renounced by more sophisticated generations.

And so to the faculty, for their continued skill in conveying learning to reluctant generations of youth, I say, for myself and this class—thank you very much. And to you, the students, without whom we professors would be truly sad—felicitations! I am sure President Stoffer, your faculty, parents and friends are very proud.

But I did not come here solely to eulogize the faculty and graduating class. I came also to discuss some problems of adjustment to the unusual uncertainties which face us in our day. To be confronted by uncertainty is surely nothing new in human experience, but the extent and source of our present insecurity seem to come to us with novel impact and leave us in some doubt as to a proper course of behavior.

The cause of the unique uncertainty of our day is an essentially false philosophy, which after some 100 years of incubation and restless stirrings has accumulated a violent force and this force has been turned outward on the world. It is the philosophy of class conflict, based on an economic interpretation of history and a mistaken materialistic dialectic. According to the Marxists, the history of civilization is the history of exploitation, of the many by the few, and the culture of a people is but part of the apparatus of enslavement of those who toil. Religion, art and literature are to them but the servants of politics and must be made to serve the state. The state, in turn, is viewed as an instrument of organized violence administered by the ruling classes as a means of oppression. The Communist dictatorships ironically referred to as people's democracies, use this power ruthlessly to suppress individualism and freedom in their political, cultural and economic manifestations. The Marxian doctrine and its new testament, by Lenin and Stalin, make of our ideals a sham, our defense of freedom a hypocrisy, and love of country an emotion stirred and diverted by tricksters for their selfish interest.

Small wonder we are assailed by uncertainties, a new sense of insecurity and resulting anxiety when such perverse ideas are combined with military power and loosened in the world. No single group of our citizens is more apprehensive or filled with foreboding than the quarter of a million young persons who are receiving their baccalaureate degrees this month from American universities. Abroad there is even more misgiving and concern in the minds of young people, for they live closer to the danger, in societies which are more divided on fundamental issues; their professors are widely separated on basic questions of social philosophy and organized minorities are vocal in sponsoring the most radical sort of ideas.

Americans, least of all Kansans, have never been impeded nor awed by a feeling of uncertainty or insecurity. Indeed, we have thrived in the midst of uncertainty. Perhaps

this is partly because we are still close to the pioneer days and have been weaned on stories of Indian raids and the struggle to make Kansas free. The Beecher Bible and rifle-men who left the security of Boston to settle in nearby Wabaunsee County and take their chances in bloody Kansas are a symbol of resolute faith and purpose in the midst of uncertainty. True, motives may have been mixed, as one settler on Pony Creek wrote to his relatives back home in New England: "We came to make Kansas free and, incidentally, get a quarter section of land."

The real danger in the uncertainty which confronts us in our era is that we may become weakened by doubts, that our emotions may become so aroused as to lead us to foolish actions and we may be led to emphasize the wrong things in trying to work out the solutions to the perils of our own day.

What adjustments can the intelligent person make which will preserve his sense of balance, dispel in measure the anxiety of fear, and enable him to stand as his pioneer ancestors did with calm surety and steadfast purpose?

The adjustments I wish to suggest take the form of recommendations for action and for certain points of view. What actions we should take in view of the present uncertainties, what points of view we should develop in the interest of our common welfare depend, of course, on the nature of the problems with which we are confronted. I would very briefly characterize the program of those who oppose us as follows:

1. They are attempting to weaken the western democracies by using every tool of propaganda and design to widen each fissure and crevice in the social structure of the democracies. If our enemies are successful in this, they will have gained two important ends—(a) we will be divided and (b) we will be led to doubt the enduring quality of our institutions.

2. They stimulate national movements in the colonial areas of the world and contribute by force to the success of these movements. Then, in these backward areas, they stimulate agrarian revolt and finally organize the proletariat uprising of the urban workers as the climax of the three-stage Communist revolution in colonial areas.

3. The economies of the major industrial nations of the west, they contend, contain the seeds of their own destruction. Without going into the economic basis for this Communist point of view, let me say merely they argue that the collapse of western civilizations is to be expected as a consequence of the breakdown in the economic system as revealed to us in periodic business depressions.

And so the Communists have a program which would weaken us internally by exploiting any weaknesses which may be found in our social and economic structure, which will harass us at the fringes of the earth as colonial peoples are stimulated to revolt and will, it is contended, destroy us at last through a breakdown of economic organization.

If this is the program of our foe, and he like Hitler has written out his philosophy and program of action in detail for us to read, then the question arises: What are the adjustments which a rational person might well make during this period of uncertainty?

I would suggest first, that we should observe with great care the points at which the Communists direct their divisive propaganda. We should then consider in a rational way whether the faults truly exist in our social structure. If so, we should do what we can as soon as we can to strengthen our democracy by remedying these faults. One does not travel abroad for long before the propaganda reaches his ears, sometimes from friendly sources—What about your lynchings? What about the share croppers? What

about the Okies? What about the gangsters who rule your great cities? "Why," the concierge of a Swiss hotel asked me, "do you keep your Indians in concentration camps?"

With such cunning, attempts are made to belittle us in the eyes of world opinion and cause doubts among us. Some of the faults which are exploited so craftily run deep and are surrounded by intense emotion. One cannot heal them overnight nor cure them with single acts of well-intended legislation, nor do I advocate a Carrie Nation-like approach to their solution by members of this class, for example. It does seem, however, that one rational adjustment to the uncertainties which confront us is to re-evaluate the importance of issues raised in the broad area of ideological conflict and to see that we use our influence right here at home to develop a more perfect democracy and so strengthen ourselves at home and abroad.

Members of organizations working toward these ends, whether women's clubs, service clubs, trade unions, student societies or Senate crime investigating committees surely serve their country's cause.

Not only, it seems to me, should we take a positive position to remedy, as we can, the faults in our society, but I would suggest also that, as individuals, we should impose restraints on ourselves when under the emotional tensions of our new insecurity. This to me is another useful adjustment to uncertainty. For there is real danger that our anxieties will stir such emotions within us that we will seek an outlet near at hand—that we will turn on our neighbors; that we will assail the universities and attempt to restrict intellectual inquiry there; that we will join with those whose fears overcome their faith and deprive ourselves of those fundamental rights of freedom which are the glory of our society.

As you may remember, the New York Times conducted a study last month in 72 major colleges in this country and reported "a subtle, creeping paralysis of freedom of thought and speech is attacking the college campuses, in many parts of the country, limiting both students and faculty in the area traditionally reserved for the free exploration of knowledge and truth." This, I think you will agree, must be stopped by men and women who make a rational adjustment to uncertainty and refuse to be stampeded by fear.

But if a rational adjustment to uncertainty is a refusal to be panicked into a destruction of our traditional freedom of expression and thought, then it seems to me there is a collateral adjustment which all responsible persons, especially professors, should make. We all know professors who like to use the shock technique to stimulate interest, and I fear we must renounce it and take special care that what we say in the classroom and public forum reflects our sober judgment. I do not mean that we should gag ourselves, to do this would destroy our integrity, but I do mean that what we say we must intend to say in all sobriety and objectivity, and that we willingly align the prestige society accords us behind our views. Only in this way do we merit the special privileges given us, and only in this way do we maintain our influence.

The second point in the general program of the Communists to which I have made brief reference has to do with their attempts to bring colonial areas of the world under proletarian dictatorships. Clearly, we see these programs in partial fulfillment in China, Indochina, and Korea—each in its own stage of the three-stage revolutionary program for such areas. This activity contributes much to our sense of uncertainty just now, and much could be said and should be said concerning our adjustments to this new element of uncertainty in our lives. I

will make but one comment, however. It is this: As a people we must make the intellectual and emotional adjustments to the fact that we are a great world power. In 1914 we were one of five or six great powers; in 1941 again we were one of five or six great powers, but now we are one of two great world powers which have the technical capacity, the industrial resources, the manpower, and the geographical position to qualify. We are so regarded by other peoples everywhere. True, we have strong allies, but in the end we emerge as the custodians of the English common law, of eighteenth century liberalism, of the rights of man, and no immature desire to escape by hiding behind the oceans or retreating to the security of the open country can change this fact, in my opinion.

If this is faced without evasion, many new complexities arise, but one at least has the inner peace of a mature person who has located himself in his environment and understands, in measure, his relationship to it.

It seems to me we are wearing our great power very well—without swagger or truculence, and I hope none of us mistakes for weakness the repose which only great strength makes possible. For another rational adjustment which should be made in time of uncertainty is a proper appraisal of one's own strength and the enjoyment of a quiet satisfaction in it.

These same Communists who assail us on so many fronts today, also hold the belief, as I have said, that every form of society—ancient, medieval and modern—breeds within itself the seeds of its own destruction. The force to which they look to destroy the great industrial nations at last is the business depression which in its recurring cycle, they say, forces more and more persons into the proletariat, centralizes control more and more in the hands of the few, whom they call the monopoly capitalists, and finally leads to the overturn of the entire structure by the mass uprising of the proletariat.

I will not now explain the fallacy of this argument as it applies to American society; its fallacies are probably evident to you. It may be, however, that a great depression in America will induce such recessions abroad in societies less stable than our own and bring such spreading unemployment and distress as to enable the native Communists to score great victories without the firing of a Russian shot.

Equally important with military preparedness in America, I would say, is the preparedness to forestall, if possible, and certainly to reduce the violence of, any major business recession which may come upon us. Faced with armed aggression, our leaders usually under-emphasize the importance of this.

Why do I mention this to the members of a class who have seen nothing but prosperity in America since their early childhood? My reason is that you should not have to learn by hard experience what we have learned and that your generation must understand that a business depression in America may be hard for us to weather, but a truly severe one might well bring real disaster to our neighbors overseas. Fear of this has been one of the great stumbling blocks in Anglo-American relations in the postwar years.

A rational adjustment to our present uncertainties is required here, too, for the concept of the Kansas pioneer who shaped his own destiny on a quarter section of good Kansas soil and regarded government as a necessary evil, is of eternal merit as it emphasizes the individual's responsibility for his own welfare. However, the magnitude of the economic forces which influence our economy, and the wide range of their effects on many people in many lands and the critical role they play for good or evil in the battle of ideologies, requires that our most

powerful and concentrated forces be mustered when collapse seems imminent and this means the Federal Government must act. This indicates, it seems to me, that when we no longer are sustained by huge military expenditures and a period of transition is before us, that the Federal Government must face its responsibility and direct its fiscal policies to the goal of economic stabilization. To the prospect of such action I believe we must adjust ourselves in this time of uncertainty.

Finally, I think we may need to make a rational adjustment to the very concept of uncertainty itself. When my class of 1922 graduated, World War I had but recently ended; we were entering the "two chickens in every pot" era and the outlook, apparently, was quite serene. However, those of us who went to graduate school had but received our higher degrees, and those who entered business had but become established when the great depression came. Our sense of economic security was rudely destroyed and our economic status, which had seemed secure and certain, became most uncertain. As we emerged from this, the Hitler tyranny appeared and all those uncertainties of personal fortune which confront men at such times assailed us. So the period of security enjoyed by the class of 1922 was short and our lives have been full of uncertainty, little dreamed of on our commencement day.

Today, your commencement day, the prospect in 1951 seems quite as uncertain as ours appeared certain in 1922. But in the fullness of time it is likely that you, too, will know years of reasonable quiet and enjoy that sense of security known too rarely by men of any era. Surely, however, the only certainty is change, and as mature persons we can scarcely feel abused or that fate is against us if our years have their lot of uncertainty which has been and will be the experience of man.

Ours is the task of making rational adjustments to the perils of our period; adjustments of the kind I have been speaking lead to action, and positive action programs dispel, in measure, the anxieties of fear. In such times as this human greatness can emerge, and I express the hope, in closing, that the members of this class may come to know the deep and satisfying experience of personal achievement in the midst of great uncertainty. "Ad astra per aspera."

Philippines Enact Minimum-Wage Law

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. BURDICK. Mr. Speaker, one of the surest ways to fight communism is to eliminate some of the conditions on which it thrives. In the Philippines it thrives on unequal distribution of the land and a low standard of living for the majority of the people. Therefore it is encouraging to know that the Philippine Government has taken a big constructive step in enacting the first minimum-wage law for the islands.

Under leave to extend my remarks, I include the following article, taken from the August issue of the Monthly Labor Bulletin, a United States Department of Labor publication:

On April 6, 1951, the Congress of the Philippines enacted the first minimum-wage law

of general application to be adopted for the islands.

The law was devised to improve the economic conditions of workers, and, thereby, the economy as a whole, not only by establishing more adequate wage rates but also by preventing certain practices through which many workers in the Philippines are deprived of a portion of their meager wages. The impetus for this law came from one of the recommendations in the report of the United States Economic Mission to the Philippines (the so-called Bell report) made to President Truman in October 1950.

By reason of conditions peculiar to the Philippines, the minimum wage specified in the new law has three different levels. A single rate of 4 pesos a day is required to be paid in nonagricultural employment in Manila or its environs. A rate of 3 pesos a day is provided for nonagricultural employment outside of Manila or its environs for 1 year, and thereafter a rate of 4 pesos a day. The rate provided for agricultural work applicable on farms comprising more than 12 hectares (approximately 30 acres) is graduated over a 3-year period, with annual increases, from 1.75 pesos a day to 2.50 pesos a day. The Philippine Secretary of Labor is empowered under the act, in certain circumstances, to appoint tripartite wage boards to recommend wage rates in excess of the specified minimum.

DIRECT PAYMENT PROVIDED

To insure that wages are received by the workers who have earned them, the law provides for the direct payment of wages to workers. It requires the payment of wages directly to the wage earner in legal tender at intervals not exceeding 16 days. Furthermore, it is designed to forestall present kick-back and extortion practices, such as the so-called capataz system in the stevedoring industry in Manila, whereby foremen extort money from workers as tribute for retaining their jobs. Other such instances involve forced purchasing from company stores and the charging of exorbitant fees for representation in wage-collection matters.

Effective enforcement of the new minimum-wage law is expected to prove a useful step in helping to stimulate the Philippine economy through an increase, however modest, in the purchasing power and standard of living for a large portion of the islands' workers.

Considerable work in the drafting of this legislation was performed in the Office of the Solicitor of the United States Department of Labor. Members of the Solicitor's staff who performed outstanding service in such work and who have recently received special recognition by the Department's Efficiency Awards Committee for their contributions to the project are Leonard Appel, who received an honor award for meritorious service, and Miss Carol Cox, who received a superior accomplishment award. Experts from the United States Department of Labor who performed on-the-spot work in the Philippines in the effectuation of this program were Henry G. Gomperts, Ealton L. Nelson, and Harry S. Kantor.

How Should Cadets Be Picked?

EXTENSION OF REMARKS OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. CLEMENTE. Mr. Speaker, under unanimous consent, I include in the Ap-

pendix of the RECORD an article by my colleague, JOHN F. KENNEDY, of Massachusetts. This article appeared in The New York Times Magazine of August 19, 1951, under the title "How Should Cadets Be Picked?"

Congressman KENNEDY has made a special study of congressional methods of selecting nominees for West Point and Annapolis. He has a distinguished record of service in World War II for which he received the Navy and Marine Corps Medal as a PT boat commander.

HOW SHOULD CADETS BE PICKED?—THE WEST POINT SCANDAL CALLS ATTENTION TO THE WEAKNESSES OF AN OUTMODED SYSTEM FOR MAKING SERVICE-SCHOOL APPOINTMENTS

(By Hon. JOHN F. KENNEDY)

The recent disclosure that 90 West Point cadets have been involved in "cribbing" on examinations has shocked the Nation. While this unfortunate scandal is a cause for concern it serves to call attention to the graver issue of the selection methods used in choosing our future military and naval leaders. Young men are finding their way into the service Academies by political favoritism, inadequate screening, and misplaced emphasis on qualities that are of little importance in military leaders.

Public attention has focused on the number of football players involved in the scandal at West Point. It is quite apparent that the first impulse toward moral breakdown came when these young men were approached by Academy officials and athletic scouts who offered them appointments to West Point. It is, of course, imperative that immediate steps be taken to stop such professional recruiting of athletes. But there is more to it than that; special preference for football players is only one of numerous faults in the entire system of selecting entrants for West Point and Annapolis.

Our present system, developed to insure the supremacy of the civilian over the military, makes the majority of appointments to West Point and Annapolis a personal prerogative of Senators and Representatives. That system is far from a success, especially when our safety may hinge on our ability to draw into the service Academies young men who are best fitted to meet the vast responsibilities that will later be placed upon them in our Armed Forces.

The broad facts as I have gathered them after some months of study with the assistance of Army and Navy officials, who recognized the deficiencies of the present system, disclose a situation so serious that we cannot afford to ignore it. These facts will show that the service Academies are unfilled; that the best men are not being attracted to them; and that an undesirably high number of graduates, upon whom the Government has spent large sums of money, fail to stay with the armed services.

Congressmen are not required by law to use any particular standard in making their appointments. In response to an inquiry I find that while half of them employ some type of competitive test, mostly the so-called civil service designating examination, the marks made by the candidates are not usually considered to be the controlling factor. Congressmen frequently make their choice on grounds of "first come, first served," or on grounds of political obligation, or perhaps because of reasons of friendship.

The weakness in our present system of selection can be pointed up by the results that the Coast Guard has obtained through its system of recruiting its students by open competition. As contrasted with West Point and Annapolis, it has eight or nine times as many applicants as vacancies—men who in many cases might have gone to the other Academies but who felt they did not have the political influence to get an appointment.

Moreover, statistics from the Educational Testing Service, an affiliate of the College Entrance Examination Board, reveal that in 1945, 1946, and 1947 (years in which this agency prepared examinations for both the Coast Guard Academy and the Naval Academy) the Coast Guard candidates achieved a higher score than the Annapolis candidates.

Further evidence of the deficiencies of our present system of selection was provided by the study made for the War Department in 1944 by Maj. Oscar K. Buross, Jr. Comparing the records of cadets who were appointed by Congressmen with those appointed in special categories as a result of a competitive examination, it was found that over a 10-year period the cadets who were not congressional appointees performed academically, year after year, better than congressional appointees.

The present system of congressional appointments is, in addition to being unfair, obviously not producing the best men for the service Academies. Evidence of this is to be found in the "attrition studies" made of the classes of 1915, 1925, and 1935 at both West Point and Annapolis.

"Undesirable attrition" is the term employed in these studies to represent those men who have been accepted for admission who later become lost to the armed services for reasons of lack of suitable temperament, want of proficiency, or absence of emotional stability. The figures on undesirable attrition are truly startling. In the Navy class of 1915 it has been 48.7 percent, in the class of 1925 it has been 52.5 percent, and in the class of 1935 it has already grown to 27.9 percent. The figures for West Point are somewhat less. For the classes of 1915, 1925, and 1935, undesirable attrition stands at 27.2 percent, 22.3 percent, and 14.8 percent, respectively. But both illustrate how the services of a vast number of officers are lost to the Nation before they have repaid the investment made in their education and training. These losses are in large part avoidable.

Of particular interest in this time of emergency are statistics on attrition in the Academies at the end of World War II. From 1945 to 1947 there were 306 resignations from undergraduates from Annapolis and 380 from West Point. Among the graduates of the Academies the attrition is even more noteworthy. About 30 percent of the Annapolis Academy graduates of classes 1943-46 have resigned their Navy commissions, and it is reasonable to estimate that the country has today less than 50 percent of all men entering the Naval Academy from 1940 to 1943.

The resignation figures of the Military Academy were a great deal less but it is evident that in troubled years too great a percentage of young men consider the Academies as a place of refuge rather than as the foundation of a life's career in the service of their country.

The entrance tests for appointees to the Academies compound in many cases the original errors made in congressional selection, although recently they have been substantially improved by being administered by the Educational Testing Service, with its experience in the field of giving college entrance examinations.

One deficiency that seems to characterize them is that they fail to equalize the opportunities of all candidates to meet the academic requirements for admission. The candidate who has private tutoring or who has attended a preparatory school with instruction oriented toward entering one of the Academies will, as a rule, achieve higher marks on the entrance examinations of the Academy than will a candidate who has equal or greater native intelligence and academic aptitude but who has the benefit only of a high-school education.

According to a survey made of the class of 1942, 97.3 percent of the 298 members of the class who qualified by passing the regular entrance examination had preparation supplementary to their high school courses. That survey substantially confirms four previous studies which have shown that more than 95 percent of the candidates who passed the regular examination had extra instruction in addition to their regular high school work. This has led to the development of "cram schools" and this trend has handicapped the boy without funds.

A second deficiency that seems to characterize these tests is that in doing the job they purport to do they do it very imperfectly. Some 15 to 20 percent of the young men entering Annapolis and West Point, despite having passed these tests, fail to graduate because of academic deficiencies—a percentage that represents pure educational waste and that is substantially higher than that which characterizes other comparable institutions.

Furthermore, the entrance requirements of the Academies consist of mental and physical qualifications and make little attempt usually to determine a candidate's personality, character, and leadership potential, but rather rely on the judgment of the Members of Congress, who themselves have no effective means, beyond personal knowledge, of determining the presence of these attributes.

Evidence of the importance of qualities other than mere academic proficiency in achieving success in the armed services is the result of a study of more than 1,000 naval line officers on full duty at the time of Pearl Harbor, drawn from the classes of 1912 to 1922 at the Naval Academy. The purpose of that study was to discover what correlation existed between academic success at Annapolis and officer career success.

Taking a correlation coefficient of 1 to mean that a candidate's success at the academy would mirror exactly his success in his later career, a result of 0 would indicate that there was no connection between the two. The correlation coefficient turned up by the study was only 0.16, which demonstrated that there is very little connection between academic success at the Academy and later success in the Navy, where personality and character begin to count heavily.

The obvious method of improving the quality of men applying for entrance to Annapolis and West Point is to pursue some such method of recruitment and selection as that practiced by the Coast Guard Academy. I doubt today whether this is a practical method. Our goal must be to develop as effective a system as possible within the framework of congressional responsibility for the selection of applicants. But there are ways, however, for immense improvements in the framework of the existing system—ways which I have attempted since 1947 to adapt to the selection of candidates from the Eleventh Massachusetts District for the service Academies.

Each year I have announced that open examinations would be held for the appointments that I was entitled to make to the two Academies. All applicants are subjected to a physical examination based on standards applied by the Army and Navy, an obvious necessity, as between 12 percent and 30 percent of those appointed by their Congressmen fail to pass the physical examination given at the Academies.

Those who are physically acceptable are then given aptitude and achievement tests, especially developed by the training division of the Civil Service Commission, which measure their ability to learn and their proficiency in academic subjects. Their scholastic records in high school and preparatory school are carefully compiled and evaluated.

Objective reference questionnaires devised to bring out all the relevant data relating to the candidate's character and personality

are sent to former teachers, supervisors, and others who have personally observed the candidate over a period of time. These questionnaires are drawn in such fashion that it is difficult to give any candidate high marks. This was done in order to get a more accurate report on an individual than the usual letter of recommendation provides.

The candidates are finally interviewed by a selection board composed of three members, consisting of a clergyman who formerly was an Army combat chaplain, a psychologist and doctor of medicine at Harvard University, and a former Army doctor with long experience in conducting interviews while in the service. The selection board, after these interviews, finally evaluates the competitive rank of each candidate and notifies, by wire, the candidates it has selected for appointment.

Some system such as this, obviously much improved, can easily be made available to all Congressmen. The Civil Service Commission, or the College Entrance Examination Board, or some similar organization, could undoubtedly devise better and more comprehensive tests which could be made available to any Congressman who might want to employ them. Local citizens of responsibility and experience could be prevailed upon to conduct the necessary personal interviews, and thus real merit would become the basis for appointment.

The cost for the introduction and operation of such a system would be negligible. It would not be compulsory, but a simple request by a Congressman would set the entire system in operation.

In addition, the admission tests given by the Academies themselves must be improved because they fail sufficiently to emphasize the qualities which, in addition to academic proficiency, make for good officers.

We all know that although two individuals may have identical intelligence levels and mechanical aptitudes, one may succeed at a given job and the other fail because of the difference in personality, attitude, and motivation. This field of character evaluation is developing rapidly. Industry and other educational institutions are availing themselves of its already demonstrated results to pretest both executives and promising college material.

What scientific advancement in this field has proven is that, although tests and evaluations of character traits are not too accurate as applied to the individual, they are highly dependable in analyzing the average characteristics of a group as a whole. In other words, while one cannot be sure of selecting a particular future leader, one can pick a group of several hundred from which future leaders can be developed with far greater frequency than from an unselected group of the same size.

During the war the psychologists and the educators achieved marked success with these techniques at the Coast Guard Academy. In evaluating Reserve officer cadets they were able to predict, with an error of two to four cases, how many individuals out of a class of 200 to 300 Reserve officer cadets would actually receive commissions. The same general sort of techniques were applied by the Army and Navy air arms in selecting candidates to become pilots, bombardiers and navigators, with startling success in reducing to almost negligible proportions the number who would eventually fail to qualify.

I believe that it is essential that some system similar to the one that I have discussed be placed into operation as quickly as possible. Common justice requires that all boys in this country of ours have an equal opportunity to attend a service academy, and the needs of the country require that the best boys be chosen.

We dare not continue to pick the men who may direct another war with new weap-

ons and new techniques by methods developed almost a century ago and shown to be wanting. There is no better place to begin than with the improvement of the process of selecting candidates for the two academies, for it is from these that the generals and admirals of tomorrow will be made. The Congress, I am certain, given the facts, would recognize its responsibilities to do a better job. To do so it must provide itself with the tools that are needed. They can easily be created, and at a negligible cost. And since the world rumbles of war and unfortunately is not likely to be soon at peace, the Congress dare no longer delay the discharge of its responsibilities as wisely and as best it may.

Tidelands

EXTENSION OF REMARKS OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. HÉBERT. Mr. Speaker, once again David Kleck, the oil editor of the Times-Picayune and New Orleans States, has pulled the rug from under the real culprits in the attempted wanton theft of the rich tidelands of the States of California, Louisiana, and Texas.

The chicanery and base machinations of the schemers has been exposed in another illuminating article which Mr. Kleck recently wrote for the Times-Picayune and the New Orleans States and which I now direct to your attention.

Just what is behind this attempted tideland grab by the Department of the Interior becomes more and more apparent with the passing of each day and the continued ventilating of the historical facts behind the scheme.

The Times-Picayune and the New Orleans States are rendering an invaluable service to the people of this Nation in exposing this unhealthy situation. These two great newspapers are doing a service in the finest tradition of American journalism and Mr. Kleck is demonstrating his great talent as a reporter who knows how to get the facts and how to present them.

This story of the story behind the tideland grab would be almost unbelievable if it was really not so fantastically true.

Read it for yourself:

APPLICANTS AFTER TIDELANDS AS PRIVATE WEALTH SOURCE—EIGHTEEN HUNDRED SQUARE MILES ASKED BY UNTAXED CO-OPS
(By David Kleck)

Nation-wide scheming to legally loot the rich coastal resources of Louisiana, Texas, and California will come to an end only with the enactment of proper legislation by Congress.

Thousands of American citizens desiring Federal control of the offshore areas for their own purposes, have been trying for years to plunder the States' oil reserves by devious use of the Federal Mineral Leasing Act.

Private citizens have asked the Government to give them mineral leases on the submerged lands and have blanketed the coasts of these three States with their claims.

In these ranks are counted Federal officials, former Senators, farmer cooperative associations, stock promoters, speculators, and individuals who figured they knew a good thing when they saw it.

By admission of a former Secretary of the Interior, Harold L. Ickes, it was pressure from the early members of this group that touched off the whole tidelands controversy, not the question of oil for national defense.

The coasts of Louisiana and Texas were singled out in 1946 by 18 cooperatives that filed claims with the Interior Department for a "fair and equitable portion" of the submerged areas, that is, 1,800 square miles. One of these applicants was a multi-million-dollar Kansas City, Mo., cooperative oil refinery.

CLAIMS STARTED IN 1934

All these were people who believed, or were told, that title to the vast undersea wealth would eventually rest with the Federal Government. On that basis, as early as 1934, individuals applied to the United States Interior Department to give them notoriously cheap leases on California's offshore areas where the prospects of oil were known.

The Federal Mineral Leasing Act provides that leases may be issued for 50 cents an acre (it used to be 25 cents) on a noncompetitive basis if the lease is not within the area of a geological structure producing oil or gas.

The reasoning was simple. Applicants plastered the offshore areas with claims that they expected to be realized when title went to the Federal Government. Under the guidance of Ickes, the Interior Department accepted the applications and issued serial numbers.

"BEGAN TO HAVE DOUBTS"

The influence these applicants and their attorneys played on Ickes was described by him before a congressional committee.

"Until 1937 these applications were denied by the Commissioner of the General Land Office and, in those areas where appeals were taken to the Department, his decisions were affirmed.

"But applicants and their lawyers continued to insist that the United States does own the land and the oil and that the Department does have the power to grant them oil and gas leases.

"So we began to have doubts"

In the interval between the time these applications began to roll in and the United States Supreme Court decisions taking the tidelands from the States, the offshore area leases skyrocketed in value. Oil companies, operating under expensive State leases, explored the submerged lands at tremendous costs and established numerous oil fields. Municipal improvements, such as harbor facilities, recreation beaches, and other structures, were erected on State bottoms that these Federal applicants claimed.

The applicants figured that when the Court decisions were final, this tremendous wealth would roll into their hands at the ridiculous figure of a few cents an acre. Their claim had precedent, they said, over all and they demanded their rights.

Stock companies were formed by applicants and stock was sold in many parts of the United States on the basis of these applications with the Interior Department. The Nation was on its way to one of the biggest land grabs in its history, and the path was paved by Ickes.

This was indicated by a letter a Federal postmaster wrote to the Senate Committee on Interior and Insular Affairs in September 1949. The postmaster, I. A. Smoot of Salt Lake City, had claimed his share of the California tidelands and he wrote:

"These applicants (many from Utah) were the first to initiate claims that the Federal Government owned and controlled

the marginal sea belt and induced Secretary Ickes back in 1935 to establish Government claim by court action."

HALTED BY SOLICITOR'S OPINION

"Sixteen years ago the Interior Department opened the marginal sea areas to American citizens to file oil and gas lease applications. The Interior Department accepted money, gave serial numbers and treated lands as being subject to the Mineral Leasing Act.

"The Department used these applicants to bring the problem to a head and finally secured a Supreme Court decision. Ickes stated clearly and definitely that leases should have been issued after the Supreme Court decision."

What prevented the national spectacle of millions of acres of oil-bearing land going to private citizens for a song was an opinion rendered by the Solicitor of the Interior Department, Mastin G. White. White decided that the Mineral Leasing Act could not apply to the submerged areas and recommended that all applications be denied. The main gist of his reasoning was that the law applied to lands in the public domain and that the submerged areas were not actually in the public domain.

Numerous applicants immediately brought suit in Federal court to force the Interior Department to hand over these leases. What makes this vast number of frustrated applicants important today is the fact that a group, headed by former Senator Burton K. Wheeler, has a suit in a District of Columbia court for this purpose. The judge has suspended action on the suit because the case of the California boundary is before the Supreme Court, but Wheeler's action is viewed as a test case by interested parties all over the country.

But these were not the only people who hoped to make a killing in the rich offshore areas. A former Assistant Attorney General of the United States, a man who helped prepare the tideland suits, also made his try.

Norman M. Littell, Assistant Attorney General in charge of the Lands Division of the Department of Justice, and in charge of all litigation the country was engaged in with respect to the public domain, headed a committee to study the ownership question of the tidelands.

FILES CLAIM FOR INDIANS

After he left the Justice Department in 1944, he filed a petition 4 years later in the Supreme Court, asking to intervene. Littell said that since California did not own the submerged areas and the Court decision did not say the United States owned it, it therefore belonged to California Indians. Therefore, he was representing 21 bands of Indians and their claims to a substantial portion of the oil-bearing bottoms.

A recent story from Washington showed how another individual, E. L. Cord, had collected Federal land script entitling the bearer to 160 acres of public land, and had therefore filed a claim for all the oil wells in the Gulf of Mexico by demanding the land around each producer.

One of the first intimations of the monster grab attempt shaping up came in 1946 when Senator CAPEHART, of Indiana, rose in the Senate to express himself as "amazed, shocked and sick" over the facts he had learned.

CAPEHART had introduced resolutions supporting the United States suit against California and immediately withdrew them. He said he had introduced the resolutions ("without understanding their significance") at the request of former Senator James E. Watson, of Indiana.

Watson was head of the Washington law firm representing the Pacific Undersea Oil Co and a registered holder of 75,000 shares of its stock. This oil company was founded out of thin air and would be in business only

if its claims on the rich coastal areas were approved, which it expected when the Federal Government took title through the Supreme Court action.

At that time Congress was passing a bill quitclaiming the coastal lands back to the States. President Truman, who had previously proclaimed that the submerged lands belonged to the States, vetoed the quitclaim legislation on August 1, 1946.

But 4 months before the veto, a curious combine focused its eyes on the Louisiana and Texas shore. Alfred A. Kiltz, a lawyer and also of Indiana, went to Oscar Chapman, then Under Secretary of the Interior, and personally delivered the claims of 15 farmer cooperatives.

FARMER COOPERATIVE CLAIMS

Shortly after, Representative Charles LaFollette, of Indiana, rose in the House and announced the claim. He said the participants covered 33 States and had a membership of 4,750,000 farmers. He asked the governors and attorneys general of all the States to reconsider their actions "in contesting the right and title of the Federal Government to the great wealth which is involved in the oil under the continental shelf and the tidelands of the United States."

He also asked them to reconsider their action in supporting the quitclaim resolution "and thereby deprive the farmers of the State of Indiana and of the 32 other States involved * * * and the people of those States of their share in that wealth and of their right to join together cooperatively in its development."

Subsequently, the list of tax-free farmer cooperative claims on file with the Interior Department increased to 18. Although domiciled all over the country, their applications were distinct in character, were written exactly alike, and all cited the President's proclamation.

The claims were made by Cooperative Refinery Association, Kansas City, Mo.; Tennessee Farmers Cooperative, Columbia, Tenn.; Indiana Farm Bureau Cooperative Association, Inc., Indianapolis, Ind.; Farmers Cooperative Exchange, Inc., Raleigh, N. C.; Southern States Cooperative, Inc., Richmond, Va.; Farm Bureau Services, Inc., Lansing, Mich.; Farm Bureau Cooperative Association, Inc., of Ohio, Columbus, Ohio; Pacific Supply Cooperative, Walla Walla, Wash.; Pennsylvania Farm Bureau Cooperative Association, Harrisburg, Pa.; Cooperative Oil Association, Inc., Caldwell, Idaho; Farmers Union State Exchange, Omaha, Neb.; Central Cooperative Wholesale, Superior, Wis.; Farmers Union Central Exchange, Inc., St. Paul, Minn.; MFA Oil Co., Columbia, Mo.; Midland Cooperative Wholesale, Minneapolis, Minn.; the Cotton Producers Association, Atlanta, Ga.; Iowa Farm Service Co., Des Moines, Iowa; and Consumers Cooperative Refining Association, Levelland, Tex.

In asking for 100 square miles each, the claims all written alike, said, in part:

"Whereas the applicant desires to explore said area in order to obtain a fair and equitable portion of the same for purposes of its own drilling and production of crude oil; and agrees that all information obtained on the area so explored and not granted to claimant shall be turned to the Government of the United States for the general welfare."

The claim presented by the Cooperative Refinery Association, Kansas City, Mo., is signed by Howard A. Cowden as president. Cowden is also president of the Consumers Cooperative Association of Kansas City, which operates in Missouri, Iowa, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Colorado and Wyoming.

OPERATES REFINERIES, PIPELINES

Operating in the stronghold of the old Pendergast political gang, this cooperative last year did a \$62,428,460 volume of business. This year it expects to do about \$75,000,000.

As a manufacturer and wholesaler, this tax-free cooperative operates refiners at Coffeyville and Phillipsburg, Kans., and Scotts Bluff, Nebr., and Newcastle, Wyo. The association also owns a part interest in a refinery at McPherson, Kans., and owns about 1,000 miles of pipeline.

Owned by 1,500 local cooperatives in nine states the association markets petroleum products, mills lumber, and manufactures fertilizer and paint. It wholesales to the local co-ops farm machinery, groceries, motor car tires, and accessories.

Although Cowden is not regarded as taking part in politics in Kansas City, the record of Congressional hearings in 1948 shows that Benjamin C. Marsh, secretary of Peoples Lobby, Inc., read a Cowden editorial into the Record. The editorial was entitled "Oil Companies Making Foreign Policy," and warned that it was time to substitute international control under the United Nations for what amounts to oil imperialism that can and may lead to war.

PEOPLES LOBBY, INC., FOLDS

The Peoples Lobby, Inc., which was all for Federal control of the off-shore areas, folded and did not appear in later hearings. Marsh had reassured the Senators that our editorials are fresh every hearing and we do not repeat them.

The claims of the co-ops further stated, in part:

"Whereas applicant has made research upon the possibilities of the existence of structures within the hereinafter described area and has already done research as to mechanical methods of drilling for and producing petroleum under waters of the Continental Shelf."

The Louisiana geological survey, a branch of the department of conservation, reported that no permits for geophysical work had been granted to anyone in the cooperative associations. However, officials of the survey pointed out, some independent geophysical company could have done the geophysical work for the cooperatives.

These officials have in their office a map prepared by a branch of the Interior department showing the gravity variations in this same area. This is gained from geophysical work.

The map was prepared by the United States Geological Survey in cooperation with the Navy Department and noted as a preliminary map of geophysical investigation. It is dated July-October 1947.

LOUISIANA OFFSHORE STUDY

The map indicates that its objective was "to obtain information on regional geologic structures, on bottom sediments and on salinity and thermal structure of the water, especially in offshore areas and at depths beyond those where exploration is at present considered economically feasible.

The scope of the Federal Government's investigation of the Louisiana offshore area is cited as "an area extending seaward 70 to 75 miles from the shore of the Gulf of Mexico between Sabine Pass, Tex., and Grand Chenier, La."

It is in this area that a year previous the cooperatives filed their claims. These claims were denied by virtue of the Mastin White opinion, the rendering of which has been contested by Burton K. Wheeler, among others, and disputed by Ickes. Although the cooperatives have never been in bad standing with the present Federal Government, the Interior Department has no knowledge of any more to force them to issue the leases.

The question apparently rests on the Wheeler suit in Federal court and the passage of legislation by Congress.

CLAIMS BY THOUSANDS

The picture of the multiple claims by thousands of people over the Nation pre-

sents one of chaos should the leases ever be granted. As Irving Smith, city attorney for Long Beach, Calif., testified before a congressional committee:

"Application * * * cover parcels of tide and submerged lands and reclaimed tide and submerged lands. These filings are located upon the entire 8.11 miles of water front of the city of Long Beach and extend seaward several miles, and likewise cover all of the municipalities' harbor facilities and recreation and park improvements * * * constructed by the city at a cost of \$25,000,000."

The magnitude of this claim is further pointed out when it is considered that the claims on the three States rest upon a \$250,000,000 investment the oil industry has made in the coastal areas. As a result, many oil companies hastened to apply to the Federal Government for leases on the very areas they had leased from the State.

But Ickes, who early in the thirties, encouraged the filing of these applications to support his move against the States, believes that the Government owes the speculators and promoters these leases.

ICKES REAFFIRMS OPINION

In a statement in a Washington newspaper in 1947 he said:

"Recently, the Solicitor of the Department of the Interior, Mastin G. White, also of Texas, and the Attorney General agreed that the Federal Leasing Act did not extend to the California tidelands."

"I challenge this finding."

"I charge that this opinion has all the earmarks of a collusive opinion to defeat the legitimate interests of the people of the United States. One last act that should be performed as gracefully as possible by the Attorney General and Secretary of the Interior is to reverse this opinion and say what I believe the courts ultimately will say—that the Federal Leasing Act does apply to the tidelands."

Ickes reaffirmed this opinion in his last appearance before a congressional committee considering a tidelands bill.

The vast move is not dead, even though Congress appears sufficiently informed to snuff out the scheme of legal looting of rich and developed resources. Even as recently as last month, when the House passed the tidelands quitclaim bill, an amendment was offered that would validate all these claims. The amendment was defeated amid cries of "Burton Wheeler's boys."

Considering the strong fight made by these applicants and their relentless efforts to seek a hasty consummation of the profit motive involved, it appears that the basic opinion of the Supreme Court has been largely ignored. The Court emphasized the need of dominion only when danger arises to threaten our domestic security. Combined with the efforts of the applicants have been the efforts of those who insist upon placing incalculable power in the hands of one United States official.

John L. Madden, assistant attorney general of Louisiana, emphasized these thoughts in an article in the July-August 1949 issue of the Louisiana Municipal Review. He said: "We have cause to wonder, as well, why the Federal Government should need control now, or during any other tranquil period in our history."

Behind the scene are the tremendous furor of the lease applicants, plans for the Federal Government to imitate the State's system of leasing that is so lucrative and the prospect of money coming into the Federal Treasury. Legal authorities question whether the Supreme Court considered any of these things in their decision.

But the grabbers have not given up yet. If an amendment which they sponsored had been tacked on the House tidelands bill, the Nation would have been on its way to the

spectacle of one of the greatest land grabs on record. As it stands, the House bill passed on July 30 could effectively kill this dream of plunder. This bill awaits action by the Senate.

Here Is America

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. BEALL. Mr. Speaker, under unanimous consent to have my own remarks inserted in the Record, I include therein a speech made by Hon. Theodore R. McKeldin, Governor of the State of Maryland, at the two hundredth anniversary of the founding of Thurmont, Md. I think this is a splendid address and exemplifies the American spirit and principles to which most of us subscribe:

HERE IS AMERICA

There are very few people in this troubled world of ours, very few in these United States and, I dare say, very few in our own State of Maryland who know that we are gathered here today to dedicate Thurmont's new firemen's hall.

In Paris, France, where the citizens are observing the two thousandth birthday of that great and beautiful city, the celebration of Thurmont's two hundredth anniversary, which we also are launching here today, hardly would be considered an event of world shaking moment.

And yet, these events are important—important to you and to me—important to America—yes, and important to the world.

Here is not just a new firemen's hall.

Here is not just a little Maryland town that is older than the Nation itself.

Here is America

Yes, here, symbolically, in brick and mortar is the United States of America

Here in Thurmont is a part of our great and powerful Nation—part of the bulwark of freedom and liberty in a world where powerful forces seek to enslave the bodies and souls of men

In Thurmont, Md., there are smiling faces and well-nourished bodies—so different from the melancholy that has become habitual, and the near starvation that has become the way of life in many areas of the earth.

In Thurmont, as in thousands of American communities, there is calmness in our determination to retain our freedoms.

Here we find sane confidence in the future in contrast to the psychopathic hysteria of despair which is the curse of the burdened lands where the dictators have crushed the souls and minds of humanity.

Even while keeping eternal that vigilance which is the price of liberty, we must keep Thurmont's smiling faces and well-nourished bodies on all the main streets—on all the highways and byways of America.

We can, and we must, retain our calmness and our confidence, without becoming lax in our determination to remain free, in the face of wars and threats of wars—in spite of the socialistic trends that creep into our own National Government and in spite of the fakery that is peddled by our false prophets and our Utopian dreamers.

That is the lesson of history and of history's repetition in our times.

The rational became the irrational and the psychotic became the rule as a preliminary to the downfall of nations throughout the annals of time. Reason gave way to

superstition, and fraud and charlatany replaced honesty and decency among the people who followed mad leaders in their selfish ambitions down the road to national ruin.

Slaves and consuls alike aped those groping, crumbling Caesars who, in their greed and in their fear, decreed themselves gods or swore their descendants to delity them after death by executive action—as preliminaries to the fall of the Roman Empire.

Adolph Hitler and his breast-thumping band of maniacs crouched at the feet of star gazers, palm readers, skull feelers, tea-leaf artists, numerologists, and seance conductors while they shouted their defiance at the true God and at man, and twisted their traitorous knives in the back of the Welmar Republic; and the aping, confused, and hysterical German populace joined the mad rush of the leaders to the scented rooms of the astrologers and other practitioners of the occult in a neurotic effort to tear the veil from the fate that they knew was about to engulf their land.

In Russia, today, the frightened keepers of a false idealism that got too big for them to handle, have sought to drive God from the churches and from the hearts of the people and to force the population to kneel in supplication before the hammer and sickle and to doff their hats in the presence of Stalin's picture in the public places.

And great masses of the people, not only in Russia but in other nations that have succumbed to her power, have become part of the international neurosis and madness.

Yes, there are fire stations in Russia, too—but not firemen's halls. They don't belong to Ivan, Serge, and the ladies of the auxiliary. They belong to the Kremlin—to Joe Stalin.

Vladimir and Igor may belong to the fire company—but they are not volunteers. They are assigned there by the commissars.

Anton and Bogdan do not drop into the fire station for a social evening with the boys. They may go there under orders for a party meeting. They may go there to be told their production is too low, or to be questioned about some remark they were heard to make.

But Thurmont, Md., thank God, is not the Russia of today. This new firemen's hall is as American as the seventh-inning stretch. This is yours. It is the club, the gathering place of the men—the volunteers—who are organized to extinguish fires in Thurmont and the surrounding territory—not start world conflagrations.

John and Pete, and Joe and Jack can come and go as they like. The auxiliary can use the rooms for a sewing bee or a bridge party. There is no one in Washington—no one in high station—who can tell them when to come or when to go. There is no one in the Nation's Capital or in any other place of power who can say who must belong to the fire company. If anyone in Washington wants to hold a town meeting in this firemen's hall for some good purpose, he must get your permission. If the purpose is not good, you can deny the use of the premises, whether the request comes from the Governor of the State or even from the President of the United States, because—

Here is America.

Thurmont, by American reckoning of historical time, is old, but to the ancient towns of Europe it is a babe in swaddling clothes—but you and your homes are far more mature than the oldest household in Communist-dominated areas of Europe.

There is no secret police watching your door, checking on your comings and goings, spying to see whose picture hangs in your living room, prying to learn the identity of your guests, delving into the lives of your associates.

There was no one this morning to bar you from your places of worship.

You are, indeed, more mature today than the people of socialized England. You

choose your own doctor at your own time. The industry for which you work is not the property of the State or of the Nation.

In spite of your youth as a town and our youth as a Nation, we are more mature than the people of the ancient races of Asia, because we of the 48 American States have learned to live together. We have no tribal warfare. We have no leaders taking arms against other leaders. We have found what their wisest men so long have sought—a true Republic—"the last, best hope of Earth," because here is America. Again, I say, keep it that way.

Just as all of us, as Americans, are calmly determined to keep America free from foreign domination, you as citizens of Thurmont be calmly determined to keep control of your local affairs and institutions—your schools, your park sites, your recreation activities, your police, and all of those things that belong to you as a community—including your new firemen's hall. Cooperate with your Federal Government in the things in which we, the people, have charged the Federal Government with responsibility, such as national defense, interstate commerce, and, when necessary, the waging of war. Cooperate with your State government in the sphere of the State's responsibility, such as the building and maintenance of primary roads, the upkeep of hospitals for the mentally ill and the tuberculosis sufferers, the educating of teachers for your local public schools, the operation of a State university, the coordination of public welfare, and, among other things, the maintenance of a State military department.

But be alert against Federal and State infringements on those things which are traditionally yours.

Beware of the Federal and State handouts of money, which may appear to be a windfall, but which actually may be the wedge in the door to give the higher levels of government control over your institutions.

So as we dedicate this new firemen's hall here today, and as we start the observance of Thurmont's bicentennial, let us also dedicate ourselves to the maintenance of all our freedoms—our freedom as a nation, our freedom as a State, our freedom as a county, and our freedom as a town.

Let us rededicate ourselves to that principle that the power shall rise from the people through the local levels of government, not loom over them like a cloud—a cloud that protects them from the glare of responsibility's sunlight, but threatens them with the dictatorial downpour of super-control.

Let us resolve in the shadow of this symbol of the people's power to help themselves to drive from the seats of government those who sell the favors of their offices, and who trade for illicit and unwarranted profits in the needs of a nation at war.

Let us dedicate ourselves to a moral reawakening—a renaissance of thinking as well as of behavior—to a public demand for honesty among our public officials—not merely the skin-deep honesty of the clever manipulator who avoids conviction—but the deeper, sincere, and genuine honesty of the man and woman who think honestly as well as behave with apparent honesty.

We must never—as did the followers of the decadent Caesars, the bullies of the Third Reich, and, presently, the sadists of the Soviet—accept as normal the recurrent waves of crime in the Nation. We must, on the contrary, dedicate and rededicate ourselves to living as God—the real Giver of all our freedoms—would have us live.

We must keep Thurmont, and all the Thurmonts, strong in their own rights—so that we as a Nation will have our greatest strength, because—

Here is America.

The St. Lawrence Seaway: A Water Highway From Vast New Iron-Ore Fields to the Industrial Middle West

EXTENSION OF REMARKS OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I include in the Record a very absorbing article from the magazine Inside Michigan which recently began publication. The magazine is dedicated to providing enlightenment on public affairs, and it is fitting that in this first issue there should be included an article of vital interest not only to the people of Michigan but also to every person in America.

The article tells the story of the St. Lawrence seaway. It is concise and to the point. I call it to the attention of my colleagues.

The article follows:

THE ST. LAWRENCE SEAWAY: A WATER HIGHWAY FROM VAST NEW IRON-ORE FIELDS TO THE INDUSTRIAL MIDDLE WEST

(By William M. Trevarrow)

Fifty-six years ago, in 1895, a joint commission was established by the United States and Canada to investigate the need for a deep-water route between the Atlantic Ocean and the Great Lakes. The Commission reported favorably, taking the first step in the long, and thus far, unsuccessful fight to establish the St. Lawrence Seaway.

In 1909, the International Joint Commission was established under the conditions of the Boundary Waters Treaty. This Commission accomplished nothing until the end of World War I. It then surveyed the seaway and power situation, filling the 60 volumes with the testimony of hearings held in cities across the United States and Canada. Its findings were favorable enough for President Coolidge to appoint, in 1924, a United States Commission, headed by Secretary of Commerce Herbert Hoover. Complete plans for the project were also drawn by a joint board of engineers.

Eight years later, today's legislation began when representatives of the United States and Canada signed a treaty providing for the construction of the seaway. Unfortunately, the treaty needed a two-thirds majority in the Senate before it could be ratified. The vote was 46 in favor of ratification, 42 opposed. The treaty was rejected.

President Franklin D. Roosevelt established an agreement with Canada in 1941, which differs from a treaty in that it requires only a simple majority for approval. Hearings on the agreement are now being conducted in both the House and the Senate and it is expected that the matter will reach a decisive vote during the present session of Congress. Estimates are that the vote will be called during the early fall months of the term.

An extremely close vote is expected and, while the bill is in committee, lobbyists for both sides of the issue are working to gain a few ballots. Should the agreement be defeated, supporters of the seaway project will have one last chance, in the national campaign next year, to gain their end. If they can bring about the election of a sufficient number of supporters of the bill, it will be passed early in the next congressional session.

To do this, the story must be brought to the people—something that has not been done to date. That so important a matter

has not been brought before the public seems strange, but throughout its 56 year history, the battle for the seaway has been fought at the legislative level and in Washington cocktail parties.

Michigan proponents of the seaway admit that the story has not been brought to the people. In a brief on the St. Lawrence seaway project prepared by Bert Robb, director of the Michigan State Waterways Commission, two objectives are established. The first and most important of these is to insure the passage of the present legislation, or, failing this, to establish such a strong position and grass-roots support that the next session will see success.

The first step in securing the necessary grass-roots support was taken when Gov. G. Mennen Williams, of Michigan, and Gov. Val Peterson, of Nebraska, called for a Midwest conference of the governors of 15 States on June 18, 1951, in Omaha, Nebr. The text of their message read in part:

"A present and future problem for the people of the Great Lakes area and the States of the Middle West is to determine interregional value of the St. Lawrence seaway project, hydroelectric, and other resource developments in connection with national and regional security.

The objective of the conference is to develop facts and information for ourselves and others through recognized expert sources. Defense officials of the Federal establishment and the Canadian Government are being invited to officially participate. Representatives of agriculture, commerce, labor, transportation, and others will be invited. Panel discussions and reports will be scheduled concerning problems of transportation, power, and connected interregional production. Sincerely urge that you join us in first interregional conference of governors on inland America's problems."

The facts to be presented before the conference of governors, although far reaching in scope, are simple. They may be roughly classified under four headings—the need for ore; foreign trade and economic stability; hydroelectric power, and national security.

Estimates by competent geologists indicate that the present supply of iron ore in the Lake Superior region will last only about 15 years. Present experiments with low-grade beneficiation processes may extend this span for a time, but will not provide a sufficient supply to keep the many mills in this area operating indefinitely. Unless the seaway is built, there is a good chance the steel and other heavy industries must relocate nearer the Atlantic coast and the new fields of foreign ore.

A few plants have already been relocated in the East in anticipation of the coming ore shortage. If this trend continues, the industrial Midwest would face a condition of economic and social upheaval.

On the other hand, if the 100-mile-long rapids west of Montreal are made suitable for navigation, the newly discovered ore deposits in Labrador and Quebec, Venezuela, and Liberia would be within easy reach of Michigan and other inland steel centers. Norman W. Foy, general manager of sales for the Republic Steel Corp., stated before the House Public Works Committee that—

"For the sake of our national welfare and security, the necessary legislation to construct the seaway must not be delayed. The seaway can be built without loss of time because approximately 5 years will be required to develop the mines and to build a railroad from the mines to Seven Islands (Labrador). During the same period the seaway can also be built. If we are to stop a possible economic catastrophe before it begins, we must have the St. Lawrence seaway not a probability, not a possibility, but an actual accomplishment."

Taking Detroit as an example, the need for the seaway as a direct route to foreign markets is easily demonstrable. Detroit is

the largest producer of export freight in the country. One out of every seven sales made in Detroit is to a foreign country. Last year, its exports and imports exceeded \$1,500,000,000. Today, Detroit is on a side road of world trade and all goods must be transferred through coastal ports with the exception of those moving by air. The completion of the seaway will place Detroit on a direct route to the Western World with resultant increases in its business. The increased market area made available by the seaway will contribute to Michigan's economic stability and permit industrial expansion.

The States of the industrial Midwest are not the only ones to benefit from the proposed seaway project. Power supplies in the Northeast are so low that defense demands during the last war caused a "brown-out" of the entire area. It is estimated that power development planned as a part of the seaway project would produce an almost unlimited amount of electricity. The resulting stabilization of industry would benefit the entire Nation.

The seaway has been attacked by its opponents as a wartime liability. An impressive group of responsible leaders, however, state that it is an urgent defense need. Leading this bloc are such men as Mobilization Director C. E. Wilson, Secretary of Defense George C. Marshall, Secretary of Commerce Charles Sawyer, and the Joint Chiefs of Staff. They state that among the advantages resulting from the project are

1. The establishment of an easily defended, new and vital line of water communication directly into the heart of the continent.

2. Provision for the construction and repair of ocean going vessels in a relatively secure area of the Great Lakes.

3. The over-all economic and industrial advantage accruing from the development of the waterway. The most important phase of this last point being the availability of open pit ore deposits which would permit rapid expansion of steel production during time of national emergency.

Opposition to the project is centralized in the National St. Lawrence Project Conference. Carroll B. Huntress, chairman of the organization, is a vice president of the Republic Coal & Coke Co. of New York. Approximately half the members are the chambers of commerce in cities on the east and Gulf coasts. Chief financial support of the program to defeat the project has come from the Association of American Railroads. Other anti-seaway blocs are found in the local transportation and power interests. In almost every case opposition has formed to protect personal interests.

The supporters of the program are, for the most part, Government representatives in this country. The Canadian Government and people are most emphatic in their insistence that the seaway be built immediately and, as has been stated before, have expressed their determination to go ahead with the project either with or without the cooperation of the United States. The greatest weakness in the past has been the lack of industrial backers. Recently many Midwest steel and iron companies have come to the program's assistance. But, with the exception of the Ford Motor Co. and the Nash-Kelvinator Corp., few Michigan industries have appeared as contributors to the seaway fight. Michigan labor and farm interests are vitally concerned with the success of the program and are taking an active part in the campaign.

These are the facts that will be brought forth at the Midwest Conference of Governors. Here, the first step will be taken in carrying the fight to the people. It is time for the proponents of the St. Lawrence seaway to let the public know what stake it has in this project.

Today the man on the street knows nothing of the St. Lawrence seaway problems; tomorrow he may well curse the legislators and press for keeping him uninformed.

Did Rain Makers Change the Weather?

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. SMITH or Mississippi. Mr. Speaker, under unanimous consent, I include the following article by Paul Friggens from the Farm Journal for September.

This article again points up the necessity for a thorough congressional study to make recommendations for legislation in this field which have so much effect upon the economic destiny of our country.

DID RAIN MAKERS CHANGE THE WEATHER?

(By Paul Friggens)

This year goes down as man's biggest attempt to fool Nature into raining—and so change the weather—over one-third of the United States.

Drought-plagued western ranchers and farmers have gambled upwards of \$3,000,000 in 1951 to try to get rain on 350,000,000 acres. The result, cloud-seeding looks about as experimental as the first airplane at Kitty Hawk.

"But don't laugh it off," General Electric Scientist Vincent J. Schafer warned the Great Plains Agricultural Council in August. "I think we know enough that eventually we can do anything we want to with the weather."

This year a rash of rain increasers—they use silver iodide to milk extra moisture—signed up the West. Farm Journal has just completed an on-the-spot check of their operations.

More than 50 associations of farmers and ranchers, who have contacted for rain and snow, report, about two to one, that they believe they got their money's worth.

What about those droughts, then?

"They can't break a drought," declares Rod J. McMullin, general manager of the Arizona Salt River Valley Water Users. Desperate Arizonans have been seeding 4 years to stem one of the worst droughts on record. "Our experiments show that there's not much you can do in a dry cycle but just sweat it out."

The United States Weather Bureau at Phoenix jabs. "While the rain makers seed the clouds the droughts get worse."

Does rain-increasing really work, then? It will take years to find out conclusively, but from laboratory and field tests, five things stand out.

1. Scientists—including the United States Weather Bureau—now agree that it's possible under proper conditions to increase moisture. Meteorologists also see hopes both for hail and rain suppression.

2. Rainmakers don't always hit the target. "That's our biggest weakness," admits a team of "precipitation engineers" operating over 2,000,000 acres of Montana wheatlands. Rainfall is often increased where it is not intended. A lot of dry Montana farmers wonder if some rain maker stole their wheat rains.

3. No one knows for sure what he's getting for his money. Either Uncle Sam or the States must devise some system of control and evaluation. "We're not going to get very far unless everybody does it in the right way," Scientist Schafer told the Great Plains Council.

4. We don't yet know whether rainmaking is important economically. "Could be worth more than hybrid corn or the atom bomb," scientists declare. If farmers got only a 1 percent boost in average rainfall they would

get back double the cost of a year's cloud-seeding, a Nebraska study shows. Dr. Charles L. Hosler of Pennsylvania State College doubts that artificial rain "of any importance will be possible in the near future."

5. Rainmakers don't know about effects downwind—whether Colorado cloud-seeding might have caused Kansas floods. Leading scientists, including the United States Weather Bureau, believe not. A few wonder.

Well then, did the rain makers change this year's weather, or didn't they?

"There is very little evidence and no present scientific basis for the belief that we now possess the ability to modify or control the weather and climate of a major portion of the country." That's the last-minute official word of the American Meteorological Society.

Irving P. Krick, whose work we described in *Farm Journal's* March 1951 issue, has made rain making into a multimillion-dollar affair. He does more than 90 percent of the West's grand-scale seeding, and declares: "Half of America is my laboratory." He's also cloud-seeding in Mexico and Salvador.

Farmers and ranchers report absolutely opposite results.

"Bumper crops" and "grass never better" are the reports to *Farm Journal* from many parts of South Dakota, Kansas, Nebraska, Washington, and Oregon. "Results here in reverse—target area one of the driest in Montana," goes another report.

"Some bone-dry farmers are of the opinion that rain increasers are doing more harm than good," asserts Montana's commissioner of agriculture. "No rain . . . we're stuck with the costs . . . doubt anybody could ever sell us again," says a Nevada group.

Whether it's nature's water or "Krick" water, Krick can point to a second wet year on his original three contracts in Washington, Colorado, and northeast New Mexico. The rest of powder-dry New Mexico is not so sure.

At all events, the West is filled with talk of rain making. From Montana to Mexico I heard about a new kind of summer storm, and a rain that falls after the clouds go by.

"Never saw anything like it in my life," declares Floyd Lee of the famous San Fernandez ranch, New Mexico. "It actually drizzled over my place for half an hour after the clouds disappeared." Meteorologists explain that this is the effect of silver iodide seeding.

Elmer Allen, a cattleman of Miles City, Mont., told me about another unnatural rain—almost 4 inches of "heavy mist" in June. "I was born and raised here, and never saw a rain like it," Allen declares.

Wyoming cattlemen report "Grass still growing in August." In western South Dakota there's another curiosity—crops are above average while rainfall is below normal, and some waterholes low. "It's due to gentle rains, with slight runoff," the rain makers claim.

All over the West I heard the same story: "No runoff. Grass rains instead of gully washers." Some say that the seeded rain, instead of the usual violent thunderstorms, could be the greatest soil-erosion and flood-control discovery we've ever made.

The Weather Bureau takes a dim view: "Misty rains could be dissipating clouds. We know that seeding dissipates energy and moisture."

Hail suppression might be big news. Dr. Bernard Vonnegut, the General Electric genius who developed the silver iodide technique, told Congress:

"Wise use of cloud-seeding can achieve reduction of hail and its great damage to agriculture." A team of Oregon cloud-seeders claim to have had 3 years' phenomenal results in knocking off hail thunderheads.

The spectacular new science has the West in a whirlwind.

There's the \$1,000,000,000 Kansas flood. Although top meteorologists doubt that

there's any scientific evidence to link it with rain making, you should tell that to some Kansans.

Washington dry-land wheat farmers scored a second year's record crop, while hay, bean, and cherry growers again took it on the chin. A Yakima Indian chief sued the wheat men for ruining his hay crop.

It was up there in Washington that I met my first "rain-stopper." Ed Garrick, a bean farmer, is the organizer of Sunshine Unlimited. It's well known that overseeding actually retards rainfall, so Sunshine Unlimited plans to spot duplicate generators everywhere the wheat men operate next season, and stop any rain. "We'll do it up brown," swears Garrick.

High in Colorado, with a 250-percent snow pack after last winter's seeding for irrigation farmers, Summit County folks appealed to the Governor for relief from blocked roads, snow slides, and mine cave-ins. Just the reverse, Colorado's San Luis Valley farmers paid \$10,000 for a snow pack, but at the end of the contract felt that they had failed to get enough snow.

A western concern is doing a flourishing business selling kits.

In Washington, Benton County's harvest is so bountiful that commissioners are talking about reclassifying 600,000 acres of dry wheat lands—if rain making really works.

Uncle Sam, several Western States, and citizens, are all vying for water rights in the skies.

The Bonneville Power Administration is considering rain making to fill its big power dams. It would stake out the skies, of course. Wyoming and Colorado laws already assert sovereignty in the clouds, while in Custer County, Mont., I found probably the first document of its kind. There the Tonn brothers, big ranchers, have filed "legal notice to all the world" that they are appropriating all moisture above their ranch and claim prior right to increase same.

"Going to need policemen in the skies to see that some State doesn't steal another's weather," quips Senator CLINTON ANDERSON, authoring one of several Federal weather-control bills.

Four Federal agencies—Commerce, Agriculture, Interior, and the military—are scrambling to take over.

The Weather Bureau, which has ridiculed cloud seeding, now climbs on the band wagon to an extent. "The Weather Bureau finds reasonable evidence that some cloud modification is possible, and we admit the possibility that rainfall may be locally influenced in some degree by artificial means." So it is seeking millions to fence off the country for its own exclusive experiment.

The Bureau of Reclamation—never slow to grab an opportunity or an appropriation—asks \$25,000,000 to investigate rain-increasing. Reclamation boss Michael Straus wants to see if the world's costliest dams will have to be raised, and spillways and canals enlarged, to accommodate the extra water. The same Bureau wants to experiment with stopping natural rain in wet areas.

Most westerners fear that rain making will be another excuse to fasten further Federal controls on the country, and create another batch of fat jobholders. It is agreed that rain makers should be required to register, be financially responsible, and report on their operations. Colorado, Wyoming, and Arizona now require this.

Westerners, however, do not see why the States cannot control and evaluate the new science, by getting together.

Several things seem clear from this year's grand-scale experiment:

Ambitious operators raced to control fat cloud contracts, and may have stretched themselves too thin.

"There is a feeling among our subscribers," says a well-known New Mexico rancher, Albert Mitchell, "that Dr. Krick possibly

overstretched himself, and that we did not get enough generators and personnel to serve our territory properly this year." Krick denies this.

Like the first airplane at Kitty Hawk, rain-increasing may be putting us on the threshold of a new era in which no man can guess the end.

"We have got to think of the upper atmosphere as a reservoir from which we are tapping only a small portion (perhaps 1 percent)," says Scientist Bernard Vonnegut. "I feel with almost 100 percent certainty that cloud-seeding can be of enormous value to our country."

As Montana Sheepman Earl Davis sizes it up:

"Just rained enough here this year to wet a man's shirt. It is about time that somebody tapped that waterhole in the sky."

Nobody can be sure yet whether the rain-increasers are really doing it, but, as mentioned, two-thirds of the farmers and ranchmen who laid out money this year feel they probably got their money's worth.

Help Liberate Poland, Czechoslovakia, Rumania, and Bulgaria—The Poles, the Czechs, the Slovaks, the Rumanians, and the Bulgarians Back Move for a New and Positive Foreign Policy

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, on June 7 last, I introduced House Concurrent Resolution 120, pertaining to Poland, and on the same date I introduced House Concurrent Resolution 121, pertaining to Bulgaria. On June 15, I introduced House Concurrent Resolution 123, pertaining to Rumania, and on July 4, I introduced House Concurrent Resolution 139, pertaining to Czechoslovakia.

The purpose of these resolutions is to assist the Polish people, the Bulgarian people, the Rumanian people, and the peoples of Czechoslovakia in attaining liberation from their present Communist enslavement and for the early restoration of their basic human rights and freedoms.

I wish to set forth herein excerpts from some of the many responses I have received to these resolutions:

POLAND

Oil City, Pa., July 20, 1951.

Please accept my sincere thanks for your plea in behalf of Poland. I already began to doubt whether anyone in Washington will have the courage to speak up against communism.

Dear sir, I have attended Russian schools and know Russia. It is a giant of clay.

Once again many thanks to you, Mr. Congressman; millions of Poles here in the United States will be grateful to you.

HIERONIM KLOS.

CHICAGO, ILL., June 18, 1951.

We of the Polish American Congress, uniting 6,000,000 Americans of Polish descent, are most grateful to you for having submitted House Concurrent Resolution 120 in the House of Representatives on June 7, 1951,

In this respect the voice you have raised on behalf of Poland and Communist-dominated countries has also heartened a wide section of America which is now seeing the folly of the Yalta Pact.

It is our fervent hope that your resolution will bring about hearings and eventual repudiation by the United States Congress of that shameful agreement.

CHARLES ROSMAREK,
President, Polish American Congress, Inc.

MANLY, AUSTRALIA, July 17, 1951.

I understand that a few weeks ago you introduced into the House a resolution in regard to the Yalta agreement and Russian aggression against Poland.

This is a matter on which I, myself, feel strongly, as I believe that our action at Yalta was wrong and that our conduct toward Poland consisted of a downright betrayal. There is no doubt whatsoever in my mind that Russia has been guilty of outright aggression against Poland and other states of Eastern Europe.

W. C. WENTWORTH,
Member of Parliament, the Parliament
of the Commonwealth.

[From Milwaukee (Wis.) Kurier Polski of
July 17, 1951]

The energetic Congressman from the Fifth District of Wisconsin, CHARLES J. KERSTEN, recently submitted a well-founded resolution pleading very courageously in defense of tortured Poland which was sold out in Yalta.

The resolution was referred to the Committee on Foreign Affairs. Even should the resolution get stuck in the committee, it has at any rate achieved the desired result in the Polish cause. KERSTEN in his resolution brought to light the injury inflicted upon an Allied nation which is suffering a terrible injustice. He submitted his resolution before the House of Representatives, unafraid to run the risk of falling out of favor with the administration and the State Department, which up to now stubbornly defended the shameful Yalta agreement.

Americans of Polish descent have expected for a long time the submission of such or similar resolutions to the Congress of the United States, and lived to see that a resolution was submitted by a Congressman who is not of Polish descent—Congressman KERSTEN.

BUFFALO, N. Y., July 6, 1951.

We are thankful that we have leaders in Congress such as you, who recognize the tremendous injustice done to Poland. Certainly proves beyond any question of a doubt that any time and every time we sacrifice basic principles of justice, regardless in what part of the world they occur, sooner or later they back up to our doorstep.

F. B. ROGGER,
General Manager, Everybody's Daily.

CZECHOSLOVAKIA

HILLSIDE, N. J., August 11, 1951.

It is gratifying to know that men like you are attempting to free peace-loving peoples from other nations from the clutch of that terrifying menace, communism. Keep up the fight.

MICHAEL HVASTA.

CLEVELAND, OHIO, August 9, 1951.

Thanks very much for the insertion in the CONGRESSIONAL RECORD in behalf of the Slovak people to win freedom, and on behalf of our organization of over 96,000 members, I want to sincerely thank you for your interest in our people.

N. J. WARGOVICH,
President, Jednota, First
Catholic Slovak Union.

WASHINGTON, N. J., August 3, 1951.

You deserve our sincere thanks and appreciation for the splendid work you did in behalf of the Slovak people. I know that all appreciate your kindness and good judgment.

JOHN C. SCHRANKA,
Chairman, Board of Governors,
American Friends of Slovak Freedom.

MIDDLETOWN, PA., July 11, 1951.

Thank you for a copy of House Concurrent Resolution 139 pertaining to the liberation of the peoples of Czechoslovakia. It does interest me, indeed. I am happy that you have set forth something that will undoubtedly be acceptable to Americans of Slovak descent and to the Slovaks over there and in exile.

With respect to the future, the resolution is very good. The peoples of Czechoslovakia should have a chance to choose freely whether they want to continue under Czechoslovakia. I know that expresses the will of at least 99.8 percent of the Slovaks anywhere.

In referring to the past, however, several items need clarification.

P. A. HROBAK,
President, the Slovak League of America.

NEW YORK, N. Y., July 13, 1951.

The attention of the National Committee of Free Czechoslovakia has been drawn to your proposed resolution in the House of Representatives of July 4, 1951, to have the Congress of the United States express the conviction that the people of Czechoslovakia have the right to basic human freedoms and freedom from Communist enslavement and have the Congress direct the United States representatives in the United Nations to demand that the United Nations charge the Communist regime with violating charter and principles of the United Nations for robbing Czechoslovakia of its freedom, independence, and territorial integrity and demand the withdrawal of Soviet Communist rule.

We are deeply grateful for your understanding of the hard struggle of the Czechoslovakian people for liberty and freedom, for your interest in the fate of Czechoslovakia and for your desire to help our suffering people.

We wish to call your attention, however, to certain statements in your resolution which unchanged would be misleading and might as a consequence bring results opposite to those you wish to attain—the restoration of a strong democratic Czechoslovakia.

PETER ZENKL,
National Committee of Free
Czechoslovakia
(And others).

WASHINGTON, D. C., July 10, 1951.

I studied the resolution with a special interest and am glad, dear Congressman, to state that on the whole it gives a true picture of the life in my enslaved fatherland—Czechoslovakia—and partly indicates the right ways to be followed in our common fight against communism in order to liberate subjugated nations behind the iron curtain from the Bolshevik yoke.

I am very grateful for your interest and efforts in this case. However, I cannot agree with some of the statements contained in the resolution which must be due, as I presume, to some incorrect information.

DR. MATEJ JOSKO.

WASHINGTON, D. C., July 17, 1951.

The Council of Free Czechoslovakia appreciates with sincere thanks your endeavor to strengthen the traditional friendship of the great American Nation to the Czech and Slovak (Czechoslovak) people, as well as to the

other peoples behind the iron curtain remembered in a number of similar resolutions. We are grateful to you for having described in so eloquent a manner the unbearable conditions created in our countries by the Soviets and their satellites, the different Communist regimes, and for having pointed to effective methods to be applied in the opposition to the attempts at full enslavement and decimation of also the Czech and Slovak people pursued by world communism.

We take, however, in the best of faith the liberty to draw your attention to the fact that—apparently due to incorrect information received—certain mistakes and erroneous conceptions found their way into your resolution concerning Czechoslovakia. We deem it our duty as Czechoslovak patriots to point out to you these errors.

We leave it entirely to your objective judgment to determine the way in which you will modify the suggested passages of your resolution, the tendency of which, we again assure you, is welcome by all of us with great appreciation.

DR. JURAJ SLAVIK,
Acting Member of the Executive
Board, Council of Free
Czechoslovakia.

CHICAGO, ILL., July 24, 1951.

As duly authorized representative of the White Legion, Slovak underground organization, I hereby thank you for your courageous resolution which strengthens our anti-Communist activities very much. You rendered with it an immense service to the cause of freedom in Slovakia and certainly rendered the same service to your great country.

OTO CACKO.

MILWAUKEE, WIS.

The Slovak people of Milwaukee, Wis., and environs, being gathered at the Twenty-first Slovak Day picnic in Milwaukee, sponsored by the Federated Slovak Societies, in due recognition of previous deliberations concerning your efforts on behalf of the Slovak people held under the Communist yoke in Czechoslovakia, do hereby thank you for your interest in our cause and humanitarianism the world over.

Please accept the undying gratitude of the oppressed Slovak people and of those who cherish and respect the rights of life, liberty, and the pursuit of happiness.

STEPHEN RASSEK,
President, Federated Slovak Societies
(And others)

RUMANIA

COMPTON, CALIF., July 27, 1951.

We Rumanian-Americans who are suffering great anxiety because of the turbulent times our country of origin is going through are deeply appreciative for your remarks made in the House of Representatives and for the House Concurrent Resolution 123.

As Rumanians, our fervent wish is to see Rumania free again.

JOHN T. RANCU.

CLEVELAND, OHIO, August 14, 1951.

The Rumanian American National Committee Ladies Association met in convention in Youngstown, Ohio, wishes to congratulate you for your humanitarian House Resolution 123 in defense of Rumanians' liberty and independence.

ESTER STANCULESCU,
President, Rumanian American
National Committee Ladies
Association.

COMPTON, CALIF., July 30, 1951.

Words cannot express my sentiments. I have read the text of House Concurrent Resolution 123, and am most deeply impressed by your understanding of the true situation and of the true feelings of the Rumanian people, as shown by your remarks.

Today when most of the world is menaced by chaos, your voice is raised prophetically, and the 18,000,000 oppressed Rumanians will respect your name for generations to come, as their Messiah.

May God grant that you are successful in upholding the cause of subjugated peoples thereby indirectly serving this great United States.

D. DRAGHICEANU.

BALTIMORE, MD., August 3, 1951.

I am an American citizen of Rumanian descent and proud of my American citizenship, loyal and devoted to our United States of America and proud of my Rumanian ancestry.

My family and I subscribe to the Foala Poporului (People's News), published in Cleveland, and we read an article regarding the Resolution 123 you proposed in defense of the Rumanian people as well as the other little nations who are today suffering under the cruel heel of the tyrannical Godless Communists.

We, as good loyal Americans congratulate you for this noble gesture and may God bless you, everyone near and dear to you. May God bless our America and all freedom-loving and God-loving people.

NICHOLAS MAGINA AND FAMILY.

CLEVELAND, OHIO, July 27, 1951

As President and on behalf of the Union and League of Rumanian Societies of America, the largest fraternal insurance company for Americans of Rumanian descent with over 74 branch lodges throughout the United States and Canada, it gives me pleasure to thank you for your presentation of the resolution "Rumanian People Our Natural Ally Against Communism."

It is gratifying to all of us that as busy as you are, you could find the time to investigate and present the problem of the Rumanian people as ably as you have done.

Your resolution has given our younger generation of Americans of Rumanian descent that extra punch needed to make us want to sacrifice all to aid and fight for America, the land of freedom, which through the blessings of God our parents adopted as their homeland and to which they have and will forever be loyal and ready to help against all aggressors who wish to disrupt or change the American way of life.

The success of your resolution has been in that people from all over the world are awakened to the fact that America is made up of all the nations of the world and that through the united efforts of all nationalities in America, can we as Americans bring about freedom to all the world as we Americans know it.

JOSEPH J. CRACIUM,
President, the Union and League of
Rumanian Societies of America,
Inc.

LA CANADA, CALIF., August 2, 1951.

Thank God for people like you and we all pray for God's wisdom and guidance to free the world of communism.

We get letters from Rumania from my kinsfolk, my sister, which they are all sick from lack of food, and constantly arrested and tortured, and took their homes away from them, throwing out of the home the children.

I have a letter recently which they stated frankly that they all waiting for America to come, then they all will be on our side. Every man, woman, and child will fight Communist Russia in case of war with the United States of America.

Mr. and Mrs. JOSEPH J. BREZEAN.

CLEVELAND, OHIO, August 4, 1951.

Many thanks for your House Resolution 123 in behalf of Rumania. Its contents are

a mark of your enlightened statesmanship and a credit to America's spirit of fairness and justice.

GEORGE STANCULESCU,
President, Rumanian American
National Committee.

NEW YORK, N. Y., July 16, 1951.

Our executive committee has asked me to thank you for your activities in favor of the liberation of Rumania from the Communist occupation.

With all our forces we are joining you in your fight, which is the fight of all freemen.

We are convinced that you are one who has understood the troubles of a nation caught between the devastating winds of communism.

I. GLICKMAN,
Executive Secretary,
United Rumanian Jews of America, Inc.

LOS ANGELES, CALIF., August 13, 1951.

The Americans of Rumanian origin from Los Angeles, Calif., extend their thanks and appreciation for your resolution presented by you in the House of Representatives to liberate the people of Rumania from communism.

GEORGE POPESCU,
President, The Holy Trinity
Rumanian Orthodox Church
(And others).

CLEVELAND, OHIO, July 26, 1951

The Association of Rumanian Catholics of America (an organization of American Catholics of Rumanian descent), at a meeting of its executive committee held in Alliance, Ohio, July 22, has instructed me to convey to you the deepest gratitude of the Rumanian Catholics of America for the inspiring initiative taken by you through Resolution 123, introduced on June 15 into the House of Representatives, to the end that the fundamental freedoms of the Rumanian Nation be reestablished.

Sooner or later the Rumanian people, as well as all other subjugated nations, must be free from the tyrannical yoke of Communist slavery if peace and understanding among nations are to prevail.

Your timely endeavors in the cause of God-given liberty for all nations will be a source of inspiration for all those who strive for justice in the whole world.

Permit us to count you among the great friends of the Rumanian Nation.

MSGR. BASIL MARCHIS,
President, Association of
Rumanian Catholics of America

BULGARIA

ISTANBUL, TURKEY, June 21, 1951.

We, the members of the parliamentary group of Nicola Petkov who died in the struggle for democracy and, as members of the Bulgarian National Committee in Washington presided by Dr. G. M. Dimitrov in the name of the Bulgarian people, in the name of the Bulgarian emigration in Turkey and in our own name, present to you our most sincere thanks for your historical statement made in the House of Representatives of the United States of America in defense of human rights and liberty of the Bulgarian people.

Your statement is a new demonstration of friendship of the great American Nation for the Bulgarian and it strengthens our faith for liberation from the bloodthirsty communism in the near future.

STRATIA SKERLEV,
Supreme Council of the Bulgarian
National Agrarian Union.

PARIS, FRANCE, July 19, 1951.

It is with the keenest pleasure that we have taken notice—in the newspaper, *Libre et Indépendante* (Free and Independent Bulgaria) of your remarks in the Congress relative to the liberation of the Bulgarian people from the Communist yoke.

This gesture will never be forgotten by our people, and we—their free representatives—want to confirm this to you; for your trend of thought will reach the last rural cottage and all the prisoners in the concentration camps and forced labor camps, to whom your voice will mean encouragement and hope.

The acting board of directors of the Union Agrarienne Nationale Bulgare a l'Etranger (National Agrarian Association of Bulgarians Abroad) will do everything in its power in order that your appeal to fight slavery be heard by all those who suffer and fight for freedom.

TSENKO BAREV (and others),
Acting Board of Directors of the
Union Agrarienne (Nationale)
Bulgare a l'Etranger.

WASHINGTON, D. C., July 3, 1951.

It gives me great pleasure to express to you the gratitude of the Bulgarian National Committee and the Bulgarian people of whose overwhelming majority it is a representative.

The noble act which you, the freedom-loving son of the great American Republic, instituted by introducing Resolution No. 121 concerning the liberation of the Bulgarian people along with the rest of the Eastern European nations, shall forever be a golden page in the history of our nations presently enslaved by communism, in the history of great America, and in the history of the humankind.

Your attention, invaluable help, and still more invaluable encouragement in their great struggle are, I can assure you, widely appreciated and cherished for they come in a very dark hour.

Dr. G. M. DIMITROV,
President, Bulgarian National Committee.

Nevada Civil-Work Status Reported

EXTENSION OF REMARKS OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, August 23, 1951

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Nevada Civil-Work Status Reported," published in the Reno (Nev.) Evening Gazette of August 18, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEVADA CIVIL-WORK STATUS REPORTED—ARMY ENGINEERS MAKE SUMMARY AT REQUEST OF SENATOR MALONE

Status of civil works in Nevada has been summarized by the Army engineers at the request of Senator GEORGE W. MALONE, his office announced today.

The report gives details of work on the Humboldt River and Mathews and Pine Canyon flood-control and irrigation projects, both provided for in Malone-sponsored legislation.

Also summarized are surveys and investigations made in Truckee River, Carson River,

Walker River, Martin Creek, Cleason, Robinson and Murray Creeks at Ely, and the Virginia River area. Not included is the Las Vegas Wash project survey which is provided in another Malone bill the Senate passed recently.

The report lists emergency flood-control work done since MALONE came to the Senate, as follows: Humboldt Lake, clearing, snagging, and levee repairs, \$90,000; Lovelock slough, clearing and snagging, \$18,600; similar work plus emergency flood fighting on Humboldt River at Elko, \$55,000; at Murray Canyon and Robinson Basin, \$25,000; on Humboldt River at Beowawe, \$5,000; building revetments and cleaning and straightening channel on Clover Creek and Meadow Valley Wash at Caliente, \$8,100; clearing and snagging, recent flood, Truckee River at Reno, \$50,000; and on East Fork Carson River near Minden, \$25,000.

The Humboldt River project consists of three reservoirs: at the Hylton site on the south fork of Humboldt, 120,000 acre-feet storage capacity, \$3,320,000 cost; at the Devils Gate site on the north fork, 80,000 acre-feet, \$2,530,000 cost; at the Vista site on Marys River, 50,000 acre-feet, \$3,358,000 cost. The project also includes channel improvement work along the most critical reaches of the river, cost \$200,000, and drainage improvements for the Lovelock area, cost \$1,991,000.

Total cost of the Humboldt projects is \$11,399,000; the Federal share is estimated at \$7,679,000. This project will produce estimated annual benefits as follows: flood-control benefits, \$207,000 annually; irrigation benefits, \$207,400; drainage benefits, \$309,000; total benefits \$723,500 annually. The project should be complete in 4 or 5 years.

The project in Mathews Canyon and Pine Canyon consist of two flood-control reservoirs to be constructed concurrently. Mathews Canyon flood-control basin will be formed by construction of an earth-fill dam about 717 feet long and 68 feet high above the stream bed on a tributary to Clover Creek, a tributary of Meadow Valley Wash. The reservoir will have a maximum water-surface area of 299 acres and a capacity of 6,260 acre-feet. The estimated construction cost of Mathews Canyon Dam is \$700,000. Mathews Canyon Dam will prevent flood damages to residential, business, public, and agricultural properties; to irrigation and drainage works, to existing flood-control improvements, to highways, roads, railroads, and utilities. Combined with the damages estimated to be prevented by construction of Pine Canyon Dam, the total average annual damages that will be prevented by the project are estimated at about \$110,000. The damages that would be prevented by Pine Canyon Dam and Mathew Canyon Dam from a single very large flood are estimated at \$2,000,000.

Pine Canyon flood-control basin will be formed by construction of an earth-fill dam about 2,003 feet long and 97 feet high above stream bed on a tributary of Clover Creek. The reservoir will have a maximum water-surface of 255 acres and a capacity of 7,840 acre-feet. The estimated cost of Pine Canyon Dam is \$1,356,000. All costs of entire project will be borne by the Federal Government.

Surveys under way:

Truckee River: An investigation of the Truckee River drainage basin in California and Nevada is under way, to develop a program of work that would (1) stabilize the levels of Lake Tahoe to prevent flood damages during wet years and detrimental effect on recreation during dry years; (2) prevent flood damages, especially to the city of Reno and to the agricultural area in Truckee meadows; (3) generate or make possible the future generation of hydroelectric power (4) make available an additional water supply for irrigation purposes.

Carson River: An investigation of the Carson River drainage basin in California and Nevada is under way, to develop a plan that would (1) eliminate damages caused by the floodwaters, (2) provide additional water for irrigation purposes, and (3) possibly permit generation of hydroelectric power. Studies indicate that a multiple-purpose reservoir on East Carson River at Horseshoe Bend or at the Watasheamu site, or possibly on West Carson River at the Hope Valley site may be feasible. Local channel-improvement works will be included.

Walker River: Investigation is under way for the development of the Walker River drainage basin in California and Nevada, for the same three purposes. Studies indicate that a multiple-purpose reservoir at the Pickel Meadows site will be economically justified. This project would be predominantly a power project, with flood control and irrigation of relatively smaller significance.

Martin Creek, Humboldt County: An investigation of Martin Creek, a tributary of Little Humboldt River, is being undertaken. The creek drains 170 square miles along the east slope of Santa Rosa Mountains and debouches onto the floor of Paradise Valley. The average flow into Paradise Valley is about 30 cubic feet per second, but flood flows of 9,000 cubic feet per second have been recorded which cause considerable damage to farm lands and structures on its alluvial cone. It is believed that flood damage may be prevented by channel improvements supplemented by small detention storage reservoirs.

Gleason, Robinson, and Murray Creeks provide drainage for about 100 square miles of mountainous areas above the city of Ely. These streams generally carry little or no water but occasionally considerable flow occurs during heavy snow-melt run-off or intense rainstorms, which have resulted in flow down the streets and flooding of basements of business establishments and residences. An investigation of these creeks is under way.

Virgin River: A dam is proposed at the White Narrows site on Muddy River above the mouth of Meadow Valley Wash. The reservoir would impound the winter flow of Muddy River for release during the irrigating season. The town of Overton along lower Muddy River is subject to damage from floods from Overton Wash.

Let's Deal With Basic Issues

EXTENSION OF REMARKS

OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. JARMAN. Mr. Speaker, recently a friend sent to the Honorable Brooks Hays of Arkansas, and to me, a copy of the sermon delivered by Dr. John Peters on April 22, 1951, at the St. Luke's Methodist Church, Oklahoma City, Okla., entitled "Let's Deal With Basic Issues." Dr. Peters is associate professor of religion at Oklahoma City University and former chaplain of the Fortieth Infantry Division of the United States Army.

It is an arresting document, and with the thought that it might be helpful to Members of the House, under leave to extend my remarks in the RECORD, on behalf of the Honorable Brooks Hays and myself, I include it in my remarks.

It is an impressive presentation of strong Christian convictions by a man who has shared the hardships and dangers of modern war. Its emphasis is upon moral and social issues but it is closely related to many governmental policies with which Members of Congress are concerned. It contains excellent advice and inspirational material and I commend it to the membership.

LET'S DEAL WITH BASIC ISSUES

(By Dr. John L. Peters)

One of the difficulties in dealing with the basic problem of our day is the lack of agreement as to what that problem really is. Ask the next man you meet for instance, what he considers the real obstacle to world peace, and he is likely to tell you that it is the Russians, or the Democrats, or the Republicans, or his wife's relatives. The answer will differ with the man and with his mood.

It is said that during World War I, one of the outstanding ministers of America solemnly assured a vast audience that peace would come to the world only when all persons of German extraction were rendered sterile. There was, the eminent gentleman was certain, some carnal content in German blood which constituted the primary threat to the peace of the world. Some years later, in World War II, a member of the British Parliament came forward with a somewhat more provocative suggestion. Said he, "The world will be happy again only when Franco's widow tells Stalin on his death-bed that Hitler has been assassinated at Mussolini's funeral."

The passing of time has demonstrated that the minister was obviously ridiculous and the member of Parliament patently naive. It takes more than genocide or the removal of the current crop of dictators to effect world peace. Such peace can be had only when basic issues are equitably settled.

What are those basic issues?

If our religion gives us any insight into the nature of reality—and this is a primary function of religion—we have the answer indicated in the records of our own faith. Let's assume that God knew what he was doing when he sent Jesus Christ into the world. Let's go further and suppose that there was some actual significance to the song which the angels sang when Jesus was born—"Peace on earth, good will to men." What then was the purpose of this coming? What was the program by which peace was to become more than a fading celestial song? The answer is not difficult. For Jesus presents that program in his keynote message to his neighbors in the synagogue at Nazareth. There, on the threshold of his amazing ministry, he stood and asked for the scroll of the prophet Isaiah. The account is found in Luke 4:17-19—

"And when he had opened the book, he found the place where it was written. The Spirit of the Lord is upon me, because He hath anointed me to preach the gospel to the poor; He hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord."

What was his mission? Why did he come? Let theologians clothe the answer in what terms they choose. Here Jesus simply and explicitly declares that he came to explore and to answer the needs of the disinherited, the exploited, the poverty-stricken of soul and body.

These were the basic issues with which the Prince of Peace himself proposed to deal. These are the basic issues with which any seeker after peace today must deal. Let's examine them further.

I presume that each of you who could be was at a radio Thursday and heard General

MacArthur's moving address to the joint Houses of Congress. The general's defense of certain of his policies has, of course, gained the spotlight of attention and is now the center of wide and furious debate. I wonder, however, if in the midst of all this strife and confusion we have not tended to ignore some areas of his message which are more deeply significant. Do we remember, for instance, his opening remarks in which he described the underlying reason for Asian unrest, the surging tide of which the present conflict is but the bitter froth? Here, according to General MacArthur, are facts which must be taken into consideration before any realistic policy can be enunciated or before any permanent solution can be had:

"Long exploited by the so-called colonial powers, with little opportunity to achieve any degree of social justice, individual dignity, or a higher standard of life, . . . the people of Asia found their opportunity in the war just past to throw off the shackles of colonialism and now see the dawn of new opportunity, a heretofore unfelt dignity, and the self-respect of political freedom

"Mustering half the earth's population and 60 percent of its natural resources, these people are rapidly consolidating a new force, both moral and material, with which to raise the living standard and erect adaptation of the design of modern progress to their own distinct cultural environments.

"Whether one adheres to the concept of colonialism or not, this is the direction of Asian progress and it may not be stopped.

"What they seek now is friendly guidance, understanding and support, not imperious direction; the dignity of equality and not the shame of subjugation

"Their prewar standard of life, pitifully low, is infinitely lower now in the devastation left in war's wake. World ideologies play little part in Asian thinking and are little understood

"What the people strive for is the opportunity for a little more food in their stomachs, a little better clothing on their backs, and a little firmer roof over their heads, and the realization of the normal nationalities' urge for political freedom."

There has been none to challenge these assertions, for the facts overwhelmingly support them

Are we fully aware, for instance, that while here in America the per capita annual income is around \$1,450, in Indonesia it is around \$25, in Thailand and Burma, \$35, in China, \$27? True enough, most of these people do not live under a cash economy like ours. But around the world there are many things—necessary things—which cannot be had except as they are bought, bought with that which they simply do not have.

Occasionally it is argued that, despite this fact, these people are probably happy and any attempt to assist them is simply a foolish meddling with an already satisfactory situation. Those who subscribe to such an idea must take seriously romantic novels, Hollywood extravaganzas, and the seductive brochures of travel agencies. But engineers, economists, health authorities, and soldiers have had an opportunity to observe the unrelieved misery that is characteristic of most areas of the world—including many of those lands which we still hope to preserve as a bulwark against encroaching communism

These people, it is true, usually make the most of what little they have. And they neither want nor could use that multiplicity of things which we consider necessary to our standard of living. But that they are happy amid their hunger and disease and illiteracy is a ludicrous assumption. I never shall be able to forget the mothers who brought their emaciated and fever-ridden babies to our aid stations, begging for medicine to check their suffering. And who that saw them could for-

get the long lines that waited patiently under the blazing sun or in the driving rain—for what? For the privilege of dipping into our garbage cans and relieving their constant, gnawing hunger. The trouble with most of us is that we have never known the hunger which is the constant corrosive companion of millions of these people.

I thank my God now, as I did not then, that I have known what it is to be really hungry. In hot pursuit of an education, I came to a period when I was forced for a week or so to live on 15 cents a day. Each day I would buy one Coca-Cola and two packages of "Nibs." It wasn't enough. And during that time, as I watched others eat steaks, salads, and pork chops I came to dislike them intensely. They had done nothing to me. Most of them did not know that I existed—but I just didn't like them. Hunger has its own peculiar logic.

The masses of the world are hungry. And when, through our magazines and movies, we tell them of our overabundance, they do not respond with respect and love—they only pull their belts a little tighter and hate us a little more.

It is assumed by some that any attempts to improve these conditions will only aggravate the problem of overpopulation which prevails in some of these areas. And that is a very real problem. But is the answer to be found in deepening malnutrition? In virulent disease? In weapons of mass destruction? This will, of course, have to be the answer unless some sufficient alternative is forthcoming.

Are we so spiritually and intellectually bankrupt that we can offer none?

There is another alternative. And men like Frank Laubach have dedicated themselves to it. For these miserable masses are not merely animals. They, too, aspire and dream and love and hope. They are God's children and potentially his sons in as full a measure as any of us are or ever could be. But they are illiterate, ignorant—lacking that basic prerequisite to self-help, the ability to read. Three out of every five persons on this globe, a billion two hundred million people, spend their lives in poverty, hunger, and superstition, primarily because they are illiterate. The knowledge of how to care for themselves, how to plan for and to rear their children, how to improve personal and community sanitation, how to cultivate their soil and to develop their natural resources—all this is to them a closed book because simple manuals of instruction are as indecipherable to them as Egyptian hieroglyphics are to most of us. The saving alternative begins with the impartation of the precious gift of literacy. As yet, the world's masses are without it—and dwell in consequent misery.

What makes their deep tragedy our dire threat is that now they are aware of their plight. We have sent movies, and tourists, and GI's and missionaries into these areas. And while once these people knew merely that they were miserable, now they know too that they need not remain so. To make sure they do, the agents provocateurs of communism are fiercely at work among them, fanning the coals of their tortured resentment into the flames of open rebellion—and Africa, India, Asia, and the Philippines are at work with this ferment of peril and protest. A vast, dumb, suffering multitude is determined to rise—a movement which General MacArthur has said "may not be stopped." We have the choice of giving it guidance or being destroyed by it.

We are, of course, living in that day when the prophetic words of Edwin Markham are being fulfilled. You remember his 'Man With the Hoe,' that brutish symbol of "humanity betrayed, plundered, profaned, and disinherited." And you will recall Markham's piercing question:

"O Masters, lords and rulers in all lands,
How will the future reckon with this Man?
How answer his brute question in that hour

When whirlwinds of rebellion shake all shores?

How will it be with kingdoms and with kings—

With those who shaped him to the thing he is—

When this dumb Terror shall rise to judge the world,

After the silence of the centuries?"

Around the world, multitudes once dumb are rising to ask questions—questions which once we asked: "Is colonial status right? Is exploitation just? Is deprivation necessary?

They ask, too, "Who will help us?" And far too often the only voice they hear and the only hand they see is the voice and hand of communism. From our high vantage point it seems obvious that they should know that the Communist's offer of help is but an invitation to deeper enslavement. But from their depth of need—and hearing no other voice—these masses seize this offer as a way of life itself. Unless we have shared their wretchedness, we simply cannot understand the impact which the Internationale makes upon them as it thunders.

"Arise ye prisoners of starvation,
Arise ye wretches of the earth,
For justice thunders condemnation,
A better world's in birth."

And to the submerged millions, these words are far more meaningful than all our political ideologies

It is true that a militant and ruthless Russian imperialism is using international communism as a front behind which to conceal its real designs and as a tool through which to effect its real purposes. This must be clearly recognized and intelligently dealt with. But it is also true as Stringfellow Barr, erstwhile president of St. John's College, has recently reminded us:

" . . . that if all the Russians in the world obligingly died this evening, and that if all the Communists of whatever race were so kind as to commit suicide tomorrow at noon sharp, the world revolution for equality would not stop . . . the backward peoples . . . are in motion . . . Neither containment nor appeasement will bring us peace. Our only chance is to do something about the real problem "

But the real problem may be even deeper than already has been indicated. For it is as true today as it was when Jesus declared it, that "Man shall not live by bread alone "

If we ignore man's physical needs while we hand him pious platitudes, we justify the Communist's contemptuous characterization of religion as "the opiate of the people," promising little but "pie in the sky by and by." But if we conclude that the problem is simply and only economic, then we join the Communists in their crass dialectical materialism. An attempt at a global program of "bread and circuses" is not likely to serve us any better than it served imperial Rome—and she lies today in the dust. History is full of the truth that mere material prosperity has brought neither real happiness nor continuing peace to individuals or to nations. Today's juvenile delinquent is recruited mainly from families whose economic resources are more than ample. It must be recognized that man is a unit, whose physical and spiritual needs are concomitant and interrelated. Neither can be adequately dealt with if the other is casually ignored.

Nevertheless, there is widespread agreement that today's real problem is theological. Men need not only food, they need God. Their hearts as well as their stomachs cry out for satisfaction. And many an ex-GI is serving his Lord today in the Philippines, Japan, and Asia because he glimpsed the vast

hunger for God when he served in those areas. I could tell you of the deep appreciation for Testaments and Bibles—and the plea for more of them—on the part of these peoples of the East.

It is reported that before World War II, Toyohiko Kagawa, observing the rising power and spreading ambition of the Japanese military, wrote to American Christians saying, "Send us thousands of your sons as missionaries now or you will send tens of thousands of them as soldiers later." We would not do the first. We were forced to do the second. MacArthur, shortly after assuming his responsibilities in Japan, invited the churches to send a thousand missionaries to that country. There was an immense spiritual vacuum in Japan with the collapse of Shinto. It was an open door and a golden opportunity. After 5 years had passed, that quota requested from the churches by the military remained about as follows: The Roman Catholic Church, to its credit, has fulfilled its portion; the quota of the Protestant churches was substantially unfulfilled. By way of comparison, it is instructive to note that Russia, upon the conclusion of her treaty with Red China, is said to have sent 45,000 "specialists" into that country. Large numbers of these went, of course, to the armed forces, but thousands were assigned to posts of educational, agricultural, and technical assistance—"missionaries" in the full sense of the word.

The irony of it is that while the followers of Christ are preaching the precepts of the Master, and while the Voice of America is proclaiming to the nations our good intentions, the Communists move in among the masses who never saw a missionary nor heard a radio, and appear to be practicing what we preach. Practice always has been more eloquent than preaching. Actually, America is far more able and better prepared to do, and do honestly, what the Communists do on a limited scale and for a limited time. But we have been short-sighted and reluctant. "It is time," as Frank Laubach has said, "for us to take the initiative and call the plays."

It is not too late to win the battle for men's minds and for the peace of the world. I trust, as all of us do, that we shall win any war into which we might blunder or be plunged. But our goal is not merely to win the war. It is to win the world for all that is ultimately right and good. And this second goal will not be accomplished by the weapons of the first. For war solves no basic problems.

On this there is unanimity among our thoughtful military leaders. General Bradley recently has decried the fact that we know more about killing than about living, more about waging war than about making peace. In 1946, at the reception of an honorary degree from Boston University, General Eisenhower said to his assembled auditors, "I have been classed as a rather risky chance-taking person, and I venture to make a suggestion. Why doesn't Dr. Marsh, and the president of every great university in the world, teach his people to put people in my profession permanently out of a job?" More recently General MacArthur has asserted, "I know war as few other men now living do and to me nothing is more revolting. I have long advocated its complete abolition, as its very destructiveness on both friend and foe has rendered it useless as a means of settling international disputes. . . . If we will not devise some greater and more equitable system, our Armageddon will be at our door."

Can we devise this greater and more equitable system? We can. But it will not be easy. It will call for considerably more than the pushing of a button or the dropping of a bomb. It will be long and costly—but not so long nor as costly as the unprofitable road which heretofore we have trod. It will be beset with false starts and disappointments.

But if we undertake it, we shall win out for we shall be moving in the right direction and we shall be doing what God through Christ has told us we must.

What kind of a program shall it be? I hesitate to suggest its outline. And if there be a man among you who has a better plan or can improve upon this one, I adjure him, in humanity's name, to stand and declare it. Until then, let me suggest these characteristics:

1. First of all, it must meet real needs with real solutions.

Some of our sporadic efforts along this line have smacked much of these radio quiz shows which have a habit of showering fantastic and utterly useless prizes on the luckless winner. Some mild and humble soul answers his phone and foolhardily comes up with the right answer. He is thereupon flung into the ruthless machinery of publicity, given 2 weeks in the bridal suite at the Waldorf Astoria with paid admissions to all the bright night spots—when all the poor man wanted and needed was a new pair of pants and some repairs to his upper plate. This program we envisage, therefore, must be international in its support and administration. America, while undoubtedly she must take the initiative, cannot and must not assume the role of the world's Santa Claus—and the cloak of economic dictatorship which inevitably would follow. Powerful and well-intentioned though we may be, we have neither the resources nor the insight to administer this program alone. We must appeal to and gladly accept the assistance and instruction of men of good will everywhere.

Only so can we devise a program which will allow men to keep their dignity and self-respect. For this can be no universal dole, no global boondoggle. This program must be designed to help men help themselves; to become men in the only way such a process is possible, by their own participating efforts, guided and assisted wherever that is necessary and possible.

2. Secondly, it must be extensive and aggressive enough to constitute a real counter-offensive to the Communist program.

Unless we embark upon it in this measure, we shall sink like a row boat in a heavy sea. But a vigorous program is certain of success. In France today, the Roman Catholic Church is having a revival primarily because its younger priests are acting upon the conviction that the only way to defeat communism is to outlive, outlove, outserve, and outdie it. So far our efforts have been marked and marred by timidity. We have set up a point 4 program and Dr. Henry G. Bennett, president of Oklahoma A & M. College, has been placed at its head—a program nobly conceived and ably headed. The Congress, with some reluctance, voted an appropriation of 38,000,000 to put it into effect. Immediately the plan was condemned as contributing dangerously to inflation.

What is it that really brings about inflation? I have here a chart prepared by the National Bank of Commerce of Chicago. It is their 1950 chart of business booms and depressions since the beginning of our national history. One fact is made unquestionably clear. The cheapening of the dollar—which is, of course, inflation—has come in connection with and as a direct result of war, in particular World Wars I and II. Starting its subnormal trend in mid-1917, the dollar had plunged to 69 cents by 1920. After regaining its strength through the thirties, the downgrade began again in 1941 and by 1949 had a comparative value of 59 cents. It is our expenditure for war that is bleeding us economically white. Yet this year our appropriations for defense have risen at the last report I noted, to the sum of \$71,000,000,000. That's a little over a million dollars every 7½ minutes, day and night, for 1 year. That means that in 1 hour we spend more for arms than the entire world spends in a whole year for

meeting the problems of hunger through the Food and Agriculture Organization, or in combating disease through the World Health Organization. Yet these are the only world-wide organizations set up to cope with the issues which are the breeders of war and the spawning ground of communism.

In the light of all this, to denounce expenditures for point 4 as unwarranted and foolish is much as though we planned a malarial control program with the slogan, "Billions for swatting mosquitoes, but not one cent for draining swamps." Yet it is the swamps that breed the mosquitoes. And point 4, not yet adequate, is nevertheless a step in the right direction and deserving of our earnest prayers and substantial support. We need a technical assistance program aggressive and vigorous enough to make a real impact on today's need.

3. In the third place, and of central importance, this program must be shot through with the spirit of Christ.

We can send the wrong people to do the right job—and fail completely. That is why I should like to see this program taken in hand, sponsored and underwritten in a large part by the churches. The church is an international institution, wedded to no one culture and subservient only to the high demands of Almighty God. Where the church is vital she exercises a bond of unity which transcends all other lives. She has the commission to undertake this task and the organization to effect it. And she can, if she will, do it better than any or all governments. The question is: Does she have the passion and the will to do it?

If she does attempt it, she will need vastly to expand her missionary program and to give a new definition to the term "missionary." The Christian evangel would have to be carried by teachers, engineers, mechanics, nurses, writers, and technicians. The saving "good news" would be presented by teaching men to read, helping them build dams, showing them how better to cultivate their soil, care for their health—in short, how to rise out of their ignorance, disease, and misery. It would be the imposition of no particular culture. It would be the unfolding of a way of life, as Laubach has said, in a spirit of Christian love and democratic friendliness—and it would stop communism cold.

It would call for a greatly increased support of the missionary program. If we send 100,000 such workers into these fields, it probably will cost the average church member around \$50 annually—as compared to the \$1.25 he now pays. Let us not forget, however, that we will each spend this year between \$450 and \$500 for arms. Perhaps it will be argued that this is all the more reason why we cannot be expected to make an increased outlay in any other direction. But the point is that somewhere, somehow, we must break through this vicious circle of recurrent wars. Somehow we must interrupt the process that requires us to send our sons and our sons' sons to stain the world's battlefields with their blood. Suppose, for such a purpose, we do have to pay more. Surely sacrifice and heroism is not to be required merely of the young. Actually, if we choose to put a dime for constructive ends along side every dollar we spend for destructive ends, the day will come when the dollars now spent for death will buy more abundant living for us all. But we've got to begin. We've got to sacrifice. We've got to match heroism with heroism.

There are men of means and intelligence listening to me this morning. They have proved what they can do for themselves, for their families, and for their communities. This is the hour when, under God, they need to rise and show what they can do for their world. And there are able and talented young people hearing me who ought now to dedicate their talents to this high, holy, and absolutely necessary task. It is a sad and

sobering fact that, in the last 30 years since communism began its militant march, the missionary enterprise has dwindled and retreated. In more than one major denomination of protestantism there actually are fewer full-time missionaries today than there were 30 years ago. Shall we not pick up that faltering banner and justify our very own reason for existence?

Perhaps you wonder why I feel this so deeply. Let me tell you one of the reasons. A group of us were moving up a hill in the Philippines one day through the driving rain. Suddenly a mortar shell burst squarely on top of us. The lad directly behind me was mortally wounded with a piece of shrapnel directly through his heart. As I held him in my arms and tried unsuccessfully to staunch the spurting blood, the whole cruel waste of it all swept over me. Here was this lad, a farm boy from Tennessee. He had joined our outfit only 2 weeks earlier and the night before we went into this sector his mail had caught up with him. Amid all the wonderful words from his loved ones was a letter from his draft board. He showed it to me ruefully. It informed him that after due deliberation, the board had decided to classify him as IV-F. He was the only able-bodied man on the farm of his parents and so he was exempt. But the boy had tired of waiting, and stung by the taunts of some of his neighbors, had enlisted. After basic training he had been sent out to us as an infantry replacement. And now he lay dying in my arms. That night, as I lay in my muddy fox hole, I asked God why that boy had been taken and I had been spared. Perhaps it was a foolish question. But split seconds before he was hit I stood exactly where he had stood. Why was I spared? I don't know. But I was, and I vowed I would do all I could to keep this thing from happening again. Perhaps I've failed. Surely somebody has. As I go my way in safety and comfort I feel now and then the lash of this adaptation of Eleanor Breed's bitter poem:

"The young men die in battle,
The old men sleep in bed.
The tortured earth of Asia
Is furrowed deep with red.

The old men sat conferring
With smile and scheme and lie.
The old men made the blunders,
Today the young men die."

Must this go on? I have a kid brother and a fine nephew in the Air Corps. Another nephew is entering the marines. My son is approaching draft age. And many of your sons and nephews and husbands are even now in Korea and on the high seas. Is this all and always the answer? Has Jesus failed in that high mission He undertook? Is it not, in fact, we who have failed and are failing?

Suppose the road out should prove costly. Is there any price higher than He paid? Is there any price higher than our sons are paying today?

Let us go to our knees and find our answers and rise to our feet determined by God's grace to make them effective.

What We're Up Against

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. TOLLEFSON. Mr. Speaker, an editorial appearing in the national magazine of one of the great fraternal organizations of America, the Fraternal

Order of Eagles, is deserving of the attention of not only Members of Congress but of every patriotic citizen of our Nation. As a member of that order, I am pleased to insert it in the CONGRESSIONAL RECORD:

WHAT WE'RE UP AGAINST

"An elephant is like unto a rope," observed the blind man, his hands grasping the animal's tail.

Communism is an economic system, say some, pointing to Kremlin nationalization of industry and collectivization of farming. "I perceive an elephant to be a great tree," said the second blind man, his arms locked about one of the animal's legs.

Communism is a political tyranny, some tell us, directing our attention to its one-party state and elimination of opposition.

"But I find an elephant to be a wall without doorway or windows," commented the third blind one, his palms pressed against the huge body.

Communism is a military menace, experts tell us, analyzing the armed forces and strategic position of Soviet Russia and its satellites.

"Thrice blind you must be," said the fourth of the blind men, as the elephant's trunk rested on his shoulder, "for an elephant is nothing but a large serpent."

Communism is a spiritual challenge, wise ones tell us, pointing out its assault upon religions and its denial of the freedom and dignity of the individual.

The Arab tale of the four blind beggars from the land of Ind does not let us know whether or not the four pooled their observations to come closer to the truth of what an elephant is. We had better, for our lives and freedom depend upon it, combine the opinions of the experts to learn what we are up against in the world today.

For communism is a military organization, a political tyranny, an economic system, and a spiritual challenge to the rest of the world. No adequate defense can be constructed to its pattern for world-wide conquest and domination until the free peoples recognize the fronts on which communism fights and the weapons that Communists use. Until you, and people like you, are convinced that communism is all of these things, the deluders who are its leaders and the deluded who are its followers, may lull you to sleep while they contrive to seize a world by force.

This total organization of a party and a series of nations to seize and hold political, economic, military, and thought control makes Communists in our midst the equivalent of air-borne troops dropped behind the line of battle by the enemy. Above ground or underground, they are participants in a world-wide conspiracy to effect our defeat and destruction.

Every Communist leader is an officer in the Kremlin's shock troops. Every Communist Party member is a soldier in that army. Eagles join other patriotic groups in smashing their organization and destroying their influence, not because they are Communists but because they are traitors.

Help Liberate Hungary—Hungarians Back Move for a New and Positive Foreign Policy

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, on June 7 last, I introduced

House Concurrent Resolution 119, expressing the hopes of the American people for the early liberation of the Hungarian people from their present enslavement and for the early restoration of their basic human rights and freedoms.

I wish to set forth herein excerpts from some of the many responses I have received to this resolution:

[From the Catholic Review of June 29, 1951]

The Kersten resolution, which the conviction of Archbishop Groesz now calls to public attention, is a long and thoughtful condemnation of communism.

CHICAGO, ILL., July 9, 1951

As a displaced person who recently arrived from Europe's camps to this, my adopted country, to express my humble appreciation to you as the champion of the oppressed and enslaved Magyar people of that 1,000-year-old defender of Christianity and western civilization—Hungary. You have expressed in your resolution the truth regarding the depraved and degrading acts of the Communist-controlled clique who retain power in Budapest and control Hungary with Russian bayonets.

Dr. JOHN BOKOR.

BOYS TOWN, NEBR., July 15, 1951.

The introduction and publication of your resolution is veritably a grand event, long ago expected by all Hungarians who within or beyond the boundaries of their country yearn for liberation and hope it comes true by the initiative and efficient assistance of the United States.

Principles and aims of the Kersten resolution are classic expressions of these great expectations and I may say that by returning my deep esteem and grateful obligation for their promotion I just give a true voice to all Hungarian souls of good intentions.

JOSEPH BODY.

MIAMI, FLA., July 24, 1951.

Let me assure you that everyone who came from Hungary and retained the loyalty that their mother taught them are grateful to you. I have read your resolution to the citizens of Miami over the WFEC Radio Station.

STEPHEN SZABO.

ELYRIA, OHIO, July 14, 1951.

Your Resolution 119, on the subject of Hungarian people, our natural allies against communism, was read and presented to the above church board at its regular monthly meeting held July 7.

We consider the Kersten resolution one of the most pronounced and informative presentations of the injustices being suffered by the peace- and freedom-loving people of present-day Hungary.

Rev. L. C. NOVAK.

Magyar Evangelical and Reformed Church.

TORONTO, ONTARIO, July 12, 1951.

I am one of the many who had to leave my country, Hungary, because I could not believe in or stand the barbaristic Communist ideas and form of government.

I thank you very much again and again for the interest and admirable work on behalf of my people. I know this is hard work, but please don't forget many people need your help, and many bless you for it.

ANNA ALBRECHT,
Imperial Bank of Canada.

CHICAGO, ILL., July 16, 1951.

As secretary of the Hungarian (Magyar) Club of Chicago, I have the honor of expressing to you the gratitude, approbation, and support of the entire membership for

the firm stand you have taken in the House of Representatives in behalf of the benighted Hungarian people.

You may understand, we believe, how greatly we applaud your high-minded action in presenting Resolution 119 to the representatives of the American people—not only because of our emotions with respect to a suffering people, but, indeed, principally because the dictates of reason demand such a stand as a notice to the world that the people of this country adhere to the principles of freedom, believe them to be universal, and have the moral courage to offer aid and support for their furtherance.

THEODORE BUSH,
Secretary, Hungarian
(Magyar) Club of Chicago.

MASCOUTAH, ILL., July 18, 1951.

SIR: I beg you not to stop, and please do everything you possibly can for the sake of the Hungarian people and for the sake of people over here like I am; great souls like you are our only and last hope. Of course, I am convinced, that with great men behind us, like you are, the time must and will come when the Hungarian people will be free again. Let us hope it shall happen real, real soon.

Mrs. LESTER W. MUELLER.

NEW YORK, N. Y., July 29, 1951.

Please pardon me for writing to you in the Hungarian language. However, having arrived in the United States only 4 months ago as a Hungarian refugee, I have not been able to learn the English language so far.

I read in the paper *Amerikai Magyar Nepszava* about your interview with Mr. Stephen E. Balogh, secretary general of the American-Hungarian Federation.

Your statement made in the course of this interview will raise hope and confidence in the hearts of many thousands of Hungarian refugees who have come to America that our unfortunate Hungarian homeland will finally be freed from the heaviest yoke of slavery known in the history of mankind, namely, the Slav-Bolshevik domination. Sir, already since many a decade we Hungarians realized and recognized clearly that bolshevism represents a danger threatening to engulf the whole world.

JENO SORBAN.

CHICAGO, ILL., July 11, 1951.

I have received the CONGRESSIONAL RECORD with your remarks and resolution on the Hungarian people. It is simply wonderful. Every sentence of your speech is right, and I hope those who heard it accepted it.

GEZA ZOLTANI.

CHICAGO, ILL., June 29, 1951.

We, the undersigned Committee of Three, representing 60 Chicagoans who were until recently displaced persons in Europe, and who are ever grateful to this, our adopted country, for an opportunity to enjoy livelihood and freedom under the American flag, do hereby desire to express our gratitude to you for your Concurrent Resolution No. 119, expressing the hopes of this country for an early liberation of Hungary from their present enslavement and for the early restoration of the Magyar people's basic human rights and freedoms.

ELMER L. OSABA
(And two others).

WASHINGTON, D. C., June 28, 1951.

As an American citizen whose brothers, sisters, and mother are behind the iron curtain, I am very grateful for your active support of and warm interest in the oppressed peoples behind the east-west border. Your statement to Mr. Balogh shows that you realize the problem is more than persecution of thousands, that it concerns the American foreign policy itself.

B. TALBOT KARDOS.

ATHERTON, CALIF., July 10, 1951.

I heard and read that you are a very good friend of the Hungarian people and you fight against the communistic tyranny.

I read you are making an effort to prevent the cruelty, which happen now in Hungary. Many, many thanks for it. God bless you.

DR. GEORGE DEMETER.

KULPMONT, PA., July 4, 1951.

Your indictment against the communistic, Russia-sponsored regime in Hungary is so forceful that I could not refrain from congratulating you. It presents the clearest and truest exposé of the countless grievances of that nation that I have ever read. The deeds of brutality to which the henchmen of Russia stoop in that land are, indeed, an intolerable stench in the nostrils of every respectable man.

In the communistic philosophy of life the words are always wedded to action. Hence the secret of their success. I fear that until we furnish a positive physical evidence of our deep indignation we remain just sounding brass and a tinkling cymbal. I hope, however, that your noble-minded endeavor will bear some fruit.

REV. JOS. J. C. PETROVITS.

NEW YORK, N. Y., July 8, 1951.

Your resolution recalls to our minds Hungary's present sad plight under Russia. Hungary will ever serve as an example of what happens when the great powers lack the common sense necessary to deal with the Soviet as she really is, a scheming and anti-religious power bent on destroying democracy and freedom for her own political and material advantage. I believe that your resolution makes a big step in the right direction; that is why we Americans of Hungarian origin are and will ever be grateful to you.

DESZO DE A. BALOGH

NEW BRUNSWICK, N. J., June 1951.

I read in the *Amerikai Magyar Nepszava*, of June 22, 1951, about the interview which you have granted to Mr. Stephen Balogh and which concerned itself with the terrible tragedy that befell the innocent and helpless Hungarian people who suffer in Russian prisons.

We look with confidence to the American people and through them to the civilized world that they will give help by all means at their disposal to the children and hundreds of thousands of adults who are drowning in the Russian swamp. May God bless all of you; expressing my grateful thanks in the name of every Hungarian, I remain with patriotic greetings.

J. T. SZIRAKY.

CHICAGO, ILL., July 7, 1951.

I am sure that 90 percent of the Hungarian people will bow their heads in gratitude for your sympathy and good will toward them. God bless you.

FRANK SCHMIDT.

NEW YORK, N. Y., July 5, 1951.

This is to acknowledge your memorandum about Hungary. Indeed you have used the right words—what else can I say? Please keep up the good will toward my poor birthplace. If I ever come to Washington, I hope that I will have the privilege to call on you and thank you personally.

EDMUND J. HORWATH.

President, American Hungarian
Chamber of Commerce.

ST. LOUIS, MO., July 10, 1951.

Allow me to take this opportunity to express our sincere thanks, in the name of our fellow members of the United American Hungarians of St. Louis, Mo., for your kindness. You raise your powerful voice to call

attention on that unfortunate, liberty-loving Hungarian innocent people, who are against their will forced and terrorized by Red Communists to slavery.

NICHOLAS LABANICS,
Secretary, United American-Hungarian Societies of St. Louis.

CHICAGO, ILL., June 28, 1951.

The South Side division of the American Hungarian Federation representing over 15,000 Americans of Hungarian origin wishes to express its humble thanks to you for Concurrent Resolution No. 119 with respect to the reaffirmation of the faith of the fathers of our country and also for your championing of the cause of downtrodden Hungary where thousands of its people are taken into forced enslavement, exile, and torture chambers.

JOHN MATANYI,

President, South Side Division, American Hungarian Federation.

YOUNGSTOWN, OHIO.

Our organization composed of 18 societies, churches, and lodges in this community at a mass meeting of its members, went on record in thanking you for your interest shown to the people of Hungarian ancestry.

By resolution duly affirmed at the meeting, sincere thanks have been extended to you, as it is very seldom we have an able man such as yourself acknowledge the problems and magnificent history of our mother country which has always been composed of liberty-loving people even though at the present time it is under communistic domination.

AMERICAN HUNGARIAN FEDERATION
OF CHURCHES AND SOCIETIES OF
YOUNGSTOWN, OHIO

By JOHN GOBER, Secretary.

COLUMBUS, OHIO.

The officers and members of branch 59, of the American Hungarian Federation, read and studied with great interest House Concurrent Resolutions 116 and 119. The special meeting, held on June 29, at Columbus, Ohio, unanimously resolved to express our gratitude for the noble work you are doing. We respectfully urge you to continue your fight for the restoration of freedom and human rights in Hungary and in the other Soviet satellite countries.

JOSEPH FODOR,
President.

CHICAGO, ILL., June 28, 1951.

Chicago North Side division of the American Hungarian Federation, representing over 6,000 Chicagoans of Hungarian descent, desire to express its deep appreciation to you, Congressman KERSTEN, for your noble reaffirmation of the faith of our founding fathers, and for expressing the hopes of the American people for the early liberation of the Magyar people from their present forced enslavement and the restoration of their basic human rights and freedom. What the Moscow-controlled government in Budapest is doing is in direct violation of the treaty concluded in 1946, and therefore your Concurrent Resolution No. 119 gives us Americans of Hungarian origin renewed courage that something will be done to alleviate the sufferings of Hungary. Your noble services to humanity will long be remembered and cherished in the hearts of all freedom-loving Hungarians.

JOHN BLASZ,
President, Chicago North Side Division, American Hungarian Federation.

TOLEDO, OHIO, June 26, 1951.

The pastors and lay leaders of the Hungarian community of Toledo, Ohio, at a mass meeting held June 25, 1951, express to you their gratitude for the wholehearted support

In your effort to defend the rights of the Hungarian people against the oppression and inhuman treatment to which they are subjected by the Communists. We heartily endorse House Concurrent Resolutions 116 and 119.

MSGR ELMER G EORDOGH.

WASHINGTON, D. C. July 6, 1951.

The supreme council, the national executive officers, the district and local branch leaders of the Hungarian Reformed Federation of America, representing an over-all membership of 30,000 citizens, wish me to express our heartfelt gratitude for House Concurrent Resolutions 116 and 119, and urge you to continue the good fight for the peace of the United States of America and for the liberation of Communist-dominated Hungary. We are very proud of your good efforts.

THE HUNGARIAN REFORMED FEDERATION
OF AMERICA

Rev. GEORGE E K BORSHY.

SEATTLE, WASH., July 9, 1951.

I am very grateful for the copy of the Kersten resolution which I recently received. It is the finest and the best informed paper I ever read on the subject since I master the English. My American friends ask me very often questions about Hungary. The best way to give them the most competent information would be to hand a copy of the resolution. Is it possible to get at least 50 prints?

Dr. D. VASARHELYI.

EAST CHICAGO, IND., July 9, 1951.

Your resolution in behalf of the down-trodden Hungarian people deserves the precise and everlasting gratitude for a real American who has the courage and ability to speak for the truth. If we only had more men of distinction who could see the light, maybe we would have real peace in this world. Justice is the foundation of everything. External disturbances shall not bring us peace or settled conditions. Preaching false theories will lead us to disruption and upheavals. May God preserve America from this scourge. God may preserve those who have the courage and blessings for telling the truth.

Most respectfully yours,

JOS S KOVACH.

HAWLEY, PA.

We read in the Amerikal Magyar Nepszava, American Hungarian people, of your activity, for Hungary and for the Hungarian people who are in the Red Diktatute. God may lead you in your activities.

Dr. ANDREW BALLA.

NEW KENSINGTON, PA.

If the Congressman will continue to stand for the truth and to fight for justice in the interest of the oppressed Hungarians, God will reward his efforts with material and spiritual gifts in this world as well as in Heaven.

The time is approaching, and also the elder ones among us will live to see it, when the Hungarian nation will again be able to give a helping hand to the nations of the world in reaching the goal that everybody might enjoy his due share of a happy, peaceful life.

PETER HADIKFALVI.

CHICAGO, ILL., July 29, 1951.

Your clear-headed, courageous, and energetic efforts to enlighten the American people about the abhorrence and wanton disregard of every principle of right and decency by the Red usurpers in Hungary constitutes a highly valuable patriotic public service in

behalf of our American people because, as you have done in your splendid speech, you illustrate by living examples, existing in Hungary, the true and horrid nature of a Yalta-created "government by broad representation" in reality the true and horrid nature of communism.

JOSEPH C. CANADY.

BRIDGEPORT, CONN.

The John Calvin Church and Sick Benefit Society of Bridgeport, Conn., is taking this opportunity to express its most sincere gratitude to you for that noble Christian-like speech and resolution which you delivered in the House of Representatives on June 20, 1951, in behalf of the oppressed Hungarian people in Hungary.

Please be assured that your continued efforts merit the admiration of every American of Hungarian descent.

May God bless you in your noble work here and abroad for liberty and peace.

LOUIS KARDOS,

Secretary, Hungarian Evangelical and Reformed Church of Bridgeport, Conn.

TORONTO, CANADA, July 5, 1951.

I was deeply touched to learn that you take interest in the Hungarian affairs and that you feel and understand this nation's hardships and struggles.

It is such a good feeling that we are no more alone and forgotten, there is somebody who cares for this little, but heroic nation.

Thank you very much for your understanding and I know you will do your utmost to help Hungary in their struggles. God bless you.

VALERIA LOMDL.

STURTEVANT, WIS., July 31, 1951.

As an American-born Hungarian I want to express the hope of helping the Hungarian people from their present enslavement and for the early restoration of their human rights and their freedom from communism and all the cruelty that is going on there. Please do all you can for those poor Hungarians over there in Europe. Thank you.

JOHN D KOVACH, Jr.

FRANKSVILLE, WIS., August 1951.

I am expressing myself as thousands are doing and thousands have done already. I am writing to liberate the Hungarian people from their present enslavement and for the early restoration of their basic human rights and freedoms. To wipe out the communism from Hungary.

JOE KLAUS.

CHICAGO, ILL.

As national president of the American Hungarian Federation permit me to express the appreciation and gratitude of the Federation on your Concurrent Resolution 119. * * * The inhuman practices committed in Budapest in enslavement of thousands of Hungarians is in direct violation of the treaty of 1946, and we urge your endeavors in behalf of the humanity of Hungary and in the interests of the democratic ideals upon which this, our Nation, was founded.

DANIEL SZANTAY,

National President, American Hungarian Federation.

WASHINGTON, D. C.

Please accept my deepest and sincerely heartfelt thanks for your magnificent attempt to help that unfortunate people.

Only yesterday I received a letter from my only sister, living now in Hungary, who is now the wife of a retired colonel of the army. She wrote the few lines weeping and says farewell to us, who for some years were able

to help them from here, writing as one who goes to the death cell or gallows. It seems certain that they will be driven away from their modest home and taken to some concentration camp, not being allowed to take with them anything.

REV EDMUND VASVARY,
The Hungarian Reformed Federation
of America.

NEW YORK, N. Y.

Your resolution and extension of remarks were received with greatest interest and deepfelt gratitude not only by all Hungarians living on free soil but by free members of every nation now languishing under Soviet yoke.

MSGR JOSEPH KOZI HORVATH,
Executive Committee of the Hun-
garian National Council.

To Explore Union

EXTENSION OF REMARKS

OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. HERTER. Mr. Speaker, under leave to revise and extend my remarks, I should like to include the following editorial from the Providence Journal of Friday, August 3, 1951:

TO EXPLORE UNION

As supreme commander of the North Atlantic Treaty Organization forces in Europe, General Eisenhower occupies a position which is unique in the military history of the world. He was chosen by the common consent of a dozen governments. But because the NATO countries are bound together only in an alliance of sovereign states, Eisenhower is a military commander with no effective civil authority above him.

A less sensitive democratic and more ambitious man might relish this circumstance and seek to take advantage of it. General Eisenhower on the contrary, earnestly desires improvements in the NATO machinery which will place his own military command in proper subordination to centralized civil authority effectively representing the nations he is serving.

This arresting picture of the problems behind the NATO command and of General Eisenhower's personal reaction to them was painted recently before a congressional committee by the long-time American prophet of Atlantic union, Clarence Streit, portions of whose statements are reprinted elsewhere on this page. Mr. Streit, who testified in support of the pending mutual-security bill, was newly returned from Europe, where he had talked at length with General Eisenhower.

The MacArthur controversy, Mr. Streit reported, struck Europeans as "a sharp object lesson in the difficulty of keeping the military subordinate to the civil by diplomacy." No one was more sensitive to this reaction than General Eisenhower, who thereafter "leaned backward to confine himself to the purely military side of his office."

But this wise and necessary reaction on the part of the NATO commander aggravated the practical difficulties inherent in his position as the military agent of 12 sovereign governments. Responsible to a council on which each nation has an equal voice and which has power only to recommend action, General Eisenhower is like a man in a boat in the Atlantic Ocean without oars and without any helm.

What the NATO commander needs, obviously, is a more cohesive and effective political authority above him. Progress is being made in that direction. The recent tentative agreement of five NATO countries to form a common army with centralized ministries of defense and finance is a long step forward.

The question is whether such plans go far enough. Great Britain and the Scandinavian countries would not participate in the common army plan. Neither would the United States. Yet Eisenhower serves them all.

Mr. Streit's answer is Atlantic Union—organic consolidation of all of the NATO countries along federal lines. But he recognizes that no such revolutionary move can come overnight. All he asks is that Congress pass the long-pending resolution for an international conference to explore the possibilities of union.

This would commit no one to anything. The sole object would be to examine the possibilities, the advantages—and the limitations—of federal union. We agree with Mr. Streit that the time is ripe for such a study.

Contribution of Labor to American Economy

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, August 24, 1951

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the text of the address which I delivered before the annual convention of the West Virginia State Federation of Labor at Huntington, W. Va., on August 23, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It always gives me a great deal of pleasure to speak to the American Federation of Labor. We are old friends, and it is always good to be with old friends.

You are old friends of whom I am very proud. I know of no group of people in this land of ours, either collectively or individually, who are stronger backers of our Nation, our Government, and our way of life than American trade-unionists.

You have proven your devotion over the years. You have proven it in good times and you have proven it in times of strife. You have been the backbone of democracy in the United States.

I know you have. You know you have. A grateful Nation knows you have.

You have proven your belief in this land of ours and its institutions many times. You have proven it especially in your never-ceasing fight against communism and nazism and every form of dictatorship over the minds and the bodies of men.

It was the production of American labor which made it possible for us to throw back and defeat the aggressive hordes of Hitler.

It is the production of American labor which is making it possible for us to hold and strengthen the free world against communism.

American labor has been in the fight against communism for a long time.

You know the causes of communism and the cures. You know that the way to fight it is not by undermining American institutions and freedoms. You know that the way

to fight it is not by making wild and irresponsible charges.

You, who have been in the fight a long time, know that communism breeds in the slums of cities. It breeds in the bitterness of approaching hunger. It grows like a mushroom on the dunghill of cheap labor, in the neglect of basic human rights.

The causes of communism have long been well known to organized labor, and organized labor has long known how to act effectively against the dangers of communism.

Labor is fighting communism at the ground level, and it is slugging communism where it hurts.

Organized labor has led in the fight for better working conditions, better housing, health insurance, social security, and other benefits for all citizens.

It is my firm belief that organized labor in the United States has done more than any other single group to defeat communism in this country and throughout the free world. The trade-unions of the United States have been active in bolstering the struggling anti-Communist unions in Europe. Representatives of your great federation have gone into Western Europe and have beaten the Communists at every turn.

The A. F. of L. is actively engaged in protecting the freedom of workers everywhere, in strengthening their bargaining power, in helping workers win a higher standard of living and a place of dignity in the community—in other words, in helping workers of the free world withstand the blandishments of communism.

As part of our fight against this menace to world freedom, your Government and many private groups are bringing to this country workers from other lands in the free world. Each of you can do a great deal to make these visitors to our land feel at home and to show them why we prize democracy so highly. By helping these visitors see the real America and the American way of life as you live it, each of you can take a more active part in the fight for survival. You can teach freedom. You can teach democracy.

Take these visitors into your homes and into your union meetings. Arrange for them to sit in on your grievance and collective-bargaining sessions. Take them to civic functions such as PTA meetings. Show them local government and politics in action. That is the way to teach freedom. That is the way to teach democracy. Teach it by helping our foreign guests live it as you do, day by day.

We all know that there is also the material side of our fight for peace. On this front American labor has made its greatest contribution to protect this land we love. Labor has fought incessantly for peace but when the chips have been down and our national integrity and security has been threatened the laboring man and woman have stood shoulder to shoulder with our soldiers in the field.

Hitler misjudged you on this score. Even while Fortress Europe crumbled around his head he considered democracy weak and those of us who believed in its principles soft. Democracy is not weak. The American people are not soft. American labor proved this in World War II.

While our Army, Navy, Marines, and Air Force chalked up victory after victory over the "supermen" American labor won battle after battle on the production line. American workers are the unsung and unbemedaled heroes of our victory over the Axis Powers, and no one should forget it.

I could tell many stories of the sacrifices made by the men and women who kept the supplies rolling to our men in the front lines, but time is limited. There is, however, one little-known incident—one battle of production—which stands out as a shining example

of what free labor in a free land can and will do to protect their freedom. It is a story of a battle in a far-away land that was won primarily by the hands of American workmen. It is the story of a job that "couldn't be done."

In early 1942 the wily fox of the desert, German Field Marshal Rommel, chopped the British African armored forces to bits. When the dust of battle had settled only 70 tanks remained out of an original force of 300. Tobruk had fallen and the Afrika Korps stood before El Alamein. Hitler was elated. "Cairo will be ours within a month," he declared. But he failed to comprehend what American labor could do.

Franklin Roosevelt, however, knew the working man and woman. He knew what industry in our country could produce; he knew that it would produce "Hold on. Fight for time. Count on us," was his solemn pledge.

In early 1942, if you will remember, our own war production was in its infancy. It was barely beginning to roll. But this did not lessen President Roosevelt's belief in the abilities of America's labor force. He put the problem in the hands of American industry—labor and management.

Local union and management leaders in the principal Sherman tank plant were called in and the situation explained. This was a fight for existence. For the next 9 days and nights, through holiday and weekend without a let-up, the battle against time went on. Every worker spent at least 14 hours a day on the job—many of them worked 20 hours straight without rest. Naturally, fatigue became terrific. The injury rate rose above the normal percent of casualties suffered in battle. But not one worker asked to be relieved. Not one worker let his country down. The original plan had called for 250 tanks, the quota was doubled. Along with this, extra guns, howitzers, tank destroyers, and ammunition were produced. These were speeded to the weary soldiers of the British Eighth Army in North Africa.

For six long weeks of bitter desert fighting the tanks, produced by American labor on that job that couldn't be done, spearheaded the attack. The guns produced by the men and women in our factories stopped the Germans in their tracks. And for the first time turned a German victory into defeat; making the beginning of the end of Hitler's Third Reich.

This was only one job. This is only one example of the ability and productivity of American labor. It is only one example of the great debt that is owed by this Nation to its vast labor force. It is only one example of how labor won the battle of production during the last war. But it is a vivid example, and one that will long be remembered.

Again today the American worker is being called upon to help protect our freedom. And again today they have accepted the challenge. They are accomplishing the undreamed-of task of producing for a dual economy; one for the needs of the civilian population, to keep their standard of living high and raise it still further, and the other to keep our defenses strong and to further strengthen them. This is a tough job but a job labor can do.

Since we have drawn the line in Korea against Communist aggression, our defense activity has grown by leaps and bounds. It is going to grow still further. We are going to have a three-and-a-half-million-man standing army.

We are going to produce 50,000 airplanes, 35,000 tanks and over 200,000 jet engines a year. And we are going to do this without seriously disrupting our civilian economy. It will be hard work. It will mean sacrifices. But we will do it.

To keep our defense machinery supplied and to meet civilian demands our steel production is being raised. Within 18 months

we are going to produce 118,000,000 tons of steel a year. Russian slave labor, of greater number than our own work force, has been able to produce the staggering total of 27,000,000 tons of this vital defense material per year.

We are going to raise our electrical output 30 percent and double our production of aluminum. We are going to step up our production in all other fields.

We are serving notice now to all would-be world conquerors that America is ready, her people are ready, and her industry is ready. We are ready to sacrifice if we must, to fight if need be, and to give of our material wealth and our very lives to keep freedom alive. The Hitlers of the past have disbelieved us and they have perished along with their ideologies. Let the Hitlers of the present take notice that we are a united people and the world's most powerful nation. Let them take note that we seek peace at all times. But let them fully understand that we will never give up one iota of freedom to maintain this peace.

Now our dual economy is going to produce many problems but problems that we can and must solve.

One of these problems is manpower. To maintain our national security and to continue our economic stability we are going to have to use our human resources to a maximum extent. This involves providing manpower for the Armed Forces in sufficient numbers and with the mental, physical, and occupational qualifications necessary to maintain a strong fighting machine. It also means providing manpower for producing the materials and services necessary to support the Armed Forces, to meet our commitments of aid to other free nations, and to support the civilian economy.

To meet these requirements there are certain definite things that we all are going to have to do; certain things that organized labor can do.

We are going to have to constantly increase our manpower potential through the further training of workers. We can do that through increased apprenticeship programs and additional training and education of workers already on the job and those who will enter industry for the first time.

American labor and management have done a marvelous job in the mutual operation of apprenticeship programs to provide more skilled workers for the job ahead. The results are easy to see. These programs have produced the best craftsmen in the world. Craftsmen of the type we need to keep strong. We can all do more though to promote this type of training. We need all the skilled workers we can get and if we are to have them when we need them we have to start training them now—not when it may be too late. I know that labor will keep up its support of apprenticeship and will increase this support as our defense effort swings into higher gear.

To meet our manpower requirements we not only are going to have to train new workers and improve the skills of those presently employed, we are going to have to protect the workers while they are on the job. It doesn't do much good to train a man or woman and then have them injured or killed on the job. That is just plain waste. Waste we can ill afford.

For years, organized labor has taken the lead in the development of safety devices and standards. It has worked unceasingly for more safety legislation and has encouraged the growth of safety-mindedness on the part of employers. As time goes on and production increases, safety will become even more important. It is up to each of us, not the other guy, to practice safety.

When you speak of safety it always brings up the problem of those who have been injured on the job and are now physically

handicapped. In these unfortunate persons lies a vast source of manpower—manpower we need desperately to meet our defense production demands. We are going to have to make every effort to make room at the Nation's work benches for those persons who are capable of good work in spite of their physical impairments.

Of all the groups interested in employment of physically handicapped workers, none should have a more valid interest than those who labor in our plants and factories.

As has been proved many times, the laboring man has a great human compassion for all those in our vast army of physically handicapped people. But he has an even greater compassion for those men and women who must fight for a place in our labor force, despite their handicaps.

Because he works with his hands as well as his brains, the laboring man has a deep understanding of the fight of the physically handicapped to make and to hold for themselves a place in the productive and economic scheme of things.

The President's Committee on Employment of the Physically Handicapped, a part of the United States Department of Labor, conducts, in cooperation with labor, management, and public and private agencies, educational and informational programs designed to bring about greater equality of opportunity in employment for the physically handicapped.

The program of the President's committee has the full support of the A. F. of L. President William Green has said

"The physically handicapped should be encouraged to serve where opportunity presents itself for them to do so, and labor and management should cooperate in helping to create work opportunities for handicapped individuals.

"It is the purpose and policy of the American Federation of Labor to cooperate in as full a measure as possible in the promotion and achievement of these worthy objectives."

Yes, to get the manpower we are going to need to keep our defense and economy strong, we are going to have to train workers and we are going to have to look to every source of workers.

We are going to build our defenses so strong that no one will dare threaten us. We are doing it now and will continue to do so. But we must realize that there are dangers to our welfare at home as well as abroad. We must guard against losing our standard of living even while we protect it.

In a dual economy that we are planning the needs of the military naturally must come first. That means that we are going to have fewer new automobiles, refrigerators, washing machines, television sets, and other civilian goods than we might have in normal times. It means that all of us are going to have money to spend but fewer things to buy. This condition is the first step to inflation.

To win against our enemies we are going to have to stabilize our economy as well as build our defenses. We are going to have to win on the home front before we can hope to win elsewhere. American labor knows as all citizens know that the home front fight is a bitter one. The forces of the special interests are well organized. They are attempting, and have been somewhat successful, to lull the American people to sleep with their cry of the "voluntary way being the American way." By this I suppose they mean that you and I should voluntarily accept an inflationary condition so that they can profit. Well, we won't do it.

We have seen how this voluntary way works. We have seen how the special interests have voluntarily helped themselves at the expense of the rest of the Nation. We have seen what voluntary means when we

try to buy meat for our families. It means we can voluntarily do without or pay the outrageous prices set by the special interests.

Have any of you ever received anything voluntarily from these special interests; either fairer wages, shorter hours, better working conditions, or anything? Of course you haven't and you won't. These special interests, and all of you know who I mean, are going to have to be controlled now as in the past.

The new National Production Act shows what happens when special interests are at work. Oh, they helped pass an act all right. But it was an act designed to help them and not you. The President tried to strengthen the old defense production law, and I tried to strengthen it, to give some measure of protection to all the people, to stop inflation, and to see that everyone received a fair share of the national production.

The reactionary spokesmen for the special interests that are in Congress ignored the advice of the President, his top economic advisors, and even the clear thinking members of their own group, and wrote a bill which protects no one but themselves.

It is a bill that eventually will wreck price and wage controls. It will raise ceiling prices for the manufacturer, the wholesaler, and the retailer. It prohibits the Government from reducing the price of beef to a point where we can all have a steak now and then, and it makes effective roll-backs of other commodities practically impossible.

This bill heralds the return of black markets, meatless meals, high prices, lagging wages, and the terrible deprivation and frightful damage of a renewed inflation.

None of us will have protection against the exploitation of the special interests unless Congress repairs the damage done by the new Defense Act. I fought its passage and will fight for its revision. The President fought for a strong controls bill, one that would protect us and our families. He signed the present one reluctantly.

The special interests in their "voluntary" way are willing to let the whole defense program fall apart to achieve their ends. They held up the emasculated defense production bill until the last minute and then presented the President with the choice of accepting it, for the time being, as it was, or letting the old law expire with resulting chaos and confusion.

The President had no choice, he signed this special-interest-conceived bill, but he urged the Congress to revise and strengthen the new law, point by point, to give our Government the tools it needs to fight inflation and build our defenses.

I am going to continue to fight for a law that will protect all of the people of this Nation from exploitation. I am going to continue to fight for a law that will protect you and your families from the dangers at home as well as those abroad.

I ask you to join me in this fight.

American Foreign Policy in the Far East

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Friday, August 24, 1951

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject American Foreign Policy in the Far East, delivered by me on August 17, 1951, at Chautauqua, N. Y.

There being no objection, the address was ordered to be printed in the Record, as follows:

Mr. Chairman, ladies and gentlemen, it is a privilege to come here once again and to discuss the subject, American Foreign Policy in the Far East. If this same topic had been assigned prior to the outbreak of hostilities in Korea in June of last year, I would have suggested that a question mark would have been necessary at the end of the speaking assignment. I doubt if there were any persons in the executive branch of the Government who could have given a clear cut and satisfactory explanation of what our foreign policy in the Far East was at that time. Certainly a Member of the minority party could hardly have been expected to accept such a speaking assignment.

For a period of more than 50 years our foreign policy with relation to China had been fairly clear and consistent through both Republican and Democratic administrations. Its basic conception was to maintain an independent China and to resist, by all diplomatic means available, various efforts to encroach upon or destroy the sovereignty of the people of China over their own land.

Despite the efforts of some to paint us as having imperialistic ambitions in Asia, the facts speak for themselves and clearly show that the contrary is true.

As a result of the Spanish-American War, we had rather unexpectedly and reluctantly come into a position of responsibility in the Philippines. Our efforts during the next four decades were directed toward preparing the people of those islands to take over the responsibility of government for themselves, looking toward the creation of the Philippine Republic which has now taken its place among the free nations of the world. Our Nation had played a part in the opening of Japan to trade and commerce with the west and the average American viewed with a mixture of interest, admiration, and alarm the great military and economic progress that nation made in a relatively short time.

In 1904-5 it came as a surprise to many people that the Japanese naval and military forces could win such notable victories over imperial Russia. Through the good offices of President Theodore Roosevelt the Treaty of Portsmouth was negotiated and signed in 1905. To prevent an aggressive Japan from extending its domination from Manchuria southward, the United States in 1941 risked and ultimately became involved in World War II.

The rapid advance of the Japanese forces for a time isolated us from our historic friend and ally, China, and forced our withdrawal from the Philippines, to whose defense we had pledged ourselves and from other island bases in the far Pacific. During the entire period of the war, and up until the time of the Yalta Conference in February of 1945, we had a policy in the Far East, which was generally understood and, I believe, generally approved.

That policy was to resist overt aggression, to win a victory over the aggressor, to restore to the Republic of China and to the Republic of the Philippines the territory which had been taken from them by the aggressor and to restore peace to that important area of the world.

The sacrifices made by many people in many lands was certainly not for the purpose of substituting a Communist aggressor in place of a Japanese one. Yet, the record is clear that the agreement made at Yalta played an important part in the extension of Soviet power in Asia and the ability of international communism to win a great victory in continental China. History will have a hard time justifying an agreement made without the knowledge or consent of the American people or of the American Con-

gress, which at the expense and without the knowledge of our historic friend and ally China, gave rights and areas which belonged to them, to the Soviet Union.

From that time until the outbreak of hostilities in Korea, it was most difficult to know just what our far eastern policy was and what was motivating the action and inaction which has had such a catastrophic impact.

Our diplomats lost what our fighting men had won. A friend who had fought the aggression of Japan for 6 years was sacrificed to one which engaged in the war in the Far East for 6 days.

In the Philippines we set out to help rehabilitate their war-torn economy and to enable their government to once again take its place among the free nations of the world.

In Japan, thanks to the leadership, vision and capacity of Gen. Douglas MacArthur, a nation whose inhabitants had been our enemies, were being reconstituted into our friends. While this was going on in two important far eastern island nations, China the key to the future of all of Asia was going down the drain of communism.

Exactly contrary to the position we were taking in Europe, where we suggested that governments not form a coalition with the Communists, we were urging the Republic of China to take Communists into their government. The Chinese have a saying that "you can't have coalition with a tiger unless you are inside the tiger." For this reason they resisted both our suggestions and our pressures to form a coalition with the Communists. When they refused, our Government placed an embargo for a period of about 8 months against any arms and ammunition to the legally constituted Government of the Republic of China. During that same period of time the Soviet Union in Manchuria, as a part of the Yalta agreement, turned over captured Japanese arms and equipment to the Chinese Communists in large quantities. This, I believe, was the turning point in the Chinese civil war.

The Soviet Union openly and loyally gave moral and military support to the Communist forces of Mao-tse Tung.

Our Government followed a vacillating policy of giving aid but refusing to give the type of supervision and support to the legal Government of China which they quite willingly gave to the legal Government of Greece. Our policy seemed to have been one of "scuttle and run" as far as China was concerned. This tragic phase reached its culmination in a series of acts by the executive branch of our Government. The Chinese white paper issued on August 1, 1949, was a devastating blow aimed at a prostrate friend and was meant, I fully believe, to pave the way for a recognition of the Chinese Communist regime after the ice had been broken by India and Great Britain. On January 5, 1950, the President of the United States in a public declaration made it clear that the Government of the Republic of China, which by then had withdrawn to the island of Formosa, could no longer expect to receive any military aid from this country and on January 12, 1950, in his speech before the National Press Club, Secretary Acheson made it clear that while we would fight to defend Japan or the Philippines against aggression, that both the Republic of Korea and the island of Formosa were outside our line of defense or responsibility.

The men in the Kremlin and in Peking must have interpreted these signs as reasonable assurances that they could consolidate their victory in China and win a cheap victory in Korea without too great a risk.

Fortunately under our form of government neither the opposition party nor the press is under government control.

The issuance of the China White Paper being such a one-sided presentation was challenge in and out of Congress. The

scuttle and run policy met resistance throughout the Nation, in Congress, in the press, and in the Defense Establishment.

On December 28, 1949, in order to stem the growing criticism the State Department issued one of the most remarkable confidential documents ever issued by a responsible agency of the Government of the United States. With the technics one would expect of a totalitarian nation, they set forth a line of propaganda which was contrary to the advice of the responsible defense authorities of this Nation and misrepresented the facts as to the importance of Formosa to the strategic defense of this Nation.

When they were caught at this deception, they resisted for a period of 18 months the full facts from being revealed to the Congress or the country and it was not until the Joint Committee on Armed Services and Foreign Relations, by a vote of 15 to 9 in June of this year insisted on the memorandum being published, that the full facts and the extension of the deception was known to the Congress and the country.

Despite warnings from responsible officials in the Far East and from those who had been there and returned, the administration continued its fatal Chinese policy until overt aggression broke out in Korea on June 25 of last year.

As a result of the bitter experiences of the Korean war, the criticism of the opposition party and the clear-cut testimony of the responsible defense chiefs of this Nation at the hearings growing out of the MacArthur removal, steps have been taken which may salvage to some extent the damage done in that area of the world.

As a result of the Japanese Peace Treaty Conference in San Francisco, we should have despite the prospects of a Soviet filibuster, a Japanese peace treaty sometime during the month of September of this year.

We have embarked upon a clear policy of giving both economic and military aid to the Republic of China on Formosa for the purpose of keeping that important strategic island out of unfriendly hands and its 8,500,000 free people from being enslaved by communism.

We are giving arms aid to the non-Communist forces of southeast Asia in an effort to try to prevent that important area from falling to Communist domination.

Additional assistance is being given to the Government of the Philippines so that they may maintain law and order and improve their economic position. Technical assistance and economic aid is being given to other nations of Asia so that they may have an opportunity of helping themselves to improve their agriculture and industrial production for the benefit of their respective peoples.

But this program is at best a holding operation. It is part of the over-all global containment program which has its counterpart in Europe and the Middle East.

I believe that it will be most difficult to bring the operations against the Communists to a successful conclusion in Indochina as long as the Communists there have a common frontier with Communist China. It must be remembered that the civil war in Greece was not brought to a successful conclusion until access to Yugoslavia was denied to the Greek Communists. When they could no longer get supplies and reinforcements from across the border and retire there when necessary to strike again at some other part of the frontier, the forces of the Greek Government with the equipment and advice from the United States were able to successfully conclude the operation.

As long as all of continental China is in the hands of Communists allied with the Kremlin the ultimate odds of saving Asia are stacked against the free nations of the world.

Given a little more time to liquidate non-Communist elements and to consolidate their position on the mainland of China, the economic and military power of the Soviet Union plus China will ultimately be able to dominate all of Asia on the continent and perhaps the island nations of Japan, the Philippines, and Indonesia as well. This fact, as unwelcome as it may be to face, is one which no realistic person dare ignore when the challenge to human freedom is so great.

One only needs to look at the map in the light of world events to realize how different the world picture would be today if that area labeled "China" were under the control of a free and friendly government outside of the Communist orbit.

Many competent observers believe that the risk of Soviet aggression in Europe has grown in direct ratio to her success in protecting her Asiatic flank through a Communist China and a Communist North Korea.

There are indications that in our lifetime, Manchuria and North China may remain in the Soviet sphere. If indeed they are not ultimately incorporated in the Soviet Union. There is hope, however, that in South and Central China there may still be an opportunity for the non-Communist Chinese to throw off the yoke which binds them and to restore to a part of their country at least the dignity and freedom which only a free China can have.

There is a growing realization throughout the country, as well as in the legislative and executive branches of the Government, that the menace of aggressive communism is global in character and that it does not make sense to close the door to communism in Europe. If it is to be left wide open in Asia.

Unfortunately, up until the Communist aggression from North Korea against the Republic of Korea on June 25, 1950, there were too many of our people in and out of official life, who were either apathetic to the problems of Asia or who followed a deliberate policy discounting its importance despite a full realization of what was going on there.

Even after fighting between the North Korean aggressors and the United Nations' forces resisting aggression had taken place, with the obvious material and moral support of both Communist China and the Soviet Union, there was not a full appreciation of the nature of the conflict and of the Communist objectives. When the participation of the Chinese Communists became an established fact in October of last year, a fear psychosis seemed to grip many of our United Nations' associates, who demanded a "peace at any price" formula in order to bring the conflict to a halt.

Those who then and now favor a far eastern Munich, are willing to purchase a temporary respite by admitting Communist China to the United Nations and to turn Formosa over to the Communist regime.

They lose sight of the fact that if such proposals could be accomplished it would be a tremendous victory for aggressive Communists in Asia and throughout the world and would, I believe, assure the passage of most of the rest of Asia into the Communist orbit within 2 or 3 years at the most.

These short-sighted ones fail to recognize the Communist approach to the problem which is that the "road to Paris is through Peking."

The recent Soviet acceptance of the invitation to attend the San Francisco Japanese Peace Treaty Conference may be for the several purposes of disrupting the work of the conference, using it as a sounding board for Communist propaganda and to advance the cause of Communist China for United Nations membership and the possession of the strategic island of Formosa. I believe

that this pattern will be clearly revealed between now and the final signing of the treaty some weeks hence.

The American people are entitled to the full facts regarding the contributions made or offered in the collective security action to resist aggression in Korea.

Four days after the aggression started, the Government of the Republic of China, now on Formosa, offered the United Nations 33,000 troops.

This is the approximate number contributed by all of our United Nations' allies a year after the outbreak of hostilities.

Up to the present time, out of a United Nations' membership of 60, only 19 nations have sent or offered to send combat forces to Korea. The United States has supplied approximately 350,000 troops and the other nations who have troops in Korea have supplied approximately 10 percent of that number. This is, I submit, not a fair contribution of the burden of collective security.

There are some people who are under the impression that time is on the side of the free world. This is not necessarily so.

On VJ-day in 1945 there were less than 200,000,000 people behind the iron curtain. Today there are over 700,000,000 in the Soviet orbit.

When World War II ended, the United States had an Army in being of great strength and battle tested. Our Air Force was preeminent and had no equal in numbers or quality. Our Navy was the most powerful in the world. This Nation alone possessed the atomic weapon and the atomic production capacity.

Had we not been incumbered and compromised by the secret agreements of Yalta, Tehran, and Potsdam, we had the opportunity to insist that human freedom would be reestablished in Czechoslovakia, Poland, Hungary, Bulgaria, Rumania, and all of Korea and that a nation which had been our ally such as China would be reestablished in full authority over all of its territory including Manchuria.

Now, less than 6 years later, this Nation is negotiating terms of a settlement at Kaesong with North Koreans and Chinese Communist volunteers, which leaves the North Koreans in possession of most of the territory they had before their aggression and leaves the Chinese Communist aggressor free to move elsewhere when he thinks the time is right.

Still outside of the Communist orbit in Asia are approximately another one-half billion people. These will remain under a constant threat of aggression, which if successful will destroy their rights and liberties, but with the precedent now established that if the aggressor tries and fails, he will be secure in his own territory to rehabilitate himself and try again at the time of his choice. It is a dangerous doctrine and one which may be costly to free men everywhere.

There is real doubt as to whether this Nation can for a period of 5 or 10 years carry the unprecedented burdens of its own Defense Establishment and assume a large part of the defense burdens of the rest of the free world without wrecking our economy and destroying the initiative and productivity which has made this Nation a great world power. Our present policies have made us almost the captive of Soviet strategy. They test us out with the Berlin blockade and we go to great expense and effort to offset. They engage in civil war in Greece and we move to the support of the Greek Government. They threaten in Turkey and in the Middle East and we send military and economic supplies to bolster the defenses of those countries. We become so preoccupied with Europe that China with her 450,000,000 people passes into the Soviet orbit and by so doing jeopardizes a

billion one hundred million people and the vast resources of all Asia.

Leaving the initiative to the Communists may, in the end, either bring them or their satellites military victory or destroy our economic system in the cold-war process. We must find an alternative that is workable and will have the support of our own people and those of the free world. It must be a means of enlisting the support of those who want freedom but find themselves temporarily behind the iron curtain.

I am convinced that if we rally the force of freedom throughout the world, we can find the means of gaining millions of allies who now are deep in Communist territory. Instead of international communism being able to disrupt the free nations of the world we should find the means of keeping the Communists so busy in their own backyard in Asia, Europe, and the Middle East, that strains and stresses will develop and will crack the fabric of communism and bring it crashing to the ground. In our own Nation Abraham Lincoln recognized that this Nation could not continue half slave and half free. In this age of the airplane and the atomic weapon it is doubtful if the world can remain half slave and half free.

It was Lincoln who said: "Fellow citizens, we cannot escape history—the fiery trial through which we pass will light us down in honor or dishonor to the latest generation. We, even we here have the power and bear the responsibility—in giving freedom to the slave we assure freedom to the free. We shall nobly save or we shall meanly lose this last best hope of earth."

If we use the same courage and common sense that motivated the men who sat in the Constitutional Convention at Philadelphia, there is no domestic problem we cannot solve and there is no foreign foe we need fear.

Dispersion of Industries

EXTENSION OF REMARKS OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, August 24, 1951

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on industrial dispersion, by Jack Jonas, a member of the staff of the Washington Star, which was published in the Washington Sunday Star of August 19.

As I pointed out several days ago, Mr. President, the object of the industrial dispersion program is to avoid the creation of any new concentrations of industry anywhere in the country which would be so large as to form inviting targets for bombing attacks. I desire to emphasize that the program is not one of moving industries from their traditional locations to parts of the country which would presumably be safer from attack. Any part of the United States could be reached by a determined and resourceful enemy. Industrial dispersion can be accomplished by the careful spacing of new plants within an established industrial region just as it can be by moving them to less industrialized areas of the Nation. But it is a matter of plain common sense that great new concentrations of industry should be avoided.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNCLE SAM FINALLY IS GETTING SERIOUS ABOUT PROTECTING INDUSTRY

(By Jack Jonas)

For a long time now, everybody has agreed that if war brings enemy bombers over America, there should be some way to keep the bombs from destroying the Nation's industrial might, and that the best way to do this is to make the factories harder to hit.

Military men have stressed—and civil defense officials agree—that the application of the simple military tactic of spreading the targets over a broader area is the best solution. They call it "industrial dispersion."

Briefly, it amounts to this—build new factories on the outskirts of a city instead of close to downtown, where other busy plants are located. Spread the plants, as the population has spread in recent years, into the suburbs and beyond.

Properly executed, such a plan could even cut the A-bomb down to size as a military weapon.

But the military and civil defense people have bitten their fingernails in bitter frustration as they watched new plants being built next door to already-established industries, both of them ripe for the same bomb. This situation arose because, for an equally long time, nobody did much about putting the industrial dispersion policy into effect.

The military has warned again and again that it will be unable to keep the majority of enemy bombers from getting over their targets. They shouted the warning, and everybody yawned.

TEACHER'S PET

Now the Government finally intends to do more than just talk about spreading the country's industrial power over wider areas. The core of the National Security Resources Board's new policy is this—the industrialists who build new plants away from places where they are likely to be bombed are going to become, literally, "teacher's pet" when it comes to favors from the Government.

They will get the bulging defense contracts, the defense loans, the strategic raw materials, and the right to pay less in income taxes by writing off their factories over a period of 5 years instead of 20 or 25 years.

But the program goes much deeper than that. It includes a concentrated effort to get local businessmen and city and State officials in each area interested in handling the problem themselves with a minimum of Government interference. The Government has promised to set an example by building future Federal projects out of target areas.

The plan does not mean a gigantic reshuffling of industries already located in busy areas. Established industry is to stay put—nobody is going to pick up the sprawling automobile factories in the Detroit area and scatter them over Texas. Disruption of the present plants might weaken the very structure that is to be protected—the structure that makes this a mighty industrial Nation.

LONG MOVES NOT NECESSARY

Nor does it mean that future additions to basic centers of industry will be shifted to other areas of the country. The plants can locate in the same general market areas, where labor and the proper utilities are readily available. They would merely move from 10 to 20 miles away from the center of the target.

The key word in the program is "space"—space between the plants themselves, space between the congested areas which would naturally rise up around the new factories, space to make an enemy bombardier confused about where to drop his eggs.

To bring all this about, the Government will stress formation of local committees—the NSRB likens them to task forces—to make a thorough study of the problem in each community and decide what particular program of industrial dispersion would best suit that community.

When the study is completed, a survey, again under local direction would be made to find out what factory sites are available in the desired areas. Laws of the communities will be studied to see if any changes need to be made to facilitate the spreading of industry.

When all of these things have been done, the Government suggests a comprehensive report be made available to industry in the area, showing the plant owners and prospective plant owners where planned new plants can be built in keeping with national security.

But the Government recognizes that reports and studies are not enough. That is why the program of incentives has been drawn up to make new industries, and adjuncts to present industries, want to move into the country where they will be safe from atomic attack.

DISTANCE ISN'T EVERYTHING

The Government also has a warning—be sure that the sites selected follow the pattern of sound industrial location. They should be close to transportation, near the water supply and other utilities, out of flood areas—all of the basic considerations of plant location should be observed.

Although the Government says that, as a general policy, it isn't going to pick up an already established industry and set it down again hundreds of miles across the country, it was just such a move that led to the pattern which is to be followed in the future.

The military was instrumental in moving the Boeing Aircraft Corp B 47 plant from Seattle, Wash., to Wichita, Kans., because it was deemed to be vulnerable to air attack where it was located at Seattle.

The startled Seattle Chamber of Commerce set about to do something that would keep such things from happening in the future. They drew up a plan of industrial dispersion designating areas outside the city, but still near enough to be readily available to workers and utilities, at sites where factories would be relatively safe from attack.

When the Government began formulating its present industrial dispersal policy, it leaned heavily on the Seattle experience, and Seattle Chamber of Commerce experts helped write the fancy red, black, and green brochure which the Government has issued to explain its program.

PLENTY OF DIFFICULTIES

Putting the program over will not be a simple task. Opposition will come from the cities themselves, which will see a great loss in taxes if the big industries are located outside the city limits.

In many cities the plan will be difficult to implement. Utility routes—gas, electricity, and water—have followed the pattern of the centralized city. Few lines, particularly water, have extended much past the suburbs because they were not profitable investments.

Workers will grumble about traveling extra distances to work until housing developments can be constructed in the areas of the new plants. With defense production taking much of the critical materials, housing around the new plants will be slow in coming.

The larger plants will attract smaller industries to locate nearby, and this, coupled with the expected housing developments, might eventually cause them to evolve into a major bombing target. To counteract any such tendency the Government's program suggests plenty of space between the expected

new communities, perhaps developed as parks or recreation areas or kept as farm land.

NO MORE UNDERGROUND

The only alternative to dispersion seems to be building underground factories. This, of course, is a tremendously costly operation. Besides, areas away from the centralized industrial areas would have to be chosen as spots for underground factories, and, the experts say, if the sites are far from the central areas anyway, why not go ahead and build the plants on the surface?

Congress recognizes the importance of industrial dispersion. It has been critical of the failure so far to get along with the job. But Congress, at the same time, has bypassed proposed legislation for building five new major Government buildings on the fringe of Washington—indicating a lack of real interest in the program of dispersion as it applies to its own particular business.

Last week the Office of Defense Mobilization, to which the task of issuing certificates of necessity was transferred recently from the NSRB, announced a 60-day moratorium on their issuance, stating that a survey is needed of all the applications. Perhaps the survey will pursue the President's policy on industrial dispersion.

Some industries have been following the plan on their own, but they have been few and relatively small. Major department stores in the big cities, for instance, have followed with branch stores the move of the residents to the suburbs. It was good business. Now, the industries must follow, not because it will be particularly good for business but because it may save their lives.

Can We Organize Revolution Behind the Iron Curtain?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from New Leader for August 13, 1951:

CONVERSATION WITH AN MVD AGENT

(By Melvin J. Lasky)

BERLIN—I was not surprised, but still immensely pleased, to note on the day of my return here from New York a small item in the local press that another Communist bigwig had jumped off and was now a refugee in the free western sectors of Berlin. We met the next afternoon in a cool corner of a sidewalk cafe on the Kurfürstendamm. The face and figure were vaguely familiar from the dozens of blurred butcher-paper photographs in the Soviet and Communist press. A tall, powerfully built man, with pale, hollow cheeks and ceaselessly narrowing and burning eyes. A formidable fellow. He had only returned from Soviet Russia 2 years ago, a political confidant of the MVD, a protégé of General Gomez-Zalser (with Ulbricht the most seasoned of the Cominform chieftains in Germany), a whip of the Stalinist propaganda machine in the East. Such was Prof. Dr. Eduard Schulz, erstwhile head of the Soviet German School of Journalism in Leipzig, now another ex-Communist, but of the late class of 1951.

"Why make any pretense?" he said (with characteristic toughness). "One doesn't jump off for ideological reasons, because one

has become converted to the free way of life. Of course, there is hardly anybody who doesn't at one time or another play with the idea. Ah, the Golden West! But sooner or later, it becomes a matter of life and death. Last Friday night, I was faced with the decision. My bank account had been closed on higher orders. I suddenly couldn't get a car, several mysterious phone calls came through. It would be a day or so before they would close in. Why? Who knows? Factional intrigue among our German Communists, maybe—a mysterious order from Moscow—some crazy Jesuitical reaction to some unorthodoxy which somehow slipped across my lips. . . . Anyway, I had to take my chances—a year or two in an American hoosegow for being a big bad subversive, or a hell of a lifetime in Siberia. So here I am. . . .

Yes, there he was, sipping fine Löwenbrau, for the moment a little helpless and forlorn, without papers, money, or any notion of what would be done with him; but his "Bolshevik ingenuity" would carry him forward, and I didn't doubt it. I was only grateful that there weren't a thousand of these resourceful, cynical agitprop commissars in East Germany's service. Or perhaps there were.

"I can see that you're troubled," he observed perceptively. "You're still caught up in those old petty-bourgeois categories of sincerity and the like. Everybody is sincere and isn't sincere, everybody believes and doesn't believe, can't you comprehend that? There wasn't a man among us who wasn't insecure. Right up to the top of the German Politburo. Eisler is shaky. Paul Merker has been broken. Lex Ende, for some mysterious connection with Noel Field in West Berlin (which was supposed to run back to Rajk and Kostov), was sent to die in the uranium mines of Aue. Albert Norden, whom you must know from his Protestant magazine days in the United States, toys dully with the notion of taking off for somewhere. And do you think Ulbricht or even Zaisser are ever really at ease?"

"Everybody is suspect, and most everybody is spying on everybody else. The so-called operational section of the MVD has asked me a dozen times for information on the top boys themselves. Of course I told them. But sometimes, in the case of my good friends, we worked out a pretty smooth story beforehand to appease the Moscow inquisitors. There was always the risk that one of those good friends would tip off the MVD that everything wasn't on the up-and-up. Maybe that's what happened to me. Who knows?"

We sat and talked in the cafe for long hours until the sun had moved around and caught us in our corner. The man had much to tell. I had much to learn. I thought suddenly of that Washington narcotics commissioner who had pooh-poohed the polite antimarijuana and heroin educational campaign undertaken by good-willed doctors and nurses. "The only people of any value," he said, "were the former addicts themselves: They know the disease, they understand its lures, they can talk the language." The same goes for the Schulzes.

Only a week before, he had been part of the apparatus. Through little slips of the tongue, he still indicated his newness at being a victim and not an executioner. He spoke of the so-called concentration camps. He occasionally spoke of "we," meaning, of course, "they." Only a month ago, he had done a devilishly clever job of sucking in an American foreign correspondent, Al Cappon of the Associated Press staff in Berlin, to do a propaganda job for them. Cappon fell for a visit to Schulz' Institute in Leipzig. He came and, in good American fashion, saw for himself: "I was there." Of course, he did not know that the nice young student in short pants who came to act as

a guide was a secret-police agent shipped down from Berlin. Of course, he did not know that the western literature he saw in the hands of students in the library had been removed just a few minutes before from a locked closet and placed in the hands of three reliable party members. How could he know that every word he said was turned and twisted to make it appear that an American was telling the truth about the American imperialist invasion in Korea, the American plot to rearm Nazi Germany, the American blindness to the true progressive character of the people's democracies? The clever Schulz had done an expert job. Poor Cappon was yanked back to the States by the home office. . . .

"I'll concede this much to you people in the West," Schultz continued. "You've learned something about propaganda. You have almost caught up with Marx and Engels. But with propaganda alone, mein lieber, it can't be done. Organization is what counts, political organization. And there you've got a long way to go before you even catch up with Lenin. Around these parts, only somebody like Rainer Hildebrandt makes a dent on the top Russo-German leadership. Zaisser himself once spoke to me of that 'dangerous fellow Hildebrandt, who is trying to organize a Résistance again us. . . .'" Zaisser had organized the International Brigades in Spain; he knew the meaning of the word. All the rest is piddling, petty-bourgeois nonsense.

"And it just amazes me. What kind of a political show do you people run? Here in the East, you have every opportunity you could possibly wish for. A political party afraid of its own shadow. An economic system that doesn't work. An atmosphere loaded with tension, suspicion and instability. National conflicts that are explosive. And is it taken advantage of? Why, any of my 150 kids in the Leipzig Seminar could produce genuine revolutionary situations out of this stuff. Don't you people have any money? Or don't you care enough?"

We argued a little. I tried to explain the slow course of Western politics, the nature of democratic decisions. I pointed to the Presidential message to the peoples of Russia over the heads of the Kremlin leaders as evidence of the possibility that the Western world could muster the clan and the dynamism which goes with an historic movement of liberation.

"Yes, yes," he said, "but there is so little time, or so our friends in Moscow always used to remind us. You are all busy arming, and military strength naturally will impress Stalin. But they still have the political initiative, and I know of no leading Stalinist who has ever thought for even a single minute of anything but ultimate Soviet victory in all of Europe. And how easily they could be terrified into thinking of defeat. How? Well, if the party structure here and elsewhere in the east begins to crack under the load of factionalism, insecurity, and heresy. If the economic system, with a little careful and systematic prodding from our side, teeters on the verge of break-down. If resistance movements, agitating under the slogan of all-European liberation, begin to make themselves felt. If the eastern military force, including the Red army itself, becomes (once again with more than a little help from your side) shot through with discontent, subversion, and desertion.

"No, have no fear, I am not trying to convert you to Marxism-Leninism. But if Marx turned Hegel upside down, maybe it would pay you to turn Lenin on his head. I tell you that a revolution is going to be made in this world of ours in our time. Either they will make it, or you will have to make it. You are rich and prosperous, and they are poor. You are open-minded and even intelligent, and they are fanatical and very

often blind. But they are serious, my friend, and you are asleep. They want to change the world and you only want to cling to it. They will continue to think in terms of moving forward, until you force them to think in terms of moving back. . . ."

I played with the prospects for a moment—"the democratic uprising against Soviet totalitarianism"—"the liberation of Europe"—"the disintegration and overthrow of the MVD Empire." I paid for the beers, and we walked together a bit toward the Bahnhof Zoo. I disliked the man's arrogance. Wasn't he still a professional fanatic? I had long ago stopped making notes and was busy with furious mental resistance. How delusive was this rhetoric of the "masses in motion"? What could this pseudo-putschist tell us, we who had known the sans-culottes and Thomas Jefferson?

We said goodbye, this man Schulz and I. He said, with a characteristic scowl and squint (which I take to be standard Bolshevik equipment), that we would probably meet again—in a Siberian prisoner-of-war camp. . . .

"Or," were his parting words (which I suppose I will never forget), "or can you make a revolution?"

Senate Crime Investigating Committee

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, August 24, 1951

Mr. WILEY. Mr. President, the days are running out on the life of the Senate Crime Investigating Committee. On August 31 this special committee, which began to function in May of 1950, will have retired into history with the filing of its final report.

Much has been accomplished by it, but a great deal more must still be done. It is for that reason that I have made numerous statements urging the Senate Commerce Committee to carry on our crime probe.

I have pointed out the tremendous numbers of areas in which the crime investigation could be carried on with great public benefits resulting. Among such areas deserving investigations are: crime in the District of Columbia; crime on the water front; crime resulting from gangster attempts to muscle into Chicago labor unions. There are numerous other fields for investigation, moreover.

At this time I ask unanimous consent that there be printed in the Appendix of the Record the text of a statement along this line which I released to the press last Sunday. I also ask that an article I wrote for the current issue of Lookout magazine, published in Cincinnati, Ohio, be printed in the Appendix.

This particular article stresses the need for a higher standard of morality in Government and in private life. One of the ways by which to help achieve such higher standards is by intensification of our efforts against wrongdoers. Their continued immunity from prosecution serves to lower the morale of our Nation, particularly the morale of our Nation's youth.

I trust that the crusade against crime will not end on the mistaken assumption that all that possibly could be done has been done; on the contrary, a tremendous amount of work that could be done and should be done remains to be done in order to wipe out "the shame of our cities."

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

WILEY URGES COMMERCE COMMITTEE START LAYING PLANS TO CARRY CRIME PROBE ON AFTER SEPTEMBER 1

Senator ALEXANDER WILEY, Republican, Wisconsin, member of the Senate Crime Investigating Committee, made public a letter delivered on Friday by messenger to Senator ED JOHNSON, chairman of the Commerce Committee, urging a continuation of the anticrime crusade.

"Speaking as an individual citizen and Senator," WILEY said in commenting on this letter, "I hope that not a single day will be lost between the ending of our Special Crime Committee on September 1 and the opening of a continuing probe by a Senate Interstate Commerce Subcommittee thereafter."

"The criminals and alleged criminals of America, particularly those who are right now in hiding, flagrantly violating our subpoenas or our attempt to serve subpoenas, should not be given so much as one moment's satisfaction in the mistaken belief that Congress' interest in crime has ended. New subpoenas by the Commerce Committee, or duly authorized subcommittee, should be issued."

The full text of WILEY's letter to Chairman JOHNSON reads as follows.

"RESOLUTION AUTHORIZED COMMERCE COMMITTEE TO CARRY ON"

"I am writing to you as an individual Senator to convey by most respectful suggestion that you and your associates on the Senate Interstate Commerce Committee kindly begin to consider as soon as your tremendously busy schedule will allow, your future procedure insofar as taking over the work of our Special Senate Crime Investigating Committee is concerned. As you know, the special committee goes out of business as of September 1, when we file our final report. Under the provisions of Senate Resolution 129, as amended and passed on April 24, 1951, our Crime Committee records are to be turned over to your committee which 'shall, under and by virtue of the authority of section 136 of the Legislative Reorganization Act of 1936, continue the study and surveillance of the subject matter of this resolution'."

"I am sure that we will comment on this matter in our final report and that our distinguished chairman, Senator O'CONNOR, has been and will be in further touch with you along this line; but I thought that I might at this time submit some individual views for your kind review. I ask if you will please bear with me through these extended comments."

"I believe that the following facts might be considered by you and your colleagues:

"1. The Special Crime Committee has always been operating within a drastic time limitation, considering the vastness of its jurisdiction. We have attempted to do in the period since May 3, 1950, a job which State and local investigative agencies in the various States have had many years to do, but which many of them have not done adequately during all of that time. During the present 4-month extension of the Crime Committee, there has barely been sufficient time and resources to do more than try to liquidate the outstanding work of the previous year of the Crime Committee. We have not been able to initiate many new assignments which might very well be considered

by your standing committee nor to complete all of the liquidation of old assignments.

"DISTRICT, CHICAGO, WATER FRONT CRIME SHOULD BE FURTHER STUDIED"

"2. Among the assignments which I might possibly be taken by your committees are the following:

"(a) A complete probe of interstate angles of crime in the District of Columbia. I realize that the Senate and House District Committees have jurisdiction in this field, but I do think that in view of the fact that the District of Columbia does not have national representation nor even local government, the Congress has an especially heavy responsibility to it. I was against the Crime Committee attempting to look into District crime, because I knew that within the available period, we could not possibly have analyzed Chicago interstate crime, New York interstate crime, and crime all over the country, and also handle the District assignment. We have, however, showed some facts with regard to District numbers operations, and I do not feel that this probe should be dropped at this point. I do not feel, moreover, that the Congress should scatter its shots by a wide number of crime probes. I do think that if your Interstate Commerce Committee develops a trained investigative corps, it can avoid duplication with the Senate District Committee whose request for an independent probe is still pending, I understand, before the Rules Committee, which request might thereafter be shelved.

"(b) A second major phase worthy of investigation, it seems to me, is the incredibly odorous situation along the New York-New Jersey waterfront. We have never really gotten into the guts of that situation—where organized piracy exists on a scale that would make Captain Kidd green with envy, where all of the evils of narcotics traffic, labor-union violence, policy rackets, and other crimes abound.

"(c) A third situation worthy of investigation is the current gangster effort being made to invade the Teamsters Union in Chicago. I had hoped that our Senate Crime Committee might look into that situation because in recent times, there have been a series of outrageous bombings, beatings, and murders in Chicago teamster circles which have indicated that there is being attempted a repetition of the Capone mob muscling into unions of the 1920's.

"These are but a few phases which might well be explored. The crusade against crime has only begun; it cannot be allowed to die.

"FURTHER PROBE NOT NEEDED IN GAMBLING FIELD"

"I do not feel, of course (and I'm sure you would concur), that the Interstate Commerce Committee should continue piling evidence upon evidence in fields which we have already explored. Some of our recent work has been of a rather cumulative nature. I think that we have already made our point insofar as exposing organized gambling is concerned. This matter (except in the District) should now be left to the States and localities to handle.

"3. I realize what a tremendous jurisdiction your committee has, what a great variety of subjects come under your study. However, I do feel that under your very competent over-all chairmanship, a standing subcommittee might be appointed by your full committee. That subcommittee need only meet comparatively rarely, but it would have a trained body of investigators and could do a splendid job. For the small amount of money which it would cost, it could save untold millions for Uncle Sam in additional income-tax returns alone. Such a subcommittee should, of course, be given the same subpoena power and the same right (by Presidential direction) to secure income-tax returns, as we had.

"I particularly invite your attention—and I know you will agree, based upon your many years of able Senate service—on the necessity of the carefully trained corps of investigators which I have mentioned—men with seasoned judgment who would use with great discretion and care the tremendous powers which they would possess—so that the innocent (whether it be an innocent community, an innocent individual, an innocent corporation, or innocent associates), might not be harmed, while the guilty would not be spared.

"MEMBERS OF PRESENT COMMITTEE WOULD COOPERATE"

"4. It is indeed fortunate that three of the members of the Senate Crime Committee also serve on the Interstate Commerce Committee—our industrious chairman, Senator O'CONNOR, and my colleagues, Senators HUNT and TOBEY. All three of these splendid legislators have, I am sure, tremendously crowded workdays and numerous other assignments. But they would, I feel sure, be happy to constitute the nucleus for your future work. I am sure that insofar as my worthy colleague and former chairman, Senator KEFAUVER, and I are concerned, we two who serve on the Judiciary Committee, should be happy to cooperate to the greatest extent possible with your committee in the event you would like to call upon our services and perhaps the services of those members of our staffs who have assisted us on the probe.

"5. I realize that Members of the Senate are legislators, rather than crime investigators; but in these instances of crime, which I have cited above, and in others which might be mentioned, we have a paramount responsibility which I feel we must discharge.

"6. I want to point out further that the files of the Senate Crime Committee constitute literally treasures of information which can be used down through the years in supplementing the work of Federal, State, and local law-enforcement officers. It would be a pity if those files were simply to gather dust in some Senate attic.

"NATION'S TOP CRIMINALS STILL NOT REALLY HIT"

"7. We have seen that in the instances of the largest syndicates, the topmost individuals have generally remained immune from prosecution. We have still barely cracked these topmost individuals, men of the character of Frank Costello, Joe Adonis, etc. I do not feel that convicting any such top individuals of contempt of the Senate is enough (even if we should be successful in the contempt cases). On the contrary, I think that we ought to help lay the basis for conviction of these individuals of the substantive crimes of which we feel they are guilty.

"Speaking generally and without any specific individual in mind, I think that it is basically wrong for any American to feel complacent that top criminals are put away for, say, a year in prison, rather than the 20 or 30 years which they undoubtedly should get for the wide variety of crimes of which they are really guilty. We legislators cannot, of course, prosecute, but we can certainly help pave the way for prosecution.

"Our aim has never been to 'get' any individuals as such, because we are interested in legislation. But, if in the process, the criminal master minds can be exposed, it should certainly be done.

"We have learned that the threat of a Federal investigation has been enough to really worry the Nation's top criminals who invariably have been unafraid of State and local probes.

"I would not want, of course, a congressional committee or subcommittee to ever assume that it can take the place of any duly constituted Federal investigative agency, such as the great FBI, or the Secret Service,

or the Narcotics Bureau. I do think, however, that for some time to come, a subcommittee such as I am suggesting, could supplement the work of these and other investigative agencies.

"During the year and a half of our crime committee's work, we have operated without partisan politics and in virtually unbroken harmony. I am sure that that record could be duplicated on your own committee."

"TOP CRIMINALS ARE STARTING TO RESUME THEIR ACTIVITIES"

"Congress' job is definitely not done in this field, as I see it. Already, the pendulum of crime is starting in the swing back against the reform wave. There must be no let-up in our moral crusade, as I see it. You, with your profound spiritual sense can, I am sure, appreciate what I am saying."

"I realize, too, that this whole matter is something that you will want to take up with the full committee, but I do hope that this can be done at an early date. If there is a hiatus between the expiration of the special committee and the start of a later probe, I am afraid it would be most unfortunate and uneconomical, and so I am indeed hoping that there can be an unbroken continuity."

[From the Lookout of August 19, 1951]

UNITED STATES SENATOR ALEXANDER WILEY, FROM WISCONSIN, A MEMBER OF THE SENATE CRIME INVESTIGATING COMMITTEE, VIEWS THE STAGGERING AMOUNT OF EVIDENCE THAT HAS BEEN UNEARTHED AND GIVES HIS OPINION OF THE RESPONSIBILITIES OF THE CHRISTIAN IN PUBLIC LIFE¹

"Ultimately, success in the war against crime depends on the uplifting of standards of public and private morality, a rededication to basic spiritual values, which will entail righteous indignation over crime and corruption. To this end, the committee looks with confidence to the great force of religion and morality as applied in all phases of life and to sound education of the generations which follow."

These words are found on page 188 of a committee print of the third report of the Senate Crime Investigating Committee. For over 1 year, we members of the committee (popularly known as the Kefauver committee) have visited the length and breadth of this Nation, seeking out instances of crime and corruption. I personally have investigated in Washington, Kansas City, Las Vegas, Los Angeles, and some other cities. Following each of our disclosures, following all our legislative suggestions for reforms, the committee has come back to the basic point that it is upon religion that the ultimate solution of crime and corruption depends.

This is no new conclusion. As a matter of fact, this solution—man's return to God—ever has been available to us poor mortals. What miracles we could achieve if we but realized it and made use of the dynamic force for human happiness, for peace and prosperity, that is inherent in Christianity, if we but applied spiritual principles in every phase of our daily lives.

"Sound education," such as the Crime Committee recommended, means obviously more than teaching the ABC's to the Nation's young—more than stuffing heads with geography, chemistry, grammar, etc. Sound education involves basically the inculcation of moral principles on the minds of our Nation's youth.

Now, there can be few greater satisfactions than the joy of helping to mold the minds of youngsters along creative, constructive lines. My own dear wife for many years taught in Sunday school, as did other members of our family. Every moment devoted

to this task was in itself a blessing, a joy, a measure of personal fulfillment, a measure of service to God and to one's country. In Acts 5. 28, as my readers so well know, are related the words of Peter to the council: "We ought to obey God rather than men."

And so I salute the tens of thousands of Sunday-school teachers throughout the Nation for their obedience to our Lord, for their inspiring contribution to the service of God, and, yes, indeed, the service of their fellow men.

The more I have worked with the Crime Committee the more I have been convinced that if we did a better job of teaching our youngsters at mother's knee, in Sunday school, in grade school, high school, and institutions of higher learning, the dreadful problems that we face today would present themselves rarely. Problems of gambling as a \$20,000,000,000 industry, of criminals infiltrating into legitimate business, of wild teenage youngsters arrested on narcotics jags, of scandalous basketball sell-outs, of bloody gangland slayings, of corruption of public officials, of casinos running wide open, of thousands of homes broken because the breadwinners' pay envelopes have been used to put money down on horse races, could have been kept from developing had more emphasis been placed on the right kind of teaching.

You and I and all like-minded Americans must recognize that the best way to smash crime is to stop it before it starts. How? By spiritual education of the highest order.

But this conclusion on our part need not be based solely on revelations of the Senate Crime Committee. You and I know from the revelations of other Federal, State, and local investigating groups that the problem of public morality is one of the most challenging problems of our age, if not the most challenging.

You have read the stores of shady practices in connection with the Reconstruction Finance Corporation. You have read of the mink-coat gifts, the deep-freezer gifts. You have read of other disclosures that indicate there has been a decay of men's spiritual core.

Well, then, I repeat, how are we to solve the problem? By a rededication to spiritual values, a personal and mass moral reinvigoration on the basic principles of the Gospel.

It is not enough for the Christian to worship his Creator in his church. There falls upon him the obligation to put his creed into his deed 7 days of the week, to let his light so shine before men that they may see his good works, and that they may emulate his example.

The Christian has an obligation, particularly in relation to his elective officials, to secure the finest and most honest public-spirited citizens available. Let him reject those individuals who, unlike Caesar's wife, are not above suspicion. Let him turn out from office those individuals who have associated with gamblers and racketeers. Let him turn out those lax law-enforcement officers—sheriffs, police chiefs, district attorneys—who have winked at instances of gambling and racketeering in their midst.

Are these tasks easy? Of course not. They are difficult. They take time, energy, often financial contributions for the cause of good government. But these things must be done if you and I are to be worthy of the description "Christian" in its broadest, most ethical, most spiritual meaning.

In the face of this challenge, I am not one of those who are discouraged or disheartened. To be sure, I cannot rejoice over the appalling conditions that we of the Crime Committee have found. But I can rejoice in the certain and sure knowledge that our people will be adequate to the task of solving this problem, and that the forces of God in our country will be in the van-

guard of those bent upon cleaning up that which we have exposed.

SENATOR WILEY STRESSES—

"It is upon religion that the ultimate solution of crime and corruption depends."

"Sound education involves, basically, the inculcation of more principles on the minds of our Nation's youth."

"If we did a better job of teaching our youngsters . . . the dreadful problems that we face today would present themselves rarely."

"You and I must recognize that the best way to smash crime is to stop it before it starts. How? By spiritual education of the highest order."

"The Christian has an obligation, particularly in relation to his elective officials, to secure the finest and most honest public-spirited citizens available."

"What miracles we could achieve if we but . . . made use of the dynamic force for human happiness, for peace, and prosperity that is inherent in Christianity."

Arrival in the United States of Greek Displaced Persons

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, August 24, 1951

Mr. DOUGLAS. Mr. President, on July 16, 32 men, women, and children from Greece reminded Americans of their precious freedom, which at times we take for granted. This freedom is a God-given right. But it must be constantly protected and fought for, or ruthless men, hungry for power, will destroy the democratic and free institutions that are the product of man's eternal desire for justice and decency.

The ancient Greeks were the first to affirm the essential dignity and worth of the individual. They established the philosophy of personal and intellectual freedom on which the great city-states were patterned. Indeed, it was Socrates who drank the hemlock poison and sacrificed his life for this principle. Then, under the statesmanship of such men as Themistocles and Pericles, these states led in the development of an artistic and intellectual flowering that has not been surpassed. The modern world is even yet drawing from ideas and accomplishments of the Greeks. The roots of contemporary science, mathematics, architecture, philosophy, sculpture, and literature are all buried deep in the history of Greece.

Since the beginning of the Second World War, the lot of Greece has been hard. In 1941 her small and determined army turned back the Italian invasion. Then with equal courage they fought the Nazis of Germany when they took up where Mussolini had failed. But the overwhelming numbers of the German armies were too much. For 3 years after that, the Nazis carried out one of the cruelest and most inhuman of all programs of national extermination against the people of Greece. Thousands were starved to death, other thousands were

¹ This article is for reading in connection with the Bible-school lesson for August 26, the Christian's Responsibility in Public Life.

executed, and many more died of the diseases which flourish on hunger and misery.

But despite these years of incredible hardship, the Greeks were ready to fight for liberty once more. In 2 years of unofficial but very real warfare against the Communists, they proved their mettle. And in Korea the Greek troops are proving themselves brave and efficient fighters once more.

Since 1948 over 2,600 Greeks have entered this country under the Displaced Persons Act. The American Hellenic Educational Progressive Association, or AHEPA, has done splendid work in financing the transportation of many of these displaced persons and has helped them to find homes, jobs and happiness in this country.

On July 16, 32 of these displaced persons landed in America. But they did not land at Ellis Island. During their voyage, they expressed a desire to visit the Statue of Liberty—the symbol of freedom to all Americans and to millions throughout the world—before setting foot on American soil. A moving account of the gratitude and sincerity of these Greek immigrants appeared in the New York Times for Tuesday, July 17, which I ask to have printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GREEK DP'S BOW TO MISS LIBERTY—THIRTY-TWO WHO ASKED ARE PERMITTED TO FIRST SET FOOT ON UNITED STATES SOIL ON BEDLOES ISLAND

Two symbols of the American way of life were introduced yesterday to 32 Greek immigrants. One was the Statue of Liberty. The other was a hot dog.

Arriving at a Hoboken pier aboard the Greek liner *Nea Hellas*, the 26 men, 5 women, and a little girl made an unusual request. They remained aboard the vessel and asked that the first American soil they set foot on be Bedloes Island, on which stands the Statue of Liberty.

The American Hellenic Educational Progressive Association, under whose sponsorship the displaced persons were brought here, checked with the Department of Immigration. The way was cleared and the immigrants were taken from the *Nea Hellas* onto a tugboat.

The tug's first stop was Bedloes Island. As the tug neared the island and the Great Lady became visible through the haze, a 22-year-old girl suddenly jumped up from the valise on which she was sitting.

CLASPS HANDS AS IF IN PRAYER

Her hands clasped together as if in prayer, the girl, Ourania Zaphiropoulou, whispered in Greek "Bless God. Be with us all the time."

Following the girl's lead, the others leaped to their feet and began waving and shouting. Then, giving way to an urge to make some noise to express their happiness, a group of the younger men began a gay and cheerful song whose title in English was "Sea, Wild Sea."

The first step on American soil was a solemn moment for each immigrant. They walked slowly, eyes staring, toward the steps leading to the statue. Then under Miss Liberty's shadow they knelt to receive a blessing from the Reverend Demetrios Makris, chancellor of the Greek Archdiocese of North and South America.

After an inspection of the statue, the immigrants met the second American symbol—the hot dog with mustard.

TAKES A BITE, AND SMILES

Stamatios Greveas, a former prisoner of the Nazis, took his first bite of a frankfurter, and a great smile broke across his face.

Among those who arrived were women whose husbands had been killed in the war and men whose homes had been burned down. Each was ready to tell a story of hardship and tragedy. Rather than that, though, they wanted to talk about their future in America.

The association has brought 650 displaced persons of Greek origin to the United States during the last 4 months. The immigrants' request to go to the Statue of Liberty before any place else was made to the association through Capt. Stamatios Polemis, skipper of the *Nea Hellas*.

Mr. DOUGLAS. Mr. President, this incident may at first seem small. But it is a tribute to the inherent strength of the free world. These displaced persons, who have kept alive the spirit of liberty through countless hardships, were brought to this country with the help of a group of public-spirited and unselfish Greek-Americans. The Displaced Persons Act, under which they were admitted, is a reaffirmation of America's willingness to provide a haven for the homeless tempest-tossed peoples of the Old World. And finally, contrary to all regulations, they were permitted to visit the Statue of Liberty without going first to Ellis Island. This fierce love of freedom, unselfish generosity, and understanding by the authorities of the desire and dignity of the individual combine to form an American story at its best.

AFL President Says Our Freedom is a Trust We Must Defend

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Our Heritage. Freedom," written by William Green, president of the American Federation of Labor for the August 1951 issue of the American Federationist, the official periodical of the American Federation of Labor:

OUR HERITAGE: FREEDOM

Members of the American Federation of Labor have every reason to be proud that they are citizens of a great Nation whose institutions are based on sound principles of human freedom, giving each and all the right to life, liberty and the pursuit of happiness. These rights are buttressed by constitutional guarantees of freedom—freedom to worship in accord with one's conscience, the right of association, the right to work or not to work, protection against arbitrary arrest and the right to trial jury.

Just how important these rights are we know as we learn the tragic facts of what happens to our citizens and the citizens of other free nations when they are unfortunate enough to incur the displeasure of the U. S. S. R. or its satellites. A human being

has no sacredness in their eyes, for to them a person has no higher purpose than to obey the orders of the appointed representatives of the Communist Party. Those who do not obey orders are sent to corrective work camps or liquidated. Citizens live in dread of the early morning knock on the door as a summons to answer prejudged charges. The more important persons are subjected to Communist procedures—drugs, et cetera—so that they sign confessions and declare their "guilt." In addition to those in political prisons, the numbers in the Kremlin's compulsory labor camps have been estimated as high as 15,000,000.

We have a free press which publishes the views of many groups so that we can get some kind of hearings, whereas in Communist states no one is free to disagree with party policy. One must follow the party line without deviation. In this country apprehension is roused should an individual be penalized for differing with official policy. Here we have freedom to express differing political views, to join political parties of our own choosing, and the right to secret ballot to assure real freedom in voting for representatives of our own choosing.

We have the right to organize in unions for the purpose of negotiating contracts determining the terms and conditions under which we work and we have that most precious right which distinguishes free men from slaves—the right to refuse to work under conditions which we believe to be unfair. Because this right is so basic, we use it with a feeling of deep responsibility for consequences to workers and to the community.

Such a way of life emphasizes the dignity of every human being by giving him the opportunity of determining his own life with responsibility for his decisions. This way of life resolves on the ability of each individual to distinguish right from wrong and to be aware of the effects of his acts and decisions on the rights of others.

Those who have had the privilege of living in a free country and enjoying a free way of life can never be content in any other environment. Freedom stimulates initiative and provides an opportunity for development of moral and spiritual forces which are the bulwark of our liberties.

Our freedom is a sacred heritage—a trust which we must defend against all who would take it from us.

In this hour of national peril to a strong nation, we need, as during the period of this country's birth, to echo the challenge of one of its founders: "Give me liberty or give me death." With a totalitarian enemy that discredits all that we believe there can be no compromise. Aggressive, atheistic materialism cannot coexist with Christian civilization.

What Is the Matter With Some of Our Preachers?

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. WOOD of Idaho. Mr. Speaker, under leave to extend my remarks, I wish to append an article appearing in the Chicago Tribune of August 20, 1951, quoting the Rev. Carl D. Soule, a member of the peace commission of the Methodist Church, as urging the surrender of United States sovereignty to a world

government in which we will be hopelessly outnumbered and outvoted just as we are now in the United Nations.

If the Reverend Soule is correctly quoted, he is advocating the worst type of world despotism—the domination of the world by the have-not nations that have made a mess of their own governments—a world despotism that will be ruled by Stalin and his Asiatic stooges, which would proceed to drain away our wealth and drag our standard of living down to the world level.

None will deny that one of the principal objectives of the Kremlin is to discredit and destroy the Christian religion, and those who advocate the policies accredited to Reverend Soule are doing more to discredit the Christian religion than any other force in America, and are playing right into the hands of the Communists.

Internationalism, communism, and fascism are all forms of absolutism which can lead only to despotism. Show me an internationalist who would surrender the sovereignty of the United States to a world super-government and reduce the United States to the status of a mere world province, and I will show you a potential traitor to the United States. You will know them because they are the type who smear loyal Americans with such terms as "isolationism" and "McCarthyism." The article from the Tribune follows:

PASTOR URGES UNITED STATES SURRENDER OF SOVEREIGNTY—FAVORS WORLD STATE STRONGER THAN UN

Surrender of United States sovereignty to a world government was urged yesterday by the Rev. Carl D. Soule, a member of the world peace commission of the Methodist church. He spoke in the Evergreen Park Methodist Church, Ninety-fourth and Homan Avenue.

Observing that the Methodist church had helped to get the United States into the United Nations by a widespread letter-writing campaign, he added that "in our church there is strong support for the United Nations, and there are many who would like to go beyond the United Nations to something stronger."

CITES CONFERENCE STATEMENT

He then noted that the church's last general conference, in Boston in 1948, adopted a statement reaffirming its faith in the United Nations, but recognizing the necessity for a stronger form of organization—some type of world government whereby nations would surrender more of their sovereignty than they have yet done.

Taking for his subject, Three Pillars of Peace, the Reverend Mr. Soule said the spirit of nationalism is the great obstacle to those seeking international control.

"A Christian is not primarily an American," he said. "He is first of all a Christian. We should give greater attention to pronouncements made by international bodies, especially Christian bodies such as the World Council of Churches."

LAUDS AMSTERDAM DECLARATION

He mentioned with approval the action of the World Council of Churches at Amsterdam in 1948 in condemning both communism and capitalism with the statement that neither was capable of insuring justice and freedom in the world. The pronouncement said that capitalism had failed to meet human needs, and had concentrated on materialism. Later this was modified to condemn only "laissez faire" capitalism.

The Reverend Mr. Soule assailed the House Committee which reduced the size of the appropriation recommended by President Truman for the United Nations, and said that church leaders had bombarded the Senate with letters of protest, urging that the cut be restored.

The church is concerned, he said, that the Nation live up to all of its commitments. He praised the activities of the United Nations economic and social council and, particularly, its program of technical assistance to foreign nations.

Intensify Defense Program, William Green, AFL President, Urges

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial written by William Green, president of the American Federation of Labor, which appeared in the August 1951 issue of the American Federationist, the official publication of the AFL.

DEFENSE IS IMPERATIVE

The men in the Kremlin are realists when they propose an end to loss of human lives and waste of quantities of munitions in fighting up and down the territory of Korea with no possibility of victory. They directed their representatives in the United Nations to propose a truce. This he did at the conclusion of a vicious diatribe against the member nations fighting in Korea to maintain the principles of the United Nations. Such a truce determines military adjustment. At the beginning of truce parleys the Communists tried to assume the position of hosts dealing with representatives of a conquered army. Clear conditions of equality were laid down by the United Nations negotiators as the basis for continuing negotiations. American citizens are grateful to Vice Admiral Joy and his associates for the way they have conducted business in our behalf.

We want an end to the stalemate in Korea in order to prepare for a show-down with the real enemy of human freedom. Unless Stalin's aggression is ended, there can be no peace for the world.

Our defense program should be expanded and defense production intensified regardless of what happens in Korea, for the security of our Nation is at stake. We need to go back over our experience in 1945, after VE- and VJ-days, when the slogan was raised to "get our boys home" and return to normal conditions. Hard-won victories of our armies were imperiled by hasty demobilization. Our diplomats—weakened by the crumbling of our armies and the Air Force, and our Navy put away in mothballs—made concession after concession until the fruits of victory earned by the sacrifice of human lives were quite dissipated.

Just as surely as a change in the Korean situation takes place, enemy agents within our borders will raise the slogan: "Stop building for defense." We must be unperturbed and ready to defeat their strategy and move steadily on to preparedness for any emergency.

Preparedness is the only policy the Kremlin will respect. Unless sure of conquest, the U. S. S. R. does not attack. But prepared-

ness is much more than the availability of troops amply equipped with fire-power and means of transportation and supplies to maintain them in action. It involves spiritual and moral preparedness—stamina to take the risks necessary to maintain our ideals. It requires clear thinking and decisive action by all citizens to keep themselves informed of their own interests and welfare so as to be able to detect and defeat the propaganda of enemy agents.

Congress has a major responsibility to legislate for defense purposes promptly and wisely. Defense is not a partisan issue and hence is not a proper field for maneuvering for party advantage. In non-Government fields organizations of employers and employees also have heavy responsibility, both for promoting defense work and for the detection and frustration of sabotage in defense production as well as in those relations where data and experience are available which would enable the enemy to benefit by our successes and be informed of our plans. Likewise, responsibility rests on those professions which contribute research and information to defense production and where treason is particularly fateful. High-ranking scientists and Communist spies and informers have stolen information and blueprints to enable Kremlin engineers to make the designs and patterns of guns and atom bombs, so that they lack only the know-how of production. Our own citizens should be alert to detect such spies and be on guard against sabotage of workers on the job.

Soviet timetables indicate their military will be ready for a test about 1953. Their transportation facilities are not complete in East Germany and Siberia, although integration into through lines has been effected in the satellite states. Transportation is essential to a show-down. Nor have long-distance, two-way bombers reached the production stage in the U. S. S. R. Even with respect to mobilized units ready for action, the balance is beginning to turn against the Kremlin. The Soviets intend to try to speed plans in the coming months. Time necessary to get patterns from drafting boards and into continuous supply for Soviet use require a much longer time for Soviet workers than for workers in the United States. This country has nothing to fear, provided we put all our energy into expediting defense production. Keep your mind free of the fear psychology that some writers promote.

American Navy Should Not Be Without a Cruiser "Brooklyn"

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 13, 1951

Mr. MULTER. Mr. Speaker, with the sale of the cruiser *Brooklyn* by our Government to the Government of Chile our Navy no longer has a fighting ship honoring the great borough of Brooklyn. Our ever-alert borough president, the Honorable John Cashmore, has started a movement to correct this omission. As he so ably points out the patriotism of Brooklynites should be symbolized by giving the name "Brooklyn" to one of our fighting ships. He proudly points out the heroic services of Brooklynites in all our wars and particularly the fact that in World War II more than 320,000

Brooklyn men and women fought in defense of freedom and democracy.

I join with him and other members of the Brooklyn delegation in this worthy project.

The following editorial which appeared in the Brooklyn Eagle of August 16, 1951, is most appropos:

AMERICAN NAVY SHOULD NOT BE WITHOUT A CRUISER "BROOKLYN"

Announcement that the Navy Department is planning to present the ship's bell of the United States cruiser *Brooklyn* to Brooklyn College recalls the fact that it was sold to Chile several months ago and no longer carries the American flag under which it distinguished itself in World War II.

It was a happy thought on the Navy's part to arrange to have this bell find a home in the community for which the stout old cruiser was named and at a public institution which bears the name "Brooklyn" and in which the borough takes just pride.

The incident, however, brings home to us the fact that there is now no American fighting ship that bears the name of this community. This should be remedied at the earliest possible moment. We suggest to the nine-man delegation in Congress from this borough that they act as a unit in urging that one of the next cruisers to be built be given the name "Brooklyn." According to naval custom, it is the cruisers that are named for cities and the battle-ships for States.

The name "Brooklyn" is a proud one in the American Navy. It was first borne by a 3,000-ton sloop of war, which saw active service throughout the Civil War, notably at New Orleans in 1862 when it was a part of the attacking fleet under Admiral Farragut. It was finally put out of commission in 1889. The second to bear the name was the light cruiser *Brooklyn* which was launched on December 2, 1896. She had a wonderful record in the Spanish-American War. At the Battle of Santiago she served as the flagship of Commodore, later Admiral, Schley, was hit 26 times, yet lost only one man killed, and two wounded. That was the engagement in which the Spanish fleet under Admiral Cervera was destroyed.

It was Schley's maneuvering of the *Brooklyn* on that occasion that brought about the famous controversy between Admirals Schley and Sampson. The *Brooklyn* was put out of commission in 1906, then sent to Boston as a receiving ship in 1914. Shortly afterward it was made the flagship of the Asiatic Fleet, largely, it was said, because of its comfortable living quarters for both the men and officers. During World War I it was sent on various diplomatic missions in the Far East and from her were directed the movements of our cruisers hunting German raiders in that part of the world. In 1917 she was on duty at Vladivostok. Finally in 1921 she was sold for junk.

The second cruiser *Brooklyn*, which is now in Chilean waters, was launched in the Brooklyn Navy Yard in 1936. From early 1942 until December 1944 she was in almost continuous active service, starting with the invasion of north Africa, where her guns destroyed a part of the French fleet at Dakar. She played a prominent part in the landings in Sicily, was in the Salerno invasion, was flagship of the first support group at Anzio and Nettuno. For 6 days, starting May 12, 1943, she pounded Italy from Cassino to Gaeta. Her 6-inch guns were also felt during the invasion of southern France. She was finally put in moth-ball storage at Philadelphia Navy Yard in 1946, where she remained until her sale.

Brooklynites will always regret that she is passing her later years under a foreign flag and with a different name. We feel sure that the sentiment for another American ship of war bearing the honored name will be general throughout the borough.

Cooperatives and the Income Tax

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 24, 1951

Mr. THYE. Mr. President, there appeared in the August 1951 issue of the American Bar Association Journal an article entitled "Cooperatives and the Income Tax." It was written by Mr. Israel Packel, of Philadelphia.

The article throws timely and much-needed light on a subject into which entirely too much heat and confusion have been injected to permit its ready solution on the basis of the welfare of the country and the interests of agricultural cooperatives.

The editors of the American Bar Association Journal commented as follows in presenting the article:

Mr. Packel says that our income tax laws levy taxes not on the cost of doing business, but on the cost of doing business profitably. This raises a peculiar problem when the business enterprise upon which the tax is imposed is a cooperative, since the cooperative is often said to be a nonprofit organization. If the tax is levied only upon profits, the cooperative escapes the tax. The form of the enterprise should not result in different tax results, he argues. On the other hand, as the Government's need for money for defense increases, the exemptions which now are granted cooperatives are being reexamined and narrowed by the Congress. There is a danger, however, he says, that the effort to obtain equity might lead to an attempt to hit cooperative transactions with patrons of the enterprise—transactions that result in no profit to the cooperative, thus falling outside the traditional concept of income.

As an aid to a better understanding of the subject, I ask unanimous consent that the article from the Bar Association Journal be reprinted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COOPERATIVES AND THE INCOME TAX: A PROBLEM OF ACHIEVING EQUALITY

(By Israel Packel, of the Pennsylvania bar (Philadelphia))

The increased cost of Government resulting from the clouds of all-out war is borne by individuals or by their economic enterprises. An increase in the rate of the income tax is one way of meeting the rising cost of the Federal Government. The elimination of exemptions is another way of coping with the problem and, therefore, Congress is appropriately reexamining the Topsy-like growth of exemption provisions relating to various types of cooperatives. A decade ago the writer urged such a legislative study.¹

The same demand for equality which calls for the elimination of unjustifiable exemptions, dictates that a tax which is imposed on profits should not tax cooperatives or any other organizations for that matter, on that which does not constitute profits. Thus, wholly aside from any question of the elimination of exemptions, it is important to determine the extent to which equality calls

for the application of income taxes to the economic activities of cooperatives.

The syllogism—Income tax is a cost of doing business, cooperatives are engaged in business and therefore cooperatives must pay income taxes—starts with a false premise. The income tax is not a cost of doing business; it is a cost of doing business profitably. The company which does \$100,000,000 worth of business pays no income tax if it has no profits. It may well be that under a sound system of taxation, the cost of government should be borne by economic enterprises on some basis in addition to that of profit. Until such a change is made in our tax system, however, it is not fair to single out cooperatives, assuming it could be done constitutionally, to make them pay an income tax on anything other than profits within the normal meaning of that word.

The in terrorem argument has been made some 18 years ago in England² and here in the past few months, that discrimination in favor of cooperatives "is bound to tend to drive the taxed organizations out of existence, leaving the state with no support from the organizations which are conducting much of the business activities in the state."³ This ignores the fact that if our economy ever approaches such a situation, there can always be a change in the system of taxation.

It does not truly help the analysis to pick on decisions⁴ or authorities⁵ referring to cooperative activity as nonprofit or to multiply decisions calling cooperatives merely agents or instrumentalities for their members.⁶ There is no gainsaying that the word "nonprofit" must be examined in the light of the purpose for which the word is used.⁷ Likewise equality of taxation is not to be escaped by getting courts to disregard corporate entities, which people set up for their economic advantage.

COOPERATIVE PROFITS ARE LIMITED IN NATURE

The real crux of the matter lies in the dual relationship of (1) cooperative and member and (2) cooperative and patron. They are not to be confused with each other, even though cooperatives generally deal with their own members. The cooperative and member relationship is comparable to that of the ordinary relationship between corporation and shareholder or between unincorporated association and owner except for (1) the democracy in control, whereby each member of a cooperative generally has one vote no matter what his capital interest may be and (2) the limitation on capital return, whereby each member of a cooperative gets at most a fixed maximum return which excludes what the economist calls entrepreneur profit. This limited return must be earned before it can be paid to members. Therefore, to the extent that the cooperative has receipts which it can use to pay such limited returns, it has profits within the meaning of the income tax law.

² Magill & Merrill, *The Taxable Income of Cooperatives*, vol. 49, *Michigan Law Review*, pp. 167, 183 (1950).

³ E. g., the holding that the cooperative came within the definition of nonprofit operation under an exemption provision of the Interstate Commerce Commission Act, *United States v. Pacific Coast Wholesalers' Ass'n.* (338 U. S. 689 (1950)).

⁴ "The profit incentive is the mainspring of commerce, but is the antithesis of cooperation," Henderson, *Cooperative Marketing Associations*, vol. 23, *Columbia Law Review*, p. 91 (1923).

⁵ *Infra*, note 9.

⁶ For a variety of situations in which the courts have considered the nonprofit or profit character of cooperative enterprises, see Packel, *Law Cooperatives* (2d ed., 1947), p. 28.

⁷ Packel, *Cooperatives and the Income Tax*, vol. 90, *University of Pennsylvania Law Review*, pp. 137, 155 (1949).

The limited return on capital of members refers to distribution to members. It in no way refers to increases in the growth of cooperative capital. The history of almost all successful cooperatives shows great increases in capital. Such growth, however, is by no means to be ascribed necessarily to income. Additional investments of capital or even contributed capital, whether it be a cooperative or any other association is not profit subject to income tax. Sometimes increases of capital are evidenced by the issue of share certificates or participation interests in capital, surplus or reserves and sometimes the increases are purely by way of contribution. Yet, in any event, the rule is clear that such capital increases do not constitute income.¹

This analysis of the cooperative and member relationship shows then that cooperatives do have taxable profits to the extent that their receipts can be used to pay a return on capital to the members. Conversely, capital received from members for which interests in capital or reserves are issued or for that matter capital contributed to the cooperative, does not constitute taxable income.

COOPERATIVE-PATRON RELATIONSHIP IS SIGNIFICANT FACTOR

The cooperative and patron relationship is the most significant factor in determining whether the bulk of the receipts of cooperatives is subject to income tax. A good number of lawyers, many of them representing cooperatives, seem to feel it necessary to say that the problem must be approached from the standpoint that the relationship is one of agency rather than of buyer and seller.² That seems unnecessary because, as the Supreme Court of the United States has pointed out, ownership and control "can have no different tax consequences when clothed in the garb of agency than when worn as a removable corporate veil."³ The Sales Act and traditional concepts of the common law in the light of all the facts as to the method of operation used by a particular cooperative would furnish the answer as to how the relationship is to be categorized. Then again, the underlying reason for labeling the category would have significance.

On careful analysis it would appear to make no difference as far as the income-tax question is concerned whether the transaction between the cooperative and the patron is called a sale or not. The relationship between the parties because of the very nature of cooperative dealing is that the transaction by means of patronage refunds is to be handled without entrepreneur or risk profit. "The patronage-dividend device has been woven into the warp and woof of the cooperative system."⁴ It makes no difference as to the true relationship, taxwise, whether A says to B, "I make you my agent to sell my wheat, you to receive your expenses and 5 percent of the selling price," or if he says, "I sell you my wheat for \$1,000 with the understanding that you will proceed to sell it and refund to me everything you receive over \$1,000, less your expenses and 5 percent of the selling price." Surely, there may be differences between the two situations as to the passage of title, risk of loss, rights of credi-

tors, and other legal consequences. But so far as profits when B sells, how can it be said that B's status is any different in these two situations?

It has been argued that the cooperative-and-patron relationship is one of self-dealing, and for that reason no agreement can be effective to allocate the economic benefit so as to mitigate the tax burden.⁵ It is true in cases of self-dealing, of which the parent-subsidiary and the family partnership are only a few examples, that mere agreements for the division of future profits are ineffective taxwise. These illustrations, however, are a far cry from the situation where the agreement is made with the very persons whose transactions purportedly produce the profits. Agreements between A and B as to the distribution of profits resulting from transactions with third persons are entirely different from agreements between A and B or A and all its customers with respect to the very transactions between them.

CONFUSION RESULTS FROM IGNORANCE OF TRUE NATURE OF COOPERATIVES

The confusion results from the failure to recognize the true nature of cooperative transactions with patrons. The charges made by a consumer of purchasing cooperative and the original payments made by a marketing cooperative are subject to the understanding that there will be patronage refunds in the form of cash, credits, or capital interests. That understanding by virtue of the nature of a cooperative is an essential part of the cooperative and patron relationship. It is to be distinguished from the cooperative and member relationship. The point was made effectively and briefly by Lord MacMillan, in the House of Lords, in *Inland Revenue Commissioners v. Ayrshire Association, Ltd.*⁶ which held that the English Finance Act of 1933 aimed to tax undistributed receipts of cooperatives had missed fire:

"It is not membership or nonmembership which determines immunity from or liability to tax, it is the nature of the transactions. If the transactions are of the nature of mutual insurance, the resultant surplus is not taxable whether the transactions are with members or nonmembers."

The patronage refund is an incident of carrying out the arrangement between the cooperative and the patron that the transaction should be conducted without entrepreneur profit. The farmer could receive for his products \$1,000 at time of delivery and \$200 in the form of a patronage refund, or \$800 followed by \$400, or \$1,200 with no patronage refund. In each one of the situations the net position of the cooperative or the farmer is the same. Likewise, the consumer cooperative which sells or orders for a patron a washing machine, is in no different situation so far as profits are concerned, whether it receives \$200 and refunds \$40, or receives \$180 and refunds \$20 or makes an initial charge of \$160.⁷

²Supra, note 3. Other writers have taken the position that the patronage refund system is effective so that the cooperatives are not subject to income tax thereon, O'Meara, *The Federal Income Tax in Relation to Consumer Cooperatives*, vol. 36, *Illinois Law Review*, p. 60 (1941); Paul, *The Justifiability of the Policy of Exempting Farmers' Marketing and Purchasing Cooperative Organizations from Federal Income Taxes*, vol. 29, *Minnesota Law Review*, p. 343 (1945).

³(1946) vol. 1, *AELR*, p. 637.

⁴For an interesting recent opinion of Judge Goodrich which indicates properly that there may be a difference in the method of operation so far as the fair trade laws are concerned, see *Sunbeam Corp. v. Civil Service Employees Coop. Assn.* (19 L. W. 2437 (3d Cir. 1951)).

An interesting English case decided in 1948,⁸ which apparently has received no attention on this side of the Atlantic, raises a very serious question. English and Scottish consumer cooperatives had joined together in the formation of an organization to raise tea in India. The Privy Council held that there could be profits because the nature of the transactions differed from cooperative insurance where the funds are received from, and paid out to, patrons. The case seems to be wrong, historically and analytically, because there is no justification for discrimination solely on a functional basis. What difference does it make whether the cooperative is dealing in insurance policies, spices, wheat, rural electrification, housing, or washing machines? The important thing is the nature of the transaction under which it furnishes the economic product or service. The weakness of the English case is made manifest by this response to the point that the actual distribution of patronage refunds would mean that there are no profits.

"Their Lordships are not concerned to discuss that suggestion in this appeal and express no opinion favorable or unfavorable on it."

It has been succinctly pointed out: "The patronage dividend is as much a part of the transaction as the price itself."⁹ If the patronage refund is an inherent part of the transaction, then whether or not paid in cash, it cannot be entrepreneur profit for the cooperative. Of course, the benefits received by the patron, unless he be a non-business consumer, must be reflected in the income tax returns of the patron.

MUTUAL AND NONMUTUAL DEALINGS MUST BE DISTINGUISHED

Some cooperatives for diverse reasons discriminate between members and nonmembers in their transactions. Manifestly, if the dealing with a nonmember is not on a mutual basis, the benefits of the transaction go to someone other than the patron. It might be contended that nonmutual dealings are part of a general understanding to reduce the costs of mutual dealings. Here, however, it is a valid contention that the arrangement is ineffective taxwise since it is an agreement to share profits in dealings with third persons. It is necessary, therefore, in such situations, to differentiate mutual and nonmutual dealings, and the income received from the latter transactions would be taxable.

Cooperatives are in nonmutual transactions at times with persons other than patrons. Thus, for example, in order to go into larger quarters a cooperative may sell its building and realize a large profit. Then again, marketing or purchasing cooperatives with large reserves may make temporary investments in bonds or other securities. Certainly the returns on such investments representing nonmutual transactions constitute taxable income. These instances, though, are rare and should not be used to draw general conclusions as to the taxability or non-taxability of cooperative receipts.

Under present law, nonexempt cooperatives are liable for income tax to the extent that their receipts are sufficient to permit the payment of a return on capital and to the extent that they have income from nonmutual dealings. Aside from the foregoing, they have no receipts which constitute income because their normal dealings with patrons are on a cooperative basis under which patronage refunds are made in the form of cash, evidences of indebtedness, or capital credits.

⁸*English & Scottish Joint Coop. Wholesale Society, Ltd. v. Assam Agricultural Income Tax Com'r* (1948) (2 *AELR* 395).

⁹*Midland Coop. Wholesale v. Ickes* (125 F. (2d) 618 (8th Cir. 1942)).

¹ *Garden Homes Co. v. Com'r.* (64 F. (2d) 593 (7th Cir. 1933)).

² See Report of the Committee on Classification and Terminology of the Division of Cooperative Corporations (1950) Proceedings of the Section of Corporation, Banking, and Business Law, p. 156 et seq. Also see Hanna, book review, vol. 3, *Journal of Legal Education*, p. 502 (1951).

³ *National Carbide Corp. v. Com'r* (336 U. S. 422, 430 (1949)).

⁴ *Bowles v. Inland Empire Dairy Assn.* (53 F. Supp. 210 (E. D. Wash. 1943)).

Congress, undoubtedly, will and should change the existing provisions of the law by clarifying and narrowing the scope of exemptions to cooperatives. Congress, however, should not depart from traditional concepts of income so as to attempt to hit cooperative transactions with patrons which are conducted without entrepreneur profit.

What Goes on During a War?

EXTENSION OF REMARKS OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. POULSON. Mr. Speaker, under unanimous consent, I insert in the RECORD this article by George H. Todt published in the Highland Park News-Herald, of Los Angeles. A question he has raised has been one many people have wondered about, and that is, Just what goes on during a war? The military should answer such questions.

The article follows:

IN MY OPINION

(By George H. Todt)

One of the greatest—and most shocking—stories concerning World War II has never been fully told.

It relates to 47 massive Allied air raids sent against Frankfurt, Germany, from 1942 until 1945.

Over 50,000 heavy bombers dropped in excess of 100,000 tons of high explosives to turn the great city into a shambles almost as bad as Kassel.

Nearly everything of military significance was thoroughly clobbered and either badly damaged or destroyed.

I repeat "nearly everything."

But there was a fantastic exception made in the case of the much-bombed city of Frankfurt. You deserve to know what it was.

It was the vast I. G. Farben chemical works located at Höchst, a suburb of sizable proportions at the very edge of the city.

In addition to the mile-square factory area at Höchst, the I. G. Farben administrative buildings in the center of the town were left carefully untouched by bombs.

Not one was ever dropped on these two prime military targets, perhaps two of the most vital to the whole war effort of the entire Third Reich.

Why?

I talked to many people on the scene in 1945 and 1946, and this is what they told me:

"Destruction of the huge I. G. Farben chemical works at Höchst would have hastened German collapse by at least several months.

If this is true, then all the American boys—as well as those of other countries, too—who were slain the last few months of the war died unnecessarily.

Their people can today thank the genius for their deaths who decided it was more valuable to bomb the I. G. Farben workers' homes—thereby making them a few minutes late to work at the factory—instead of destroying the prime outlet of much-needed German chemicals at their production source.

Was this indeed simply madness?

Or was it something worse?

Were there certain parties or interests—here or abroad—who were so involved in I. G.

Farben financial manipulations that they did not desire the destruction of one of the greatest sources of Nazi power? A power used up until the last moment to bring death to sons of American mothers sent abroad to win a war as quickly as possible?

Our people deserve to know the answer to this now.

It cannot bring back any of the dead who were sacrificed needlessly. But it might prevent another tragedy of this sort happening to us again in the future.

Other important factory areas were smashed ruthlessly and with precision pinpoint efficiency by our bombers. On the very first try in most instances.

So why not the I. G. Farben works in Frankfurt—a town struck by 47 major raids involving a thousand or more bombers apiece in each attack?

The plants would have been easy enough to hit. They were out in the open of a vast square mile of concentrated industrial buildings.

They were plainly marked for all to see by 8 or 10 huge red brick chimneys which rose hundreds of feet into the air. They could be seen 50 miles away. It would have been impossible to miss them, except on purpose.

Our failure to bomb such targets would be comparable to an enemy air fleet smashing residential Grosse Point in Detroit, but forgetting about Willow Run and the Ford plant.

Or to devastate Beverly Hills and Hollywood in the Los Angeles area, thereby passing up the Lockheed, Douglas, Hughes, North American, and Northrop aviation factories located nearby.

Such an action would seem unthinkable to a reasoning person.

It is hard to see where it could make any sense to those who might have some honest questions to ask about this matter.

Perhaps some may ask at this point of our discussion: "How is it possible that some intrepid young pilot did not take it upon himself to break formation and bomb the I. G. Farben works anyway?"

In defense of all our airmen who took part in the Frankfurt actions, let me tell you of their predicament in regards to this very situation.

They are always under orders when on bombing missions.

When they start out, they are ordered to bomb primary target A. If they are unable to do so because of weather or other legitimate reasons, they may bomb alternate targets B or C. Usually there are not more than that.

Indiscriminate bombing is not allowed.

If unable to bomb his primary or alternate targets, a pilot has no further choice except to lug his bombs home.

He may be court-martialed if he does otherwise.

The airman who bombed the Krupp works on his own in World War I received such fare for his courageous and timely action.

So that is the reason why I believe none of our crews took it upon themselves to bomb the I. G. Farben works.

They were simply not ordered to do so.

Falling to receive such orders, it would have been illegal for them to even try—and with perhaps some dire results for their pains if they had succeeded.

Here is another queer angle to this I. G. Farben business.

Many other junior officers in Frankfurt became curious, as I did, as to why these installations were so miraculously spared by British and American airpower.

It became a great topic for conversation in the mess.

Lots of folks got quite upset about the whole thing. Many said they intended to write their Congressmen about it. Perhaps some really did. For a strange thing came to pass.

One day we learned that a new batch of Johnny-Come-Latelys had arrived in Frankfurt from Washington, D. C. It was said that they were a Treasury investigation team. The rumor spread that they were on hand to look into the stinkeroo concerning I. G. Farben.

This crowd had a lot of cute girl typists and clerks. They became frequent visitors at the Casino officers' mess in the evening. We did our level best to pump them for all we could learn.

They were frank enough to admit that our suspicions were really founded on some facts. In the words of one young lady I heard exclaim:

"This is the biggest scandal the country has ever had. When the report is made public, it will blow the lid off Washington."

However, the girls also indicated that they had been sworn to secrecy for the time being. Therefore, no detailed descriptions, if you please.

After this we all went back to sleep. The war was over, and we went home to mother. We scattered over the United States. Many of us waited patiently for the great report to come out. We were still curious to know who had worked this one.

However, a strange thing happened. The report has never been made public—if there was ever a report really made out in the first place.

Perhaps it was only a smoke screen set up to allay the outcry which was commencing to come out of Frankfurt in 1945-46.

I am not sure what we would find in any investigation of this matter if one were ever made.

I do not know the individuals, parties, interests, or countries which might become involved in a scandal of this type. That is, if there is really a scandal to be uncovered.

I do not care about these things, for the reason that I am a reporter, not a politician or a diplomat.

I believe in uncovering the truth and reporting it. Then let the chips fall where they may.

We are about 6 years late with a much-needed investigation of the I. G. Farben matter.

The American people deserve to know the answers. The blood of many fallen sons has earned for them the right to know why this German cartel was preserved at the price of additional and unnecessary American dead.

To whom was their filthy money more precious than the lives of Yankee soldiers, sailors, and airmen?

Let us try to learn the answer.

A Prayer by the Distinguished Chaplain for the Long Beach Navy Shipyard Employees Association

EXTENSION OF REMARKS OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. DOYLE. Mr. Speaker, under unanimous consent heretofore granted me, I am honored to bring to the attention of you and all my colleagues a prayer written by the chaplain of the Long Beach Navy Shipyard Employees Association, Max Horowitz, who is employed by the navy shipyard as a rigger. He is a veteran of World War I, is very

active in veterans' affairs, and is always anxious to help fellow members of the VFW. He is widely noted for his untiring services in behalf of the veterans being hospitalized in the military or veterans hospitals.

The prayer follows:

Almighty God, our Father, we seek Thy blessing and guidance on the deliberations of the Long Beach Naval Shipyard Employees Association. Grant that any actions taken be for the best interests of our employees and the Long Beach Naval Shipyard.

Bless those that are in authority over us that they may supervise in fairness to all.

Watch over our beloved America, O Lord, that she might always be the land of the free and the friend of the downtrodden.

Guide our President and his advisers and our legislators that, whatever they do, it might be for the good of all America.

May Thy protecting eye watch over our Armed Forces and that the enemies of our way of life be destroyed.

Finally, O God of Mercy, be with those of our number who suffer from bodily injuries and disease. May Thy healing power restore their bodies and release them from pain and suffering.

We ask this in Thy holy name. Amen.

PRAYER OF ADJOURNMENT

Our Father, as we are about to adjourn, we ask Thy blessing on each one till we meet again. Amen.

Mulhern Aims To Enforce Fair-Pay Act by Education

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. MULTER. Mr. Speaker, another of my constituents has been signally honored by being chosen Brooklyn's Man of the Week.

The article with reference to Thomas F. Mulhern, which appeared in the Brooklyn Eagle Sunday, August 12, 1951, follows:

BROOKLYN'S MAN OF THE WEEK—MULHERN AIMS TO ENFORCE FAIR-PAY ACT BY EDUCATION

(By Victor Timoner)

With the United States Department of Labor appointment last week of Thomas F. Mulhern as a top administrator of the Fair Labor Standards Act in the New York-New Jersey region, the firm hand of an able executive took over the task of helping keep a floor under wages and a ceiling over hours in the biggest precinct of the Nation's labor market. And the added job of keeping tabs on ballooning post-thirty-eighth parallel pay envelopes for the Wage Stabilization Board holds no terrors for this placid, bespectacled Jack-of-all-trades.

A career Government employee and an avid reader of "heavy stuff," particularly tracts on economics, Mr. Mulhern sizes up his view on getting the world's work done with a single homely phrase, "I never believed in feeling sorry for myself."

Son of Irish immigrants and heir to his father's views on labor organization, acquired during 30 years as president of Local 59 of the Brewery Workers of America, one of the first employee groups to be formed in the

New York area, Mr. Mulhern was born in Brooklyn in 1893.

It was during his student days at St. Francis Prep that he first formulated what today he considers a foolproof design for success in working out a problem. And he is eternally grateful for having chanced upon the formula at so early an age.

"When the decks are cleared for action," he explains today, "the critical first step that's taken decides whether the job will be done crisply or whether it will be done into a hash. Set your goal or objective clearly in mind with razor-sharp detail, plan every step of the way in advance, and take the steps firmly. Most folks make a hash of things because they are vague about the first steps."

Mr. Mulhern fondly recalls that he achieved enviable success with his formula when at a youngish 25 he landed a job as classified advertising manager of the Brooklyn Eagle. He started his career with the paper as a delivery boy while attending St. Francis Prep, and worked his way up the rungs, as a reporter, as a helper in the circulation department and as an assistant manager in the classified section, finally reaching the top position in the last-named department at an age which put him in the way of being the youngest to hold such a job on any of the big city dailies of that day.

His newspaper career took him then to the New York Telegram, the Herald Tribune, and the New York Journal, and before he left the field for Government work he attained the position of publisher of the Suffolk County edition of the Island News. And throughout he picked up a keen insight into the relations of management and labor which proved invaluable for his present detail with the Labor Department's Wage and Hour and Public Contracts Division.

The strong interest he has in the written word is also due in part to the fact that upon graduating from St. Francis College he spent several semesters as a teacher. Subjects he taught were Latin, Greek, and English.

But there is nothing of the pedagogue in Mr. Mulhern. He says that his reputation for seeing an objective and going toward it is due mostly to an understanding of how to work cheerfully with others. "I have a vast sympathy for people, vast numbers of 'em," he confesses, "and that's why I find my present job so rewarding."

His calling today finds him in direct charge of a staff of 114 investigators, who chalk up a total of about 65,000 field studies a year throughout New York and New Jersey. In the 12 years that the wage-hour law has been in effect—the graying executive has been in the program from the very beginning—a total of \$15,000,000 has been found due workers in metropolitan New York and Long Island for violations of the Federal act. From January 25 to September 30, 1950, the New York City office alone found violations in 1,032 firms and determined that 11,195 workers were owed \$483,575.

An analysis of the investigations in the metropolitan area has shown Mr. Mulhern that a high percentage of those who receive back wages are young workers in their first jobs, elderly people who take any wage offered because of the difficulty they have in finding work, members of minority groups and some displaced persons, whose lack of English and ignorance of labor laws put them at a disadvantage.

But Mr. Mulhern says he is convinced that an enforcement officer can do more by trying to prevent violations through education rather than by catching people after they have unwittingly broken the law.

In 1922 Mr. Mulhern cemented a summer romance with Miss Josephine Dybinska, a school teacher, and moved from the Park Slope area to 1594 East Seventh Street,

where two daughters, Jo-Ann and Jean, and a son, Thomas F., Jr., were born.

Summing up views of his job as assistant regional director of the New York-New Jersey office, which has quarters at 341 Ninth Avenue, Manhattan, Mr. Mulhern says that making democracy work by seeing to it that the Nation's wage earners are well paid and properly paid is "the best antidote we have today for the poison of Communist doctrine."

Mr. Mulhern is a former president of the New York City Classified Advertising Managers Association, former president of the St. Francis College Alumni Association, and is affiliated with Delta Sigma Pi, International business fraternity, and the St. Patrick's Society of Brooklyn.

Dispersal of Industries in Atomic Warfare

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. SMITH of Mississippi. Mr. Speaker, if Hiroshima and Nagasaki taught the world anything about atomic warfare, it should have been the vital necessity of dispersing industries to make the widest possible bomb target. Too much of our most vital productive capacity is already crowded together in areas easily subject to enemy attack, yet new industrial expansion is continually concentrated into these same vulnerable areas.

Purely from a defense standpoint there are many other potent arguments against the continued concentration and crowding of defense industries in the same congested sites. When workers far beyond the normal population of a community must be brought in to furnish the labor force for these industries, there are additional costs to our economy, either private or governmental. Additional housing must be built. If it is not immediately forthcoming through private sources, there is demand for the Government to build it. In addition, the community facilities which local and State governments normally supply are suddenly overtaxed, and these services can only be supplied through assistance from the Federal Government. All of these extra items require the use of more critical materials, and make the cost of defense even more burdensome to the taxpayer.

When the Defense Production Act was before Congress for extension a few weeks ago a strong effort was made to write into the law a provision to encourage dispersal of industrial plants established for the future. Despite the overwhelming logic of the dispersal argument, it was voted down by a sectional division.

The National Security Resources Board, with an eye more to national security than narrow sectional interests, has since that time announced a dispersal program which is to become official policy for all defense agencies. This policy is a step in the right direction, as evidenced by the bitter denunciations it has received from politicians of the

North and East. At best, however, it is still very timid and very technical.

The need for dispersal is evident in the recent report of prime defense contracts made by the Department of Defense. New York got 18.3 percent of these contracts, and California 13.4. Tiny Connecticut, with a population approximately the same as Mississippi, got 5.8, while Mississippi received 0.2. Other State figures include Arizona, 0.2; Arkansas, 0.1; Colorado, 0.3; Florida, 0.2; Kentucky, 0.2; Maine, 0.3; Nebraska, 0.3; New Hampshire, 0.3; New Mexico, 0.1; Oklahoma, 0.3; Utah, 0.1; Vermont, 0.1; West Virginia, 0.1; Wyoming, 0.1. Tennessee and Alabama, two Southern States with a relatively high degree of industrialization, received only 0.7 and 0.6, respectively.

To narrow the range down to two industries which have figured prominently in defense industrial expansion, during the first 8 months of defense activity, 11 Northeastern States have been authorized to build 81 percent of the new iron and steel capacity and 76 percent of all new aircraft plants.

We must have a fundamental reversal of policy as an elementary step toward national self-defense.

As a supplement to my remarks, I submit the statement on industrial dispersion issued by Defense Mobilizer Charles E. Wilson, and an article on industrial dispersion by Ralph E. Lapp, which appeared in a recent issue of the magazine Reporter:

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF DEFENSE MOBILIZATION,
Washington, D. C., August 16, 1951.

Defense Mobilization Director Charles E. Wilson issued today the following statement in connection with the industrial-dispersion policy:

"Industry has much to gain and nothing to fear as a consequence of the industrial-dispersion policy announced by President Truman last Friday.

"It is a great program for the good of the country—for many years to come, in peace and in war—and we are going ahead with it. It holds possibilities for every section of the Nation, including those already built up with industry.

"I should like to emphasize the local character of this program for greater national security. Existing industrial areas can apply the dispersal idea—space—in terms of a few miles rather than hundreds. We are not asking vital industries to move their factories but only to locate new factories a few miles away from existing ones.

"In our expanding production we must take every possible step to protect our people, and our military experts tell us that one of the best ways to protect people and industries is to spread them out.

"By spreading them out we make it that much harder for an enemy to hit them. The greater the number of likely targets, the greater the chances of each one to survive an attack. And the possible damage from each bomb is thereby limited rather than increased.

"The present plan is different from any plan heretofore proposed because it is local in concept, and even encourages continued growth of present industrial areas—out from the edges.

"We are relying upon private industry everywhere to see that new plants are dispersed, and effective dispersal can be accomplished within local marketing areas.

"What we suggest, above all, is simply the judicious use of space—one of the best defenses against the atomic bomb—in the planning and construction of new plants still to be built."

[From the Reporter of August 21, 1951]

OUR CROWDED TARGET AREAS—GOVERNMENT AND INDUSTRY, IGNORING THE LESSON OF NAGASAKI, HAVE NEGLECTED OUR BEST DEFENSE AGAINST THE A-BOMB: DISPERSION

(By Ralph E. Lapp)

American industry, greatly expanded during the Second World War and further enlarged in the postwar years, is now being fortified to the extent of over \$20,000,000,000 to meet the urgent demands of our present mobilization. Despite our industry's already dangerously high vulnerability to atomic attack, new war plants are still being located in critical target areas.

Last fall the National Security Resources Board was assigned responsibility for approving pieces of paper called certificates of necessity, which permit a company to write off, for purposes of tax saving, the cost of new plant construction over a period of 5 years rather than the usual 20 to 25. Subsequently, the Defense Production Administration was made the certifying authority, and up to the present date more than \$8,000,000,000 worth of certificates have been approved. Roughly, 40 percent of the dollar value of this new construction has been slated for metropolitan areas. The enormity of this defiance of the simple rules of atomic common sense is only slightly lessened by the fact that some of the plants are not to be built right in the center of metropolitan areas—presumably because such areas are too heavily populated or have too high tax structures.

A House subcommittee investigating the granting of certificates of necessity has reported: "Under the present policy [of granting certificates of necessity] no effort is made by the Government to control the location of new facilities through certificates; the selection of the site is left entirely to the applicant." The report concludes: "... after studying all aspects of this matter * * * the failure on the part of administrators of the program to make any effort whatever to locate new industrial facilities with regard to military security is most illogical and unreasonable."

PREATOMIC MOBILIZATION

It is especially paradoxical that NSRB should rubber-stamp certificates of necessity without considering the national security, because that very agency has shown in its brochure, National Security Factors in Industrial Location, that it understands dispersion of plants to be basic defense against A-bombs. This reads: "The whole problem of industrial dispersion boils down to a common-sense application of the old adage about not putting all of one's eggs in one basket * * *. The job of dispersion is one that industry must assume, both for its own protection and that of national security."

The Office of Defense Mobilization has dodged the industrial dispersion issue, apparently because it considers it politically infeasible and because it prefers to concentrate on "getting the job done." Our present mobilization effort has thus become in this respect a postscript to the Second World War program. Industry, with ODM's blessing, is following the well-traveled but now dangerous road of preatomic mobilization. With but minor exceptions this road has been followed in our entire industrial development since VJ-day. Five years of unprecedented construction have witnessed an annual expenditure of about \$18,000,000,000, the bulk of which has been funneled into our largest metropolitan areas.

HOW FAR IS ENOUGH?

Data compiled for 35 prime target areas, almost all of which are metropolitan, reveal that 56 percent of the Nation's industrial product by dollar value originates in these manufacturing centers. Chicago alone accounts for 7 percent of the total. Anyone who has looked down upon a large city from an airplane knows how plants are usually crowded within city limits. To be sure, some industry has moved out to the country, but not far enough out, and open space around the plant is soon filled with the outspread from the city.

Dispersing manufacturing facilities beyond city limits can be an effective defense measure if the dispersion distance is considerable and if permanent open space is maintained between the city and the plants. Just what is meant by a considerable distance? In some cases the dispersal distance should be as high as 20 miles, for example in the case of huge plants which necessarily attract other smaller industries. In other instances a few miles may be sufficient.

Since our industrial plants represent fixed investments of long duration in the sense of national security, their defense must be planned not just for the weapons of today but for those still below the technical horizon. In this connection, a New York industrialist told his colleagues: "Don't try to protect your plants. If you locate in the suburbs, 5 years from now the A-bomb will be so much bigger it will get you anyway." Such pessimism is not warranted, since every weapon, even the H-bomb, can be combated with the proper use of space. In fact, unless industry goes underground—and this is generally regarded as impractical—our only defense weapon is space.

The combination of official secrecy and unrestrained guessing has discouraged many industrialists from any kind of action. When the Atomic Energy Commission detonated A-bombs near Las Vegas early this year, light flashes were visible from points 400 miles distant. These tests convinced many laymen that the H-bomb had been ushered into the world, even though the AEC later denied it. Tersely worded official statements from Eniwetok about weapons several times more powerful than the Hiroshima-Nagasaki type compounded the confusion.

Industry cannot be expected to erect defenses against unknown weapons. Nor can it safely proceed in its planning on the basis of information passed out over Washington dinner tables. The facts about the power of new weapons already have been brought out in testimony before a congressional committee considering the dispersal of Federal agencies. Top AEC officials were called upon to advise what would be judged to be a safe distance for establishing six new agency sites close to Washington, D. C. They stated that 12 miles would be adequate from the standpoint of the probable power of new atomic weapons and 20 miles for other possible weapons.

As long as the Government keeps data essential for sound industrial development secret and until ODM changes its short-sighted policy of giving industry free rein in plant location there will be further concentration of war plants in prime target areas.

THE PENTAGON'S ALOOFNESS

One might expect the military services to exert influence in safeguarding their future tanks, planes, and ships. The late Admiral Forrest P. Sherman, testifying before the Senate inquiry into the MacArthur ouster, commented on the reasons for Soviet hesitancy in plunging into a third world war: "... the deterrent to war with us is the realization of our technical and industrial potential, the forces we have, our ability

to expand them; that there is the realization on the other side that if a general war comes they will be defeated." Yet the Military Establishment has never announced any policy on the security of the Nation's war plants. On the other hand, it seems to have gone out of its way to emphasize our vulnerability to air attack.

An exceptional instance in which the military intervened in plant location was the transfer of the Boeing Aircraft Corp's B-47 production from Seattle, Wash., to Wichita, Kans. W. Stuart Symington, as Secretary of the Air Force, personally strong-armed this relocation. The case is worth discussing because Seattle reacted vigorously and constructively. Its chamber of commerce realized that the Boeing incident could well condemn the city as a site for future industrial growth. To counter this threat the chamber of commerce announced an approach to industrial mobilization in which dispersion of key industries plays an essential role. Certain areas judged to be out of bomb range have been designated for new manufacturing facilities. Time must elapse before the effectiveness of the Seattle plan can be assessed, but certainly the basic philosophy behind the scheme is heartening. Milwaukee is likewise adopting a progressive attitude toward industrialization, not because it suffered a Boeing incident, but because it has an enlightened mayor, Frank P. Zeldner.

Any sane program of dispersal must begin with a critical evaluation of the present vulnerability of existing war plants. In the language of the war planners this means that there must be a target analysis of United States industry by men who look at our industrial concentrations through the eyes of Soviet strategists. Target analyses have already been made by the Air Force and by the National Security Resources Board, and only recently two new groups have set to work on the task—the Industry Evaluation Board in the Department of Commerce and the Facilities Protection Board of the National Security Council. NSRB itself has started a new attack upon the over-all problem and is currently formulating a national policy for industrial dispersion. Announcement of this policy is expected from the White House some time this summer.

BROODING YANKEES

Anticipating President Truman's policy statement, Representative JAMES T. PATTERSON, Republican, of Connecticut, has taken issue with dispersion by quoting the Bridgeport Post, "a scheme to fill up the empty spaces of the South and Southwest, not by enterprise, not by the long process of building up a place in industry through merit and competition, but simply by deliberate brutal Government action transferring established industry from one section of the country and planting it somewhere else through the manipulation of Government contracts." A group of Congressmen, for whom Representative PATTERSON is a spokesman, have been increasingly worried about the loss of industry from New England ever since the much-publicized uprooting of the Chance Vought Aircraft Co. from Stratford, Conn., near Bridgeport. The long-distance move, in this case to Texas, paralleled the Boeing case. Together they form the two big exceptions to the rule of nondispersion.

New England need have little fear that the administration plans to parcel northeastern industry out to the rest of the country. But if the policies now being developed are put into effect, New England along with the rest of the Nation will find that it is no longer at liberty to select new plant sites without first considering national security. The Government has a number of

powerful tools that can be used to persuade industry if the latter should disregard atomic vulnerability. One, already mentioned, is the certificate of necessity. Others are loan guarantees, direct loans, direct supply of equipment, allocation of critical materials, and preference in the awarding of military contracts. No new mechanisms have to be invented to put the pressure on industry; they exist but have not been put into effect.

Certain critical industries, evaluated as absolutely essential to war production, may have to be shifted to new locations. This does not mean they will be lifted bodily out of New England and set down in Kansas. More likely the Government's policy will be to recommend the relocation of plants somewhere within the same market area but well outside of bomb range. Such drastic action will be limited to relatively few plants, but as plants become obsolete the companies concerned will be encouraged to build elsewhere if the old location is vulnerable to attack. Many plants, especially those in the chemical field or where technological advancement is very rapid, go out of date in as little as 5 years.

THE PRICE

An argument frequently advanced to block dispersion is that it will cost too much. Although it is absurd to think of dispersing all industry, even this colossal task is not nearly so unattainable as it might seem. A rough estimate of the replacement cost for American plants, arrived at by adding up (in terms of 1950 dollars) the prewar United States industrial plant cost, the amount of wartime construction, and the very considerable additions to the total since the war, puts the replacement cost at slightly more than \$300,000,000,000. Since we are spending an average of about \$18,000,000,000 per year on new construction and equipment, simple mathematics would indicate that we could replace our total industry in about two decades. The actual process is, of course, more involved than simple arithmetic, and the time required would be longer, but no one proposes that we demolish our present economy and completely replace it.

If we subtract plants that are not essential to war production, we eliminate about 60 percent of the total. Furthermore, since some of these plants are peripherally dispersed, are in small towns, or are not even in target areas, the amount of industry for hypothetical relocation would be further reduced. The dollar total thus involved would probably become about \$90,000,000,000.

This figure drops further when one considers that equipment could be reinstalled in relocated plants. Since equipment costs usually outweigh direct plant-construction costs by a factor of between two and three, it may be deduced that with our present outlays for new construction we can replace our most vulnerable essential plants in about 10 years. It must be emphasized that this is selective dispersion, applied only to critical plants which are judged to be in target areas. Selective relocation obviously should not and cannot take in such installations as breweries, soft-drink bottlers, department stores, or dry cleaners.

Six years ago in Nagasaki the Mitsubishi Steel Works and a score of other factories were, much like United States plants today, turning out war goods. Then came the fateful day when the atomic bomb was introduced to Japanese industry. Yet, judged by six postwar years of unrivaled construction and concentration of plants, United States industry has apparently not learned the lesson of the twisted girders and crumbled walls of factories built too close together.

THE UNWARY EAGLE

Businessmen point out in their own defense that they have not been encouraged to disperse and that the Government has announced no program for industrial relocation. They are, of course, correct, for it is a case of multiple negligence. The Pentagon says dispersion is not its responsibility. Put to the test, NSRB and ODM have both refused to come to grips with the problem until now. Only at this late date, with defense construction well under way, is NSRB valiantly trying to put teeth into a sound dispersion policy. Meanwhile the steady agglomeration of defense plants in overcrowded target areas keeps on adding to the country's vulnerability.

A Libyan fable chronicled by Aeschylus may well be pertinent to American industry. An eagle stricken with a dart said, when he saw the fashion of the shaft, "With our own feathers, not by others' hands, are we now smitten." Perhaps the moral of the fable, the omen of Nagasaki, and the new drive within the NSRB may yet jog the lagging memory of United States industry.

American Appropriations to Foreign Countries

EXTENSION OF REMARKS OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Charity Begins Elsewhere" from the Bismarck Tribune of August 23, 1951. This is one of the finest editorials I have read dealing with the fact that we are sending money all over the world and permitting our own people, including American Indians, to starve.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

CHARITY BEGINS ELSEWHERE

How the United States is pouring out billions to help unfortunate peoples all over the world while it neglects some of its own equally unfortunate citizens was told by a Member of the United States House of Representatives recently.

The Congressman, FRANK T. BOW, Republican of Ohio, had reference to what he described as "gross neglect of duty in our treatment of our American Indians." His interest is somewhat remarkable in that the so-called Indian problem does not exist in his district.

Since the inception of the American ECA program, Bow told the House, the total direct cost in ECA dollars for agricultural production, reclamation, irrigation, transportation, communications, power, waterways, and harbors has been \$294,349,400. In addition, beneficiary countries have had available \$3,961,700,000 in other funds provided by the United States to develop their resources.

Thus the United States has been most liberal with the American taxpayer's dollar when it comes to helping out people in the British colony of Kenya with a road-building program, or the people in French Morocco with their municipal water supplies, or the people in Indonesia with their public health

projects, or the people of the Belgian Congo with their power projects.

It is a different story, however, when funds are asked to correct the admittedly sorry conditions of American Indians on their inadequate reservations, where they live in stunting poverty without prospect of self-improvement.

Before the present Congress there are Indian rehabilitation measures which would authorize expenditures totaling \$90,650,000. But Congress shows little disposition to act favorably upon them. It will go all the way on a \$4,000,000,000 program to help strangers on other continents. But it gets mighty miserly when it comes to spending a fraction of that amount to help some of its own people.

As outlined by Bow, the rehabilitation programs now proposed are intended to give Indians financial assistance so that they can become self-supporting. They would raise the Indians' economic, social, education, and health standards so as to bring about final termination of Federal supervision and control over the Indians.

Part of this would be accomplished by reimbursable loans for land acquisition, equipment buying, farm improvement and aid in the consolidation of fractionated heirship interests, which are an intolerable mess now. In addition, some money would be spent outright to put the Indian on his feet.

Among the authorizations asked are these for North Dakota Indians: \$15,000,000 for the Turtle Mountain Chippewa, \$10,000,000 for the Standing Rock Sioux and \$2,000,000 for the Fort Totten Sioux. Bow's report, incidentally, shows that the average annual income per family on these reservations in North Dakota is \$745 at Turtle Mountain, \$765 at Standing Rock, \$949 at Fort Totten. For the country as a whole, over half of the American Indians have less than \$500 annual income per family.

Most American Indians are crowded onto reservations comprised of the poorest available land, go without even the minimum schooling because school facilities aren't available to them, live under deplorable health conditions, are shut off from normal credit sources and have their inherited lands all tied up by the bungle of fractionated heirship interests.

The tragic part of it is that as long as Congress and the country fails to take the problem by its figurative horns and do something about it, it will keep on costing the country money.

Money spent now to help the Indian solve his own difficulties would be money saved many times over later.

But Congress in its myopic economy can't seem to see this.

It's willing to spend billions for people in Asia and Africa, but virtually nothing for these Americans who need the help, in many instances, much worse than the foreigners do.

Assuredly, American charity does not begin at home.

Dispersal of Industry in the United States

EXTENSION OF REMARKS OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD program No. 48 in my series of broadcasts to the people of Pennsylvania in the series "Happenings in Washington." This broadcast pertains to the matter of dispersal of industry in the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 48)

This is ED MARTIN, speaking to you from the Nation's Capital and bringing you another discussion of Happenings in Washington.

In this broadcast I want to tell you about an Executive order issued by President Truman which strikes a severe blow at Pennsylvania and every other industrial State.

It is a threat to the growth and expansion of every productive enterprise in Pennsylvania.

It holds over thousands of workingmen and their families the danger that they may be forced to break up the homes where they have been established for years and seek new jobs and new homes wherever the Government directs industry to go.

The order, issued by the President on August 10, gives the administration bureaucrats the power of life and death over all industrial expansion.

It places in the hands of the Defense Mobilization Director autocratic power to dictate where industrial plants necessary for defense production are to be located.

To enforce this unprecedented authority, the Director of Defense Mobilization is ordered to use his unlimited power to grant or withhold allocations of critical materials.

Every other department and agency of the Federal Government that has to do with defense production is directed to deny certificates of necessity for accelerated tax amortization, Government loans, defense contracts, and all other Federal aids to industries which refuse to submit to this new form of bureaucratic tyranny.

President Truman's advisers, who drafted the order, call it an industrial dispersal policy. They justify it as designed to minimize the effects of any atomic bombing attack on the United States.

But the real purpose is to force, in the name of national defense, the industrialization of areas where industry has been unable or unwilling to go because of conditions unfavorable to efficient or profitable operation.

Here are the rules laid down by which it is planned to force industry into line. They are contained in a public statement issued by the National Security Resources Board, an agency of the Executive Office of the President. I quote:

1. To the greatest extent practicable, certificates of necessity, allocation of critical material for construction purposes, and emergency loans growing out of defense production will be confined to facilities which meet satisfactory standards of dispersal.

"2. Primary consideration to dispersal factors will be given in locating facilities built by the Federal Government.

"3. Defense contracts will be awarded and planning under Defense Department production-allocation programs will be conducted in such a manner as to make maximum use of facilities located in dispersal sites."

That is the end of the quotation and I say to you, my fellow Pennsylvanians, that these measures are absolute proof that the administration leaders do not understand and have no appreciation of the free-enterprise system which gave America the highest industrial development in the world, and cre-

ated the miracle of America's unparalleled productive capacity.

Concentration of industry in areas such as the great steel-producing district of western Pennsylvania is all wrong, the bureaucrats would have us believe.

Furthermore, they say, it is dangerous, even though as they themselves point out, some \$18,000,000,000 were invested each year in the last 4 years in new plants and equipment, largely in areas already highly industrialized.

In other words, those who operate under the system of free enterprise and the public which invests its savings in American industry, just don't know what's good for them—the Government will have to lead them into safety and security.

And to make the scheme more attractive, the statement to which I have referred has this to say, and I quote:

"With the necessary technical guidance as well as the positive inducements which we will give, much can be accomplished."

There is the old familiar promise of the Government medicine man—that a kindly, paternalistic government has something to give—positive inducements—that will make everybody safe, secure, and happy.

That promise is false. It means the end of free enterprise as we have known it in the United States. It is the essence of state socialism.

At this point it would be natural for you to ask: "Where has Congress been all this time?" "What is Congress doing about it?"

I'll tell you. When the President issued that order on August 10, he defied the will of Congress which a few weeks earlier refused to give him the power to order the dispersal of industry.

Twice in the House and again in the Senate the attempt was made to include that provision in the defense production bill and each time it was overwhelmingly defeated.

The first time the dispersal proposition appeared in the House it came as an amendment inserted in the defense production bill by the Committee on Banking and Currency.

This amendment was ruled out of order because it was drawn with such broad provisions that it went far beyond the intent and purposes of the defense production bill. In effect, it would have amended the Internal Revenue Code with respect to tax amortization. It was ruled that this should be handled as a tax matter and that the attempt to make it a part of the defense production bill was an invasion of the jurisdiction of the House Ways and Means Committee.

Immediately another amendment was offered omitting the reference to tax amortization, but retaining all the power to direct where new or expended industry must be located.

I am pleased to report to you the whole Pennsylvania delegation, Republicans and Democrats alike, was in the forefront of the battle to save Pennsylvania industry and Pennsylvania jobs from the disruption threatened by this New Deal scheme.

Not a Pennsylvania voice was raised in its favor, and the amendment was rejected by the decisive vote of 134 to 79.

In the Senate the dispersal plan was defeated by even a greater margin, the vote being 56 against the amendment and 25 in favor.

When the vote was taken in the Senate, I was hospitalized following an operation. Otherwise there would have been another emphatic vote against the proposal.

My colleague, Senator DUFF, voiced the opposition of Pennsylvania, stating that it would be a fatal mistake to adopt any measure which would seriously interfere with the successful pattern of production. Of course, he voted to defeat the amendment.

Thus, Congress clearly expressed and recorded its opposition to the scheme. By its

vote in both Houses. Congress supported the traditional American freedom of choice, freedom of initiative, and freedom of enterprise. It recognized the right of industry to establish factories in locations where we have the skilled manpower and the know-how to do the job, where there are adequate shipping facilities and economical access to raw materials and normal markets.

It took into consideration the many billions of dollars that would be added to defense costs by the expense of building new communities, full-scale public housing, new schools, new recreational facilities, and other essentials to meet the needs of the dispersed workers and their families.

It rejected the proposal as a dangerous attempt to revolutionize the industries of the United States and to distribute them on a political basis.

But President Truman, in flagrant violation of the clear and unmistakable will and intent of Congress, grabbed the powers which the elected Representatives of the people refused to give him and which it never intended for him to have.

His Executive order of August 10 was a usurpation of power which must be regarded as an attempt to fasten bureaucratic control upon industry which can become tighter and tighter as new and more stringent Executive orders are issued.

The assumption of this power by the President virtually places a noose around the neck of American industry that can be tightened at his will.

No President in our history has ever asked for or assumed such dictatorial power.

It is an outrageous attempt to undermine and destroy the free enterprise system and to substitute a planned and regimented economy, directed and controlled from Washington.

Under the plan put into effect by the President, a manufacturer, planning to locate a branch plant in the Pittsburgh district, or near Philadelphia, or in any other industrialized area of Pennsylvania, could be summoned to Washington and ordered to locate in an undeveloped region of the South or West.

Otherwise he could get no certificate of necessity, no defense contracts, no allocation of critical materials and, of course, he would be barred from any Government loan, if he needed it.

Or even if he wanted to build an addition to an existing plant in order to increase production he would be told he could not do so.

Just think of it—some politically appointed bureaucrat, sitting at a desk in Washington, without experience in business or industry, would be in a position to dictate to the industrial brains of America where plant expansion must be placed.

JOE MARTIN, the minority leader of the House, was absolutely right when he called the Truman order "the first step toward one-man Government in this country."

"The Congress might as well shut up shop and go home," he added.

Ours is a government of law—not of men. The Congress of the United States must in no uncertain terms say to the President that it will not tolerate such a brazen attempt to defy its clear mandate.

It must be made clear that Congress will not tolerate the usurpation by the Executive of the duties and responsibilities entrusted by the Constitution to the legislative branch of the Federal Government.

In order to prevent the President from exercising such unwarranted authority, I have introduced a bill in the Senate, the effect of which will be to rescind the President's order.

The bill provides that "in granting certificates of necessity under the Internal Revenue Code, in allocating critical materials for construction purposes, and in making emergency loans growing out of defense production,

preference shall not be given to facilities which meet any specified standards of dispersal; and defense contracts shall be awarded and planning under Department of Defense Production allocation programs shall be conducted without regard to maximum use of facilities located in dispersed sites."

It further provides that "any order, regulation, or instruction issued or promulgated by any officer or agency of the Federal Government inconsistent with this amendatory act is hereby rescinded."

In conclusion, let me say to you, my fellow Pennsylvanians, that I shall do everything within my power to obtain speedy and favorable action on this bill.

This is Ed MARTIN speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

The Law of Supply and Demand

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. BUTLER of Nebraska. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Charlotte (N. C.) Observer of August 24, 1951, entitled "The Old Law Works." The old law referred to is the law of supply and demand, and the editorial points out very succinctly how prices of grains and many other items have slumped off during recent weeks, not because of the activities of the OPS, but simply because demand for these commodities has fallen off.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE OLD LAW WORKS

On the same day this week that President Truman indicated he will renew his fight for stronger price-control powers, the newspaper wire services carried reports showing that the old law of supply and demand hasn't been voided. It continues to operate, whenever it is unfettered from the economic manipulations, to bring prices into line.

Anyone who recently has been following what's happening to corn, wheat, cotton, and other commodities knows that the decline in prices is not due to any efforts of the Federal Government, but rather in spite of them.

The Dow-Jones commodity future index shows that between February and June of this year the price barometer fell from 215 to 180. And the primary reason the index hasn't shown a further decline since June is the Government's price floor (support prices) which is designed to prevent food and wearing apparel from becoming too inexpensive.

Wheat, however, sold in Kansas City this week for \$2.36 a bushel, approximately 9 cents under the support price. And corn sold in Chicago at \$1.64 a bushel, 10 cents under the expected support level. Cotton, selling in the neighborhood of 34 cents a pound for December delivery, is about 2 cents above the price floor.

The price of a leading grade of cotton print cloth recently fell 9 cents a yard under the price of last March, and the price of flour under the New York market fell from \$6.50 a hundred pounds (the February price) to \$6.05.

Price declines also cover such items as gasoline, electric appliances, frozen foods, and fruit juices. Lard is 2 cents a pound under the price of last February and the year's tremendous hog output is expected to bring the price down further. Lard for December delivery is selling under 15 cents.

The irresistible force under all of this, of course, is something the economic planners haven't yet been able to control completely, though they have moved far in that direction. That force is production.

Nature has smiled during 1951 not only on the crop and grass lands of the United States but upon those of much of the free world. The cotton crop now nearing harvest is the third largest in the Nation's history, and it follows on the heels of another bumper crop of wheat and precedes an upcoming bumper corn harvest.

An Associated Press dispatch from London says that Europe's pantry this year will be better stocked with home-grown items than at any time since the end of World War II. No country west of the iron curtain has had a bad growing season, and in Spain farmers are gathering the best harvest in 50 years.

The effect of all this on food prices was illustrated last week by Dun & Bradstreet's index of wholesale prices. Its index, representing the wholesale cost of 1 pound each of 31 food items, stood at \$6.94. Last February on the same items it stood at \$7.31.

A wartime economy, of course, could quickly change the picture, and it may be that the Truman administration is seeking stronger price controls for use in the event the big war really comes. And the President may know of something down the road ahead which he chooses not to reveal to the public.

But certainly the current operation of the time-proved law of supply and demand doesn't suggest the need of stronger price controls now.

Thanks Expressed by Richard J. Rossbach for Veteran Benefits Received

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Richard J. Rossbach, apartment 19, 1137 Sherman Street, Denver, Colo., transmitted to me by letter. The statement marks Mr. Rossbach as a patriot.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

To the People of the United States of America.

I owe you a debt of gratitude which I shall herein try to express. I am a veteran of three campaigns in Europe during World War II. For having thus participated in this conflict I was privileged to complete my education at your expense and to borrow money with which to buy a house. As if this were not enough, you have hospitalized me for 16 months for the treatment of a wartime, service-connected disability which I sustained; you have provided me with compensation and you are now paying my national life insurance premiums. It is for all of these helps you have afforded my wife and me that I now wish to express my deepest gratitude.

I know, however, that you the people of the United States of America, can be most completely repaid for these helps, most graciously given me, by my being a good, useful, and loyal citizen of our country. I shall try to be such a citizen by employing my profession to the general good of our country and by good moral conduct in both public and private life.

Yours sincerely,

RICHARD J. ROSSBACH.

Financial Plight of Postal Workers

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received from Mr. James H. Rademacher, Jr., president of the National Association of Letter Carriers, of Detroit, Mich., together with an article enclosed in his letter entitled "Post Office Workers' Plight Is Cited," which appeared in the Detroit News.

I call particular attention to the fact that the postal employees of Detroit alone have borrowed over a million dollars from their credit union in order to keep from starving to death.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

NATIONAL ASSOCIATION OF
LETTER CARRIERS, BRANCH No 1,
Detroit, Mich., August 23, 1951.

Hon. WILLIAM LANGER,
United States Senate Office Building,
Washington, D. C.

DEAR SENATOR LANGER: I am sending you an article from the Detroit News of this date which I would appreciate having you use for the RECORD and/or on the floor.

You have been so truly effective in the past for our just cause I probably am taking advantage of your generosity.

It is most sincerely hoped that retroactive features will be contained in the final legislation and perhaps the fact that over a million dollars in debts have piled up on Detroit postal workers alone may be enough to convince the Senate of our critical plight.

With sincere gratitude for your wonderful treatment of our legislation and with kindest personal regards, I remain

Appreciatively,

JAMES H. RADEMACHER, Jr.,
President.

[From the Detroit (Mich.) News of August 23, 1951]

POST OFFICE WORKERS' PLIGHT IS SIGHTED—
GET NO RAISE, GO DEEP IN DEBT, UNIONIST
SAYS

Detroit's post office employees, rebuffed by Congress in attempts to get a pay raise, today are in debt to their credit union for more than \$1,000,000.

James J. Rademacher, Jr., president of the Detroit branch of the Letter Carriers Union (AFL), said the economic situation of postal employees here is critical.

"Pay-raise bills have been before Congress since last December," Rademacher said. "Little action seems possible before mid-September.

"Meanwhile, the public, with lessening service daily, seems to think post-office people already have received a pay raise.

"DEBTS PILING UP

"No raise has yet come to a vote in Congress, much less anything sufficient to take up the enormous debts which are piling up against loyal workers."

Rademacher said that 1,300 temporary, non-civil service employees are working in Detroit post offices to supplant men and women of experience who were forced to quit to support families. He said jobs in industry have called 1,200 from the service since July 1950.

"More than 50 post-office employees resigned in the last month," he said.

ASKS ESCALATOR PLAN

Rademacher declared there is no reason why the Post Office Department cannot set up an escalator pay plan.

"A 37 per cent turn-over of employees occurs when spiraling prices overtake wage levels," he said. "This results in a tremendous loss to the Government. Training of new employees is costly.

"It all could be prevented by an elastic pay formula, not subject to whims or obstructions. It is a shame to see the postal service destroyed, especially when it could be saved for less than its destruction is costing."

Treatment of Patients in Providence, R. I., Veterans' Administration Hospital

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to the editor of the Providence Journal, Providence, R. I., and published on last Wednesday, August 22. This letter from a veteran, a patient at the United States Veterans' Administration Hospital, Providence, R. I., is an excellent commendation of the service extended to veterans at this veteran facility in my home city. Certainly, the manager of the hospital, Dr. William A. Sullivan, the attending physicians, the nurses, and, for that matter, the whole staff at the hospital, are to be congratulated on the excellent service given the veterans in Rhode Island.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AS PATIENTS SEE IT

EDITOR:

I wish you would write a story for the paper and let the public know what a wonderful job this hospital is doing for the veterans.

My fellow patient, Julius Greenstein, spoke out of a full heart as he sat beside me in the comfortable day room of ward 6B of the Davis Park Veterans' Hospital in Providence, on his way to recovery from an operation. Four weeks earlier, desperate with pain, he had tried a number of hospitals, only to find that there were no beds available. Then, knowing of the long waiting list and somewhat fearful of being lost in red tape, he had applied to the veterans' hospital and found himself immediately admitted to an emergency bed.

"You know," he said, "I have been figuring that the treatment I have received here would have cost me at least a thousand dollars in a private hospital. I wonder how many eligible veterans realize and appreciate what the Government is prepared to do for them."

The Veterans' Administration contact man who calls on all patients immediately after their admission, had explained to me that the actual cost to the Government was much lower because its medical services were rendered on a wholesale basis.

No doubt that term "wholesale" had something to do with the financial administration of the institution, which I am not competent to discuss, but I soon saw that it also had something to do with the actual conduct of hospital affairs. Being of the nature of a military institution, routines could be introduced which, while not cutting down on the quality or quantity of service required in each individual case, nevertheless made it possible to operate efficiently with a minimum staff of attendants.

Patients in serious condition could have half a dozen special nurses if they needed them, but patients who were not confined to their beds and who were perfectly able to look after themselves were required to do so. They were required to keep their rooms tidy, make their own beds, change their own bed linen at least twice a week, and take their meals in a central cafeteria. They received every attention that they needed and none that they did not need, and it was good for them.

Another of the military features making for efficiency was the rigid restriction of visiting hours to one a day and two on Sundays. This seemed a hardship in some instances where people came a considerable distance to see their friends, but the visiting hours meant an interruption in the busy routine of medications and treatments, and had they been of longer duration they would have materially lengthened the average time required for recovery. Again, the rule was tempered in accordance with individual circumstances.

Still another factor which contributed enormously to the economic efficiency of the hospital and at the same time to the health, welfare, and high morale of the patients was the volunteer service which is rendered on a large scale by the patriotic people of the vicinity. Volunteer nurses' aides devote regular hours of service in the wards ministering comforts and attentions which the busy nurses would not have time to render.

Gray Ladies make daily rounds to make sure that there is no shortage of toilet articles, smoking materials, or reading matter. Various organized groups on regular schedule take over the administration of the daily visiting hours, operating the information desk, running the elevators and distributing packages brought by the visitors. Last, but not least, are the volunteer services of those who provide stage shows several times a week in the hospital theater.

The hospital constitutes an interesting sort of melting pot. There can be few other situations where people of such diverse color, religion, national origin, and condition in life live together in intimate daily contact with every outward sign of complete harmony.

Of course the most important consideration about any hospital is the professional qualification and skill of the medical staff. I found that all the patients with whom I talked at Davis Park shared a very high degree of confidence in the doctors and in the medical establishments as a whole, including the nurses, orderlies and technicians. They could not, as laymen, judge professional qualifications in the medical field. They had to accept that on the authority of the Veterans' Administration. Their faith, however, was founded on the evidences of their own observation. The

quiet, efficient, ceaseless industry with which doctors and nurses went about their work was that of people who knew what they were about.

Even as I was being wheeled into the hospital on a stretcher, I was beginning to be impressed with the fact that all of the resources of the United States Government were being drawn on in the battle to restore me to health and strength. It was an awesome feeling which grew with the passage of the days. Here was more than a hospital. This was a living monument to the patriotism of the American people. Every time I looked out and saw the flag waving from the top of the pole on the level of our sixth floor windows, a lump came in my throat and I felt an impulse to salute!

JOHN D. KETTELLE.

BARRINGTON.

Koch Treatment for Mastitis

EXTENSION OF REMARKS OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Monday, August 27, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "London Milk Producers Study Koch Treatment for Mastitis," published in the Ontario Milk Producer for July 1951. I call this particularly to the attention of the farmers of this Nation who have cattle.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LONDON MILK PRODUCERS STUDY KOCH TREATMENT FOR MASTITIS

The frank, enthusiastic, and sincere testimony to the efficacy of the Koch treatment for mastitis, sterility and acetonaemia, given to a group of Middlesex County dairymen, a few days ago, by a dozen or so Michigan dairy farmers, left the Canadian group somewhat stunned. The evident control that has been gained over mastitis particularly, seemed almost unbelievable to the Middlesex men who, heretofore, in the majority of cases have been able only to secure temporary relief from this scourge of the dairy farmer.

The London Whole Milk Producers Assn., interested in the reported success of the Koch treatment in British Columbia, under the authority of the British Columbia Department of Agriculture, decided to send a committee to Imlay City, Mich., where extensive work had been progressing in the application of the treatment. Duncan Fletcher, Beverly Chappel, John Byers, and Ivan Parkinson representing the association, made the trip. They were accompanied by Dr. D. H. Arnott, of London, Canadian associate of Dr. Koch, who arranged the tour, and by Douglas Cozens, Woodstock, of the Ontario Whole Milk Producers' League Field Service, and the editor of the Milk Producer.

The Imlay City enterprise was the result of action taken by the chamber of commerce. Mastitis was rampant in Lapeer County. Members of the chamber had read of the Koch treatment and the work being done in British Columbia. A meeting was called at which Dr. Arnott was invited to speak and tell of the results in the British Columbia project. After this meeting, which was attended by some 250 dairy farmers, the chamber of commerce decided that some action should be taken but that the veterinary department of the State college should

be requested to cooperate and render some financial assistance.

A committee went to Lansing. The result, as reported, was that the committee was told, first that it would require \$2,000 to finance the project in its initial stages; that sufficient experts on the specified diseases were not on the staff, and that the time was not available. Dr. Bryan, the chief veterinarian, is reported to finally have offered to make tests required but only providing no representative of Dr. Koch was present. Refusal to permit Dr. G. F. R. Barton, one of the veterinarians named by the British Columbia Government to work on the investigations in that Province, to assist or even be present is said to have been made.

The Imlay City committee believed that, for reasons best known to themselves, the State officials wanted no part in the work. It went home disappointed, but not dismayed. It was decided that the work should go ahead. Finances were found and Koch Cattle Shots, Inc., was founded. Its president is Lawrence Thatcher, a member of the Christian Medical Research League, of Detroit, the organization that produces the Koch treatment, and its manager is Lyle Watkins, long-time prominent citizen and farm-implement dealer of Imlay City.

Two herd-demonstration tests were arranged. Dr. Lewis T. Dawe, veterinarian of Capac, Mich., agreed to supervise the tests. The herds chosen were badly infected with mastitis, consisted of 23 Holsteins in the herd of Max Graybiel, and a 35-Jersey herd owned by Richard Konig, both in Lapeer County. Control groups were not treated.

The results of these tests were so successful that the green light was given the new organization. Dr. Dawe reported that he was much encouraged. Dr. William Mackay, of Lapeer, said he had found the medicine more effective than any other he had used in chronic mastitis cases. Dr. David Ellis, of Memphis, said that out of 40 or 50 doses he had observed favorable results.

This, briefly was the background of the Imlay City enterprise, which was told to the Canadian group and shown to them by well-documented evidence.

For 2 days the party toured Lapeer, St. Clair, and Sanilac Counties, covering nearly 300 miles in the trip. Some 15 or more dairy farmers were interviewed by the party in addition to druggists who retail the treatments, State agricultural instructors, and others have had some contact with the work that is being done.

One of the first farms visited was that of Harlan Greenwald. A number of cows in his Holstein herd had developed sterility. Bulls and feeds were changed in the belief that one or the other or both was responsible for this condition. However, there was no effect. Cows did not conceive. The Dr. Koch treatment was suggested and Mr. Greenwald consented without much hope and as a last resort. The cows and heifers were injected and no other treatment was used. Mr. Greenwald says the condition has entirely cleared up and he has had no more trouble. This was the story told by Mr. Greenwald.

At the Fergus-Lea farms, where, by the way, the committee saw one of the finest herds of Guernseys this writer has run across for many a day, Harold Walton, herd manager and part owner, told an amazing story. Mastitis, acetonaemia, and sterility in a prize bull were part of his troubles and were conspiring to reduce the number and the effectiveness of his herd to a very unprofitable position. The natural increase could not be maintained. After other treatment, the condition remained substantially unchanged. Then the Koch treatment was used. Following the treatment conditions began to improve, in some cases in a matter of hours. Today the herd is clean. Milk production has increased as has butterfat. Mr. Wal-

ton's records show an increase in butterfat from 3.84 to 4.21. One of his cows had a condition diagnosed as acetonaemia further complicated with pneumonia. The cow was down and appeared a fit subject for the wagon. Mr. Walton said that at 11 o'clock at night it was injected with the Koch treatment and the following day the cow was on its feet. It made rapid recovery from both the acetonaemic condition and from the pneumonia. In the case of the bull, which was a pedigree prize-winning champion, it developed an apparent sterility. It could not get a calf. The bull was treated with a Koch injection. It regained its potency and can now successfully withstand heavy service.

At the farm of Elmer Perkin, he told that he had several times attempted to bring a herd into profitable producing condition. On each occasion, as he believed he had reached his goal, mastitis infected the herd and they finished in the slaughterhouse. He was in debt, veterinary bills and medicine was costing him \$200 upward per year, and was on the verge of quitting and getting out of the dairy business. He was induced to use the Koch treatment and, he said, from the day his herd was treated, his troubles began to decrease. He told the committee his herd was cleaned up. In a couple of cases there had been a recurrence and these cows were subjected to a second injection which cleared up the flare-ups. Today, he said, "I am almost out of debt, my milk checks have increased in amount, and pretty soon those milk checks are going to be all mine."

William Thorman, a dairy farmer with a herd of fine Holsteins, had similar troubles. He told the committee he treated 30 cows and had 100-percent success with 29 head.

The committee visited several farmers who had been shut off from the dairies. One such case was that of the postmaster of Deckerville, Mich., Mancel Wintermute. This man was not actually shut off, but had been warned on several occasions that he would be shut off. He said he was about to sell, when he decided to try the Koch treatment. Everything else he had used had given only indifferent results. After the herd had been treated, beneficial effects became apparent. The herd is now producing steadily without trouble. Quality and quantity have substantially increased. Asked if he had any intentions of selling out now, Mr. Wintermute said, "No, not any more."

One farmer, a Mr. Shreiber, of Imlay City, told the committee that after his herd was treated, he not only had his mastitis trouble cleared up, but that his milk check increased from \$421 to around \$755 per month.

The product is sold by some 42 druggists in the counties visited and in Deckerville, the druggist there, Mr. Vannattar, produced his books for the inspection of the committee. These showed the accounts of some of the dairy farmers in the area. They showed in the case of one man, that in a period of approximately a year he had purchased such drugs as penicillin, aureomycin, streptomycin, sulphamethazine, and sulph-anilimide to the extent of nearly \$200 but after purchasing the Koch treatments for his herd, the sales of the drugs dropped to practically nothing. Other accounts showed similar trends. Mr. Vannattar's records showed that he had distributed 340 treatments during the past 4 months, or an average of better than three for every week-day.

Wherever the committee went, or whoever they interviewed, they heard the same enthusiastic story. The writer, seeking some independent information, sought an interview with the editor of the Imlay City Times. Mr. Cross had had considerable contact with farmers who had used the Koch treatment and he said he had heard nothing but praise for the treatment. The closest he had come to anything that might be construed as

lacking in recommendation was a couple of farmers who had said they were undecided whether the treatment was doing their herd any benefit. In these cases, Mr. Cross said, "they were using other treatments at the same time."

A number of the agricultural representatives in the areas are also staunch supporters of the treatment. One, to whom the committee talked, was outspoken in his regard for the "shots."

Not only in that area, but in other areas in United States the same situation is to be found. The committee had the privilege of studying the case histories sent in by veterinarians from many parts of the United States. The results were practically all the same—a complete clearing up of the trouble.

It was not suggested that the treatment was 100 percent effective in all cases. Both Mr. Thatcher and Mr. Watkins say they have reason to believe the treatment, over-all, is nearly 80 percent effective.

Space here does not permit us to report on the many other interviews and the documents that were studied by the committee. In no case was there any derogatory evidence either oral or documentary, other than that referred to near the beginning of this report, which originated at the State College at Lansing. The committee was so impressed with the evidence they had seen and heard that they will recommend to the London Association that herd tests be made in that area. We understand that an attempt will be made to have this done as speedily as possible.

In this report, we have referred to this therapy as treatments. While this definition is accurate within limitations, the liquid substance used is known as glyoxilide. It comes in small glass ampoules containing either 5 or 10 cubic centigrams. Five cubic centigrams is the amount usually employed at each treatment. It is administered with a hypodermic needle into the muscular section of the neck of the cow—sometimes in the rump. Each shot is considered a treatment. The herds visited by the committee had in the majority of cases only one treatment per cow. In some cases, two treatments were administered, and on rare occasion, three. The glyoxilide frequently produces reactions that manifest themselves in cycles of 21 days, gradually becoming lesser in intensity until they disappear entirely. It is only in extremely stubborn cases that two or more treatments are indicated. The beneficial effects of one treatment have been known to exist for up to 3 years. A year to 2 years is common. At most of the farms visited by the committee, there is a prevalent practice of retreating about every 18 months as a form of insurance. One result that was pointed out to the committee repeatedly is the generally lower bacteria count that follows the use of the glyoxilide. Counts of 8 to 10 thousand was mentioned on more than one occasion.

The action and work of the London Milk Producers Association will undoubtedly be followed with much interest, and this journal will endeavor to keep you up to date with the progress of the experiment if it is undertaken.

A Water Policy for the American People

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 17, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include

the following address I shall deliver over radio station WMEX, Boston, Mass., on Monday, August 27, 1951:

Ladies and gentlemen of the radio audience, water is not free.

Man's misuse of it to meet his growing needs is proving costly to him.

To a man sitting on his cottage porch by the sea, or overlooking a great mountain lake, this statement might appear ridiculous.

To the residents of the big and fast-growing city of Los Angeles, who could not live for long if an earthquake or enemy action or other disaster should break the aqueduct that brings water over a long distance to supply their wants, this so-called common element is precious.

When water was rationed not so long ago to the inhabitants of New York City, it came as a surprise and warning to most of us.

Again, the recent floods in Kansas and Missouri, among the most destructive and expensive in our history, told us that we were not paying enough attention to the problem of water.

Coming closer to home, the capital city of Concord, N. H., in the foothills of the White Mountain watershed, was plagued by a water-contamination threat endangering the health of its people a few weeks ago.

Life magazine, in a recent issue, devoted its first picture story to a graphic account of the diminishing water supply in Arizona, and the resulting emergency that imperils the people and the economy of that area.

Without water, industry cannot operate, homes could not function, crops would not grow, forests would disappear, fish and game would become extinct, earth would become a desert, and the human race would perish.

On the other hand, the misuse or neglect of water leads to floods, erosion, and bacteria-breeding pollution.

In primitive times, our ancestors, caught between droughts and floods, offered sacrifices to the "god of water," seeking to placate the whims of this unpredictable "deity," who either gave them too much or too little.

Slowly, with the help of intelligence and experience, man is learning to control the extremes of nature. As the population of this world grows and its needs increase, a water policy program becomes imperative.

A good many years have passed since the first Americans called upon the medicine man to appease the moods of nature.

He was dismissed as we came to realize that he was bluffing it all the time.

However, the over-all problem of water is still with us, and it is getting worse.

So, instead of the medicine man, we now put our faith in the modern rainmaker, who sprinkles pellets into a cloud from his airplane so that the water-bearing cloud will dissolve in rain to nourish the parched earth.

We pride ourselves on the great cities—the millions of cars, television sets, and miscellaneous gadgets that we manufacture. In that process, we tend to ignore fundamentals. Next to air and food, there is always the basic necessity of water. In fact, it is present in what we breathe and in what we eat. The human body itself is largely composed of this element.

When water becomes so scarce that it is worth its weight in gold, when it floods the rich topsoil from our farmlands and deposits it on the floors of rivers and oceans, when it becomes so polluted that fish actually drown in it, we begin to understand that it is very important on many counts.

We cannot ignore it or abuse it.

The President's Water Resources Policy Commission, in its 445-page report, with more to come later, faces up to the challenge. We must control and conserve these resources, not in a hit-and-miss fashion but in multi-purpose river basin developments.

This is a big subject, a many-sided subject, and we have just begun to apply ourselves to it. In the few minutes at my disposal, I can only hope to make you aware of its urgency.

As the report states: "Water has unique characteristics. Time does not change it. It is the same today as it was 10,000 years ago. Water is active and affects all other things. It has molded our mountains, carved our great valleys, nourished our forests, created our alluvial plains, played a major part in creating the fertility of our land, and carried off our topsoil."

Changes in its quality are only temporary; it does not change in quantity but only in its location and form as it pursues nature's eternal cycle from the raindrop to the land, thence to the sea, and back again to the clouds. Throughout history, water has dominated human life. The earliest civilizations appeared in the great river basins of Mesopotamia and Egypt. Settlements were limited to coast lines and river banks; trading centers arose at the confluences of navigable streams. Rainfall and drought have set the stage for the drama of human existence. Rivers, with their life-giving waters, changing at times to swollen monsters bent on destruction, have been principal actors in that drama.

Until recent times, man has not attempted to control water, except in a limited measure for water supply and irrigation. He has, for the most part, been forced to adjust his ways to its moods as nature gave or withheld rain for his crops or overwhelmed him with raging floods. Prayer, magic, and sacrifices marked his early gropings for control.

The attempt to use science and technical skill to force water from the clouds is symbolic of the modern determination to control and use water rather than submit to it.

It is an expression of the same scientific determination to use the forces of nature to serve man's purposes as is embodied in such great river basin programs as that for the Columbia, which will ultimately provide 50,000,000 horsepower and bring millions of new acres under cultivation in the Pacific Northwest.

Midway in the twentieth century, two facts have become compellingly clear. The first is that water is limited in relation to the many and varied needs for its use. These needs will intensify as the population grows and as industry develops. New industrial techniques, such as those originated in the chemical industries, synthetic fuel production, and the harnessing of atomic power, bring with them increasing demands for water.

The second fact we can now see clearly is that the management, conservation, and use of our water resources is bound up with the use of our land, and that both are essential to our expansion as a Nation. Floods cannot be controlled by building higher and higher levees, or permanently by building dams, if other things are neglected. The big streams are fed by small streams, and water control inevitably leads us back to the proper conservation of forests and agricultural land.

In short if we do not manage and conserve water, we suffer losses, some of them beyond recovery, in our natural resources. If we do not manage and conserve these other resources, we shall lose the usefulness of our water; it will rush to the sea, robbing instead of enriching us.

In the West the crucial value of water has long been recognized.

The East is now waking up to its prime importance.

The faucets in millions of homes and factories could run dry through waste of this essential liquid.

The tendency of commercial and industrial centers to push their structures, and the location of railroad tracks which join

them, down into the natural flood plains of rivers, tended to create a major problem of protection every time a river swollen by melting snow or torrential rains, overflowed its banks. The need for flood control appeared critical.

Meanwhile, the expanding cities and industrial plants begin to overload the streams with their sewage, thus causing pollution which gradually rendered them unfit for beast, bird, fish, or man. Water treatment and pollution control, with part of the cost defrayed by the fertilizer reclaimed, became necessary as a measure to protect public health.

In New England the waters of the Merrimack have been so fouled for many years by sewage and factory discharges that some of the commercial clambers at its mouth must rinse the clams in salt water or possibly chlorinated water before selling them.

More than 100 bills dealing with the problem of pollution have been introduced in Congress during the past 50 years, culminating in the passage of the Water Pollution Act of 1948.

In New England, electric power rates are among the highest in the Nation because, in part, we have failed to develop the total hydroelectric resources of this region or resist any move for the development of such power in neighboring areas.

We are worried by the migration of our textile industry. Now there are many reasons for this movement, including high taxes, the attitudes of management and labor, old and inefficient machinery, equipment, and plants, etc. Let us say that, in addition to these and other competitive disadvantages, the high cost of power is no inducement for them to remain here.

One hundred years ago when the textile industry settled in New England this area had a monopoly on all the factors necessary for the production of cotton and woolen goods. Most of the craft skills, the few key energy resources to power the machines, the availability of investment capital, cheap transportation, the limited number of raw materials without effective substitutes, resulted in a specialization. New England was the unchallenged center of textile manufacturing.

New England became the victim of habit and inertia, overlooking the fact that urban civilization was spreading across the whole continent.

Technical knowledge, manual skills, and dynamic enterprise began to lure textile manufacturers to the South. New England preferred to ignore the challenge, while more and more mills moved away. Belatedly, this area is recognizing that the challenge has become a threat that can no longer be brushed off as of little consequence. New England must get up on its competitive toes, become alert and up to date, if the textile industry is not to be lost by default.

I mention this in connection with the subject of A Water Policy for the American People only to contrast the stand-pat attitude with the handwriting on the wall seen and learned by those who believe in the economic betterment that follows from full development of an area's resources.

The manifold problem of water, its control and conservation, is not the all-in-one answer for New England, but it must be reckoned with squarely and honestly.

It is one of our few natural resources.

With precedent and ample warnings before us, the extent to which we learn how to use and control this life-supporting element for health, recreation, power, and economic progress will determine our capacity to meet modern problems with modern solutions.

I say again that we cannot afford to abuse our waterways or take them for granted.

During the Eighty-first Congress, various bills were introduced which, severally, would extend the Tennessee Valley Authority to

include the Cumberland River basin; create separate valley authorities for the Columbia River, the Merrimack River, the Missouri River, the Connecticut River, and the Savannah River; and create a comprehensive system of valley authorities covering the entire country.

These have been temporarily sidetracked by a threat to our security from without.

But, in time, we shall learn or fail to learn the lesson that "every human enterprise is the mixture of a little bit of humanity, a little bit of soil, and a little bit of water."

The China Story

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following review by Edna Lonigan of the best-seller book, *The China Story*, by Freda Utley, published by Henry Regnery Co., Chicago:

In her new book Freda Utley reviews the China story from the close of the Second World War to the entrance of Communist China into the Korean war. Her book cannot be read, even by those who have followed every twist and turn in our China policy, without a mounting sense of fury at the betrayal of both China and America.

The material falls into two parts, American policy in China, and the making of that policy in this country.

The China phase of the story is extremely well done. Miss Utley saw much of it with her own eyes, and for the rest has gone to the original sources, especially the hearings in Congress. For the story of what happened in this country, Miss Utley is dependent on the general level of writing and thinking about our present political issues, and that is extremely low. We do not have any such analysis of American political life today as has been made of our policies in China.

Miss Utley describes very well the conspiracy to sabotage our policy in China, but she is not yet willing to believe the extent of the conspiracy. She tries to explain the military loss of our right flank, and the political loss of 400,000,000 allies, as due to "misunderstanding" of China. She still hopes for a change through better "understanding" of Russian communism, without seeing that the problem for Americans is understanding of how communism operates through American agents in the American Government, Congress, and the press. Hers is the position taken by nearly all our writers today.

Perhaps the best chapter in the book is that on American "aid" to Chiang, entitled "Too Little and Too Late." Miss Utley disposes completely of the padded figures used by the administration and its adherents to suggest that we gave vast amounts of assistance to China, and Chiang was too corrupt or inefficient to use it.

Mr. Acheson's bloated figures of our postwar aid include postwar lend-lease, military aid, and UNRRA. Postwar lend-lease includes the cost of repatriating Japanese soldiers and moving Chinese Nationalist troops into the areas recovered from Japan. These are clearly war costs. As Dr. Judd pointed out, we actually saved money by transporting Chinese troops instead of sending American forces to take over from Japan.

Another item in Chinese lend-lease is the estimated value of supplies left in the China-Burma-India theater, and destroyed promptly at the end of the war in Asia. These items are still charged to Chinese lend-lease aid though many of them are at the bottom of the sea.

A third financial item is UNRRA. As Miss Utley says, as fast as UNRRA rebuilt roads and bridges, railroads and flood-control dams, the Chinese Communists destroyed them. For that the Communists were given a large share of UNRRA aid—which is charged to Nationalist China.

It is easy to see how much material help all this gave to Chiang in his postwar struggle with the Communist armies. But in these financial reports only figures were murdered. Far more terrible is the story of what happened to the bullets the Chinese soldiers needed to protect their country against hostile invasion.

The Chinese did not need the more elaborate types of war equipment—heavy artillery, antiaircraft, radar. They needed, as General Stilwell said, "Bullets, damn it, just bullets." What happened to those bullets for the guns of China is a story that every American should know in exact detail because it explains why 250,000 of our countrymen are fighting in Korea.

The Chinese needed rifle ammunition of the same caliber as the German 7.92 millimeter. After VE-day, captured stocks of such German ammunition were ordered shipped to China, with the approval of the Joint Chiefs of Staff. But the very first consignment was stopped in midpassage by an order from Lauchlin Currie of the White House Secretariat, who had been named by Elizabeth Bentley as among her contacts when she was a courier for the Soviet espionage network. As Miss Utley says, this ammunition would have given the Nationalists critically needed help at no cost whatever to us.

After VJ-day the same sudden mysterious orders went out to destroy all ammunition, planes, jeeps, and the rest in the Pacific, instead of sending them to China. We know what vast quantities of goods were in the pipelines leading from our American factories to the fighting fronts. We know what tons of equipment would have piled up for Chiang's armies. But someone in our Government knew, and did not want Chiang to have them. He issued an order to help the Soviet war plans by throwing the stuff into the sea. Congress has never given this chapter in our postwar debacle the attention it deserves.

We can only list the many forms in which our military aid to Chiang was sabotaged. General Marshall ordered an embargo of war matériel into China that lasted a year, while the Communists were being rearmed by the U. S. S. R.

War surpluses were sold to China, but the Armed Forces were ordered not to declare anything surplus if it was of military value. (Instead of letting the Nationalist Chinese use our equipment against the Communists, we waited and let our men use it against the same Communists in Korea.) Only a small part of the ammunition the administration did sell was of the type the Chinese could use in their equipment. The Chinese bought the rest to use the explosives in mining, or to make new ammunition—while time was running out.

When Congress finally rebelled, and voted military aid to Free China, the State Department, and other Federal agencies, held up the purchases, set arbitrary standards, made studies, refused shipping permits, and used every possible tactic of delay. The first substantial shipment of the arms Congress ordered left Seattle just after the Communists had conquered most of China.

Finally our Government ingeniously cut the value of congressional appropriations for China by rigging the prices charged for

equipment. Prices were set 10 to 30 times as high as prices the Government charged Greece and Turkey for the same matériel. Thus the effective value of congressional appropriations could be cut 90 percent.

Even Mr. Acheson admits the Chinese did not surrender ammunition to the Communists. They surrendered their guns when they could no longer fire them. We do not know how many of those Chinese fighters, some of them trained in Burma by American officers, have been shot or sent to Siberian slave camps because they did not want to join the Communist armies we are fighting today.

As Miss Utley makes clear, the story in Korea is an exact parallel to that in China. We were twice bitten but now twice shy. The blockade of the China coast by our Navy after the outbreak in Korea enabled the Chinese Communists to rearm, by stopping Formosa's blockade of Shanghai and Tientsin. This is Marshall's 1946 blockade of our friends, and rearming of our enemies all over again. Again the peace settlement proposed by the administration in Korea is, like Marshall's peace in China, pure appeasement of the Communist enemy. Miss Utley probably would have added that the Soviet peace terms on the front pages today are underneath the double-talk, exactly the same as the Acheson-Marshall-Lattimore solution in China, withdrawal of our Armed Forces, mock withdrawal of the Communists, while the native Communists are rearmed by the U. S. S. R.

Miss Utley then attempts to account for diplomatic and military policies in Asia designed perfectly to help the U. S. S. R. by analyzing what happenings in our Government made this possible. She gives a fine account of how the Communists captured the diplomats in the China field, how John Davies, John Stewart Service, and others were won over to the Communist side, and then, while still remaining as American public servants, did everything their positions permitted to aid the victory of Communist arms. Miss Utley also tells how these servants of communism, when they returned home, were always promoted to higher echelons in the policy-making bodies of the State Department and our Armed Forces. John Davies is in charge of our Far Eastern policy in the State Department's Policy Planning Committee. John Service is about to come up for Senate approval for another promotion.

In her excellent discussion of the way writers were won over, the author mentions Francis McCracken Fisher, who served with the United Press Bureau in Hankow, then went to OWI, and became policy information officer for the Far Eastern Division of the State Department "where he was in a position to decide what news and views should be passed on to the higher-ups." In 1949, she adds, "When congressional pressure forced a minor house-cleaning job in the Far Eastern Division . . . Mac Fisher was quietly moved over to the War College." Miss Utley believes Mr. Fisher is not a Communist, but if somebody powerful did not love him, when he was criticized by Congress, he would not have been promoted to the War College, but led to the nearest exit.

One of the best ways to test whether officials have the support of the Communist bloc in our Government is to notice whether, when they are criticized, they invariably come out with higher rank, ever nearer to a more sensitive area. Miss Utley is concerned to distinguish between those who are Communist by conviction, those who follow the Communist line out of ambition, and those who are innocent dupes. These are important distinctions when judging an individual but we must be careful to remember that they are of no importance whatever when judging the political power of the Communist bloc in our Government.

Miss Utley puts together correctly important pieces of the pattern by which American Government and military officials aided a hostile power and sabotaged our own country and our most loyal allies. But still she does not believe the pattern is there. She believes minor officials of the Foreign Service in one geographical area were powerful enough to overturn the hundred-year-old American policy in Asia, and to do it without anyone's knowing or effectively protesting. That is underestimating the solid structure of the American executive establishment, the Congress, the press, and public opinion. Many protested and protested bravely and clearly. Our problem is to find what force could have been strong enough to overcome all those solid American institutions and the people who had been educated in the American creed in foreign policy.

Miss Utley reports that career-minded men in the Foreign Service thought it necessary to support the Communist side, if they hoped to get promotion, but she does not ask who was strong enough to make it certain that pro-Communists in the State Department would go up, and pro-Americans would go down—or out, like Grew and Hornbeck. No career men believe such claims unless they are supported by proof of power. She reports that pro-Communists rose steadily to positions of increasing importance in the writing field, but she does not wonder why the law of averages failed so signally after being so dependable for a long, long time.

Miss Utley says, "Since this was the period when the influence of the Friends of the Soviet Union and the champions of the Chinese Communists was at its height, it was hardly surprising that many well-known columnists and commentators, and editors followed the IPR-State Department line." Well, it was very surprising, one of the most surprising things that has ever happened in this country, where the free press has had greater influence and greater professional pride than in any other country.

Miss Utley fails to explain—or even to ask—why the same curious design for secret support of the Soviet Union's intricate moves for power appeared at the same critical moment in our State Department in China, the State Department in Washington, the top military, the White House, the administration supporters in Congress, the press, the colleges, and even the churches. It appeared in our European policy as well as in Asia, though Miss Utley does not see—from a distance—how the Marshall plan blunted our opposition to communism in Europe, as Marshall did in Asia. Even Turkey seems at the moment to be getting the China treatment.

All the different parts of our postwar foreign policy were designed to fit together, and the level from which the parts were coordinated was evidently far above the State Department and the Joint Chiefs of Staff. The locus of the conspiracy within our Government to let Asia fall, but not let it look as if we pushed her, must have been in the White House circle, or in the top levels of the party in power, or, in practice, both.

Miss Utley thinks the American people are deluded about the nature of the Communists in Russia. That is not the problem. American publicists are still deluded about the nature of communism in the American Government, American parties, and the American press. It is because the Communists now have roots deep in American political life that we shall find no easy way to dislodge them.

Mr. Acheson "believes that the Soviet Government's ambitions are not the result of any lust for power, but merely the consequence of a false philosophy," says Miss Utley. Perhaps. And perhaps not. Mr. Acheson's behavior at the hearings before the Armed Forces and the Foreign Relations

Committees of the Senate was hardly that of a simple-minded idealist. It suggested the behavior of a very able lawyer defending a client who was guilty as charged.

Like so many commentators, Miss Utley is misled by the belief that Americans were fooled by the Communists because they are indifferent to foreign affairs, ignorant of countries other than their own. That ignores the fact that the United States has till now had a great foreign policy. The British had a more difficult problem than we had in their nearness to Europe, but no nation has ever had a greater foreign policy than we, especially in Asia. It does not take an extensive knowledge of foreign geography and customs and culture, to make a good foreign policy. That the British lacked also. It takes clear political understanding of the relations between nations, and a clear understanding of the basis of free political institutions at home. Both of those we possessed in full measure.

The Communist General Staff which in 1942 decided to sabotage our policy in Asia did not underestimate us. They did not send a man on a boy's errand. They thoroughly understood every phase of American governmental, political, and cultural life, and they devised a military campaign to overcome our total strength.

If we wish to cut out the conspiracy which wrecked our China policy, and, as Miss Utley says, now keeps us fighting in Korea with one hand tied behind our backs, in preparation for an appeasement peace, then we dare not underestimate it.

Miss Utley hopes we can change our China policy by a change of heart, but she herself gives us the answer in her last chapter. She quotes there the terms of the Russo-Chinese Treaty which the Communists have signed, and which makes the 400,000,000 people of China into slaves of the Soviet Leviathan.

Americans cannot overcome the political skill which has parlayed postwar Russian poverty and desolation into an empire of 800,000,000 slaves unless we recognize that the problem is power, and regain the understanding of power and the skill in dealing with it, which are the American political heritage. (The China Story, by Freda Utley, Henry Regnery Co., Chicago, Ill., price \$3.50.)

Employment of the Physically Handicapped—Address by the Secretary of Labor

EXTENSION OF REMARKS OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the address by Secretary of Labor Maurice J. Tobin at the annual meeting of the President's Committee on National Employ the Physically Handicapped Week, in the Departmental Auditorium, Washington, D. C., August 17, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

EQUALITY OF OPPORTUNITY FOR HANDICAPPED

Mr. Chairman, members of the committee, distinguished guests, ladies, and gentlemen, I am happy to welcome you today, just as I was happy to welcome you from this same platform a year ago. I am also

glad to report much progress by your Government and by the Department of Labor during these last 12 months of defense mobilization.

A year ago, in talking with you, I said:

"Today, employment is high and going higher. We meet in the grim shadow of a tense world situation. Our troops are fighting in Korea. To meet the growing demands for manpower and supplies this Nation is speeding defense production and rapidly expanding its armed might. Here in the Department of Labor, we are throwing all the resources of every bureau and agency into the task of drawing up plans to meet the current civilian manpower situation, as it is affected by the President's program."

I could repeat the same statement almost in its entirety, except that today the plans have not only been drawn but are in operation. I shall discuss with you some of the completed plans and some of the action taken since our last annual meeting on August 9, 1950.

During the last fiscal year, ending June 30, 1951, some 277,000 job placements were made of physically handicapped workers through the joint efforts of the Federal-State public employment service system. This figure compares with 177,000 for the previous year, exactly a 100,000 increase. Included in this remarkable figure of more than one quarter of a million placements of handicapped workers in a 12-month period, were 132,000 disabled veterans.

Only 1945, the last year of the war, with its 297,000 handicapped placement exceeded the record total of 277,000 during fiscal 1951. Of course, 1951 was a record year for all placements, with more than 14,000,000 workers placed.

You can gather some idea of the magnitude of handicapped placements by comparing them with the increase of 47 percent in placement of male workers and a 22-percent rise in total placements of women over the previous year. The increase in the placement of handicapped workers during 1951 as compared with 1950 was 56 percent.

I believe that Robert Goodwin, Director of the Bureau of Employment Security, and his coworkers, including Perry Faulkner, Chief of the Veterans' Employment Service, are entitled to a real vote of gratitude from the Nation for this record. The State Employment Security Administrators, many of whom are with us today in their capacities as chairman of governors' committees, can take particular pride in the work done during the past 12 months for they have actually done the major job.

However, the job has only just begun. We have completed the comparatively easy part of the task. The real challenge and the real goal lie ahead. During the next 12 months we must not only continue our placement of qualified handicapped workers, but we must increase our national efforts to rehabilitate and train other workers, particularly the severely disabled, so that they can enter our labor market with credit to themselves and profit to their country.

In my remarks last year I referred to Korea. You have all read the casualty figures in your local papers. I need not repeat them here. However, I can assure you that the Department of Labor is doing everything possible to assure job opportunity for today's Korean disabled veterans.

Military and naval hospitals are being visited by representatives of the Veterans Employment Service or the State employment services.

Where the discharge rate of disabled veterans from service hospitals has warranted establishment of itinerant service in the hospital itself, such a service has been arranged.

Today, procedures are established so that the local office of the employment service

near the service hospital is called at any time there is a need for services or counseling. We are trying to provide expeditious and detailed services to the disabled veteran, not only while he is in a service hospital, but after he has returned home to his own community and is either looking for work or seeking further training.

The disabled veterans in active employment service files are fewer in number today than at any time since the end of World War II. Less than 31,000 disabled veterans are actually registered and seeking employment.

The disabled veteran of Korea is much younger than his older brother who suffered injuries during World War II. Some 80 percent of today's disabled veterans from Korea are under 20 years of age. Naturally, this means that we must work closely with the Veterans' Administration in finding training opportunities for many of these young men who are now entering the labor market with no previous work experience.

However, I would not have you think that we are overlooking the civilian handicapped. The Department has been working closely with the Federal Security Agency, the Department of Defense and the Office of Defense Mobilization, as well as with other agencies of Government, to assure our country of the greatest possible utilization of its available manpower.

As you all know, the Office of Defense Mobilization, headed by our friend Mr. Charles E. Wilson, who is on the platform today, has over-all responsibility for manpower policy and coordination. Mr. Wilson has a special interagency committee on manpower policy. It advises him on manpower problems, including the allocation of available manpower to meet military and civilian requirements. This advisory group also reviews policies, plans and programs relating to manpower and studies proposed executive orders and legislation in this important field.

Another committee, a labor-management manpower policy committee, advises both the ODM and the Department of Labor, which has responsibility for almost all of the civilian manpower mobilization. The various programs of the Labor Department today and since the onset of Korean hostilities, are coordinated and directed by the Defense Manpower Administration, headed by former Senator Frank Graham, now on leave of absence, who chaired the mobilization panel at your spring meeting in May.

Under the Department's Defense Manpower Administrator, plans are developed and placed into operation by the Bureau of Employment Security, the Bureau of Labor Standards, which services the President's committee, the Bureau of Labor Statistics, the Bureau of Apprenticeship, the Women's Bureau, and the Bureau of Veterans' Reemployment Rights.

The plans that I referred to in my remarks here last August have been placed in action. In each of 13 regions, area directors of DMA have been set up. In each of these regions, labor-management committees on defense manpower and interagency mobilization committees of Federal agencies concerned with manpower problems have been established and are operating.

To provide our communities with readily functioning local representatives of DMA, I have designated the local managers of the Public Employment Service offices as responsible for manpower problems, including the increased placement and proper utilization of the handicapped. Locally, citizens' committees advise and work with these appointed officials. Local NEPH committees are no doubt assisting these local office managers in solving pressing manpower problems.

I have recited this chain of command for manpower utilization for two reasons. First, that you may have a better understanding of wherein lie opportunities for you and your

respective organizations to assist in the national manpower program, and, secondly, to draw a comparison between our attack upon the problem and the similar voluntary administrative operation of the President's committee, which works somewhat less formally through Governor's committees and thence through them to local committees.

Within a week I will release a new publication to the field, titled "The Job at Home." It is subtitled "Labor and Management Mobilize." Aimed at responsible community and State leaders who will be serving on our area manpower committees, the booklet emphasizes the vital importance of the current defense program. It points out that the success of our efforts depends on all of us, that a large part of the defense manpower job must be done on the local level.

Our objective today is to insure that national manpower resources are developed and used in such a way as to make the maximum contribution in safeguarding our national security.

Many of you may find this pamphlet upon your desks when you return to your States and communities next week. Others will become familiar with it in the months ahead. In a way, it is similar to your Committee's Program Guide, which Admiral McIntire tells me is being released today, a program guide for coordinated, cooperative community action in behalf of the handicapped. "The Job at Home" includes the handicapped, but also takes into consideration the older worker, women, young workers, and certain minority groups.

In all this planning and special work, I am constantly reminded of the need for better and more accurate statistics, particularly in the field of the handicapped. The Department has previously endorsed special legislation aimed at providing us with more documented figures regarding the number of handicapped, types of disabilities, and incidence of the handicapped in the population. I am still convinced that a survey or census, even of a pilot variety in one community, would be a distinct help. Those of you who represent communities or who are connected with foundations having funds for such a worthy project in this period of defense mobilization might explore with your associates the possibilities of such a census or survey.

I realize that the Office of Vocational Rehabilitation and the Bureau of the Census conducted a national sample survey last September. They estimated that some 3,000,000 persons in the age group 14 to 64 were unable to work or could work only occasionally because of a disability that had lasted 7 months or longer. I am happy to agree with the Census people who conservatively estimate that more than 2,000,000 handicapped people in America can be added to our labor force if provided with selective placement and rehabilitation. However, this estimate, excellent as it is and useful as it undoubtedly will be, is still not the definitive and definite figure we would like to have.

As reported by Selective Service Director Lewis B. Hershey, a considerable number of the handicapped are included in those rejected for military service for physical reasons. They should be given every possible opportunity to serve their country on the defense line since they have been denied the opportunity to help out on the firing line. I am personally very much interested in any plan whereby many of these young men could serve in uniform on a limited-duty basis. I know that this has been under serious consideration for some time, and I feel that perhaps the Government might undertake a pilot program with great profit.

Another suggestion relating to this whole field of the proper use of manpower in the defense effort has been made recently. It is simply that special effort be made by the

Government and by defense contractors to place subcontracts with firms having as a cardinal policy the employment of handicapped workers.

I am familiar with many establishments that employ handicapped workers almost exclusively. I would presume that many of these firms would be excellent places for subcontract work connected with national defense. It may well be worth while for the Office of Defense Mobilization and the Department of Defense to consider some method of alerting their purchasing officials to the possibilities of placing orders with shops and plants specializing in the employment of qualified handicapped workers. I can offer the services of the Wage and Hour and Public Contracts Divisions of the Department of Labor in making known to the proper authorities places of employment where the handicapped, particularly the seriously disabled, are given an opportunity to make good that is so frequently denied them.

This idea certainly blends well with something else that I said at your meeting a year ago. I said:

"Our goal this year cannot be confined merely to obtaining job equality for the physically handicapped. It must be enlarged by a vigorous campaign to bring to the attention of employers, as dramatically as we can, the very real manpower asset we have in our handicapped population. As the demand for manpower expands, employment of handicapped workers must be maximized to the extent needed in defense production."

This maximum use of the handicapped would certainly be furthered if they could be brought more and more into the defense effort through such means as I have just suggested.

Our efforts to bring about maximum utilization of the handicapped have taken many forms, several of which I have mentioned already. I should not like to omit mention of a recent joint statement prepared by the Department and the Federal Security Agency for the Office of Defense Mobilization. This 5-page document, titled "Mobilization of the Handicapped for National Defense," emphasizes the importance of community action. In addition, the Department has cooperated with the Federal Security Agency, Civil Service Commission, and the Veterans' Administration in preparing a proposed plan for the maximum utilization of the physically handicapped. This resulted from the pioneer work of your own mobilization committee which set out a year ago to draw up usable plans for today's emergency. We are presently working out the details for use of this plan in a few selected areas where there are labor shortages. We hope that through the lessons learned in this and in other pilot projects, to have available a tried and tested plan in the event general mobilization is forced upon us by our enemies.

America's free workers, who have proved beyond question their ability to outproduce the slave laborers of dictator countries, stand ready to do their important tasks in the great defense effort that confronts us.

We must, however, use our manpower wisely; we cannot afford to squander our human resources.

As the demand for manpower expands, the great potentialities for labor expansion that lie in the huge reservoir of unused skills represented by unemployed handicapped workers must not be overlooked. Properly placed, handicapped workers will meet the test, whether in the shop, the office, the laboratory, or on the farm. Those who are not employed should be given the right to take their places in the common effort to build up the strength of the Nation. Those not trained should be trained.

We ask no special preference for the handicapped; simply equality of employment op-

portunity. Employers who do not now employ physically handicapped workers are urged to consider them for available jobs, as new manpower is required in the defense effort. America needs all of us.

The President's Industrial Dispersal Order

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. MARTIN. Mr. President, this afternoon I issued a statement relative to the President's statement on the dispersal of industry, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. EDWARD MARTIN,
OF PENNSYLVANIA

Mr. President, in his statement defending his industrial dispersal order President Truman complains that it has been misrepresented by its critics.

His program, the President asserts, and I quote his words, "merely encourages the spacing of new defense and defense supporting industries a few miles apart."

The program, the President continues in his statement, "merely suggests that in building a new plant . . . the site of the new plant shall be located a few miles away from other defense plants in the same locality."

But I insist, Mr. President, that when a policy, presented as one of "encouragement" and "suggestion," has within it the power of compulsion and the threat of severe punishment, it violates the principles of free competitive enterprise and becomes dictatorship.

The President's order of August 10 states that the Director of Defense Mobilization shall establish general standards with respect to dispersal which shall be followed in the granting of certificates of necessity, in the allocation of critical material for construction purposes, and in the making of loans growing out of defense production.

But when we turn to the National Industrial Dispersion Policy, as promulgated by the President, we find that it goes beyond the President's order by including further and more drastic measures to be taken against industries which do not meet satisfactory standards of dispersal.

It announces that "defense contracts will be awarded, and planning under Department of Defense production allocation programs will be conducted, in such a manner as to make maximum use of facilities located in dispersed sites."

Is it improper to ask for a clear and more explicit definition of satisfactory standards?

Is it improper to question the wisdom of giving the Government unlimited power to dictate where new or expanded defense industry is to be located?

In the booklet issued by the National Security Resources Board, it is suggested that dispersed areas be selected 10 to 20 miles away from densely populated or highly industrialized sections and the same distance from major military installations.

But the plan itself places no 10- or 20-mile limitation.

If the program contemplates dispersal of only a few miles Congress should write it into the law in language so clear that there could be no possibility of misunderstanding or misinterpretation.

Otherwise, the "satisfactory standards of dispersal" to which industry may be required to conform, could be so framed that they would hold the power of life or death over any industry or industrial community.

I am firm in the belief that the President's order is dangerous and harmful to the defense effort. It should be revoked, and I shall do everything in my power to have Congress enact my bill to prohibit the administration from carrying out the program.

Employment of the Physically Handicapped—Address by the President

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. SPARKMAN. Mr. President, it was my privilege recently to attend the full meeting of the President's Committee on National Employ the Physically Handicapped Week. The opening speech at that meeting was by President Truman.

Mr. President, the millions of physically handicapped persons in this country deserve every encouragement. The President in his speech pointed out the progress that has been made in the employment and utilization of physically handicapped persons. I commend the reading of the address by the President, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to welcome you to this annual meeting. It's good to be with you again.

This year of 1951 will be the seventh year that we have observed National Employ the Physically Handicapped Week. In those 7 years, we have made a lot of progress. The needs of the physically handicapped are much better understood throughout the country than they have ever been before. Many of the old prejudices against employing handicapped workers are disappearing. It is now well recognized that employment of the physically handicapped is a natural and very valuable part of our economic life.

The figures show that this is true. Secretary Tobin and Administrator Ewing will give you all the details. But it's very impressive to me that during this past year, the public employment services were able to find 100,000 more jobs for handicapped people than during the year before. That's a gain of more than 50 percent.

This kind of progress shows the value of the work of this committee, which has brought private citizens and private organizations and State and Federal agencies together in one great effort.

Much good has been done in these last years, but there is a great deal more that we must do. Our goal should be to see that every physically handicapped person who wants to work and who is able to work gets a chance at a job he can do.

I say this, not only because we ought to do it as a matter of decency, but also because

there is so much our handicapped citizens can do for us, if we help them to gain employment.

We need these people in our labor force. We need them badly. We need to use their skills and energies in our great program of defense production, to help us win the struggle for a just and lasting peace.

The production job ahead of us calls for the fullest and wisest use of all our resources and especially of our manpower.

We are now employing more than 62,500,000 people in this country. As defense production expands, there are going to be more and more jobs and it will be harder and harder to find enough people to fill them.

A great proportion of the able-bodied young people who in earlier years would have been starting work for the first time, are being drawn instead into the armed services. These conditions are bound to continue.

This means that in our national interest it is urgent for us to make full use of the skills and abilities of all our handicapped citizens. Those who have been trained should be employed at their highest level of skill. Those who have not yet been trained should be given rehabilitation and vocational training. Your 1951 poster puts the problem very clearly when it says, "America needs all of us."

I think that you should hammer this point over and over again. Giving the physically handicapped a job is not a charity. It is not just a gratuitous kindness. These people need jobs, it's true. But the more important fact is that the country needs their help. If they are given the right jobs—jobs fitted to their capabilities—they can do just as much as anyone else to increase the production of the Nation.

The polio victim, the spastic, the blind, the deaf, and the amputee, as well as those suffering from heart disease and other disabilities can all do their part. All they need is a reasonable chance and good old American fair play. Once on the right job they ask no favors of anyone.

I hope that this Committee will make every employer in the country aware of the fact that hiring the physically handicapped is not simply a humanitarian obligation, but a real business opportunity. These people include some of the best workers we have. They are people who have suffered the shock of being disabled, and have gone through the physical and mental suffering of being crippled or blinded or otherwise injured. And, in spite of all that, they have picked themselves up again, mastered their handicap and fitted themselves, sometimes through years of rigorous training, for jobs which they can do. It takes a lot of character to go through an experience like that, and in any kind of employment—I don't care what it is—character counts.

I am going to have the pleasure this morning of presenting a trophy on behalf of this Committee. This award is to be given annually to a handicapped individual selected by the Committee for the best performance of the year in behalf of the physically handicapped.

The trophy was designed and made by four severely handicapped persons. The young man who has been selected to receive it this year is also a severely handicapped person. He is an employer in Chicago. He is in business for himself. He is successful in that business. Today, he employs 80 persons and 60 of them—three-fourths of them—are handicapped. Some of them are blind, some are deaf, some have lost an arm or leg. But that plant of his, during World War II, outproduced larger concerns that employed more workers. It did such fine work that it received the Army and Navy "E" award.

I am very proud of that young man—George Barr. He has made this country a better place to live in—and he has shown

what men can do if they have the courage and the will.

There is a lesson for all of us in this story. That lesson is that you never know what you can do until the going gets rough. The true measure of a man's ability—the true measure of the character and ability of a nation—comes out only in a struggle against difficulties.

A lot of people are saying these days that the people of our country are soft. They are saying that we haven't had things easy for too long, and that we do not have the strength of character to impose restrictions on ourselves and to undergo hardships in this time of crisis.

I simply don't believe this. I just don't think it's true. When I look at the record of our physically handicapped, and what they have done and are doing in American industry, I know it is not true. And if any further proof is needed we can find it in the record of our soldiers, sailors, marines, and airmen in Korea. There's nothing soft about the job our fighting men have been doing over there, and there's nothing soft about the way our physically handicapped workers have been doing their jobs here at home.

If these among us who have been disabled can pick up their lives again, and fit themselves for jobs in spite of their handicaps, I am sure that the rest of us can do what we are called upon to do in this period of national defense.

This Nation is not soft. I believe we have the same kind of character we have always had. I believe we have the will and strength and know-how to carry on through these difficult times.

I know we can face up to any problems that lie ahead, both at home and abroad.

And I am confident that we can reach our goal of a just and lasting peace.

Flying Leathernecks

EXTENSION OF REMARKS

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. NIXON. Mr. President, I ask unanimous consent that a statement I have prepared regarding a motion picture entitled "Flying Leathernecks," which it was my privilege recently to witness at an advance showing here in Washington, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. RICHARD NIXON, OF CALIFORNIA

This film is the Edmund Grainger production, Flying Leathernecks, portraying the immortal achievements of our Marine Corps air arm in the early days of the Pacific war. It is a splendid combination of documented World War II history and an original story.

With the passage of time, too many of us are prone to forget the very important part played in the ultimate victory by those few brave Americans who were on the battle scene at the war's outset, and during the trying days and weeks immediately afterward. Ill-equipped as they were, they held the line and even accomplished strategic advances which, it later developed, were of the utmost importance to final success.

It is the story of this critical stage of the war and the part played in it by our fight-

ing marine flyers which is portrayed in excellent fashion in Flying Leathernecks. Mr. Grainger is to be highly commended for this production of great historic and patriotic significance which is at the same time good entertainment.

Our Wartime Relations With the Soviet Union

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. LEHMAN. Mr. President, on August 17 the Honorable W. Averell Harriman made a statement regarding our wartime relations with the Soviet Union, particularly as they concern the agreements reached at Yalta. This statement is so informative and so useful for reference by Members of the Congress and others interested, that I ask unanimous consent that the statement be printed in the Appendix of the RECORD at a cost estimated by the Public Printer to be \$512.50.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF W. AVERELL HARRIMAN, SPECIAL ASSISTANT TO THE PRESIDENT, REGARDING OUR WARTIME RELATIONS WITH THE SOVIET UNION, PARTICULARLY AS THEY CONCERN THE AGREEMENTS REACHED AT YALTA

I am submitting this statement for use in connection with the hearings on the far-eastern situation. My objective is to clarify the confusion that has arisen regarding the understandings reached at Yalta by President Roosevelt and Prime Minister Churchill with Premier Stalin.

Much has been said and written about Yalta and its effect on the postwar course of events. Some people have shown a lack of understanding of our objectives in the conduct of the war and our efforts during the war to lay a foundation for a peaceful postwar world. Others appear to have profited from hindsight. Still others—for reasons best known to themselves—have distorted and perverted the facts to a point where their statements have little or no basis in reality. As a result, a myth has grown up that what President Roosevelt and Prime Minister Churchill did at Yalta has led to our postwar difficulties with the Soviet Union. This myth is without foundation in fact.

The discussions at Yalta and the understandings reached there were an integral part of our negotiations with the Soviet Union throughout the war to bring the desperate struggle to a victorious and early conclusion and to find a way in which the United States, Great Britain, and the U. S. S. R. could live together in peace. The postwar problems have resulted not from the understandings reached at Yalta but from the fact that Stalin failed to carry out those understandings and from aggressive actions by the Kremlin.

In this statement I have attempted to set forth the manner in which President Roosevelt sought to achieve his objectives. In doing so I have drawn heavily on my personal experiences. After being involved in our rearmament program beginning June 1940, I was sent by President Roosevelt to London in March of 1941 as his special representative for assistance to Great Britain.

From October 1943 until January 1946, I was Ambassador to the Soviet Union. Prior to this appointment President Roosevelt had sent me on several special missions. The first was in September of 1941, when I went to Moscow with Lord Beaverbrook as chairman of the President's special mission to the Soviet Union. In August 1942, I represented President Roosevelt at the first meeting of Prime Minister Churchill and Premier Stalin in Moscow. I was with Secretary of State Hull at the Moscow conference in October 1943. I attended all but one of the conferences between President Roosevelt and Prime Minister Churchill, and all of the conferences between the United States, Great Britain, and the Soviet Union—Tehran in November 1943, Yalta in February 1945, and Potsdam in July 1945. I also attended the meeting between Churchill and Stalin in Moscow in October 1944. I was in San Francisco for a few weeks during the United Nations conference in April and May 1945. Throughout the war I had innumerable personal talks with Churchill and many discussions with Stalin.

The primary objective of the American and British Governments in our relations with the Soviet Union during the war was to keep the Soviet Army as an effective fighting force against Hitler. We sought to do this through the shipment of essential supplies and through the coordination of our military strategy. Supplies began to flow shortly after the discussions Lord Beaverbrook and I had with Stalin in Moscow in September 1941. The principal strategic talks took place when Churchill visited Moscow in August 1942 and at Tehran in November 1943. At this latter conference, Stalin was informed of our plans to land in France, and he undertook to attack shortly after we got ashore in order to prevent the Germans from diverting divisions from the eastern front to the west.

There are those who now contend that we should not have supported the Soviet armies. They contend that we should have let Germany and the Soviet Union kill each other off. These people forget the real danger was that Hitler would knock Russia out of the war. The Germans were only a few miles from Moscow when I was there in October 1941. That year the winter saved the city. I was in Moscow again in August 1942 when the Russians were again facing disaster. The supplies from the British and ourselves may have been decisive in helping the Russians to hold Leningrad, to prevent the encirclement of Moscow, and to stop the onslaught on Stalingrad and the oil fields of the Caucasus. With the increased flow of our supplies, by the spring of 1944 the Russians had been able to throw the Germans back on all fronts.

These people forget that on June 6, 1944, when the Allies landed on the Normandy beaches, there were about 60 German Divisions in France and the Low Countries, whereas there were 199 German divisions and 50 satellite divisions engaged on the eastern front. In accordance with Stalin's agreement at Tehran, the Russian armies launched a major offensive on June 22 and tied down and broke through this formidable Nazi force.

If we had failed to come to the support of the Soviet Union the Germans would have rendered the Russian armies ineffective and would have been able to throw their full power against an Allied invasion of the Continent. In this case it is doubtful whether such an invasion could have been attempted, and no one can now tell how long the war with Hitler might have lasted.

These tremendous and courageous operations by the Soviet Army and the fact that Stalin had honored such a vital military commitment influenced the attitude of British and American representatives in subsequent negotiations with the Soviet Union—

and built up favorable opinion for the Soviet Union among the people of the United States and the other western allies.

In addition to maintaining the Soviet Union as an effective fighting ally against Hitler, it was our objective to encourage the Soviet Union to join in the war against Japan at the earliest possible date. Because of their ambitions in the east, there was never any doubt in my mind that the Soviets would attack the Japanese in Manchuria in their own due time. The question was whether they could come in early enough to be of any help to us and to save American lives. I raised the subject with Stalin as early as August 1942. He told me then that it was his intention to come into the Pacific war when he was in a position to do so. Stalin was gravely concerned by the possibility of a premature attack by the Japanese. He had weakened his Siberian forces for the defense of Stalingrad. Furthermore, the Japanese Navy alone could have cut off the vital line of our supplies coming through Vladivostok.

The question of Soviet participation in the Pacific war was discussed in some detail at Tehran. Roosevelt proposed to Stalin the basing of American heavy bombers in the maritime provinces north of Vladivostok. This was deemed a necessary requirement by our Air Force in order to cover the Japanese islands. In addition, Roosevelt suggested the possible use of Soviet ports for our naval forces and requested the immediate exchange of military intelligence concerning Japan. Stalin agreed that these matters should be studied. Shortly thereafter we established exchange of combat intelligence. The other matters continued to be the subject of discussion on my part with Stalin in Moscow during the ensuing year.

Concurrently with our negotiations for the conduct of the war, President Roosevelt sought to come to an understanding regarding postwar problems with the Soviet Union. It was clear that unless these problems were settled we would have difficulties once the war was ended. President Roosevelt attempted to use our relationship as allies to develop a basis on which world peace could be maintained, and to settle in advance differences which we were likely to have over the treatment of territories occupied by the Red Army.

In August 1941, before Pearl Harbor, Roosevelt and Churchill had met at sea and proclaimed the Atlantic Charter, a statement of the fundamental principles to which nations must adhere if they are to live together in peace and freedom. In January 1942, at our request, the Soviet Union subscribed to the Atlantic Charter in the Declaration by United Nations. In October 1943 a further step was taken in the Moscow Declaration, which laid the foundation for the United Nations. This declaration was signed by Molotov, Eden, and Hull, and the Chinese Ambassador in Moscow. It was only after Hull's vigorous insistence that Molotov agreed to the inclusion of the signature of the Chinese. This was in line with Roosevelt's consistent attempts to strengthen the position of the Chinese National Government and to obtain the support of that Government by the Soviet Union.

At Tehran, in addition to the military matters, President Roosevelt attempted to develop further a basis for reaching political understandings with the Soviet Union. Plans for the organization of the United Nations were discussed, and also such matters as the postwar treatment of Germany, the future of Poland, and the independence of Iran. Further negotiations about these matters took place in Moscow on frequent occasions during the ensuing year and, with respect to the United Nations Organization, at Dumbarton Oaks.

Russian objectives in the Far East were also explored at Tehran particularly with

reference to the need of the Soviet Union for the use of warm water ports. I understand that Roosevelt had talked about this latter point with Chiang Kai-shek at the Cairo Conference, and that Chiang had indicated his agreement with the idea that the Port of Dairen should be internationalized.

In my talks with Roosevelt in 1943 and 1944, he told me of his concern over the historic conflicts between the Soviet Union and China, and the need for finding a basis for the settlement of the underlying causes of these difficulties.

On Roosevelt's instructions, I discussed with Stalin on a number of occasions throughout 1944 Soviet participation in the war against Japan, the concerting of our military actions in the Pacific, including operations by American bombers from the Maritime Provinces, and the basis of an understanding between the Soviet Union and the Chinese National Government. In one of these talks, which took place in June, Stalin minimized the Chinese Communists, and stated that Chiang was the only man who could hold China together and that he should be supported.

Molotov reiterated this position when Mr. Donald M. Nelson and Maj. Gen. Patrick J. Hurley stopped at Moscow in August en route to Chungking.¹

Although Stalin had on several occasions mentioned Soviet political objectives in the East, it was not until December 1944 that he outlined these objectives to me in detail. He said that Russia's position in the East should be generally reestablished as it existed before the Russo-Japanese War of 1905. The lower half of Sakhalin should be returned to the Russians, as well as the Kurile Islands, in order to protect Soviet outlets to the Pacific. The Russians wished again to lease the ports of Dairen and Port Arthur and to obtain a lease on those railroads in Manchuria built by the Russians under contract with the Chinese, specifically, the Chinese Eastern Railway, which was the direct line from the Trans-Siberian Railroad through to Vladivostok, and the South Manchurian Railroad making a connection to Dairen. He stated that the Soviet Union would not interfere with the sovereignty of China over Manchuria. In addition Stalin asked for the recognition of the status quo in Outer Mongolia. I pointed out to Stalin that the talks at Tehran had envisaged internationalization of the port of Dairen, rather than a lease. Stalin replied that this could be discussed. I immediately reported Stalin's proposals to President Roosevelt, and they became the basis of the discussions at Yalta.

It was against this background, which I have briefly sketched, that President Roosevelt and Prime Minister Churchill met with Stalin at Yalta in early February 1945. The question of Roosevelt's physical condition at the time of Yalta has been the subject of considerable discussion. Unquestionably, he was not in good health and the long conferences tired him. Nevertheless, for many months he had given much thought to the matters to be discussed and, in consultation with many officials of the Government, he had blocked out definite objectives which he had clearly in mind. He came to Yalta determined to do his utmost to achieve these objectives and he carried on the negotiations to this end with his usual skill and perception.

The discussions at Yalta covered a wide range of topics, including final plans for the defeat of Hitler, the occupation and control of Germany, reparations, the United Nations Conference to meet at San Francisco on April 25, the restoration of sovereign rights and self-government to the liberated peoples of Europe, and the establishment of a free, independent and democratic Poland through the holding of free

¹ See United States Relations With China, pp. 71-72.

and unfettered elections. By the declaration on liberated Europe, Roosevelt and Churchill obtained the pledge of Stalin for joint action to secure the fundamental freedoms for the people in territories overrun by the Red Army.

The text of the declaration is as follows:

"The Premier of the Union of Soviet Socialist Republics, the Prime Minister of the United Kingdom, and the President of the United States of America have consulted with each other in the common interests of the peoples of their countries and those of liberated Europe. They jointly declare their mutual agreement to concert during the temporary period of instability in liberated Europe the policies of their three Governments in assisting the peoples liberated from the domination of Nazi Germany and the peoples of the former Axis satellite states of Europe to solve by democratic means their pressing political and economic problems.

"The establishment of order in Europe and the rebuilding of national economic life must be achieved by processes which will enable the liberated peoples to destroy the last vestiges of nazism and fascism and to create democratic institutions of their own choice. This is a principle of the Atlantic Charter—the right of all peoples to choose the form of government under which they will live—the restoration of sovereign rights and self-government to those peoples who have been forcibly deprived of them by the aggressor nations

"To foster the conditions in which the liberated peoples may exercise these rights, the three Governments will jointly assist the peoples in any European liberated state or former Axis satellite state in Europe where in their judgment conditions require (a) to establish conditions of internal peace; (b) to carry out emergency measures for the relief of distressed peoples; (c) to form interim governmental authorities broadly representative of all democratic elements in the population and pledged to the earliest possible establishment through free elections of governments responsive to the will of the people, and (d) to facilitate where necessary the holding of such elections

"The three Governments will consult the other United Nations and provisional authorities or other governments in Europe when matters of direct interest to them are under consideration.

"When, in the opinion of the three Governments, conditions in any European liberated state or any former Axis satellite state in Europe make such action necessary, they will immediately consult together on the measures necessary to discharge the joint responsibilities set forth in this declaration.

"By this declaration we reaffirm our faith in the principles of the Atlantic Charter, our pledge in the declaration by the United Nations, and our determination to build in cooperation with other peace-loving nations world order under law, dedicated to peace, security, freedom, and general well-being of all mankind.

"In issuing this declaration the three powers express the hope that the Provisional Government of the French Republic may be associated with them in the procedure suggested"

It was agreed that there should be continued collaboration between the three governments through periodic meetings of the Foreign Secretaries, and the concluding paragraphs of the Yalta communique, quoted below, expressed the determination of the three governments to have "unity for peace as for war":

"Our meeting here in the Crimea has reaffirmed our common determination to maintain and strengthen in the peace to come that unity of purpose and of action which has made victory possible and certain for the United Nations in this war. We believe that

this is a sacred obligation which our governments owe to our peoples and to all the peoples of the world.

"Only with the continuing and growing cooperation and understanding among our three countries and among all the peace-loving nations can the highest aspiration of humanity be realized—a secure and lasting peace which will, in the words of the Atlantic Charter, 'afford assurance that all the men in all the lands may live out their lives in freedom from fear and want.'

"Victory in this war and establishment of the proposed international organization will provide the greatest opportunity in all history to create in the years to come the essential conditions of such a peace"

Had Stalin honored these commitments taken at Yalta, Eastern Europe would be free today and the United Nations would be a truly effective organization for world security.

The last understanding to be reached was that relating to the Far East. The crucial issue was not whether the Soviet Union would enter the Pacific War, but whether it would do so in time to be of help in the carrying out of the plans of the Joint Chiefs of Staff for an invasion of the Japanese home islands. The great danger existed that the Soviet Union would stand by until we had brought Japan to her knees at great cost in American lives, and then the Red Army could march into Manchuria and large areas of northern China. It would then have been a simple matter for the Soviets to give expression to popular demand by establishing People's Republics of Manchuria and Inner Mongolia. President Roosevelt sought to reduce the general assurances which Stalin had previously given to specific undertakings for the early entry of Russia in the Pacific War, to limit Soviet expansion in the East and to gain Soviet support for the Nationalist Government of China.

It should be recalled that it was only on the second day of the Yalta Conference that General MacArthur entered Manila. The bloody battles of Iwo Jima and Okinawa still lay ahead. It was not until more than 5 months later that the first and only experimental explosion of the atomic bomb was successfully concluded at Alamogordo. The military authorities estimated that it would take 18 months after the surrender of Germany to defeat Japan, and that Soviet participation would greatly reduce the heavy American casualties which could otherwise be expected. The Joint Chiefs of Staff were planning an invasion of the Japanese home islands, and were anxious for the early entry of Russia in the war to defeat the Japanese Kwantung army in Manchuria and in order that our bombers could operate from bases in Eastern Siberia.

These plans were outlined in two memoranda which were before the President at Yalta.

In a memorandum for the President, dated January 23, 1945, the Joint Chiefs of Staff stated:

"The Joint Chiefs of Staff have been guided by the following basic principles in working toward U. S. S. R. entry into the war against Japan:

"Russia's entry at as early a date as possible consistent with her ability to engage in offensive operations is necessary to provide maximum assistance to our Pacific operations. The United States will provide maximum support possible without interfering with our main effort against Japan.

"The objective of Russia's military effort against Japan in the Far East should be the defeat of the Japanese forces in Manchuria, air operations against Japan proper in collaboration with United States Air Forces based in eastern Siberia, and maximum interference with Japanese sea traffic between Japan and the mainland of Asia."

In a memorandum dated January 22, 1945, the Joint Chiefs of Staff stated:

"1. The agreed over-all objective in the war against Japan has been expressed as follows:

"To force the unconditional surrender of Japan by—

"(1) Lowering Japanese ability and will to resist by establishing sea and air blockades, conducting intensive air bombardment, and destroying Japanese air and naval strength.

"(2) Invading and seizing objectives in the industrial heart of Japan.

"2. The United States Chiefs of Staff have adopted the following as a basis for planning in the war against Japan:

"The concept of operations for the main effort in the Pacific Islands:

"(a) Following the Okinawa operation to seize additional positions to intensify the blockade and air bombardment of Japan in order to create a situation favorable to:

"(b) An assault on Kyushu for the purpose of further reducing Japanese capabilities by containing and destroying major enemy forces and further intensifying the blockade and air bombardment in order to establish a tactical condition favorable to.

"(c) The decisive invasion of the industrial heart of Japan through the Tokyo Plain

"3 The following sequence and timing of operations have been directed by the United States Chiefs of Staff and plans prepared by theater commanders

"OBJECTIVES AND TARGET DATE

"Continuation of operations in the Philippines (Luzon, Mindoro, Leyte). ———.

"Iwo Jima, February 19, 1945

"Okinawa and extension therefrom in the Ryukyus, April 1–August 1945

"4 Until a firm date can be established when redeployment from Europe can begin planning will be continued for an operation to seize a position in the Chusan-Ningpo area and for invasion of Kyushu-Honshu in the winter of 1945–46.

"5 Examination is being conducted of the necessity for and cost of operations to maintain and defend a sea route to the Sea of Okhotsk when the entry of Russia into the war against Japan becomes imminent. Examination so far has shown that the possibility of seizing a position in the Kuriles for that purpose during the favorable weather period of 1945 is remote due to lack of sufficient resources. The possibility of maintaining and defending such a sea route from bases in Kamchatka alone is being further examined

"6 The United States Chiefs of Staff have also directed examination and preparation of a plan of campaign against Japan in the event that prolongation of the European war requires postponement of the invasion of Japan until well into 1946"

These military considerations had been the subject of careful study by Roosevelt for a long time and they were uppermost in his mind at Yalta. President Roosevelt personally carried on with Stalin the negotiations leading up to the understanding on the Far East. I was present at the meetings when these matters were discussed and, under President Roosevelt's direction, I took up certain details with Stalin and with Molotov. Neither Secretary of State Stettinius nor any of his advisers, except for Charles E. Bohlen, who acted as the President's interpreter, had anything to do with these negotiations. Any suggestion to the contrary is utterly without foundation in fact.

The first conversations took place on February 8, at which Stalin brought up with Roosevelt the proposals which he had presented to me the previous December in Moscow. Stalin contended that these proposals should be accepted. Roosevelt said that he believed there would be no difficulty in regard

to the Kurile Islands and the return to Russia of the southern half of Sakhalin. He said that, although he could not speak for Chiang Kai-shek, he believed that Dairen might be made a free port under an international commission, and that the Manchurian railroads might be operated jointly. The President and Stalin also discussed internal conditions in China. Stalin reiterated his recognition of the need for a united China under Chiang Kai-shek's leadership.

Stalin suggested that the proposals be put in writing and be agreed to before the conference ended.

Two days later, on February 10, Molotov took up with me the details of the understanding to be reached. I reemphasized President Roosevelt's views that the ports should be free ports and not leased to the Soviet Union, that the Manchurian railroads should not be leased but jointly operated, and that in any event, the understanding should specify that the concurrence of Chiang Kai-shek was required.

I reported this conversation to Roosevelt, and he instructed me to explain his views again to Molotov, which I did.

Later on in the same day, February 10, Roosevelt and Stalin met again. Stalin agreed to the modification as proposed by Roosevelt, except that he maintained that a lease on Port Arthur would be required, as it was to be used for a naval base. Stalin accepted the requirement for Chiang Kai-shek's concurrence and said that he wanted his concurrence also to the status quo in Outer Mongolia. President Roosevelt and Stalin concluded that the matter should be discussed with Chiang when Stalin was prepared to have this done, having in mind the need for secrecy and lack of security in Chungking.

On the following day, the text was shown to Churchill, and after his agreement, it was signed on that day, February 11, 1945, by Stalin, Roosevelt, and Churchill. The full text is as follows:

"The leaders of the three great powers—the Soviet Union, the United States of America, and Great Britain—have agreed that in 2 or 3 months after Germany has surrendered and the war in Europe has terminated, the Soviet Union shall enter into the war against Japan on the side of the Allies on condition that:

"1. The status quo in Outer Mongolia (the Mongolian People's Republic) shall be preserved;

"2. The former rights of Russia violated by the treacherous attack of Japan in 1904 shall be restored, viz:

"(a) the southern part of Sakhalin, as well as all the islands adjacent to it, shall be returned to the Soviet Union;

"(b) the commercial port of Dairen shall be internationalized, the preeminent interests of the Soviet Union in this port being safeguarded and the lease of Port Arthur as a naval base of the U. S. S. R. restored;

"(c) the Chinese-Eastern Railroad and the South-Manchurian Railroad which provides an outlet to Dairen shall be jointly operated by the establishment of a joint Soviet-Chinese company, it being understood that the preeminent interests of the Soviet Union shall be safeguarded and that China shall retain full sovereignty in Manchuria.

"3 The Kurile Islands shall be handed over to the Soviet Union.

"It is understood that the agreement concerning Outer Mongolia and the ports and railroads referred to above will require concurrence of Generalissimo Chiang Kai-shek. The President will take measures in order to obtain this concurrence on advice from Marshal Stalin.

"The heads of the three great powers have agreed that these claims of the Soviet Union shall be unquestionably fulfilled after Japan has been defeated.

"For its part the Soviet Union expresses its readiness to conclude with the National Government of China a pact of friendship and alliance between the U. S. S. R. and China in order to render assistance to China with its armed forces for the purpose of liberating China from the Japanese yoke."

Stalin also agreed to joint planning for military operations in the Pacific and to the use by the United States Army Air Force of bases in the Maritime Provinces at Komsomolsk and Nikolaevsk.

President Roosevelt felt that he had achieved his principal objectives. He had obtained the agreement of the Soviet Union to enter the war against Japan within 3 months after the defeat of Germany. This was the period required to move Soviet troops from the European front to Siberia. It was considered to be in good time, and conformed to the plans of the Joint Chiefs of Staff which involved the redeployment of our forces from Europe to the Pacific. Roosevelt had also obtained Stalin's pledge of support for Chiang Kai-shek and recognition of the sovereignty of the Chinese National Government over Manchuria.

In recent years several objections have been leveled at the terms of the Yalta understanding on the Far East and the circumstances under which it was concluded.

It has been asserted that the understanding was a mistake because, as it turned out, Russian participation had no influence on the defeat of Japan. To President Roosevelt at Yalta, the lives of America's fighting men were at stake. He had been advised by the Joint Chiefs of Staff that the defeat of Japan would take many months after VE-day and that if the Soviet Union came in soon enough countless American lives would be saved. Furthermore, up to that time, Stalin had carried out vital military undertakings. Roosevelt, therefore, considered that a definite commitment from Stalin was of supreme importance and would be of great value.

Another criticism is that Chiang Kai-shek was not consulted before the understanding was signed and that the understanding was kept secret. The question of consulting Chiang was a difficult one. Secrecy was a military necessity. Experience had shown that whatever was known in Chungking got to the Japanese. Stalin was unwilling to risk Japanese knowledge of his plans until he had been able to strengthen his forces in Siberia. At Roosevelt's insistence, however, the understanding specified that Chiang's concurrence was required where China's direct interests were affected and that Chiang should be notified at the appropriate time.

I am sure that Roosevelt would have much preferred to have consulted Chiang in advance, if he had thought it was feasible for him to do so. On the other hand, he had had certain general talks with Chiang on some of the points involved, and knew of Chiang's desire to come to a permanent understanding with the Soviet Union. For these reasons, and also because of the strong support that he had given Chiang in the past, Roosevelt felt that he could work things out with Chiang when the time came.

Because of the prior conversations with Stalin, Roosevelt was convinced that the requirement for Chiang's concurrence qualified the provision that the claims of the Soviet Union shall be unquestionably fulfilled, and that Stalin so understood. Events proved that Roosevelt was correct. The Yalta understanding provided a framework for negotiations between the Soviet Union and the Chinese National Government in the summer of 1945, looking toward a settlement of the long-standing difficulties between the two countries. These negotiations which I will discuss in greater detail later in this statement were voluntarily negotiated between the two governments and culminated in the Sino-Soviet agreements

of August 1945. In these agreements, although the Soviet Union obtained certain privileges in the railroads and the ports, it fully recognized the sovereignty of the National Government over both China and Manchuria and agreed to support that government and no other. When the Sino-Soviet agreements were made public in August they were welcomed both in China and in the United States. These agreements dispose of the claim that the concessions made at Yalta regarding Manchuria undermined Chiang Kai-shek and ultimately caused him to lose control of the mainland of China. The loss of control over the mainland by the National Government was due not to the Yalta understanding but to the fact that the Soviet Union broke the Sino-Soviet agreements and to the factors which have been discussed in detail before these committees.

Subsequent to the Yalta Conference certain events took place during the late winter and spring of 1945.

At the end of February, Ambassador Hurley, who was then United States Ambassador to China, returned to Washington for consultation. He has testified that he saw President Roosevelt on two occasions in March and that Roosevelt instructed him to go to London and attempt to ameliorate the Yalta understanding. (Printed record, pt. 4, p. 2885.) It does not appear that Ambassador Hurley correctly recalls the facts.

I am convinced that President Roosevelt's concern after Yalta was to see to it that friendly relations were developed between the Soviet Union and the National Government of China.

Ambassador Hurley came through Moscow on his way to Chungking in April. He stayed with me during his visit. At no time did he indicate to me that President Roosevelt was disturbed about the understanding reached at Yalta or that he desired that this understanding be ameliorated. On the contrary, the purpose of Ambassador Hurley's visit to Moscow, as he stated it to me and to Stalin, was to find out from Stalin when Chiang could be told about the Yalta understanding and to help further cement the relations between the Soviet Union and the Chinese National Government.

This is revealed by the report which Ambassador Hurley sent to the Secretary of State on the meeting which he and I had with Stalin and Molotov on the night of April 15. The full paraphrased text of this report, dated April 17, is as follows:

"Conference concluded by me and Harriman on April 15 with Molotov and Stalin. My analysis of former statement by Molotov on attitude of Soviet toward National Government of China and Chinese Armed Communist Party given to Stalin and Molotov. My analysis was briefly as follows: 'Molotov said at the former conference that the Chinese Communists are not in fact Communists at all. Their objective is to obtain what they look upon as necessary and just reformations in China. The Soviet Union is not supporting the Chinese Communist Party. The Soviet Union does not desire internal dissension or civil war in China. The Government of the Soviet Union wants closer and more harmonious relations in China. The Soviet Union is intensely interested in what is happening in Sinkiang and other places and will insist that the Chinese Government prevent discriminations against Soviet nationals.' Molotov agreed to this analysis. I then outlined for Stalin and Molotov existing relations between the Chinese Government and the Chinese Communist Party. I stated with frankness that I had been instrumental in instituting conferences and negotiations between the Chinese Communist Party and the Chinese Government. I then presented in brief form an outline of the negotiations, of the progress which

had been made, and of the present status. I informed Stalin that both the Chinese Government and the Chinese Communist Party claimed to follow the principles of Sun Yat-sen for the establishment of a government of the people, by the people, and for the people in China. I continued that the National Government and the Chinese Communist Party are both strongly anti-Japanese and that the purpose of both is to drive the Japanese from China. Beyond question there are issues between the Chinese Communist Party and the Chinese Government, but both are pursuing the same principal objective, namely, the defeat of Japan and the creating of a free, democratic, and united government in China. Because of past conflicts there are many differences on details existing between the two parties. I made clear American insistence that China supply its own leadership, arrive at its own decisions, and be responsible for its own policies. With this in mind, the United States had endorsed China's aspirations to establish a free, united government and supported all efforts for the unification of the armed forces of China. I informed him that President Roosevelt had authorized me to discuss this subject with Prime Minister Churchill and that the complete concurrence of Prime Minister Churchill and Foreign Secretary Eden had been obtained in the policy of endorsement of Chinese aspirations to establish for herself a united, free, and democratic government and for the unification of all armed forces in China in order to bring about the defeat of Japan.

"To promote the foregoing program it had been decided to support the national Government of China under the leadership of Chiang Kai-shek. Stalin stated frankly that the Soviet Government would support the policy. He added that he would be glad to cooperate with the United States and Britain in achieving unification of the military forces in China. He spoke favorably of Chiang Kai-shek and said that while there had been corruption among certain officials of the national Government of China, he knew that Chiang Kai-shek was selfless, a patriot, and that the Soviet in times past had befriended him. I then related to Stalin and Molotov the request made by the Chinese Communists for representation at the San Francisco Conference. I told them that before leaving China I had advised the Chinese Communists that the conference at San Francisco was to be a conference of governments and not of political parties and that I had advised the Communists to request representation at San Francisco through the national Government of the Republic of China. I told him that this decision had been upheld by President Roosevelt and that the President had advised Chiang Kai-shek of the advisability of the national Government's permitting the Chinese Communist Party to be represented on the Chinese national Government's delegation to the conference at San Francisco. I told them that it was a very hopeful sign when Chiang Kai-shek offered a place on the delegation to San Francisco to a Chinese Communist and that the appointment had been accepted. I told Stalin that I thought it was very hopeful that a leading member of the Chinese Communist Party would be a delegate of the Chinese national Government at San Francisco. Stalin agreed that this development was very significant and he approved. I told him that President Roosevelt and Prime Minister Churchill had indicated their approval of the policy outlined. The marshal was pleased and expressed his concurrence and said in view of the over-all situation, he wished us to know that we would have his complete support in immediate action for the unification of the armed forces of China with full recognition of the national Government under the leadership of Chiang Kai-shek. In short, Stalin agreed

unqualifiedly to America's policy in China as outlined to him during the conversation.

"Also instructed by Roosevelt to discuss another subject with Stalin. Asked by Stalin if I was acquainted with subject. I stated "Yes." Stalin then inquired if I had advised Chiang Kai-shek. I said, "No." Stalin then said that he and Roosevelt had agreed that when it was time for discussions with Chiang, I was to institute such discussions. There followed a full talk on this subject as to which Harriman, who is now on his way to Washington, can give you the details. Harriman's general helpfulness and cooperation in the meeting with Molotov and Stalin and in all other matters were of great value."

With regard to the last paragraph of the telegram, Stalin said he preferred to delay discussion of the Yalta understanding with Chiang for about 2 months longer and Hurley agreed.

I returned to the United States to report to President Truman immediately after the conversation with Stalin and before Ambassador Hurley's report was prepared and dispatched. On April 19, I discussed Ambassador Hurley's report with Mr. E. F. Stanton, of the Far Eastern Affairs Division of the Department of State. Mr. Stanton's memorandum of that conversation is summarized as follows, on pages 97-98 of the volume United States Relations With China:

"Mr. Harriman felt that General Hurley's report, while factually accurate, gave a too optimistic impression of Marshal Stalin's reactions. Mr. Harriman was certain that Marshal Stalin would not cooperate indefinitely with Chiang Kai-shek and that if and when Russia entered the conflict in the Far East he would make full use of, and would support, the Chinese Communists even to the extent of setting up a puppet government in Manchuria and possibly in north China, if Kuomintang-Communist differences had not been resolved by that time. He indicated that he had impressed on General Hurley the fact that statements made by Stalin endorsing our efforts in China did not necessarily mean that the Russians would not pursue whatever course of action seemed to them best to serve their interests. Mr. Harriman feared that ambassador Hurley might give Chiang Kai-shek an over-optimistic account of his conversations with Stalin and he thought it might be advisable to suggest to General Hurley that he should be careful not to arouse unfounded expectations."

As a result of this conversation, the Secretary of State on April 23 instructed Ambassador Hurley in Chungking not to present his talk with Stalin in too optimistic a light to Chiang Kai-shek.

In a cable to President Truman from Chungking on May 10, 1945, Ambassador Hurley outlined in some detail his conception of the mission which he had been given by President Roosevelt in March. There is nothing in this cable which indicates that Roosevelt had instructed Ambassador Hurley to attempt to ameliorate the Yalta understanding. The paraphrased text of the cable is as follows:

"Knowing the great strain under which you must be working I have hesitated to burden you with problems by which we are confronted here. In my last conference with President Roosevelt he entrusted me with two specific missions in addition to my duties as Ambassador to China. The first mission was to bring Churchill and Stalin to an agreement on the policy that the United States has been pursuing in China. Namely (1) to take all necessary action to bring about unification under the National Government of all anti-Japanese armed forces in China. (2) To endorse the aspirations of the Chinese people for the establishment of a free united democratic Chinese Government. (3) To continue to insist that China furnish her own leadership, make her own

decisions and be responsible for her own policies and thus work out her own destiny in her own way. As you have no doubt been advised by the Secretary of State I obtained concurrence of Churchill and Stalin on the plan outlined. The British claim that the policy to which they now agree has always been British policy. This statement is incorrect. Roosevelt knew it was incorrect and that is why he sent me to London. We have conclusive evidence on this point which it now seems unnecessary to resubmit since agreement has been reached. The policy of all the southeast Asia imperialist governments was to keep China divided against herself. This policy would seem to have been altered now that the British and the Soviet have agreed to the Roosevelt policy in China.

"The second mission entrusted to me by President Roosevelt in my last conference with him pertains to a decision affecting China reached at the Yalta conference. Before my last visit to Washington and before I had been informed by the President of the Yalta decision pertaining to China including particularly the all-important prelude, the Generalissimo had discussed with me China's position on the same problems decided upon at Yalta and had given me his attitude relating to them. He gave me, at that time, an aide memoire summarizing his position on some of the problems. Of course, the subject discussed in the prelude to the Yalta decision was not known to him and so far as I am concerned the matter has not yet been presented to him. Since my return we have continued to discuss the problems that would be involved in promoting future friendship and peace with Russia, without referring to the Yalta decision as such. All of the problems decided, except No. 1 in the prelude, have been raised by the Generalissimo and discussed fully with me. I am convinced that he will agree to every one of the requirements but will take exceptions to the use of two words "preeminent" and "lease." These two words have had connotations in Chinese. They have been involved in the controversies over extra-territoriality. These two words seem to impinge on the principles of the territorial integrity and independent sovereignty of China. Both Roosevelt and Stalin advised me that it was agreed between them that I would not open the subject of the Yalta decision with Chiang Kai-shek until the signal was given me by Stalin. Stalin said he would give me carte blanche and let me use my own judgment as to when and how to present the subject. However, both Harriman and I were of the opinion that it would be best to delay the presentation because of the possibility of leakage which in turn might bring undesirable results. I explained this to Stalin and it was finally decided that I am not to present the subject to Chiang Kai-shek until we have advised Stalin that, in our opinion, the time is opportune and until we have received the signal from him. I want to emphasize to you that prior to my recent visit to Washington I had discussed with Chiang Kai-shek all phases of the Chinese-Russian problem before we knew what was contained in the Yalta agreement, and since coming back to Chungking we have again thoroughly covered the same subjects without alluding to the primary subject. We are therefore in a position to proceed with dispatch on the Yalta Agreement when we are authorized to submit the particulars thereof to the Generalissimo. My purpose in wiring you this report is to give you the foregoing brief and somewhat cryptic outline of the situation and at the same time advise you that the Generalissimo has received telegrams from the Chinese Ambassador at Washington summarizing all of the items decided at Yalta except the primary one.

"The Chinese Ambassador's recitations of the various items are not all correct although he states that he got the various points in

conversation with President Roosevelt. The Chinese Ambassador has indicated that the United States will join as a third party in the agreement between Russia and China on the various instrumentalities described. No such participation is indicated in the Yalta decision. In addition to this the Chinese Government yesterday received a cable from a Chinese representative in Switzerland which reports movements of troops that we know are taking place and which indicate Russia's intent. The Chinese Government also has other information of movements and plans from which they have concluded that the object referred to in the prelude of the Yalta decision is definitely expected to happen. From the reports the Chinese are now receiving and with what they already know it is reasonable to expect them to reach approximately correct conclusions on this subject. It is of utmost importance that the Generalissimo as head of a state vitally concerned should be informed officially and in an appropriate straightforward manner becoming the character of the United States when the time is propitious. This information could and probably would have been given to him some time ago were it not for the lack of security associated with China. It now appears desirable that you discuss this situation with the Joint Chiefs of Staff and the Secretary of State to determine when you should direct me to ask Stalin for his approval of the time when I am to officially inform Chiang Kai-shek. Telling Chiang Kai-shek and asking him to clamp down secrecy which no doubt he would do to the best of his ability would I believe keep the secret from the enemy longer than it will be kept by letting the Chinese continue to conjecture publicly on the facts that come to their knowledge from other sources. The American theater commander is familiar with the contents of this message."

With regard to Ambassador Hurley's comments on the words "preeminent" and "lease" in the Yalta understanding, I can personally state that neither Roosevelt nor Stalin intended that the phrase "preeminent interests" should go beyond Soviet interests in the free transit of exports to and imports from the Soviet Union. President Roosevelt had told me at Yalta that this was his interpretation and, when I took this position with Stalin in August 1945, he agreed. As to the lease on Port Arthur, Roosevelt looked upon this as an arrangement similar to privileges which the United States had negotiated with other countries for the mutual security of two friendly nations.

The problem of China and the Soviet intentions in the Far East was also discussed during Mr. Hopkins' special mission to Moscow in May 1945. During a conversation which he and I had with Stalin on May 28 I brought the matter up and Stalin reaffirmed his support of a unified and stable China which would control all of Manchuria. Stalin reiterated that the Soviet Union had no territorial claims against China and stated that he would support the open-door policy. He said he would also welcome representatives of Chiang to be with his troops when they entered Manchuria in order to facilitate the establishment there of administration by the Chinese National Government.

Soviet participation in the war against Japan was again discussed at the Potsdam Conference which took place from July 17 to August 2, 1945. It will be recalled that although the first and only atomic bomb experimental explosion had been successfully concluded on July 16, the bomb had not yet been used against Japan. During the conference, Stalin informed President Truman of peace feelers which he had received from the Japanese Government. These were of such a character as to be unacceptable.

At Potsdam, more than 5 months after Yalta, the Joint Chiefs of Staff were still planning an invasion of the Japanese home

islands and still considered Soviet participation in the Pacific war essential. On July 24, 1945, the Combined Chiefs of Staff reported to the President and the Prime Minister that their over-all strategic concept for the prosecution of the war in the Pacific was as follows:

"In cooperation with other allies to bring about at the earliest possible date the defeat of Japan by: lowering Japanese ability and will to resist by establishing sea and air blockades, conducting intensive air bombardment, and destroying Japanese air and naval strength, invading and seizing objectives in the Japanese home islands as the main effort; conducting such operations against objectives in other than the Japanese home islands as will contribute to the main effort; establishing absolute military control of Japan; and liberating Japanese-occupied territory if required."

The Combined Chiefs of Staff also stated: "The invasion of Japan and operations directly connected therewith are the supreme operations in the war against Japan; forces and resources will be allocated on the required scale to assure that invasion can be accomplished at the earliest practicable date. No other operations will be undertaken which hazard the success of, or delay, these main operations."

They went on to say that our policy should be to:

"Encourage Russian entry into the war against Japan. Provide such aid to her war-making capacity as may be necessary and practicable in connection therewith."

On the basis of this over-all plan, extensive discussions were carried on with the Soviet Chiefs of Staff for the attack on Manchuria by the Soviet forces about 2 months prior to landings by United States forces on the Japanese home islands.

In the meantime the Chinese Government had been informed of the Yalta understanding. In Washington on June 9, President Truman had discussed with T. V. Soong, Premier of the Chinese National Government, the provisions of the understanding, including the promise of Stalin to conclude a treaty of friendship with the National Government of China. On June 14, President Truman saw Soong again and told him of the renewed assurances Stalin had given Hopkins and myself in Moscow to support the National Government of China under Chiang Soong expressed his gratification. On June 15, Ambassador Hurley informed Chiang of the Yalta understanding and also communicated to him Stalin's renewal of his assurances regarding China's sovereignty in Manchuria and his support of a unified and stable China and of the open-door policy.

By this time it had been agreed that negotiations would start promptly in Moscow between China and the Soviet Union regarding the matters dealt with in the Yalta understanding. T. V. Soong arrived in Moscow at the end of June 1945. Negotiations were conducted between Stalin and Molotov, on the one hand, and Soong, on the other. They were interrupted by the Potsdam conference, but were resumed early in August, at which time Soong was joined by Wang Shi-chieh, the Foreign Minister of the Chinese National Government.

Stalin, at the outset, made demands that went substantially beyond the Yalta understanding. While Soong was not prepared to accede to all of these demands, he made it clear to me that his Government was anxious to reach an agreement with the Soviet Union, and to this end he was prepared to make concessions which we considered went beyond the Yalta understanding.

At no time did Soong give me any indication that he felt the Yalta understanding was a handicap in his negotiations. I repeatedly urged him not to give in to Stalin's demands. At the same time, during this

period, I had several talks with Stalin and Molotov in which I insisted that the Soviet position was not justified. This action I took on instructions from Washington. Also, on instructions, I informed Soong that the United States would consider that any concessions which went beyond our interpretation of the Yalta understanding, would be made because Soong believed they would be of value in obtaining Soviet support in other directions. Soong told me that he thoroughly understood and accepted the correctness of this position. The fact is that, in spite of the position I took, Soong gave in on several points in order to achieve his objectives.

Events moved swiftly during the early days of August. On August 6, the first atomic bomb dropped on Hiroshima and on August 9 another on Nagasaki. On August 8, the Soviet Union entered the war against Japan. On August 10, Japan sued for peace through the Swiss Government and on August 14 an armistice was arranged. On that day a series of agreements between the Soviet Union and China, including a Treaty of Friendship and Alliance, were concluded. They were ratified by the Chinese Government on August 24, 1945, and were made public at that time. The texts of these agreements are set forth on pages 585-596 of the volume entitled "United States Relations with China" and are summarized as follows on page 117:

"The treaty pledged mutual respect for their respective sovereignties and mutual noninterference in their respective internal affairs. In the exchange of notes the Soviet Union promised to give moral support and military aid entirely to the National Government as the central government of China and recognized Chinese sovereignty in Manchuria; and China agreed to recognize the independence of Outer Mongolia if a plebiscite after the defeat of Japan confirmed that that was the desire of the Outer Mongolian people. The agreement on Dairen committed China to declare Dairen a free port 'open to the commerce and shipping of all nations' and provided for Chinese administration of the port; but it exceeded Yalta by granting the Soviet Union a lease of half of the port facilities, free of charge. This agreement has not been put into effect, since Nationalist military and civil officials have been prevented from functioning in the Kwantung Peninsula area because of the attitude of the Russians and the Chinese Communists. The agreement on Port Arthur provided for the joint use of the area as a naval base by the two powers and extended the boundary of that area farther than the United States expected, though not to the pre-1904 boundary which the U. S. S. R. would have preferred. The railway agreement provided for joint ownership and operation of the Chinese eastern and south Manchurian railways. The treaty and the agreements regarding Dairen, Port Arthur, and the railroads were to run for 30 years."

Of prime importance is article V of the Treaty of Friendship which reads as follows:

"The high contracting parties, having regard to the interests of the security and economic development of each of them, agree to work together in close and friendly collaboration after the coming of peace and to act according to the principles of mutual respect for their sovereignty and territorial integrity and of noninterference in the internal affairs of the other contracting party."

Supplementing this provision, an exchange of notes between Molotov and Wang specified:

"In accordance with the spirit of the aforementioned treaty, and in order to put into effect its aims and purposes, the Government of the U. S. S. R. agrees to render to China moral support and aid in military supplies and other material resources, such support and aid to be entirely given to the National

Government as the Central Government of China."

Soong told me in Moscow he was gratified at the results obtained and expressed his gratitude for the active support the United States had given him in his negotiations. Ambassador Hurley informed the Secretary of State on August 16 from Chungking that Chiang Kai-shek was "generally satisfied with the treaty." Ambassador Hurley went on to state that at his suggestion Chiang had invited Mao Tse-tung, chairman of the Chinese Communist Party, to a conference in Chungking. His cable concluded by stating that "Chiang Kai-shek will now have an opportunity to show realistic and generous leadership." On September 6 Ambassador Hurley cabled the Department of State that—

"The publication of these documents has demonstrated conclusively that the Soviet Government supports the National Government of China and also that the two Governments are in agreement regarding Manchuria."

The Sino-Soviet agreements were welcomed by the American press. As a sample, I quote below portions of an editorial which appeared in *Life* magazine on September 10, 1945:

"Twelve days after Japan gave up there was announced in Moscow and Chungking an agreement which was as great a victory for common sense as the defeat of Japan was for armed might. The Soong-Stalin treaties contain less ammunition for pessimists than any diplomatic event of the last 20 years. The signatures of two men have done as much to assure peace as all our flying fortresses.

"Two strong and subtle men, both revolutionaries since youth, sat down in Moscow and discovered that each needed and wanted a long peace to complete his particular revolution. So they negotiated out every major issue between Russia and China.

"In Chungking, Mao and Chiang are now laying the basis for that (China's) future. It is extremely bright.

"Certainly Americans have cause to call it bright. For the present prospects of China are a vindication of American policy in Asia for almost 50 years.

"Peace, lively but genuine peace, is therefore the outlook."

Nothing that was done at Yalta contributed to the loss of control over China by Chiang Kai-shek. The Yalta understanding was implemented by the Sino-Soviet agreements, which had they been carried out by Stalin, might have saved the Chinese National Government. The inability of the Chinese National Government to maintain control over China was due to the fact that the Sino-Soviet agreements were not honored by Stalin, and to other factors which have been dealt with before these commitments in great detail.

I do not believe that it would serve a useful purpose for me to discuss the subsequent course of events in China, as they have been testified to at length in these hearings by others who had direct contact with these matters.

In conclusion, I want to reemphasize the objectives that President Roosevelt and Prime Minister Churchill sought to achieve in their relations with the Soviet Union during the war.

Their primary objective was to maintain Russia as an effective fighting ally. This problem in itself gave grave concern, not only as to the military capabilities of the Soviet forces, but also as to whether the Kremlin would make separate arrangements with Hitler and leave the Western Allies stranded. The building of mutual confidence in the conduct of the war was not an easy task. But the fact remains that Russia was an effective fighting ally, and carried

out vital military undertakings against Hitler.

In addition, Roosevelt and Churchill sought to lay a foundation during the war for cooperation to maintain world peace by all nations, including the Soviet Union, and to find solutions to specific problems which would result from the war, particularly with regard to the treatment of those countries which would be occupied by the Red Army. No one was under any illusions about the difficulties that we would encounter. Nevertheless, step by step, Soviet leaders subscribed to principles which culminated in the formation of the United Nations. They entered into agreements designed to dispose of many specific problems. The carrying out of these commitments would have gone a long way toward achieving Roosevelt's objective of a peaceful world. The postwar difficulties stem from the fact that Stalin did not carry out his commitments and from the fact that the Soviet Union has failed to live up to the Charter of the United Nations.

Some people claim that we sold out to the Soviet Union at Yalta. If this were true, it is difficult to understand why the Soviet Union has gone to such lengths to violate the Yalta understandings. The fact is that these violations have been the basis of our protests against Soviet actions since the end of the war. There would have been a sell-out if Roosevelt and Churchill had failed to bend every effort to come to an understanding with the Soviet Union and had permitted the Red Army to occupy vast areas, without attempting to protect the interests of people in those areas.

Only by keeping our military forces in being after Germany and Japan surrendered could we have attempted to compel the Soviet Union to withdraw from the territory which it controlled and to live up to its commitments. The people of the United States and the war-weary people of Europe were in no mood to support such an undertaking. This country certainly erred in its rapid demobilization in 1945, but this is an error for which the entire American people must share the responsibility. I cannot believe that anyone seriously thinks that the move to bring the boys home could have been stopped. I still recall my grave concern when I was in Moscow at the cold reception the Congress gave to President Truman's recommendation for universal military training in the fall of 1945.

The most difficult question to answer is why Stalin took so many commitments which he subsequently failed to honor. There can be no clear answer to this question. I believe that the Kremlin had two approaches to their postwar policies, and in my many talks with Stalin I felt that he himself was of two minds. One approach emphasized reconstruction and development of Russia, and the other external expansion.

On the one hand, they were discussing possible understandings with us which would lead to peaceful relations and result in increased trade and loans from the west for the reconstruction of the terrible devastation left in the wake of the war. If they had carried out this program, they would have had to soft pedal for the time at least the Communist designs for world domination—much along the lines of the policies they had pursued between the two wars.

On the other hand, we had constant difficulties with them throughout the war and they treated us with great suspicion. Moreover, there were indications that they would take advantage of the Red Army occupation of neighboring countries to maintain control, and they were supporting Communist Parties in other countries to be in a position to seize control in the postwar turmoil.

The Kremlin chose the second course. It is my belief that Stalin was influenced by the hostile attitude of the peoples of Eastern Europe toward the Red Army, and that he recognized that governments established

by free elections would not be "friendly" to the Soviet Union. In addition, I believe he became increasingly aware of the great opportunities for Soviet expansion in the postwar economic chaos. After our rapid demobilization, I do not think that he conceived that the United States would take the firm stand against Soviet aggression that we have taken in the past 5 years.

The one great thing accomplished by our constant efforts during and since the war to reach a settlement with the Soviet Union is that we have firmly established our moral position before the world. Had these efforts not been made, many people of the free world would still be wondering whether we and not the Kremlin were to blame for the tensions that have developed. The fact that the Soviet Union did not live up to its undertakings made clear the duplicity and the aggressive designs of the Kremlin. This fact has provided the rallying point for the free world in their collective effort to build their defenses and to unite against aggression.

W. A. HARRIMAN.

Subscribed and sworn to this 13th day of July 1951.

Employment of the Physically Handicapped—Address by Oscar R. Ewing

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address by Oscar R. Ewing, Federal Security Administrator, at the fall meeting of the President's Committee on National Employment of the Physically Handicapped Week, August 17, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

As an associate member of this Committee, I am honored to share with you in work which the condition of our times has made even more important than ever before. As administrator of the Federal agency concerned with the health, education, and economic security of all Americans, I am happy to be a part of this continuing effort to increase employment opportunities for the handicapped. And as an individual, I find it heartwarming to aid in this humanitarian program.

To help our handicapped citizens toward the independence of self-support is to help them share fully in the bounties of our way of life. This is not merely a matter of common humanity. It is a patriotic service that contributes to the enduring strength of our Nation. Our strength is founded on the rights, the dignity, and the worth of the individual. One of its greatest concepts is that every man and every woman should have a fair and equal chance for useful work.

At the meeting of this Committee last year, President Truman emphasized that the free world relies on our strength in the effort to overcome the forces of tyranny and aggression. All that has happened during the past year adds urgency to what the President said then. We cannot realistically hope to achieve a just and lasting peace unless we are strong—and we cannot be strong unless we use all our human resources.

Many months ago the American people embarked upon a gigantic mobilization program for national security and world peace. This program calls for something beyond blueprints and raw materials. It calls for manpower at the very time when manpower is short in America. Manpower can be developed but it cannot be stockpiled.

The handicapped, the housewives and mothers, the older people and the retired, and the young people—these make up a reservoir of potential manpower that offers possibility of development. In the last war we learned that it was possible to carry the employment of homemakers too far. Our mobilization program today may go on for many years; and we cannot afford to take the risks of broken homes, family separations, and childhood insecurities that the unlimited employment of married women might bring about. That is one reason why we must place greater emphasis upon the use of handicapped citizens. Their numbers are considerable, and their capacity for work is enormous. If they are put to work they will not create new social problems; on the contrary, they will be solving the very social problems which so often arise out of their disablement.

These are the simple facts that every American ought to know. This committee has the job of making sure that every American gets to know these facts. We must break down apathy, overcome prejudice, and spread the truth about the capabilities of handicapped men and women.

In the Federal Government, as you well know the value of handicapped citizens to the defense team is widely recognized. The Manpower Policy Committee of the Office of Defense Mobilization has recently established a task force to survey the problems relating to utilization of the handicapped in the defense effort. This task force, under the able leadership of Dr. Theodore G. Klumpp, its chairman, is already working on the best methods to channel the handicapped into defense production.

We in the Federal Security Agency have revised our programs to the requirements of national defense. We have speeded up the whole process of vocational rehabilitation, the only complete public program of this type for disabled civilians.

In cooperation with organized labor and the American College of Surgeons, we are now reducing the length of time required for injured workers to return to the job. With the voluntary agencies, we have inaugurated special programs for the rehabilitation of persons with epilepsy, mental illness, tuberculosis, and certain other serious conditions. In response to our recommendations, many public vocational schools have opened their doors to blind students, thus expanding opportunities for employment of the blind.

Through a more intensive use of rehabilitation centers in our program, increasing number of seriously disabled persons, who for years have been confined to their homes or beds, are being returned to our labor force. In this connection I would like to cite particularly the splendid cooperation extended by the United Mine Workers of America in the physical restoration and retraining of injured coal miners for employment in other occupations. Finally, we have strengthened the ties between the State vocational rehabilitation agencies and the State employment services in the interest of better service to the handicapped.

With the added impetus of our defense needs, we have also stepped up other major programs of the Federal Security Agency. At my request the Surgeon General has established a committee on rehabilitation to help us draw more heavily upon medical services in rehabilitating the substantially disabled. Greater efforts to insure the adequacy of health and medical care to meet

both immediate and long-range needs are being made by the Public Health Service. The Office of Education is assisting our public schools in providing training to develop to the maximum the potential skills of American workers.

Through the public-assistance program we try to reduce the financial distress which some among us suffer even in times of prosperity. Indeed, many of the people who receive such aid are in distress because of disablement. Our Children's Bureau is working to help maintain the American family as a unit even under the congested conditions often associated with defense production. And, for older people, I have recently proposed that the benefits of old-age and survivors' insurance be broadened to include hospitalization insurance for up to 60 days a year.

One striking example of the need for a continuing campaign against disablement lies in the growing amount of disability due to chronic disease. The war against chronic illness is a ceaseless struggle—a struggle on two fronts. On one front we fight disease itself—in the research laboratory and in the hospital or clinic. On the other front we fight the effects of today's major crippling diseases with physical restoration and other processes of rehabilitation.

We have, then, a problem for which employment is only part of the solution—the part that comes last, after the whole complicated job of medical rehabilitation and retraining has been done. Advancements of medicine have added years to the span of human life. In so doing, they have imposed upon society the obligation to make these added years healthy, productive, and happy.

That is one of the very purposes of the Federal Security Agency, including the Office of Vocational Rehabilitation. The Public Health Service, with its broad program of research, is constantly uncovering new methods to preserve life. Many who would have died but for the development of the antibiotics, improved methods of surgery, and other advances of medicine are now enabled to live to old age. With our broad programs of social security, we have the means of insuring minimum economic security and helping to maintain family life. Through training and vocational rehabilitation, we have achieved the means of adding productivity to the life thus extended.

Rehabilitation has made tremendous strides since enactment of the Barden-Lafollette Act of 1943. In the past 8 years, the Federal-State partnership has transformed more than 400,000 disabled men and women from dependency and despair to the self-respect and economic independence that a steady job affords. To many this program has meant a new lease on life.

These heartening gains show what can be done, and what should be done on a bigger scale. We still have far to go. There are still at least 2,000,000 persons throughout the country so handicapped by physical or mental disability that, without rehabilitation, they are either unable to work in jobs which use their best talents, or unable to work at all.

Each year about 250,000 Americans are disabled by disease, accidents, or congenital causes. Service to all of these people must be given if we are to meet fully our obligations to the handicapped and to the Nation.

In a time of national emergency, there is always the danger that our permanent programs may be overshadowed by the dramatic appeal of immediate defense needs. We must realize ourselves, and emphasize to others, that the rehabilitation of handicapped men and women is vitally important to the defense effort. Rehabilitation means more hands, more skills, and more brains

added to the productive effort which supports military security.

Each year more disabled persons have been rehabilitated, but the number who still need rehabilitation continues to mount. Advancements in medicine and other sciences are giving us new techniques and know-how with which the job can be done better than before. But we need more money to fulfill these exciting possibilities. For 3 years there has been no increase at all in the amount of Federal funds available for this vital job.

Every American must come to understand how important our handicapped citizens are—or could be—to the national interest. We can no longer afford to overlook their productive potentialities. We can no longer allow ourselves the doubtful and lazy luxury of ignoring the possibilities of increasing our manpower supply through rehabilitation.

This committee has a great educational responsibility—a responsibility which we have assumed because of our interest in the handicapped and the Nation's welfare.

It is not enough that many industrial employers take an enlightened view toward hiring handicapped men and women. It is not enough that our Government hires handicapped workers for jobs that they can fill.

We must carry the message further, to the small-business men whose payrolls account for most of our employment and most of our job opportunities. This message must reach the corner grocer, the farmer, the filling-station owner. It must reach into every section and every community in America. When it does, opportunity will flourish where prejudice may once have barred a handicapped person from the chance to make a living.

I know that all of us here feel this very strongly. I ask that you give your attention, not only to the employment aspect of the problem, but also to the rehabilitation aspect. We must open employment opportunities for the handicapped, and we must also extend the services of rehabilitation to equip more of our substantially handicapped to share the fruitfulness, the self-respect, and the ever-broadening possibilities of American opportunity.

Migrant Workers Find Better World in Minnesota Town

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Migrant Workers Find Better World in Minnesota Town." This article appeared in the Labor Information Bulletin, dated August 1951, which is published by the United States Department of Labor.

There being no objection, the article was ordered to be printed in the Appendix of the Record, as follows:

MIGRANT WORKERS FIND BETTER WORLD IN MINNESOTA TOWN—HOLLANDALE CITIZENS JOIN TO AID CHILDREN AND PARENTS

Things are looking up this year for the 800 migrant farm-worker families who annually

help gather the crops around Hollandale, Minn.

All groups in the community of 355 persons—school officials, church leaders, growers, farm worker recruiters, and other citizens—have joined together to see that school-age children of the migrant workers are not employed during school hours, as required under regulations of the Federal Wage and Hour law, and that they actually attend school.

In May of this year, the State Department of Health sent a mobile X-ray unit to Hollandale and examined both migrant and local children and adults.

NEW STATE BILL

Under a bill introduced in the Minnesota State Legislature by State Senator Earl L. Engbritson, who resides in Hollandale, the State Board of Health is authorized to regulate the construction and maintenance of equipment insofar as they concern sanitary conditions in the migrant labor camps. The bill was approved in April of this year by the Governor.

Hollandale is surrounded by an extensive area of intensive farming. Potatoes, cabbage, onions, and asparagus are the major crops. Sugar beets and spinach are also grown. During the agricultural season—which extends from June to early November—the 800 migrant families more than double Hollandale's population. Most of them come from Texas and are of Mexican origin.

Few of the children in these families attended school. They worked in the fields instead. Housing was poor and sanitary facilities in many cases nonexistent.

During the 1950 season investigators of the Department of Labor's Wage and Hour Division, with the help of Minnesota State labor law inspectors, launched an educational program to get the cooperation of school officials, church groups, growers, and those who recruited labor for the growers in providing school facilities for the migrant children—and seeing that they attended school. The Fair Labor Standards (Wage-Hour) Act provides that no one under 16 years of age may be employed at agricultural jobs during school hours by a producer who ships directly or indirectly in interstate commerce.

GROWING INTEREST

At first the community was resistant to the idea of taking the migrant children into school, but increasing insight into the many problems that beset the migrants has resulted in a growing interest in these families and a local action program to help work out answers to their problems. School officials made plans for them. One minister urged more than 100 growers in his congregation to tell the migratory workers that their children should be in school. In another church attended by many of the migrants, the priest gave his congregation the same information.

REMAINED THROUGH WINTER

During last winter several families from Texas, whose earnings had been very low because of poor crops, stayed on in Hollandale. The 25 children in these families continued to attend school. The small amounts charged for school lunches were provided by donations from churches, the parent-teacher association, and other groups. The families were supported by public funds.

Then, this spring, one local grower, who recruits in Texas for himself as well as for other growers, prepared contracts in Spanish for the workers to sign. These contracts included a clause informing the workers of the Minnesota school-attendance law. Another clause explained the Federal minimum-age provision.

Copies of these contracts were left with the Texas State Employment Service offices. Families migrating to Hollandale were told

to bring birth certificates and school records of their school-age children.

Early in May, representatives of the Department of Labor's Wage and Hour Division and the Bureau of Labor Standards, as well as representatives of the Minnesota State Industrial Commission, visited Hollandale. They found 65 migrant-family children in the Hollandale elementary and high school that day, though the influx of workers from Texas had just begun. They expected an enrollment of not less than 120 before the end of the school year. The principal of another school was preparing to take in children from other districts where space was lacking.

The investigators were agreed that things were looking up, particularly for the migrant children, and they believe that what Hollandale is doing, and what its citizens plan to do, can be adopted to thousands of like communities throughout the Nation.

Light Plane Pilot Sets Speed Record

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a news story entitled "Light Plane Pilot Sets Speed Record," which appeared in the Washington Daily News of August 7, 1951, be inserted in the body of the RECORD at this point. The article concerns the speed record set by a Minnesota citizen in a recent plane flight to Mexico City. I believe the story has significance, since it is my firm conviction that this is but another means of cementing friendly relations between the nations of the world.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIGHT-PLANE PILOT SETS SPEED RECORD

MEXICO CITY, August 7.—Pilot Max Conrad held a new light plane speed record today after landing his little Piper Pacer to end an 18-hour, 44-minute flight from Winona, Minn.

He averaged 100 miles per hour during his 2,200-mile flight. He said he encountered some thunderstorms soon after taking off, but later everything was easy.

ROOM FOR GAS

When he arrived yesterday, the plane had enough gas for five more hours of flying. His Piper Pacer had three of the four seats removed to make room for 165 gallons of gas, enough for about 26 hours of flying.

Nonstop flights for long distances in light planes have been a hobby for Mr. Conrad. A few weeks ago, he set an official record with a 23-hour flight from Los Angeles to Teterboro, N. J. Last fall he flew to Europe in the same plane to visit his vacationing family.

Mr. Conrad said he tired on the flight, but the best way to stay awake is to keep hungry.

HIS FORMULA

"I take along a box of Graham crackers," he said. "And every hour I eat several, chewing them about three times as long as usual. I do not drink anything, not even water."

"The crackers keep me going and alert. After a while, they even taste good."

Mr. Conrad said he would stay in Mexico 5 days and will fly back, taking it easy and seeking no record.

Government Development of Power Projects

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 28, 1951

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the dedication of the new Flambeau hydroelectric station 6 miles north of Ladysmith, Wis., on Sunday, August 26, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXPANDING AMERICA'S POWER FRONTIERS

(Address by HON. ALEXANDER WILEY, of Wisconsin)

I am delighted to be here today to join with the members and friends of the Dairyland Power Cooperative in the dedication of this splendid hydro power plant.

I should like to welcome here the distinguished Secretary of Agriculture, Mr. Brannan, and the former Secretary and now REA Administrator, Mr. Wickard. I welcome them not only to my State but to my own home area—an area in which I was born and raised and have lived virtually all my years, with the exception of my service in Washington. Welcome, gentlemen, to God's country.

I am particularly glad to be here today for a good many reasons:

MORE ELECTRICITY CRUCIAL TO SOUND FARMING

1 First, I am glad because this new plant will clearly mean good things to Midwest agriculture and indeed to all the folks in our communities whose prosperity depends directly upon a prosperous, healthy agriculture.

I speak as a member of the REA myself—my farm in Barron County being served by the Barron County Electric Cooperative. And so I rejoice that the miracle of expanded electricity will be assured for all of the farmers served by this vast Dairyland Power Cooperative. The kilowatts will truly help relieve the back-breaking burdens of farmers, their families, their kin, and their help.

WISCONSIN MUST KEEP STEP IN ELECTRICITY OUTPUT

2 For another thing, this dedication means that my State—Wisconsin—is keeping step with the national increase in power potential. Electricity, we all know, is a key to success in future healthy competition in agriculture and industry.

Just consider the northeastern section of our country, for example. The whole area there will, many experts believe, soon be starving for electric "juice"—"juice" which could and should be generated by the St. Lawrence seaway power project—power for which we have mutually battled for so long. Last thing I did in Washington was in committee to speak on behalf of an amendment for the St. Lawrence seaway. The Northeast

will consequently lose step with the rest of the Nation because it simply won't have the electricity to meet expanding needs. I don't want that ever to happen to Wisconsin. We want to keep in step and indeed to stay ahead of step.

FLOODS ON THE MISSOURI COMPARED WITH CAREFUL HARNESSING ON FLAMBEAU

3. There is a third reason for our mutual joy today. As we view this wonderful project, there comes to mind the marked contrast between what we are dedicating here (by the use of our God-given ingenuity, initiative, and cooperation) and what was not done in the valleys of the Missouri and Kaw Rivers, and, yes, in southwest Wisconsin. In those areas, terrible floods have inflicted ghastly damage upon the people, upon industry and upon farms. The mountains of mud piled high today throughout the whole flood region stand in marked contrast to this mountainous dam today. The one the symbol of the destructiveness of nature, unchecked and uncontrolled by man. The other—the symbol of farmer-citizen owned, farmer-controlled creativeness and constructiveness.

THE MIRACLES OF THIS NEW STATION

As we know, this station alone is capable of producing sufficient electrical energy to fill the entire present needs of approximately 18,000 farms. According to the most conservative estimates, the annual production of electricity by this plant will average 60,000,000 kilowatt hours. As a matter of fact, there is a chance that the total energy output will pass the 70,000,000 mark before the year's end. If you base your estimate on an annual production of 60,000,000 kilowatt-hours of energy, the Flambeau hydroelectric station will be producing energy at the rate of 5½ mills per kilowatt-hour, which is, of course, a very low rate indeed.

But the story of this dam cannot be told alone in the statistics about it. Yes, the concrete portion of the dam itself is more than 90 feet in height from bedrock, with an operating head of around 65 feet. The earth filled portion is 5,200 feet in length. The project, as you know, went into service in January of this year after 3 years of construction. It cost \$6,125,000.

One of the finest features of the station is the multiple purposes which it serves, in that, for example, it has created a lake of 2,000 acres with a shore line of 23½ miles. This beautiful lake carefully cleared and cleaned by Dairyland at a cost of \$180,000 before it was flooded is a tremendously valuable addition to Wisconsin's recreational resources. It will help contribute to making Wisconsin—for its own people and for out-of-State visitors still more of a paradise for boating, fishing, swimming, and other forms of summer recreation.

There, my friends, is more of the contrast between sound planning on the Flambeau and floods on the Missouri.

Now, let us go on and review further reasons for our pride and satisfaction today.

WHETHER PRIVATELY OR PUBLICLY, FARMERS MUST BE SERVED

One of the reasons why I personally am happy to be here today is because not so many weeks ago, it was my pleasure to assist in another dedication ceremony when the Petenwell and Castle Rock projects on the Wisconsin River were formally opened.

Those particular projects had been built by private electric companies working in cooperation with one another.

And so, within the space of but a short period of time, it has been my pleasure to join with men of good will in dedicating two great additions to the electric potential of Wisconsin; the one developed exclusively by private capital; the other developed by REA and its patrons.

This simultaneous development aimed at fulfilling the needs of the people of Wisconsin holds a great lesson for all of us. I, for one, believe that the one most important thing is indeed that the consumers of electricity be served and be served adequately, efficiently, and economically.

Down through the years, I have spoken on many occasions of the need for cooperation between REA and the private electrical companies. After all, the job of each is to serve the public interest. I realize the considerable differences which prevail now and which have prevailed between them, but I do think to the extent that it is possible, such differences should be reduced by men of good will and understanding on both sides, rather than having the differences needlessly increased and antagonisms prolonged.

As you know, the REA was set up to do a certain specific job. It is in effect a creature of the various statutes which originally set it up and which have added to its authority in subsequent Congresses (such as its relatively new authority for rural telephone service). Under the basic statute, REA's administrator was authorized and empowered "to make loans for rural electrification . . . for the purpose of furnishing electrical energy in rural areas who are not receiving central station service." In another part of the act, "rural area" was defined to exclude persons within the boundaries of any city, village or borough having a population in excess of 1,500 inhabitants.

PRIVATE UTILITIES SHOULD HAVE BROUGHT "JUICE" TO FARMERS YEARS AGO

Years ago, I pointed out to certain leaders in private utilities that the farmers of my State were hungry for electricity. The private utilities had not strung up sufficient poles to serve our farms. They had said it was too costly. I prophesied that the farmers of Wisconsin were not going to stand idle and simply hope that some day they might be served.

I said that the farmers were entitled to the electricity, and that they were going to get it one way or the other. I pointed out that our farmers were not going to be serfs. They were not going to be chained to manual labor. They insisted that the great miracle of electricity be harnessed and brought to them and to their wives.

My prophecy and the prophecy of others was fulfilled. Because of the dire need, there developed the great rural electrification movement. That movement has seen a tremendous and necessary increase in the percentage of Wisconsin farms served by electricity.

DAIRYLAND POWER CO-OP'S VAST ACTIVITIES

I have been most interested in personally learning more and more about the vast activities of Dairyland Power Cooperative and its 25 member distribution co-ops. I have read its business statements, learned more about its 2,000 miles of transmission lines, to 80,000 members in Wisconsin, Minnesota, Iowa, and Illinois, about its transmission substations, its plant substations, distribution substations. I have read about its over 400 employees, its investments, its hydro power, its steam generation, internal combustion generation, its kilowatt-hour sales, the amount of coal it burns, oil it burns, and so forth right down the line.

Reading and learning ever more about REA confirmed anew the fact, as mentioned in your literature, that the whole development of rural electrification cooperatives in Wisconsin proves the ability of farmers working together to organize, build, and maintain their own electric-power systems. This has been democracy at work and you

can certainly feel proud of your accomplishments.

What a tremendous amount of water has gone over the dams, since early 1937 when representatives of 10 rural electric distribution cooperatives met in the first discussions that ultimately led to the creation of Dairyland Power Cooperative. I will not review with you, my friends, all of the tremendous battles and controversies which have raged during these 14 years. I do want to look right now however at the present Dairyland Power Cooperative story.

DAIRYLAND POWER'S ENCOURAGING FINANCIAL OPERATIONS

Right at the end of 1950, as you know, Dairyland Powers' plant investment was over \$24,500,000. Dairyland's tax bill was in excess that year of \$178,000. To date, Dairyland has been approved REA loans in the amount of \$47,750,000 and its investment in generation and transmission facilities total over \$36,500,000. This is the amount which REA advanced the cooperative.

As of June 30, 1951, Dairyland was current in the payment of its loans. It has paid almost \$1,200,000 in principal and over \$1,000,000 in interest on those loans. As you know, the REA system is founded upon 2 percent loans to qualified borrowers with preference to nonprofit and cooperative organizations, payable back over a maximum period of 35 years.

REA'S SERVICES THROUGHOUT AMERICA

Throughout this Nation as a whole, by July 1, 1951, the REA system had approved almost \$2,500,000,000 in loans to over 1,000 borrowers, most of which were cooperatives but some of which were public power districts, other public bodies and including 25 commercial power companies. Over 80 percent of the REA loans have been for electric distribution facilities. As you know, REA makes generation and transmission loans only when borrowers are unable to purchase an adequate supply of power or a saving would result. Around 18 percent of the REA loans have thus been for the construction of generating plants and transmission lines. By July of this year, borrowers had returned to the Government almost \$300,000,000 in principal and interest payments on their REA loans. Over \$33,000,000 of that amount constituted payments on principal ahead of schedule. There has only been one REA loan foreclosure to date on an operating power system.

I have said that the REA was democracy in action, and I know that all of my listeners today would agree to that fact, based on their recognition that the consumer members do indeed control each REA Cooperative through Boards of Directors which they elect annually by and from their own membership.

As of July of this year, Wisconsin REA's had paid over \$10,000,000 in principal and interest on their Government loans. Almost one-half million dollars was paid on principal in advance of the date due. Seventeen borrowers were ahead on their payments and only two were slightly behind.

WHAT GOVERNMENT SHOULD AND SHOULD NOT DO

And so the REA story is truly an American story, proving how the American people can adapt to changing needs.

We all know that there has been considerable debate over the years over the question of public and private power, and no doubt there will be far more debate in the future. In the Congress we are always confronted with a great deal of amendments affecting electricity generation and transmission. Before each of these votes we legislators must carefully weigh the equities, the pros and cons, in trying to determine whether Government should step in or not step into

a given picture. I can think of no better rule for us to use than that expounded by Abraham Lincoln when he stated the purpose of the Federal Government:

"The legitimate object of government is to do for a community of people whatever they need to have done but cannot do it all, or cannot do so well in their separate or individual capacities. In all that people can individually do for themselves the Government ought not to interfere."

I personally have always believed in trying to maximize the area where individual citizens could act in their purely private and individual capacities. However, it is my firm belief that where, as in Lincoln's formula, it has been clearly shown that individual citizens and individual business companies are unable to fulfill a public need, the Government must step in to lend a helping hand.

TOO MUCH GOVERNMENT—TOO LITTLE GOVERNMENT—TWIN DANGERS

You and I reject the old days when America and the world suffered from the two extremes of too much Government or too little government action. On the one hand, we do not want government to reject its responsibilities to the people—to allow them to suffer from a low standard of living when the means for improvement of such standard are at hand. On the other hand, we do not want to have government-itis spread—the disease of government poking its nose into everything—reaching out its hand for all sorts of power, whether or not such power is really justified.

We are trying, as the Scandinavian countries in particular have tried, to find the middle way—a middle way between too much government and too little government.

WISCONSIN FARMING IS CHANGING

This great hydro station comes at a time when Wisconsin farming is dynamically changing. Science has come to the farm and it has come to stay. The modern farm has become not only a scientific laboratory, but it has become a complex business where the assets must be carefully conserved and increased. Assets such as our precious soil, assets like our farm people themselves, who constitute the greatest assets of all.

The Wisconsin farmer today is confronted by a great many challenges. His costs are rising—the costs of feed and fertilizer, the cost of farm labor and farm machinery. He is facing renewed competition from foreign competitive agricultural products. He is facing competition for the consumer's dollar, from other food industries, which have tremendous advertising and public relations budgets. One of his most difficult problems is that of facing a general lack of understanding among many city folks as to the farmer's problems, the farmer's cost, the farmer's needs.

The farmer is increasingly turning his interest to public affairs. He knows that our State legislature in Madison and our national legislature in Washington can help improve his lot or can harm him; can, for example, take actions mistakenly which would serve to reduce his standard of living, cut his profit below his cost of production. The farmer therefore has a right to expect his Representatives and Senators at Madison and Washington to do their part in assuring justice for him.

WE SHOULD BUILD PROJECTS LIKE ST. LAWRENCE

When I return to Washington, I will be debating and voting on legislation to provide great sums of money abroad in defense of this Nation against communism. Included among those sums will be millions of dollars designed to increase the generation of

electric power in Europe. By such power, the western European countries will be better able to sustain their industry and rearmament program. In that way, they will be in a better position to combat communism—internally and externally.

We are going to try, of course, to squeeze the water out of the foreign-aid program, to cut out unnecessary items. But a considerable amount of appropriations will remain and will be voted for.

Being with you today and seeing how Wisconsin is increasing its hydro capacity makes me very glad and proud, because it shows that we are looking after our own, just as we are trying to help others to help themselves abroad. Our greatest responsibility is, of course, to our own people.

It is unfortunate therefore that while we are indeed spending millions abroad to develop transportation arteries and electricity generation, there is right to the north of us the greatest uncompleted transportation channel in the world today, and the greatest single untapped source of power—the Great Lakes-St. Lawrence seaway power project. Here is a project delayed for 3 decades by the unfortunate selfishness and blindness of a few special interests and biased and provincial minds.

It is my hope and prayer, that just as today we are dedicating this great new project on the Flambeau, so, some day in the not too distant future, we or other men and women who follow us will dedicate the completion of a Great Lakes seaway. It will come, my friends, as assuredly as the dawn follows the night—it will come. The Great Lakes-St. Lawrence seaway is based upon self-defense necessity, on economic necessity, on the necessity of further good relations between our good neighbor, Canada, to the north, and ourselves. It will come. It must come. The hands of progress cannot be stayed by the blindness and selfishness of a few men. History proves, as the poet said, that—

"Truth proclaims this lesson,
In letters of living light.
No question is ever settled
Until it is settled right."

The seaway must and will be settled right, just as the electric needs of Wisconsin must and are being settled right.

CONCLUSION

I want to thank you for the opportunity of being with you today, and I want to congratulate all those officers and patrons of Dairyland whose dreams and hopes and days

and years of labor have now come to fruition in this splendid project.

Good luck and carry on.

Economic Power of the Soviet Union

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPP

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 28, 1951

Mr. SCHOEPP. Mr. President, I recently came across an interesting economic analysis of the Soviet Union, prepared by Paul O. Peters, Washington analyst. It furnishes important information regarding the Soviet Republic, which I am sure is not generally possessed. I ask unanimous consent that the analysis be printed in the Appendix of the RECORD. It presents Mr. Peters' view of the situation, which is most interesting.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

ECONOMIC POWER OF THE SOVIET UNION SMALL WHEN COMPARED TO THAT OF THE UNITED STATES ALONE

Studies of the economic power of the Soviet Union reveal many weaknesses which for years will probably keep her from any new direct wars of aggression and conquest against her European neighbors.

The basic weakness of the Soviet Union lies in her inability to produce agricultural commodities in the abundance necessary for all-out war against any sizable foe.

As a matter of fact without American agricultural commodities shipped under lend-lease during World War II, and through United Nations Relief and Rehabilitation Administration after the war, it is doubtful if the Soviet forces could have defeated Hitler's eastern armies, which had been reduced to almost skeleton proportions by the allied invasion of the European Continent in 1944.

The shipments of the principal agricultural commodities to the Soviet Union between 1941 and 1946 are shown by the table following:

Item	Shipped under lend-lease	Distributed by UNRRA	Total agricultural aid
	<i>Pounds</i>	<i>Pounds</i>	<i>Pounds</i>
Meats and meat products	2,152,881,000	204,889,000	2,417,770,000
Fats and oils, including butter	1,884,506,000	53,760,000	1,938,266,000
Milk, processed	218,769,000	89,856,000	308,625,000
Eggs and egg products (dried)	242,458,000	—	242,458,000
Rice and rice flour	135,808,000	3,983,000	139,791,000
Vegetables and products	53,970,000	33,150,000	87,120,000
Pulses	567,186,000	30,415,000	597,601,000
Wheat and flour	1,502,820,000	—	1,502,820,000
Cheese	69,814,000	12,063,000	81,877,000
Other foods	315,782,000	8,585,000	324,367,000
Total pounds of food supplied			7,636,714,000

THE LAND OF THE SOVIETS

Much of the Soviet Union is either ill-suited or ill-adapted for farming. This is due to several causes, namely the severity of the winters in certain areas and the lack of rainfall in others.

Over the entire area the rainfall averages less than 20 inches a year. Large parts of the country, especially in the north, are covered by tundra wastes and marshes and des-

erts in the east and south. Out of the entire area in the Soviet Union there still remains 570,000,000 acres of tillable land, comparable to 530,131,000 acres in the United States.

Russian productivity is low according to American agricultural standards, partly due to the indifference of the collectivist farmers, and partly due to the lack of mechanization. For example in 1940 there were 523,000 tractors on Russian farms compared with 1,447,000 in the United States.

The average Russian farmer harvests the crops from about 8 acres of land while the American farmer harvests 27 acres.

The production figures tell the story better than words. In the table following there is shown comparative crop productions for grains and other agricultural products:

Item and year	American production	Soviet Union production
Wheat, 1949 bushels	1, 146, 463, 000	1, 100, 000, 000
Winter rye, 1949 . . . do	18, 697, 000	950, 000, 000
Oats, 1949 do	1, 322, 924, 000	775, 000, 000
Barley, 1948 do	315, 891, 000	315, 000, 000
Corn, 1948 do	3, 681, 793, 000	110, 000, 000
Rice, 1948 do	85, 055, 000	15, 555, 500

Sheep and goats . .	27, 051, 000	187, 000, 000
Horses	5, 808, 000	10, 800, 000

¹ The United States has only about 4,000,000 goats on the farms and western ranges. The goat is a common farm animal in Russia.

RUSSIA SMALL PRODUCER OF PETROLEUM AND ITS PRODUCTS

The war potential of a country can well be measured by its access and capacity to produce petroleum and its products, gasoline and the like, in order to successfully prosecute motorized and mechanized war.

In 1947 the refinery capacity of the U S S R was known to be 575,000 barrels per day, compared with United States refinery capacity of 5,400,000 barrels a day.

In 1946 crude production in the Soviet Union totaled 166,827,000 barrels, compared with United States production of 1,731,889,000 barrels.

Just why the American people do not know all of the economic facts about the Russian war-making potential is one of the mysteries of the hour.

With a population of 211,000,000, compared to the 150,000,000 in the United States (154,000,000 in 1951) the Russians are in no position to wage a successful war against the United States or Western Europe, for that matter, under the present defense set-up of the Atlantic Pact.

It seems advisable, then, that there should be great caution exercised by the Congress in appropriating funds for the economic and military security of Europe, for materials and equipment furnished now may become the incentive to the Russians for a quick strike, hoping to enrich and strengthen their own military power.

PAUL O. PETERS.

Freedom of the Individual in the United States

EXTENSION OF REMARKS OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 28, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered at the annual picnic of the

Independent Order of Odd Fellows at Kingwood, Somerset County, Pa., on August 25, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy to be here today because your organization and your membership truly represents the spirit of patriotic Americanism—faith in God and loyal devotion to our Republic and our flag.

Throughout its history the Independent Order of Odd Fellows has been a powerful influence in the moral and spiritual progress of our State and Nation. In every city and town your order has exemplified the real meaning of brotherhood by teaching and practicing good will, tolerance, and mutual helpfulness.

You have prospered in good works, in charity, and in moral uplift. You have recognized your responsibility to those in need of a helping hand—the unfortunate, the aged, the widow, and the orphan.

May the Supreme Ruler of all mankind bless the work of the Odd Fellows and strengthen the fraternal bonds which have their inspiration in the Holy Bible for greater service to God and their fellowman.

It is always a pleasure to come to Somerset County. Here nature has spread incomparable beauty with a lavish hand. In these beautiful surroundings and in the presence of this splendid assembly, it is appropriate to consider the elements of American greatness. It is fitting on occasions such as this that we express our profound gratitude for the blessings we enjoy as citizens of a nation founded on the sincere belief that the independence of the individual is God's greatest gift to mankind.

The early settlers of America differed in their form of worship, but they met on common ground in their love of liberty and independence.

They sought in the New World a haven where they could live in freedom, where they could walk upright in dignity, obedient to the will of God, without fear of tyranny or persecution.

They braved the hazards of the ocean and the perils of an untracked wilderness in order that they might enjoy civil and religious liberty.

The trappers and traders who crossed the mountains and began the migration toward the westward plains carried rifles and axes—but they turned to their Bibles for spiritual comfort and guidance.

From those early beginnings every advance in the progress and development of our country can be traced by the golden thread of deep religious conviction.

Our own Commonwealth of Pennsylvania was established by William Penn as a holy experiment in government based on the spirit of tolerance and freedom of religion.

"If we are not ruled by God," William Penn asserted, "we will be ruled by tyrants."

The founding fathers in drafting the great charter of our liberty, the Declaration of Independence, made four explicit references to the Almighty.

In the first eloquent sentence of that immortal document they proclaimed the right of the American Colonies "to assume among the powers of the earth the separate and equal station to which the laws of nature and of nature's God entitled them."

In the second sentence "life, liberty, and the pursuit of happiness" are set forth as inalienable rights with which all men are endowed by their Creator.

In next to the last sentence appeal is made to the Supreme Judge of the World and finally there are those inspiring words of faith "with firm reliance on the protection of Divine Providence."

Eleven years later, when the Constitution of the United States was being written in Philadelphia and little progress was being made, Benjamin Franklin reminded his colleagues that "God governs in the affairs of men." He proposed that daily prayers be held "imploping the assistance of Heaven and its blessings upon our deliberations." That practice continues today in our legislative halls.

Our own Constitution of Pennsylvania, in its preamble states:

"We the people of the Commonwealth of Pennsylvania, grateful to Almighty God for the blessings of civil and religious liberty, and humbly invoking His guidance, do ordain and establish this constitution."

Supporting all this background of religious faith—of devotion to the teachings of the Holy Bible—we have the great legal pronouncement of the Supreme Court of the United States in which it was stated:

"This is a religious Nation."

These words express the eternal truth that the American Republic was founded on the principles of religion. They were spoken by Mr. Justice Brewer, when he delivered the opinion of the Supreme Court in the case of the Church of the Holy Trinity versus the United States.

I repeat the words of Justice Brewer: "This is a religious Nation."

That opinion marks a great milestone in the judicial and religious history of the United States. It should be read during this critical time by all true Americans.

More than anything else, it points out one of the great elements of American strength—the spirit of tolerance and good will under which many faiths and creeds live together in peace and harmony, respecting the right of every individual to worship God according to the dictates of his own conscience.

Referring once more to the Declaration of Independence, let me recall those rights which the founding fathers described as inalienable—life, liberty, and the pursuit of happiness.

You will notice that they put particular stress on the pursuit of happiness. They knew that no government since the world began has been able to guarantee happiness.

They knew that real happiness is the result of individual effort. It is the reward of righteous conduct toward each other, work, thrift, courage, and the love of God. Happiness is a goal toward which every free man and woman can strive by hard work, by living a clean and decent life, and by taking an honest part in the work of our churches, civic affairs, and in our Government. Success in life can be measured by our contribution to those activities which raise the spiritual and cultural level of our communities.

The courageous men and women who built the foundation of American freedom believed that each human being was created in the image and likeness of God.

In accordance with the plan of the Almighty, some men gain leadership in industry, science, education, government, or religion. Others became outstanding in the development of our natural resources. Others have superior skill as craftsmen in the production of articles of beauty and utility.

Our Heavenly Father, in His infinite goodness, expected the more fortunate to aid the less fortunate. For 150 years this plan served our people well through organizations such as yours and through individuals and families who have acquired wealth.

One of the most important of human rights is the right to acquire property by all honest means, but it brings with it an obligation to society. Billions of dollars, dedicated by great American foundations to promote health, welfare, education, good government, and to advance the cause of religion are carrying out that obligation.

But during recent years so-called intellectuals and other false prophets of a philosophy which knows no God have been gradually undermining all that is fundamental in the American way of life.

They proclaim that God's plan has failed—that security is preferable to liberty. They teach that freedom of the individual should be surrendered to a planned and regimented economy directed by an all-powerful central government. They declare that progress and prosperity can be achieved without the incentives which created the greatness of America.

That is the philosophy of communism. It hopes to cause the downfall of our country when our people turn away from religion and abandon decency in government and private conduct.

In every country where the people have followed false leaders into a planned economy and the so-called welfare state religion has been destroyed, the self-respect of the individual has vanished.

When the people forget that all human rights come from God and not from the state they begin to decay.

From the days of ancient civilizations, like Rome, to the present day, corruption in public life has preceded the downfall of nations. Men failed in religion. They failed in loyalty to their country. They became selfish. They became corrupt.

The evil influence spreads to the youth. Recently we have had some shocking examples of that influence in school and college athletics.

We have just had an appalling example of it at West Point, where the highest standards of honor have been maintained for 150 years. In all its history West Point has been the pride of the soldier and the civilian.

We have reason to be alarmed at recent disclosures that indicate a widespread breakdown of morality and decency.

We have been shocked by evidence of corruption, bribery, graft, and political favoritism in government.

We have racketeering, organized crime, and corrupt partnerships between the criminal underworld and some officials sworn to enforce the law.

The reason for this trend toward moral decay is not hard to find.

In recent years too many Americans have been careless of spiritual values. They have become negligent of their civic duties and responsibilities. They have forgotten that there is a definite relationship between religion and good government.

The religious training of our youth has been inadequate. We have failed to impress upon the minds of our young people that religion is the foundation of American strength.

We have neglected to implant appreciation of American patriotism and sacrifice by failing to make American history a basic course of study in all our schools and colleges. So many of our public schools do not teach American history and two-thirds of the Nation's colleges do not insist upon the study of our history as a requisite for graduation. We have remedied that situation as far as the public schools in Pennsylvania are concerned. The study of American history is now required by law.

We must have a moral and spiritual awakening. We must strengthen the religious life of America. Our churches must be filled with God-fearing men and women who will fight, regardless of consequences, for decency and honesty in Government.

We must defend America against greed, selfishness, and grasping ambition for personal advantage. With the spirit of God in our hearts we can clean up all immoral practices in politics, in business, and in national and international affairs.

While the threat of the Communist aggression endangers the peace of the world, we must build American strength to its highest peak.

But if we are to survive as a free nation, we need more than armies, more than guns, bombs, and planes. Above all, we need the strength and courage that come from God.

We cannot defeat communism by force alone. Even though we gain military victory, the ultimate and final defeat of communism will not be achieved until we set before the world an example of righteousness and obedience to the laws of God and man.

We will strengthen the cause of freedom when we make known to all the world that the American system of Government means freedom of the individual to plan his own destiny according to his own ability. But first we must put our own house in order. We must so live that we can be an example of patriotism, religion, and high moral standards.

We are so fortunate in America that we produce so many of the things which are helping to solve the chaotic condition of the world. We have the steel, oil, machine tools, electrical apparatus, chemical production, textiles, and countless other products of our mines and factories. We have the know-how of our skilled craftsmen, and the superior ability of management.

All of these are important, of course, but the basic industry of America is agriculture. The American farmer is the backbone of the Nation. We must maintain our great crops. We must produce the finest livestock in the world. We must keep our broad and fertile field well tilled with an abundance of grain, vegetables, fruit, cattle, sheep, hogs, and poultry.

We must continue to expand agriculture and adhere to the free economy of plenty. We must not be lured into the dangers of a planned economy of scarcity.

But we must keep in mind always that the real strength of America is not in our great industrial plants, our mines, mills or factories. It is not in our agricultural production nor in our wealth of natural resources.

Our national strength is firmly established on the freedom of the individual. Upon that principle the United States attained leadership among the nations of the world and gave its people the highest living standards in all history.

But, I am forced to say with deep regret, that this great strength of our Republic is now in danger.

Government has become too cumbersome and too costly. We are continually asking for Government handouts. States, counties, cities, all go to the higher levels of Government with hat in hand, asking that grants be made for many purposes. Chambers of commerce and other organizations join in pressure groups to demand special advantages for their own localities.

We are all leaning too much on Government rather than depending upon our own efforts.

When the iron hand of Government takes hold, the people are regimented. They are told what to do. Self-reliance is weakened. Initiative is lost. Know-how is forgotten.

Demands upon the Government are multiplied and the cost of Government climbs higher and higher.

We should not forget the lessons of history. Human rights have always been lost when a nation, burdened with debt, increases that debt through waste and extravagance. Crushing taxes are laid upon the people.

Over and over again this has ended in financial collapse and the fall of the government. Germany under Hitler and Italy under Mussolini were tragic examples. Time after time freedom died when totalitarian government seized control over the lives of

the people. It has always brought tyranny, moral degeneration and death of the body and the soul.

There are elements now in this country whose purpose is to spread confusion, dissension and hate. They are the spearheads in the drive to destroy free government.

We can defeat their evil objective if we return to the spirit of our forefathers.

They worked hard. They practiced tolerance and lived humbly in the way of the Lord. They poured out their sweat and shed their blood to build for us a land of liberty and independence.

In our industry, our culture, our spiritual life and in the betterment of government there are vast opportunities. Let us take courage. Let us live the lives of Americans.

Let us avoid hate and fear, passion and prejudice. Let us beware of empty promises of false leaders who pretend government can give something for nothing.

In real humility we should dedicate ourselves to the principles of our religious faith, because good laws are based upon religion and righteousness. Honest measures, decency and statesmanship should take the place of craftiness, deceit and political trickery. Nothing that is morally wrong can be politically right.

Men and women of the church can help strengthen America by taking an intelligent and militant part in the battle for good government.

They can take leadership in the fight against the centralization of government, the high cost of government and deficit financing which leads to bigger debt, higher taxes and inflation.

They can organize the moral forces in each community to fight against corruption and vice of all kinds.

The United States will survive as a free Nation if we all do our duty to God and our Republic.

The West Point Case

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 28, 1951

Mr. CASE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I wrote to the Secretary of the Navy on August 6, 1951, together with his reply dated August 20, 1951, referring to the recent dismissal of cadets at the United States Military Academy.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

LETTER TO SECRETARY OF THE NAVY

UNITED STATES SENATE,

COMMITTEE ON PUBLIC WORKS,

August 6, 1951.

The Honorable DAN A. KIMBALL,
Secretary of the Navy, Department of
Defense, Washington, D. C.

MY DEAR MR. SECRETARY: In connection with the reported dismissal of cadets at the Military Academy, I should like to ask for the following information:

1. Has it been customary to have an academic coach for the football team at Annapolis?
2. If so, what have been his duties?
3. What methods has he employed in carrying out those duties?

4. More specifically, how has he endeavored to coach the members of the football squad in their studies?

5. Has he proceeded:

- (a) By individual instruction;
- (b) By extra hour classes;
- (c) By use of special textbooks;
- (d) By special instruction of cadets either individually or in groups on selective projects or problems; or
- (e) By any other method.

6. How does the academic coach determine the subject material to be used?

7. How are the academic coaches and members of their staffs selected?

8. Are there academic "coaches" for any other competitive athletic groups—or any other groups?

9. If so, would the answers to the foregoing questions also apply to their methods?

10. How long has the practice of academic coaching been carried on as covered by the above questions?

Sincerely yours,

FRANCIS CASE.

REPLY FROM THE NAVY

DEPARTMENT OF THE NAVY,
OFFICE OF THE SECRETARY,
Washington, August 20, 1951.

Hon. FRANCIS CASE,
United States Senate,
Washington, D. C.

MY DEAR SENATOR CASE: I have obtained information from the Naval Academy which I consider supplies the data you requested in your letter of August 6, 1951. Since no academic coach is assigned to the football or any other team at the Naval Academy specific answers to your questions are not furnished.

The following pertinent portions of article 4206, United States Naval Academy Regulations, are quoted.

"(a) Extra instruction will be given by the various departments as indicated in the academic calendar.

"(b) The object of this instruction is to afford midshipmen every opportunity to supplement, and to clear up any doubtful points in their current work. Instructors are regularly detailed for this purpose, and all midshipmen are urged to avail themselves of this privilege. Midshipmen who have a mark of 2.6 or lower in one or more subjects may, upon written request approved by the commandant of midshipmen, have extra instruction assigned priority over extra duty 'sub,' 'weak,' and posture squads. The officer of the watch is authorized to grant this privilege in those cases where the interference with extra instruction was unforeseen.

"(c) * * * All midshipmen who wish to attend extra instruction, both regular and night, must sign up for it in advance in the department concerned.

"(d) No extra instruction shall be given by any officer or civilian instructor at any other times than shown in the academic calendar unless authorized by the head of his department. Notice of such extra instruction shall be given to the entire class and shall be open to all."

The program of extra instruction, academic year 1950-51, referred to in the United States Naval Academy Regulations is enclosed. A similar program is prescribed in this year's calendar not yet printed.

The amount of academic time lost by the football team is recognized and calculated for each of the three upper classes at the Naval Academy. For example, members of the football squad from the third class will lose six recitations in the department of mathematics this fall. Members of the varsity football squad at the beginning of the academic year in early September are sectioned by classes therefore, and continue in these section until the end of their athletic season at which time they are returned

to their regular sections. The lesson plans for these football sections are worked out so that they cover the same amount of textbook material as do the regular lesson plans for the other midshipmen of the respective class. This divergence from the normal has been proved satisfactory by experience and permits all midshipmen to be on an equal scholastic footing by the date of the term examinations which come in January.

You will note that the night extra instruction schedule is conducted during the football season. This is done in recognition of the essential, long-practice sessions required of football men. By regulation, the program is available to all who could not attend the extra-instruction classes scheduled in the afternoon and, it is utilized by other varsity fall sports squads—soccer, cross country, basketball—and by members of the corresponding teams competing in the intramural program.

As to the selection of instructors to conduct scheduled extra instruction this matter is handled at the time by the heads of the academic departments. Since all midshipmen sign up for the extra instruction they propose to attend, the numbers to be instructed govern the numbers of instructors assigned.

The Naval Academy also conducts extra instruction, again for all midshipmen who indicate they desire it, during the Christmas-leave period. Midshipmen are free, of course, to assist other midshipmen with their studies and visiting for such purpose during prescribed study periods is permitted.

We recognize that many midshipmen have difficulty with certain subjects. Heads of each department, therefore, keep close check on all whose daily averages are below passing or close to that line. An additional check on members of all athletic squads is kept by the officer representative of each sport. By personal interview individuals in academic difficulty are advised and counseled to take advantage of extra instruction. Records of marks are posted each week for the information and guidance of midshipmen.

I trust that this information is satisfactory.

Sincerely yours,

DAN A. KIMBALL,
Secretary of the Navy.

The Bill of Rights

EXTENSION OF REMARKS OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. BUTLER of Maryland. Mr. President, in the Baltimore Sun of August 27, 1951, there appeared a very timely and instructive article by Mr. C. P. Ives, a man of high learning and great insight, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PERIL TO THE BILL OF RIGHTS?

(By C. P. Ives)

Over and over again the Truman people tell us that red-baiting and anti-Communist witch-hunting endanger the Bill of Rights. Is that so? The Bill of Rights is strictly and solely a series of curbs on the powers of the Federal Government. Take article I:

"Congress shall make no law respecting an establishment of religion, or prohibiting the

free exercise thereof; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble and to petition the Government. * * *

Now, then, can Mr. Truman point to a single bill in Congress by which a Red-baiter seeks to set up an "establishment of religion"? Of course, he cannot. On the contrary, within a few years the Supreme Court, in the McCollum case, has given the church-state separation clause new force.

Well, then, are the Red-baiters pushing for laws to limit the exercise of religion? Everyone knows they are not. Are there anti-Communists in Congress advocating a law to suspend freedom of speech or of press? No. Are the rights of assembly and of petition about to be repealed? No.

Article II of the Bill of Rights says the right of the people to keep and bear arms shall not be infringed. No Red-baiter is urging a repeal of that rule in Congress. Article III promises that soldiers shall not be quartered on private persons. No threat of that.

Article IV of the Bill of Rights guarantees that the people shall be secure in their papers and houses against unwarranted search and seizure. Some very competent scholars think this guaranty has indeed been impaired in late years. But it was done by majority decision of the Supreme Court and no complaint has been heard from Mr. Truman.

Article V is the one that protects criminals, that is, people charged with crime. Mr. Truman will search the record in vain for any victim of the witch-hunt who has been made to answer for crime in illegal ways and without relief—look at the Remington reversal just now. He cannot name a single "liberal" who has been punished for the same crime twice.

Far from the privilege against self-incrimination being in danger, it is stronger than ever, is used every day by "liberals," pro-Communists, and Communists in court and before the congressional committees and has just been given renewed force by a decision of the Supreme Court. If the property protections in article V are threatened, it is surely not by the anti-Communists.

Article VI of the Bill of Rights guarantees a speedy trial, and no Red-baiter in Congress is advocating any repeal of that. Article VIII provides the right of trial by jury, and the major threat here comes from antijury articles in the law journals by slicker professors, most of whom are on the President's side politically.

Article VIII prohibits excessive bail and cruel and unusual punishment. Having seen what Judge Chesnut has just done in cutting bail imposed under the Smith Act in one case from \$75,000 to \$5,000, can Mr. Truman honestly say that this provision is in danger?

Articles IX and X are catch-all defenses of the residual rights and powers of the States and the people against all unspecified Federal usurpation. Here many of us non-Truman people feel there is, indeed, grave danger. But Mr. Truman would hardly agree since the abuse we fear comes from him and his power-happy colleagues in the post-1933 administrations.

If it is thus absolutely and teetotally false to say that the current drive against communism threatens the Bill of Rights, why does Mr. Truman keep saying that it does? The answer is painfully clear.

We have here one more symptom of the pandemic "liberal" error—an almost indescribable confusion and imprecision in the use of words and concepts. Mr. Truman has actually read into a curb on government abridgement of freedom a guarantee against social disapprobation.

For it is quite true that a man who will not turn his back on Alger Hiss today faces sharp social disapprobation may range from cuts on the street or hard words at cocktail parties through economic pressure to the

most offensive forms of scandal mongering and character assassination. And it is true that timid men valuing their comfort more than their convictions may in the face of social disapprobation swallow their dissents.

But—and this is the all-important point—dissenters retain every constitutional right to dissent. Social pressure will quite possibly be turned against them, but they will not be silenced physically by the force majeure of government. They will not be silenced because the Bill of Rights stands.

It is a gross delusion to suppose that the Bill of Rights, besides protecting dissenters against physical silencing by the Government, also cuddles cowards from the threat of social unpopularity. The Bill of Rights did not repeal courage as a basic equipment for participation in affairs.

It follows that a time when dissent may indeed require more courage, can be a time when the Bill of Rights is stronger than ever. This, indeed, all the 1933-type orators to the contrary notwithstanding, is such a time.

Need for Tuna Research Funds

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, August 27, 1951

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Dr. R. Van Cleve, director, University of Washington School of Fisheries, on the need for tuna research funds.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF WASHINGTON,

SCHOOL OF FISHERIES,

Seattle, Wash., July 31, 1951

The Honorable WARREN G. MAGNUSON,
Member of Congress,

Washington, D. C.

DEAR SENATOR MAGNUSON: For some time I have been concerned over the lack of progress on the new Inter-American Tropical Tuna Commission, which has been due entirely to the lack of funds during the past year. I was astounded to learn, on my return from a 3-month trip to Japan, that a movement is on foot in the Congress to eliminate appropriations for this commission for the coming year. I hope that such a grave error can be avoided, and I wish to call your attention to several facts regarding this commission.

While the center of the United States tuna industry is in California, in recent years the fishermen of Washington have profited greatly from the tuna fisheries off our coast. In spite of the tremendous investment in our tuna fisheries and the heavy production of food resulting from this industry, the only money spent to obtain information that will lead to sound conservation practices has come through minute appropriations made by the States of California, Oregon, and Washington. The United States has spent considerable sums for the investigation of the tuna industry off Hawaii by the Pacific Oceanic Fishery Investigations of the Fish and Wildlife Service, but the lack of research in the area exploited by the American tuna fleet, especially off the coast of Mexico and Central America, leaves this major producing area almost completely unexplored scientifically. The Inter-American Tropical Tuna Commission, established by treaty between the United States and Costa Rica in order to

fill this void and to lay a foundation for the protection of this natural resource, has been adopted and put into effect by both countries. This treaty is of great importance to the United States in many respects. It furnished a basis of active cooperation with at least one Central American country in an area in which all of these countries are vitally interested. It also provides a means of avoiding friction which has been increasing in recent years due to the policy followed by Mexico and other Central American countries of using our tuna fleet as a source of income through exorbitant license fees charged for obtaining bait, and exacted of our boats even to enter port to secure supplies. If properly administered by the United States, the treaty should also furnish a basis for closer cooperation with all the Latin-American countries and lead to a solution of the difficult problem of territorial limits and fisheries conservation off the Central American coast.

I understand that one of the facetious remarks being made in the Congress in opposition to the appropriation for this commission is that money is to be spent "to investigate the love-life of the tuna." This attitude is not new. In the 25 years I have been connected with fisheries biological work, I have heard it expressed many times by those who are completely ignorant of or uninterested in the potentialities of conservation of our natural resources. You are already aware, I am sure, of the excellent results stemming from the efforts of the International Fisheries Commission, which has rehabilitated the halibut fisheries of the Northeast Pacific. The International Pacific Salmon Fisheries Commission has accomplished equally fine results in rebuilding the sockeye fishery of the Fraser River. In the case of the former commission and its work on the halibut fishery, this is the first, and to my knowledge, the only marine fishery that has been successfully regulated and rehabilitated. The only salmon fishery of which I have knowledge that has been successfully regulated is that of the Fraser River under the jurisdiction of the International Pacific Salmon Commission. The primary reason for the success of both of these commissions has been their effort toward conservation based upon a thorough scientific knowledge of the biology of the species involved. Most of the failures in efforts to conserve other fisheries are due to lack of just such knowledge. I can assure you that without a careful and thorough study of the tuna fisheries of the west coast of the United States, Mexico, and Central America, we are deliberately taking a chance of losing the largest and most valuable fisheries of this region. In addition, we are risking the loss of a major source of protein food. We are also demonstrating to our Latin American neighbors that we are not interested in conservation. This is certainly a poor example for us to set for these countries where for the most part conservation is an almost totally unexplored field.

In view of the importance of the tuna fisheries to the United States, and in the interest of protecting our fishermen from exorbitant tribute to Mexico and Central American countries in the future, as well as to provide a sound basis for maintaining future relations with our Latin American neighbors looking forward toward the conservation of our resources, it is my firm belief that the Congress should appropriate the full amount requested for the operations of the Inter-American Tropical Tuna Commission. I am sure that support of this commission by our Government will result in benefits comparable with those derived from the other two international commissions mentioned above.

Respectfully,

R. VAN CLEVE,
Director.

Montana Indian Affairs Conference

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 28, 1951

Mr. MURRAY. Mr. President, on June 22 and 23, 1951, a Montana State Conference on Indian Affairs was held at the call of the Governor of Montana, Hon. John W. Bonner. Requests are coming from many States for copies of the proceedings of this conference, which are of widespread interest to Western States. At the request of Mr. K. W. Bergan, Coordinator of Indian Affairs, I ask that these proceedings may be printed in the Appendix of the RECORD.

I am informed by the Public Printer that the proceedings of the conference are estimated to make 8½ pages of the RECORD, at a cost of \$683.34.

There being no objection, the proceedings were ordered to be printed in the RECORD, as follows:

PROCEEDINGS OF THE FIRST MONTANA INDIAN AFFAIRS CONFERENCE HELD IN STATE CAPITOL, HELENA, MONT., JUNE 22-23, 1951

The registration of all delegates and visitors to the conference took place from 8 to 10 a. m., June 22, 1951.

The first session of the Montana Indian Affairs Conference was called to order by Miss Mary M. Condon, State superintendent of public instruction, at 9:30 a. m., June 22, in the house chamber of the State capitol.

Opening remarks by Miss Condon:

"It is my very great pleasure to officially call the first all Montana Indian Conference to order. The idea for the conference was born, I believe, in the mind of our Indian leader in the State and our very fine Governor of the State of Montana. The purpose of this meeting is to get together and talk Indian problems and learn from each other the solutions to problems. This is the most democratic way and effective way of getting concrete and lasting results. We are very grateful to you for the time and expense and the energy which has brought you to this meeting."

Miss Condon read two communications:

Telegram from Hon. JAMES E. MURRAY, Senator from Montana.

"DEAR GOVERNOR BONNER: My congratulations and sincere best wishes to you and the delegates of the tribes of Montana attending the State Indian Conference which you have had the wisdom and foresight to convoke. I am very conscious of the many significant contributions the Indian has made to our American culture and have every confidence that this outstanding record will be continued and enhanced in years to come. I hope that my legislative effort of the past and those I shall continue to make in the future in behalf of the Indians will in some measure hasten the approach of the day when the Indians will completely control their own social, educational and economic affairs and will assume those responsibilities and obligations now borne for them by the Federal Government. The paternalistic protection now afforded the Indian by the Government cannot be considered a permanent measure. I feel that the Federal Government must eventually step out of the Indian picture as the progress of the Indian places him in a position of equality in his community. With assurance of my continued interest and effort in behalf of the Indians of Mon-

tana and with kind personal regards to you all, I am,

"Sincerely yours,

"JAMES E. MURRAY."

Miss Condon read a letter from Mr. Jarle Leirfallom, chairman, Governors' Interstate Indian Council, St. Paul, Minn. Mr. Leirfallom congratulated Montana Indians upon the progress that has been made in bringing problems of Indian people to a focus and the hope that an early solution could be found:

"Hon JOHN W. BONNER,

"Governor, State of Montana,

"Helena, Mont.

"DEAR GOVERNOR BONNER: It will be impossible for me to return to Helena for your Indian conference on Friday, but I want to send this letter as a special message and greeting, hoping that you will find opportunity to read it to the persons attending the conference.

"It was very pleasant to see you briefly last week, and to find that you are putting forth such a great effort to assist the Indians, and to know that you are planning so many fine things for your State.

"The Governors' Interstate Council on Indian Affairs, which you helped organize in St. Paul last year, is making real progress. In my recent trip among a number of States, discussing the future of this organization with the governors of the States, I find great enthusiasm for the work of the council, and a real desire on the part of the States to continue working together for the solution of the Indian problem. Over the past year I have also found that Indians from all over the country have great hopes that the organization will benefit them. I am satisfied that neither the Federal Government, nor the individual States, nor local communities working alone, can solve the Indian problem. The cooperative efforts of all levels of the government, and the efforts of Indians themselves are necessary in finding a happy solution to their desperate situation. To develop this cooperation is one of the functions of the Governors' Interstate Council; to bring together all kinds of people, particularly from State and local communities, who have an interest in doing something for Indians, including Indians, who see the necessity of trying to help themselves, and by studying the many phases of the Indian problem, find out what needs to be done and then go ahead and do it.

"The Governors' Interstate Council is a meeting place where these ideas can be threshed out and progress can be made by pulling in one direction, rather than by pulling in all directions. Already, in the 1 year's time during which the Governors' Interstate Council has been active, much progress has been made. There are many things that States and local communities can do by themselves on behalf of Indians, and it is chiefly in this respect that the progress has taken place. Many State meetings and discussions have been had. Indians have been consulted about their problems. Persons interested in the Indian problems have begun to know one another, and have begun to exchange their ideas. State and local officials have begun to negotiate with the Federal Indian Bureau, expressing clear-cut ideas on what should be done and how improvements can be made, and a program is being placed before Congress. In other words, the Indian situation has been brought into the consciousness of the people of the State in such a way that there is a beehive of activity going in most States over the problem. The conference which you have called in Helena is certainly a very important undertaking on behalf of Montana Indians.

"Therefore, I want to say again that Indians in Montana and the rest of the country are greatly indebted to you, Governor, for having helped to start the Governors' In-

terstate Council, for having supported it this past year, and for carrying on the work within your State, all of which will lead to the eventual solution of the Indian problem, if we can submerge our differences to work together in a cooperative effort, rather than pulling away in different directions.

"Best wishes for a very successful conference, and thanks again for your ever-present interest in Indian matters.

"Sincerely yours,

"JARLE LEIRFALLOM,

"Chairman, Governors' Interstate Indian Council"

Miss Condon recognized and introduced Mr. Tom Main from the Fort Belknap Reservation.

"Mr. MAIN Before this conference of Montana Indians that has been called by our good Governor of Montana commences, I suggest that the chairman request that the Blackfeet Indians formally open this meeting in the good old traditional Indian way by singing a song. I can assure the chairman that under the Indian rules of order in his natural state, that I am in order. Thank you."

Motion seconded and carried

Song by Iron Pipe, Buffalo Hide, and Last Star from the Blackfeet Reservation, expressed the feeling that the Indians of the State of Montana are here today to try to iron out their problems. The above ceremony was carried out in a traditional and beautiful manner.

Hon. John W. Bonner, Governor for the State of Montana, was introduced by Miss Condon.

Brief summary of the address by Governor John W. Bonner:

"Judge Johnson, member of the Supreme Court, State of Oklahoma, Mr. Cohen, Mr. Archdale, Senator Phillips, Dave Higgins, our distinguished guests, members of Indian Tribal Councils of the State of Montana, and friends, this is a historic meeting as far as the Indians of the State of Montana are concerned. It is the first time in the history of Montana that a meeting of this type has been called in this State. I welcome all of you on behalf of the great State of Montana.

"I have had the good fortune to live on the Flathead Indian Reservation and perhaps know the Indians and their problems as well as any man.

"As attorney general I again faced the problems of the Indians of this State. It is my conclusion that more time has been given investigating these problems than solving them. Frankly speaking we have had enough investigation and the time has come to solve these Indian problems. Our real problem is to give to the Indians the same status as all other citizens of the United States of America, which means giving them the same rights, privileges, and obligations which are borne by every citizen. The obligation should be recognized as soon as possible. One of the important problems will then have been solved, and the Indians will then face the problems which are faced by all other citizens from time to time. The landless Indians are men, women, and children without a country, because our Congress has not legally recognized them. We must have the Congress of the United States give them legal recognition. Do not let anyone forget that there are many Indian gold star mothers in Montana. Indian servicemen have made outstanding records, and whether they are tribal Indians or landless Indians they are denied the rights given to other veterans. We should see to it that every Indian is given the right to serve the United States of America. Our Indians as a whole face problems of discrimination and face more severe economic hardship than most people."

Governor Bonner stated that he helped call the Governors' Conference of Indian Problems in St. Paul. If all Indian States

would support the program it would give the Indians greater opportunities to have their problems heard and place them on an equal status. Seventeen States, including Montana, have joined in an Interstate Council on Indian Affairs. Out of the suggestions made at this meeting, five proposals have been drafted and passed on to Congress:

1. Repeal of the Federal law prohibiting sale of liquor to the Indians.

2. Authorization for housing program which will accommodate Indians.

3. Extension for 2 years of the time for settling Indian claims which is due to expire August 13, 1951.

4. Provision for a vocational education program that will enable Indians to take suitable jobs.

5. Scholarship program which will enable Indian students without the necessary funds to obtain a higher education.

Governor Bonner added the foregoing proposals to the above:

1. To permit rehabilitation loans with a reasonable rate of interest from various sources.

2. A program of public works on the reservation to provide roads, etc.

3. Abandonment of racial discrimination and all discrimination against the Indians.

4. Veteran program to help Indian veterans, so that there will be no doubt that they will have the same rights as other veterans.

5. Give the Indians the same status as other citizens

6. Recognition by Congress of landless Indians, and a program of rehabilitation for them

"Of course there are many other needs which will benefit Indians. Many problems have not been solved because they have not reached the proper authorities. We have sincerely tried to do everything possible to solve our Indian problems." Governor Bonner concluded his address with an analysis of the work to be done in solving the problems of Indians in Montana and the big job of solving these problems. He closed his address with an optimistic statement that he is willing to work for such a program and asked the united support of all tribal councils in the State in a united effort to achieve this program.

The laws of 1951, established the Office of Coordinator of Indian Affairs. This makes it possible for the Indians to help solve their own problems. Montana is the only State that has such an act enabling its people to aid in solving problems confronting Indians. Governor Bonner paid tribute to those who started this bill and were successful in getting it passed.

Response. Mr. James Archdale, Poplar, Mont

Chief Black Owl, an Assinibolne Indian from Poplar, who has frequently gone to Washington to fight for the Indians, gave the response to Governor Bonner's address. In his response he gave many historical facts of the American Indian and the difficulties the Indian encountered and the new problems that are facing him every day. He stated that the Indians still love this country and are still loyal to this country, but it is necessary that they band together to gain the rights that belong to them, such as getting their water rights and mineral rights which have been taken from them. Also the Indians must be able to sell their cattle, and should also receive decent wages for the work they do in order to raise their standard of living to the level of other citizens of this country. They wish to cooperate with Governor Bonner and Miss Condon in making this conference a success. Indian people are rich in resources but have none of the other necessities of life. This conference should also do something about the prejudices against the Indians.

Mary M. Condon introduced Mr. Felix Cohen, an attorney from Washington, D. C.,

who took the place of Mr. Lierfallom on the program. Mr. Cohen is a practicing attorney from Washington, D. C., who has for years studied Indian law, and fought for Indian rights.

Mr. Cohen expressed his gratitude for the privilege of speaking at this conference, and paid tribute to Governor Bonner and to Justice Adair.

He told of the wealth that the Indians have lost in the last 100 years, and stated that today most Indians faced great poverty. He stated that for years their enemies have been trying to divide the Indians and that if they wanted to ever accomplish anything, the Indians must stick together. He paid tribute to Governor Bonner because he had all tribes represented at once, instead of having one tribe at a time.

There are on record over 500 official studies of Indian problems. These studies have never been put into effect and the problems solved. He stated that the policies of the Federal Government have gone through the following stages of philosophy:

1. Extinction.
2. Transmigration.
3. Isolation.
4. Paternalism.

He stated that in the last 100 years the appropriations made to Indians have been reduced by 80 percent; however, the appropriations to the Indian Bureau have been raised 535 times. Indians must be allowed to solve their own problems without the Indian Bureau ruling over every decision they make. The Indian Bureau has blocked every effort that has been made to give the Indians the rights they deserve. The Indian is learning from the white man not to be so trusting, but to be as shrewd as the white man. He must also learn to take over the white man's methods of going to court and going to Congress. God helps those who help themselves, and you will have God's blessing in your struggle.

Miss Condon introduced Chief Justice Hugh Adair, of the Montana supreme court, who introduced Hon. N. B. Johnson, justice of the supreme court of Oklahoma, and president of the National Congress of American Indians.

Judge Johnson expressed his gratitude at being invited to Montana for the conference. He said it was very gratifying to see the high officials of Montana taking such interest in the Indians and their problems. He expressed the hope that other governors of other States will follow Governor Bonner's example and take such an active interest in the Indian people of their States.

He extended greetings from Governor Murray, of Oklahoma, who is a Chickasaw Indian. He is the first Indian to be elected Governor of Oklahoma. In Oklahoma many county and State offices are filled by Indians. This shows that in Oklahoma they recognize Indians in their true light as American citizens and not as a segregated group. He stated that the Government has failed in fair dealings with the Indians, and the Indians must accept the white man's ways or methods or he shall be forever lost. There are now 400,000 Indians in the United States and Alaska living on some 50 different reservations. Few men in Congress have the time to make a study of Indian needs, thus they do not get the support they need to solve these problems. The Indians have bad lands, bad health, and much poverty in return for the many contributions they have given to white civilization. Groups must organize and make themselves heard by Congress, and the Congress and the people of this country must work together for a common understanding if the Indians are not to be seriously exploited. Governors of all States must unite and recommend to Congress that the States take over much of the work that the Office of Indian Affairs is now doing toward health, agriculture, and other services as they can do a much better job since they under-

stand the problems in their own areas and are closer to the people.

In both World Wars the Indians have contributed both in manpower and in the purchase of bonds, and yet they do not have the rights of other veterans and other citizens. Every Indian should go to the polls and vote, as they have a reservoir of power if they would only use it. The eventual solution of Indian problems will come through the education of our future generation.

At the conclusion of Judge Johnson's remarks the meeting adjourned for lunch.

AFTERNOON SESSION, JUNE 22, 1951, STATE CAPITOL, HOUSE CHAMBER, 1 P. M., MISS MARY M. CONDON PRESIDING

The afternoon session dealt with reports from each reservation.

Blackfeet problems, Mr. Joe Brown, of Browning reporting

In 1890 there were 18,000 Indians on the Blackfeet Reservation, mostly full-bloods. Today on the Blackfeet Reservation, out of 5,700 there are only approximately 400 full-blood Indian families. This indicates the pace of assimilation among Indians. He told about the early-day problems of providing education and getting the children to go to school, and now the problem of keeping them in school. The serious problem is that educational facilities are limited.

He believes that the Indians should have the right to build up their businesses, and handle such businesses themselves. They have partially won out in this. The Blackfeet are starting a policy committee at Browning, and believe with the backing of the results of this meeting that they are going places. This committee would be in a position and have the power to consult with the coordinator, if there is one, the Governor, and inform the State officials of reservation needs and wants. The problem is to get all tribal councils to unite on a program.

Crow Reservation problems, Mr. George Hogan reporting

One of the most serious problems of the Crow Reservation is the educational problem. The Crows paid dearly for their education by giving land for public schools to be built. Each year Congress appropriates enough money for the noonday lunches, and the tribe gives several head of buffalo for each school district in every public school in the various districts. Out of 2,800 children, 546 are enrolled in Indian schools. Those enrolled in other schools number 756, those not enrolled in any school number 70.

Irregular attendance: Parents should bear responsibility of forcing children to attend school regularly. They should be encouraged to make good, and night pastimes and tribal customs take too much of the children's time and should be lessened. Parents and teachers should hold meetings in order to understand one another and children as well. Most children need tribal assistance in order to receive the proper education.

Hon. Sam Mitchell, secretary of state for Montana, was introduced by Miss Condon. Mr. Mitchell expressed his gratitude for being able to live in this State, and how he has enjoyed serving the people of this State. He stated that the office of the secretary of state would be very happy to assist the Indians with any problems in every way possible.

Crow Agency problems, Mrs. Minnie Williams reporting

She stated that the mothers needed education in order to help their children. She told of the early days when children were stolen from their mothers and put into boarding schools, and of the hardships and insecurity they felt at being treated in this manner. This is the basis for the feeling of rebellion which still exists among Indian people today. She told of the discrimination problems, and of the need for getting together with the teachers and their desire to

cooperate with schools. She stated that the women of her tribe professionally had taken more advantage of their education than the men.

Flathead Reservation problems, Mr. Walter Marigeau reporting

One of the problems on our reservation is the migratory worker, those who do seasonal work in different communities where there is work in fruit orchards, sugar-beet fields, and potato fields. As a result there are children who should have graduated from high school, who are just commencing high school because of these periods they have missed attending school while working.

He brought up the question of what this new organization and this conference could do for the Indians. He wondered if they should support the Federal program, the State program, or have two programs. As it is they already carry about 90 percent of the administration on their reservation.

He raised the question of who is responsible for financing the education of the children who are less than one-quarter Indian blood.

He stated that the Flatheads do not have a hospital either on the reservation or in their town to care for their sick.

The tribe must pay hospitalization for its people, and \$40,000 last year was approximately the cost out of tribal funds for this purpose. They carry their own law and order, and this is also paid from tribal funds. They pay all expenses except the wages of one or two persons who work for the Indian Service.

There is a 10-percent charge against the sale of timber. Last year this amounted to about \$40,000. One-half of the Indian welfare cost is also paid by the tribe, and the other half by the county.

Chief Charlo, interpreted by Bob Adams

Chief Charlo expressed his desire that they should band together to solve their problems and needs. He told of his personal problem of paying for irrigation water twice which he has never used. He wanted to know what he could do to have the bill removed that the Bureau of Reclamation has against his property.

In answer to this problem Governor Bonner said that he would write to the Bureau of Reclamation to see if some adjustment cannot be made.

Fort Belknap Reservation problems, Mr. Tom Mann reporting

He said that they have many educated Indians on their reservation, some with college degrees and others with at least a high-school education. These men are in a position to take care of their own affairs if given the chance. The criticism is brought out that the Indian cannot make his own leases, and by going through the Indian Office there is so much red tape that it takes a week to a month to get any action. The Indian cannot develop his business ability because his rights to transact his own business are taken from him by the Indian Office. The Indian Office is so strong that there is no way to fight it. He expresses the strong feeling against the Indian Office, and he thinks that there should be some way to overcome having to have all of their business conducted through the area office. There is a tremendous need for rehabilitation on the Fort Peck Reservation. There are 500 families of Indian blood on the reservation and over one-half of them need better homes. He spoke highly of the education program on his reservation and the employee situation.

Fort Peck Reservation problems—James Archdale reporting

The land on the Fort Peck Reservation is considered as the bread basket of Montana. They ship out millions of bushels of wheat each year.

One of our problems is the question of irrigation. The Indians are selling too much

of their land to the white man. There is a false economic background back of every one of these people. We have some 1,400 Indian children that are landless. Out of 3,200 people we have some 500 Indian families and about 50 percent of them need livable homes. Out of these 500 Indian families we have a small percentage of them who are crippled people, orphaned children, blind, incapable of taking care of their own business. He believes that the liquor law should be repealed because there are only about 3 percent of the Indians who are addicted to the use of liquor. He feels that the Indian people are displaced persons because they have had all of the water and mineral rights taken away from them, and they do not have the opportunity to lease their own land or do their own business.

Northern Cheyenne Reservation problems, Rufus Wallowing reporting

In the summer of 1947 the Indian Bureau closed the Northern Cheyenne Hospital. This hospital cost the Government \$121,000. They must take their people to the Crow Agency Hospital. It is 42 miles to the nearest hospital and 80 miles for some people on the reservation. The ambulance often takes patients in to the hospital, and they must be returned to make the best of their illness because the hospital is filled. He thinks that the area office in Billings should recommend the reopening of their hospital. They have written to their Congressman, and also to the central office and they get no cooperation but are merely told to go to their area office. The area office feels that rather than reopen this hospital they can take their patients to the Crow Agency Hospital. Our Government, who sends millions of dollars to foreign countries to rearm them, could just as well spend some of that money to maintain that hospital. There is a clinic that is held there, once or twice a week. He believed that this money could just as well be spent to reopen the hospital and handle the health problem in the proper way. He also stated that the northern Cheyennes have a controversy with the Federal Government over the repayment for relief cattle issued in 1934 and 1935. These cattle came from drought-stricken areas during the depression.

Northern Cheyenne Reservation problems, Mr. Standing reporting

The Northern Cheyenne Tribe some time ago borrowed \$500,000 from the Government, and they in turn loaned this to individual Indians to purchase cattle. The difficulty was that they could not get started because the loans were so small that they could not sufficiently increase their herds. This year the Indian Bureau is now collecting what the tribe owes to the Government. "We tried to ask for an extension many times before the money came due, but we were always refused." They must now have their money or take back the stock. At least 1,800 head of cattle will be taken back in the next 6 years, which works a hardship on the tribe as they will not be able to build up the herd in time to save some for their own use. Many Indian boys are fighting in Korea for their land and for their freedom. We will fight here shoulder to shoulder until we get what we want. We must fight for our freedom or we shall forever be wards of the Government."

Rocky Boy Reservation problems, Joe Cochrane reporting

The Landless Indians have such poor land that it is impossible for the people there to make a living. As a result they have people all over the State of Montana who are doing odd jobs in order to make a living. They have some boys who should be graduated from high school and who are still in the seventh and eighth grades. This is a white man's problem as it cannot be handled by the reservation.

Landless Indian problems, Mr. Belgrad reporting

He expressed the desire to get together and thresh out the problems and arrive at some definite decisions.

He thanked Governor Bonner and Miss Condon and the rest of the non-Indian people who have given their time and effort to help the Indians to find a better way of life.

Summary of afternoon discussions, Robert Yellowtail, Crow Reservation

Mr. Robert Yellowtail summarized the afternoon discussions in a very able manner. His remarks centered around the following ideas:

Indian affairs come within the jurisdiction of Congress to handle in a legislative manner, but Congress is restricted in abrogating rights which belong to the Indians. These statements were quoted from decisions of the Supreme Court. The Indian Service has had 36 commissioners all of them selected on the basis of political patronage. The Bureau of Indian Affairs is not subjected to court review so the problem of the Indian becomes entirely political. The rights of the Indian are based upon our "Magna Carta," as expressed in: (1) Declaration of Independence; (2) Constitution; (3) Bill of Rights; (4) Atlantic Charter; (5) "four freedoms." The Indian was here before the white man and is included in the phrase "all persons" as expressed in the fourteenth amendment.

DINNER MEETING, 7 P. M., BANQUET ROOM, PLACER HOTEL, JUNE 22, 1951

The dinner was served by the Placer Hotel at a charge of \$2 per plate. There were 89 people present at the banquet. Miss Mary M. Condon presided very graciously as toastmistress at this first Indian affairs banquet. The music was furnished by Mrs. Sig Berg of Helena, and the principal addresses were given by Hon. John W. Bonner and Justice N. B. Johnson. Chiefs Iron Pipe, Last Star, Buffalo Hide, all dressed in full Indian costumes sang the Blackfeet Welcome Song. Several impromptu speakers expressed the feeling of the group in words of praise to Miss Condon and Governor Bonner for their interest and support of this first Indian affairs conference. Justice Johnson spoke very eloquently of how the Indian must proceed to accomplish the solution of his problems. He offered the services of the National Congress of American Indians in support of their program.

SATURDAY, JUNE 23, 1951, 9 A. M.

The conference and delegates met in groups for making recommendations for a program of procedures in the solution of the problems confronting the Montana Indians. Each section had a leader, a recorder, and a summarizer:

The groups met as follows:

Education. Miss Mary M. Condon, leader, room 84, Mitchell Building.

Employment: Mr. M. Joe Miller, leader, first floor, Mitchell Building.

Health: Mrs. Henrietta Crockett, leader, room 168, third floor, Mitchell Building.

Welfare problems: Mrs. Dorothy Cassutt, leader, senate chamber, Capitol Building.

Veteran problems: Mr. Forrest Gerard, leader, committee room 325A.

Federal relations, treaties, claims, land: Mr. Felix Cohen, leader, Governor's reception room.

Public works, economic, and business problems: Mr. Dave Higgins, leader, house chamber.

Landless Indians: Senator Phillips, leader, committee room 325B.

THIRD GENERAL SESSION, 1 P. M., JUNE 23, 1951, HOUSE CHAMBERS

House chamber, third floor, State Capitol Building, Miss Mary M. Condon, presiding.

Education, employment, health, welfare, veterans' problems, Federal relations, treaties, claims, land, public works, economic and

business problems, landless Indians, section reports were on the agenda.

Mr. Pamburn made a motion that all nominations be made from the floor, it was seconded by Mr. Higgins, no discussion followed, the motion was carried.

Judge Johnson was introduced. He said that there would be a meeting of the National Congress of the American Indians at St. Paul, Minn., in the Lowry Hotel on July 24-27, 1951. He said that there would be a Governors' Interstate Council meeting at the same time. In case anyone wants to go, he should write, 202 Dupont Circle Building, Washington, D. C., Ruth Bronson, secretary, Congress of American Indians.

The landless Indians

The landless Indians report was given by Mr. Belgrad, of Helena. Mr. Joe Dusone had wired his regrets that he could not be present to give the report on the landless Indians. Some of the problems that confront them are:

Rehabilitation of landless Indians heads the list. If this program were carried out it would mean a great deal in helping landless Indians be better taxpayers in Montana. Many landless Indians that are on relief rolls and receiving aid in various ways would become self-sufficient. Another problem is education. We feel that the program of rehabilitation and education must be considered together. There is much improvement to be made in education. These children must have the highest quality of education in order to compete in our way of life. Mr. Belgrad said that he hoped that the landless Indians can establish themselves so that they can take a place in society and become useful taxpayers like everyone else.

Mr. Belgrad read his resolutions and made a motion that the resolutions of the landless Indians be accepted; the motion was seconded by Mr. Pamburn; no discussion followed, and the motion carried.

The landless Indians presented a charter that showed that they were organized as a legal unit.

Mrs. B. M. Phillips, senator from Phillips County, told of her long experiences with the landless Indians and urged rehabilitation so that they could become contributing citizens.

Montana Landless Indians' Resolution

"Be it resolved, That there be conveyed to the Congress of the United States, through the Montana Representatives in Congress, that it is the feeling of this conference that Senate bill 743, now pending before Congress for the rehabilitation of the landless Indians of Montana, be enacted into law, and that this resolution be accompanied by Montana Senate Joint Memorial No. 1, setting forth the conditions and circumstances of the Montana landless Indians, introduced by Senator Mrs. B. M. Phillips, and adopted by the Thirty-second Legislative Assembly of Montana."

Resolution of Protest

"Whereas that certain strip of land bought in the vicinity of Great Falls, described as follows, blocks 14, 15, 22, Sun River Park addition in the N½ of section 9, T. 20N., R. 3E, p. m. Montana, containing some 40 acres or more purchased for the purpose and use of landless Indians residing in Great Falls, and such land would be utilized by said Indians for subsistence, gardening, and building homes: be it

"Resolved, That we, known as the landless Indians, protest any action to be taken for the sale of said land; and be it further

"Resolved, That the land in question be utilized for the purpose for which it was bought."

Montana Landless Indians Resolution of Thanks

"Whereas our great and humane governor, the Honorable John W. Bonner, has expressed deep interest in us and has encouraged us to

organize, to study our problems, and to take action, and

"Whereas Senator (Mrs.) B. M. Phillips has worked tirelessly and voluntarily without compensation in our behalf, and

"Whereas we recognized Miss Mary M. Condon, State superintendent of public instruction, and her wonderful assistants, as having played a great part in making this conference a success. Now, therefore, be it

"Resolved, That the Montana landless Indians are deeply appreciative and tender this expression of their most sincere thanks and gratitude."

Mr. Henry Little Dog, spoke briefly that he and his friends Bert Ear Rings opposed the Higgins resolutions.

Public works, economic and business problems, Mr. Dave Higgins, leader and summarizer

Mr. Higgins read his resolutions regarding public works, economic and business problems. He made a motion that his resolutions be accepted. It was seconded by Mr. Sharpe, no discussion followed and the motion was carried.

"Whereas there are vast amounts of lands on the reservations that may be in agriculture status by improving and extending existing road facilities, and

"Whereas existing reservation roads are used primarily as farm to market roads; and

"Whereas the existing roads programs on Indian reservations have been receiving insufficient funds to properly maintain and improve such roads; and

"Whereas roads, trails, and bridges into forest areas have long been neglected by reason of lack of funds, thus creating serious conditions with respect to fire hazards, dry rot and bug kill, with such timber products being critically needed for defense purposes; and

"Whereas the improving and expanding of roads, trails, and bridges to promote employment being a critical factor on the Montana reservations. Now, therefore, be it

"Resolved, That we hereby respectfully request immediate attention and increased Federal appropriations on respective Montana Indian reservations through appropriate State channels in order to alleviate the condition above mentioned, be it further

"Resolved, That Federal appropriations be increased for soil conservation on the reservations through the proper State channels to take care of flood control and drainage falling in the category of soil conservation."

The matter of the present credit regulations governing revolving credit funds on the reservations, and the securing of loans from existing loan agencies without the necessity of following the credit manual was discussed by the committee. The committee unanimously decided in favor of presenting this in the general session.

Committee report on Federal relations, treaties, claims, lands, Mr. Felix Cohen, leader

Mr. Felix Cohen, leader of the Federal relations, treaties, claims, and land, said that there were so many resolutions that they had been divided into sections. Mr. Jim Archdale read his resolutions and made a motion that they be accepted. This was seconded by Mr. Higgins, there was no discussion and the motion was carried. In the same section Mr. McDonald read his resolutions, one dealing with irrigation problems, and the other dealing with the repayment of cattle. He made a motion that his resolutions be accepted. This motion was seconded by Mrs. Schultz, no discussion followed and the motion was carried. Eneas Grandjo read his resolutions and made a motion that his resolutions be accepted. This motion was seconded by Mr. Main, no discussion followed and the motion carried.

Mr. Felix Cohen read a resolution which was presented to him by Mrs. Burgess, he made a motion that this resolution be accepted, no discussion followed and the motion carried

There were more problems that had been given to Mr. Cohen, but were not quite ready to be voted on, so he made a motion that the rest of these problems be given to the advisory committee and the coordinator. This motion was seconded by Meade Swingley, no discussion followed and the motion carried

Resolution To Permit Indian Tribes of Montana To Have Final Control Over the Spending of Their Own Incomes, James Archdale, Summarizer

"Whereas Indians are now prevented from spending their own income without the approval of various Government officials and cumbersome red tape under section 221 4 and 221 5 of title 25 of the Code of Federal Regulations, promulgated by Secretary of the Interior many decades ago, and other similar regulations applicable both to individual and to tribal income; and

"Whereas this denial of the right of Indians to spend their own money, destroys Indian initiative and prevents Indians from learning through experience how to handle their economic problems and is contrary to American principles; and

"Whereas the Legislature of the State of Montana in House Memorial No 5 has requested the Secretary of the Interior and Congress of the United States to abolish all such controls over the right of Indians to spend their own money; and

"Whereas the Commissioner of Indian Affairs advised the Governor's Interstate Indian Conference in 1950 that these controls had been abolished with respect to individual funds; and

"Whereas the Indian Bureau in 1948, 1949, and 1950 agreed to support legislation giving tribes the right to spend their own tribal income without bureau supervision; and

"Whereas Senators MURRAY and ECTON have introduced a bill to grant the tribes of Montana the right to spend their own tribal income without bureau supervision (S. 745), and similar bills have been introduced by Congressman MANSFIELD (H R 2124) and by Congressman D'EWART (H. R. 1936); and

"Whereas we have been advised that the Indian Bureau is opposing this legislation despite their previous pledges and promises: Now, therefore be it

"Resolved, That we respectfully urge the Secretary of the Interior to eliminate all controls which restrict the right of Indians to spend their own funds, and that the Secretary of the Interior overrule the Indian Bureau and give his support to the legislation sponsored by Senators MURRAY and ECTON and Congressmen D'EWART and MANSFIELD, giving the tribes of Montana final control over the spending of their own income."

Resolution on Leasing Land, James Archdale, Summarizer

"Whereas the Commissioner of Indian Affairs reported to the governor's interstate Indian conference in 1950 that the Indian Bureau was abolishing its paternalistic control over Indian leasing and was allowing Indians to lease their own lands and receive their own rentals; and

"Whereas notwithstanding this statement, the Indians of Montana are still being denied the right to lease their own lands and receive their own rentals and are being threatened that unless they sign over powers of attorney to the superintendents they will be denied all rights to get any income from their own property; and

"Whereas the result of Indian Bureau control over leases is to inject delays and obstacles that drastically reduce Indian income and destroy Indian initiative and gives

opportunity for corruption and influence to Bureau employees; and

"Whereas the so-called conservation purposes cited by the Indian Bureau to justify perpetuating its controls could be much better cared for by Montana State or county conservation officials; and

"Whereas the Montana Legislature has protested against the interference by the Indian Bureau with the right of Indians to lease their own lands: Now, therefore, be it

"Resolved, That we appeal to the Secretary of the Interior to rescind all regulations which prevent Indians from leasing their own land, individual or tribal, and receiving the rentals from this land, subject to any obligations which the Indians may owe by reason of having pledged rentals in payment of any debt."

Resolution on Irrigation, Cattle Repayment, Mr. Walter McDonald, Summarizer

"Whereas the Indians on several reservations in Montana are not permitted to use their own water for irrigation purposes unless the O. and M. charge is paid in advance; and

"Whereas the Billings area office has refused to follow the act of Congress (25 U. S. Code, Sec. 385) providing for reimbursement of O and M bills that have been assessed against Indian land where water has never been used, and

"Further, individual Indians who own land have been unjustly charged for bills that the Indian Bureau should have collected from the lessee, now, therefore, we urge:

"1 The Secretary of Interior to cancel charges on lands that cannot be irrigated.

"2. To cancel charges that the Indian Bureau should have collected from the lessee, and

"3 Instruct the Billings area office to abide by the act of Congress that gives Indians the right to water delivery free of charge where the Indians do not have adequate funds to pay for such delivery."

Resolution on Cattle Repayment, Mr. Walter McDonald, Summarizer

"Whereas in the early thirties the United States Government transferred drought-stricken cattle known as ERA cattle and ID cattle to several reservations in Montana; and

"Whereas these cattle were purchased on an emergency recovery act at a price ranging from about \$12 to \$22; and

"Whereas these cattle were meant for the use and benefit of the Indians of Montana; and

"Whereas the Department of Interior has recalled these cattle in kind or money on the reservations of Montana at the prices set by appraisers at \$130 on the Flathead and \$110 on the Blackfeet and various prices on different reservations: Now, therefore, be it

"Resolved, That we urge the Department of Interior to accept the same purchase price on the cattle that was used when the cattle were bought in the early thirties; and be it further

"Resolved, That the Department of Interior give such extensions of time for repayment as may be necessary and justified by the circumstances on the various reservations."

Resolution on Area Office, Eneas Grandjo, Summarizer

"Whereas Federal appropriation for the benefit of the Indian tribes of Montana and other adjacent areas are being diverted by the Indian Bureau to pay for the expenses of the Billings Indian Bureau area office; and

"Whereas the Billings area office has not done any work during the time of its existence in any noticeable amount for the benefit of the Indians living on the various Indian reservations in Montana, but has either

duplicated or interfered with the necessary activities on the various reservations of Montana and its surrounding areas; and

"Whereas the Billings area office has taken away powers from the superintendents of the various reservations, which superintendents are unable or not empowered to make decisions which were formerly within the province of the superintendent of the particular reservation but such matters are sent with the recommendations of the superintendent to the Billings area office where decisions are delayed to the detriment of the Indians living on such reservations, and such Billings area office acts, in most instances, as a road block and a time waster in getting matters from the superintendent of the particular reservation to the proper officials in Washington, D. C., and such area director and area office does not assume any responsibilities of officials in Washington, D. C., so as to decentralize powers as originally intended: Now therefore, be it

"Resolved, That representatives of the Montana tribes of Indians in conference assembled in Helena, Mont., at the first all-Indian conference respectfully petition the Congress of the United States to abolish the Billings area office and to abolish the useless jobs maintained by that office and that the personnel employed in such useless jobs be separated from the Federal payroll, and that the savings resulting from such action be used for the beneficial purposes intended by the Congress of the United States to aid the Indians in reaching economic self-sufficiency, be it further

"Resolved, That a copy of this resolution be sent to the congressional delegates from the State of Montana and to the proper congressional committees dealing with the Indian affairs and appropriations therefor, and to the proper Federal bureaus and departments"

Veterans Committee—Forrest Gerard, leader; Steve DeMers, summarizer, Meade Swingley, recorder

The following recommendations have been approved and passed upon in this section:

1. That this committee endorse the bill now in Congress for the repeal of the Indian liquor law.
2. That we recommend an amendment to the present trust patent laws on the Indian land which will permit Indian veteran wards to submit their land as security for a GI loan by an approved lender under guaranty loans for veterans.
3. That we strike out that portion of the Wheeler-Howard Act which states, "at the discretion of the Superintendent," and change that part of the sentence to read, "to appear before a Federal Judge and leave it to his decision as to the competency of the Indian ward involved."
4. That Korean war veterans have the same benefits and privileges as veterans of World War II
5. That the United States Government recognize the landless Indian veterans as legal citizens of the United States, to enjoy all other privileges as all other Indian veterans as to loans, education, etc.
6. That the Congress of the United States be urged to enact appropriate legislation to permit veterans who did not themselves take advantage of the GI bill of rights because of family responsibilities, business reasons, or because they had already acquired their education prior to entry into the Armed Forces, to pass on such benefits in the same amounts as such veteran would have been entitled to himself, to one or more of his children in such prorated amounts as he or his widow might choose.

Mr. DeMers moved the adoption of his report of the veterans committee, which was seconded by Mr. McDonald. There was no discussion and the motion carried.

Governor Bonner had to leave, and before he left he thanked the people for attending. Governor Bonner felt that a lot of work had been accomplished and a great deal of interest was shown at the conference. He said he would take these resolutions to the Governors' interstate council.

There are no funds to hire a coordinator; we must get the legislature to appropriate money for a salary. We need someone to help the Indians. We are just starting to move along in this work. Gov. John W. Bonner asked Mr. Bergan to take on this extra work. He thought an Indian would take the job, but at the present time he could see no one that could qualify better for this job than Mr. Bergan. Mr. Archdale felt that Mr. Bergan was well qualified. Mr. Meade Swingley spoke highly of Mr. Bergan and felt sure that Mr. Bergan could do a fine job.

Nominations were open for an Indian coordinator. A motion was made by Mr. Archdale and seconded by Mr. Swingley that Mr. Bergan be appointed as a coordinator of Indian affairs for a year and a half. There being no further nominations, the motion was carried.

Mr. Pambrum made a motion that all the various reservations and the landless Indians choose two delegates to be on the advisory board to assist the coordinator and help make resolutions. These two people can be elected in any manner the tribal council desires. At the advisory meetings there would be only one voting delegate from each reservation. The motion was seconded by Mr. Couture. There was no further discussion and the motion carried.

Governor Bonner left the conference to attend another meeting.

Welfare committee, Mrs. Dorothy Cassutt, leader

Mrs. Irgens read the recommendations concerning welfare problems; she made a motion that these resolutions be accepted. The motion was seconded by Mr. Barrett; no discussion followed and the motion carried.

- Federal level:
1. To provide Federal funds for rehabilitation loans at a reasonable rate of interest and sufficient amounts to meet the needs of the family.
 2. Authorization for a housing program that will encourage integration of our Indian citizens
 3. To support a vocational education program that will equip Indian youth to take suitable jobs
 4. Establishment of a scholarship program to provide higher education for promising Indians.
 5. To accord Indians equal opportunity for responsible positions in the Indian Service.
 6. To establish the policy of placing Indian children in public schools in the direction of normal transition, thereby ultimately reducing and eliminating boarding schools particularly for younger children.
 7. To urge the Indian Service to make increasing use of the machinery of the Johnson-O'Malley Act so that agreements may be made for services of health, education, law and order, agriculture, and relief to be dispensed by one State agency so that Indians will cease to feel that they are a minority group but are a part of the body politic with all the rights, privileges, and responsibilities of that citizenship.
 8. Extension for 2 years of that time for filing Indian claims which expires August 13, 1951.
 9. Repeal of discriminatory liquor laws.
- State level:
1. Cooperate and support the State coordinator plan.
 2. Educate the public toward a better understanding of Indian affairs through the facilities of the press, radio, clubs, and other organizations interested in Indian welfare,

and to promote more community interest to break down existing barriers that may be found.

3. Set up public works programs.
4. Encourage education in the broadest sense: (a) adult education; (b) educate children for useful citizenship; (c) make known to Indian youth opportunities for higher education, such as scholarships.
5. To promote health services with special attention to mental health.
6. To repeal discriminatory laws.
7. To actively seek services to which Indians are eligible.
8. To make known to Indians their right to appeal with regard to social-security benefits.

Health committee, Mrs. Henrietta Crockett, leader; Mrs. Vina Chattin, summarizer

Fort Belknap Indian Reservation, Mrs. Julia Schultz: "Inasmuch as there is only one doctor to provide medical service to both Fort Belknap and Rocky Boy Indian Reservations, a distance of 100 miles between, that the salary of the doctor is inadequate, that the hospital has only 30 beds, that there is no home for the aged; it is therefore requested that an additional doctor be placed on the hospital staff at Fort Belknap, and an additional appropriation be granted by the Government to increase the salaries of the doctors and for other hospital facilities and that other provisions be made for medical care of the landless Indians, since the Fort Belknap Hospital does not have the facilities to care for them, and that a home be provided for the aged, with adequate staff for same."

Northern Cheyenne Indian Reservation, Mr. Rufus Wallowing: "Inasmuch as the hospital on the Cheyenne Indian Reservation has been closed for some time, there is a dire need that there be hospital facilities for the Cheyenne Indians since the Crow Hospital is inadequate to care for the Cheyennes too. It is requested that the Cheyenne Hospital be reopened and a staff provided to operate the hospital, also that a home be provided for the aged. A resolution to the effect that the hospital be reopened is presented herewith."

Fort Peck Indian Reservation, Mr. Dave Johnson: "Inasmuch as there is evidence of lack of proper medical attention provided by the medical staff of the Fort Peck Hospital, and the hospital facilities are inadequate, it is requested that a complete investigation be made of the present medical service provided by the Fort Peck Hospital, that the need for another hospital be investigated, that additional appropriation be granted for better hospital care and facilities be granted and that a home for the aged be provided."

Flathead Indian Reservation, Mr. Jess Couture: "Inasmuch as the tribe has been paying for all hospitalization costs and transportation costs to other hospitals, which the tribe cannot continue to do and remain self-supporting and inasmuch as the present doctor is unqualified or inadequate to fill the position, it is requested that the Government assume the cost of hospitalization, transportation to other hospitals, that one doctor now employed at the Holy Family Hospital in St. Ignace, Mont., be replaced by a new, better-qualified doctor, that Dr. Mathews be replaced, and that a home for the aged be provided by using the old hospital at the Dixon Agency, with a field nurse to keep in contact with the old people for medical attention."

Blackfeet Indian Reservation, Mrs. Vina Chattin: "Inasmuch as there are many old people on the reservation without children to care for them and without adequate funds to take care of their living expenses and medical care, and inasmuch as the Blackfeet Hospital is not equipped to care for old people for indefinite periods of time, it is requested that a home be provided to care for the aged

Blackfeet Indians, with a staff nurse, that the home be placed in Browning, in town where it will be easily accessible. This request is urgent and requires immediate attention."

Resolution Providing for a Home for the Aged on Every Indian Reservation in Montana

"Whereas at the present time, there are no facilities on any Indian reservation in Montana for care of old people; and

"Whereas inadequate care of the aged creates a health problem because of inadequate funds and lack of hospital facilities to provide this care in hospitals, and

"Whereas the income to these old Indian people is insufficient to care for their living expenses and medical needs; and

"Whereas the same condition exists on each Indian reservation in Montana Be it

Resolved by the Montana Indians in conference assembled at Helena on this 23d day of June 1951, That they hereby petition and urge the Bureau of Indian Affairs, the Office of the Secretary of the Interior and the Congress to forthwith appropriate and set aside the money necessary to provide necessary homes for the aged with necessary staff on each Indian reservation in Montana, in order that the health and welfare of the said aged Indian people on the reservations in Montana may be taken care of and that these people may be spared the unnecessary risks of life now forced upon them by the Government through the Bureau of Indian Affairs without these facilities for care of the aged Indian people on the Montana reservations."

Resolution Providing for the Staffing and Operation of the Cheyenne Indian Hospital at Lame Deer, Mont

"Whereas there is at the Cheyenne Indian Agency at Lame Deer, Mont., a complete Government-built hospital unit which has been abandoned; and

"Whereas the Cheyenne Indians are in dire need for the opening and immediate use of this hospital; and

"Whereas they are now and have been since abandonment forced to take their sick to the Crow Indian Agency Hospital which is 80 miles distant from the eastern end of the Cheyenne Indian Reservation; and

"Whereas the said Cheyenne tribe from every moral consideration should no longer be allowed to continue to go along without this most urgent and necessary health protection activity; and

"Whereas the Crow Agency Hospital is and has always been overcrowded in caring for the health needs of the Crows, and is in no position to take on the extra burden of caring for the patients from the Cheyenne Indian Agency, and

"Whereas on account of this great distance several Cheyenne Indians have died enroute to the said Crow Hospital in emergency cases, and

"Whereas in the winter months when the temperature is down below the 20 degree level such trips are most hard on sick patients, and in labor cases several cases of near births enroute have happened; and

"Whereas the Government by treaty and other obligations both moral and legal is committed to perform this kind of duty toward the Cheyenne Tribe: So, now, therefore, be it

Resolved by the Montana Indians in conference assembled at Helena on this 22d day of June 1951, That they hereby petition and urge the Bureau of Indian Affairs, the Office of the Secretary of the Interior, and the Congress to forthwith appropriate and set aside the money necessary to again reopen the said Lame Deer Indian Hospital in order that the health demands of the said Cheyenne Indians may be met and their people be spared the unnecessary risks of life now forced upon them by the Government

through the Bureau of Indian Affairs in the removal of personnel of their hospital."

Mrs. Vina Chattin read the resolutions dealing with health, and she made a motion that these resolutions be accepted, the motion was seconded by Mr. Dave Higgins, no discussion followed and the motion carried.

Mr. William Smith read the report which was drawn up by the group that attended the employment section. He made a motion that this report be accepted, it was seconded by Mr. Couture, no discussion followed and the motion carried.

Recommendations on the panel on employment. Mr. Joe Miller, leader, Mr. William Smith, summarizer

The panel on employment unanimously agrees that—

1 Indian tribal councils must be urged to establish employment committees on each of the Indian reservations in the State of Montana.

2. Such employment committees should be designed to work with the younger generation of the Indian population of the State of Montana in training such young people in the industrial trades and crafts.

3. Such committees should work in close cooperation and harmony with the Montana Employment Service, a department of the Unemployment Compensation Commission of Montana, to effect the registration of all available workers, both male and female, with the employment service, so that the Indian population of this State may achieve full employment and the State and Nation be thereby enriched in all ways.

4 Whenever work of either a public or private nature is to be performed under contract or otherwise on an Indian reservation, preference should be given by public or private employers to qualified Indian workers living on that reservation.

5. Tribal councils and individual council leaders throughout Montana must be urged to contact workers with the objective of maintaining and developing further high standards of performance, punctuality, efficiency, and dependability among Indian workers.

Education. Miss Mary M Condon, chairman; Mr. Walter Morigeau, summarizer

Mr. Morigeau read the report concerning education. He made a motion that this report be accepted. It was seconded by Mrs. Burgess and the motion carried.

The committee on education submits the following report of its deliberation the morning of June 23, 1951, in the form of five recommendations

1 The United States Indian Service give special financial support to vocational training in high schools to encourage this type of training for children of Indian blood.

2. More emphasis be given to the enforcement of compulsory education laws on Indian reservations.

3 Indian education reimbursement should be given for all children of Indian blood without restriction to the one-fourth degree of blood that is used at present.

4 Indian children should be admitted to public schools on the same basis as other children without discrimination of any kind.

5. The United States Indian Service should make the education of Indian children a long-term project with more emphasis on higher education than at present. This will give the young children of Indian blood better opportunities to fit into the American stream of life

The following is a slogan Thomas Main of Fort Belknap, Mont., offered as a statement of Indian position on Federal and State relations:

"TETHERED TO FEDERAL LAW, NOT TURNED LOOSE AND NOT CHOKED DOWN

"In the word tether we can spell out something positive that we stand for:

"T is for time that each tribe needs to figure out its program of change.

"E is for education for our young people who will have to live the new way.

"T is for Tribal Council Rights guaranteed by Federal law.

"H is for home base—a guaranty that our reservation homes will always be ours.

"E is for economic planning by Indians which will guarantee our tribal assets and our own administration.

"R is for reform needed by both Indians and whites. We will improve in our responsibility toward each other as we keep in mind our responsibility to God and His laws.

Mr. Dave Higgins read a resolution dealing with the Governors' Conference and the Inter-Council on Indian Affairs. Mrs. Burgess made a motion that this resolution be adopted, it was seconded by Mrs. Schultz, the motion carried.

"Whereas the Governors' Conference at White Sulphur Springs, Va., in 1950 adopted a resolution to the effect that the problems of the Indians of the United States were also problems of the Governors' Conference; and

"Whereas and also at the Governors' Conference at St. Paul, Minn., 17 States including Montana joined in the formation of an Inter-Council on Indian Affairs which engaged in the discussions of the administration of the affairs of the Indians and finally reached agreement on five proposals presented to the Congress which proposals are as follows to wit

"1 Repeal of the Federal law prohibiting sale of liquor to Indians

"2 Authorization for a housing program that will encourage integration of our Indian citizens.

"3 Extension for 2 years of the time for filing Indian claims, which is due to expire August 13, 1951

"4 Provisions for a vocational education program that will equip Indians to take suitable jobs.

"5. Establishment of a scholarship program that will enable promising Indian students, without the necessary funds to obtain higher education

"Whereas the representatives of 22,000 Indians of the State of Montana being met in conference at Helena, Mont., on the 22d and 23d day of June, 1951, in a review of the administration of their affairs by Washington, and other matters in relation thereto by the State of Montana do hereby adopt proposals numbers 1 to 5 adopted at the St Paul Conference of 17 States, together with the following proposals, numbers 6 to 11, to wit:

"6 To permit rehabilitation loans with a reasonable rate of interest from various sources for the purpose of enabling deserving Indians to become self-sufficient.

"7. A program of public works such as roads on Indian reservations to provide improvements and employment on these reservations.

"8 Abolishment of discriminations

"9. A vigorous program to help the Indian veteran so that there will be no doubt that he has the same rights and privileges as other veterans

"10 Coordinated effort to give the Indians the same rights as other citizens.

"11. Recognition by Congress of landless Indians and a program of rehabilitation

"Whereas the Indians of Montana in conference at the State Capital of Montana these 22d and 23d days of June 1951, do hereby officially adopt the St Paul Conference proposals, numbers 1 to 5 as herein set forth, together with the proposals above recommended, numbers 6 to 11; and do further hereby recommend to His Excellency, the Governor of Montana, that he do everything in his power to see to it that the wishes of the Indians of Montana be conveyed to the National Organization of the Governors' Conference of the United States and the Congress of the United States to do all with-

in their respective powers to write into law the said 11 proposals herein above set forth. "Done at a State-wide convention of the Indians of Montana at Helena, Mont., these 22d and 23d days of June 1951."

Hon. N. B. Johnson was thanked once more for attending the conference on Indian affairs and speaking so effectively on Indian problems and lending his prestige to the conference.

Miss Condon introduced Mr. Bergan, the coordinator for Indian Affairs.

There being no further business, Mr. Couture made a motion that the meeting be adjourned, it was seconded by Mr. Higgins, the motion was carried.

JULY 20, 1951.

GOV JOHN W. BONNER,
Helena, Mont

DEAR GOVERNOR: I want to again express my appreciation for the many courtesies extended to me while in Helena. It was a pleasure to meet you and to meet with your State officials, especially the chief justice of your supreme court.

The result of the Indian conference was most heartening and gratifying. The response of the Indians and the cooperation they gave you in working out the purposes of the conference was remarkable. It was a milestone in the progress of the Indians of Montana, and I hope that they will take advantage of the good graces tendered them by the non-Indian citizens of Montana through you as Governor.

However, I believe it will be necessary to conduct some meetings on the reservations among the full-blood Indians to educate them and acquaint them with the aims and purposes back of this movement. While there was absolute harmony among those Indians present, there were a few who had some misgivings and entertained the idea that the State was endeavoring to take over all the functions of the Federal Government, but through a series of meetings held on the reservations, the real purposes of the conference can be explained. Once the full-bloods understand thoroughly what the State is trying to do, I feel that they will be wholeheartedly behind you in the great work you have started.

I do hope that other States with a major Indian population will follow your example by calling like conferences with a view toward adopting a similar course. I talked to the head of the welfare department yesterday to get his views on the advisability of requesting our Governor to call a conference of the Indians of this State. I learned from him that certain services in regard to welfare now handled by the Federal Government could well be handled by this department.

I have also learned from the area director of the Five Civilized Tribes that the Indian Bureau has entered into contracts with the State whereby the State will take over all the health services heretofore rendered by the Indian Bureau and will administer those services to the Indians except, of course, the three Indian hospitals we have in Oklahoma.

I want to take this opportunity to extend to you an official invitation to attend the eighth annual convention of the National Congress of American Indians which will be held in St. Paul, Minn., July 24-27, inclusively. I would be very happy to have you appear on our program and speak on any subject which you think will be of interest to the convention. I will be glad to arrange a date on the program suitable for your convenience, and hope that your business is so that you can be with us.

With all good wishes, I am

Sincerely,

N. B. JOHNSON,
President, National Congress
of American Indians.

Senate Joint Memorial 1 (Introduced by Phillips)

A joint memorial of the Senate and House of Representatives of the State of Montana to the Congress of the United States and to the Honorable JAMES E. MURRAY and ZALES N. ECTON, United States Senators from Montana, and to the Honorable MIKE MANSFIELD and WESLEY A. D'EWART, Representatives in Congress from Montana, requesting that Congress continue and enhance its program of rehabilitation of the landless Indians in Montana, known as nonwards.

Whereas before World War II the Government of the United States has undertaken a program of rehabilitating the landless Indians in Montana, which program was interrupted by the outbreak of the war and has not since been resumed; and

Whereas many Montana Indians, who for the most part reside on the outskirts of various cities and towns in the State, are ill-fed, ill-clothed, and their living conditions are deplorable, in that said Indians do not receive the common necessities of life. Now, therefore, be it

Resolved by the Thirty-second Legislative Assembly of Montana of 1951 now in session (the Senate and House of Representatives concurring) That we do most earnestly pray that the Congress of the United States resume and continue an adequate program of relief for the nonward Indians, commonly known as the landless Indians, of Montana, to the end that said Indians may ultimately become self-supporting, and may in the meantime not be denied the common necessities of life; be it further

Resolved, That copies of this memorial be transmitted by the secretary of state of Montana to the Senate and House of Representatives of the Congress of the United States, and to the Senators and Representatives in Congress from the State of Montana

House Joint Memorial 5 (Introduced by Higgins)

A memorial to the Congress of the United States of America, to the Honorable United States Senators Zales N. Ecton and James E. Murray, and to the Honorable Representatives in Congress Wesley A. D'Ewart and Mike Mansfield, and to the Honorable Oscar L. Chapman, Secretary of the Interior, requesting that the Eighty-second Congress introduce and pass an act eliminating all present discriminatory laws pertaining to Indians, transfer to the State of Montana and its subdivisions certain enumerated activities and transfer fund for the purposes of expediting these activities

Whereas the American Indians of Montana are now subjected to various discriminatory laws and practices administered by the Bureau of Indian Affairs, under which our first Americans are denied rights enjoyed by their fellow-citizens of other races; and

Whereas the continuance of such discriminations is inconsistent with American ideals of democracy, freedom, and equality; and

Whereas the Indians of Montana have pleaded in vain with the Bureau of Indian Affairs for the ending of such discriminations. Now, therefore, be it

Resolved by the House of Representatives of the State of Montana (the Senate concurring), That we respectfully urge that the Congress of the United States eliminate, at least with respect to the Indians of this State, all existing Federal laws which discriminate against such Indians, and we specifically recommend as a step in the right direction, the prompt enactment of the House Resolution No. 1936 of the House of Representatives of the Eighty-second Congress of the United States; be it further

Resolved, That the Secretary of the Interior is respectfully urged to see that promises made by the past four Commissioners of Indian Affairs are actually carried out and that controls which hinder the right of Indian citizens to spend their own money, to lease their own lands, to hire their own attorneys, and to run their own businesses should be promptly eliminated, be it further

Resolved, That we urge the Congress and the Secretary of the Interior, in their respective fields of jurisdiction, to turn over to the State of Montana and its subdivisions any of the following activities which, in the opinion of the Indian tribes concerned, can best be handled under agreements with the appropriate State authorities:

- (1) Education;
- (2) The administration of law and order (without prejudice to existing Indian rights);
- (3) The management of reservation hospitals and health services;
- (4) The maintenance of reservation roads;
- (5) Resource management and agricultural extension work; be it further

Resolved, That the Congress is respectfully requested to authorize the transfer to the appropriate State, local, or tribal authorities of funds for any of the foregoing purposes, not in excess of the average funds appropriated for such purposes during the past 5 years, whenever agreements satisfactory to the tribes concerned and to the appropriate State agencies have been concluded; be it further

Resolved, That copies of this memorial be forwarded by the secretary of state of the State of Montana to the Congress of the United States; the Honorable Oscar L. Chapman, Secretary of the Interior; the Honorable Senators Zales N. Ecton and James E. Murray, Senators from the State of Montana; the Honorable Wesley D'Ewart, Congressman from the Second Congressional District; and the Honorable Mike Mansfield, Congressman from the First Congressional District; and to each of the Indian tribes of the State of Montana.

INDIAN AFFAIRS CONFERENCE, JUNE 22-23, 1951

A list of the people attending the convention: Forrest Gerard, Helena, Mont., Blackfeet Reservation; K. W. Bergan, Helena, Mont., guest; Mary M. Condon, Helena, Mont., guest; Mrs. B. M. Phillips, Landusky, Mont., landless Indian; Frank Bellmore, Plains, Mont., Flathead Reservation; Arthur L. Swan, Arlee, Mont., Flathead Reservation; Joseph Ironpipe, Browning, Mont., Blackfeet Reservation. Theodore Last Starr, Browning, Mont., Blackfeet Reservation; Bill Buffalo Hides, Browning, Mont., Blackfeet Reservation, Sister Pipe Woman, Hays, Mont., guest; Sister Clare, Hays, Mont., guest; George Cochran, Harlem, Mont., Fort Belknap Reservation, David Johnson, Poplar, Mont., Fort Peck Reservation; Mrs. David Johnson, Poplar, Mont., Fort Peck Reservation; Gwendlyn Mail, Helena, Mont., guest; George J. Fox, Hays, Mont., Fort Belknap Reservation; Andrew Gray, Lodge Pole, Mont., Fort Belknap Reservation; Thomas Main, Harlem, Mont., Fort Belknap Reservation; Lorena Burgess, Perma, Mont., Flathead Reservation; William C. Knorr, Wolf Point, Mont., Fort Peck Reservation; Mrs. Dolly Akers, Wolf Point, Mont., Fort Peck Reservation; William R. Smith, Oswego, Mont., Assiniboine; Mrs. Henrietta Crockett, Helena, Mont., guest; Mrs. Julia Schulz, Dodson, Mont., Fort Belknap Reservation, Mrs. Vina Chattin, Browning, Mont., Blackfeet Reservation; Joe Jackson, Oswego, Mont., Assiniboine; Edward Belgard, Helena, Mont., landless Indians; Violet Belgard, Helena, Mont., landless Indians; Jerry Thumm, Great Falls, Tenth Avenue SW., landless Indians; Helen Thumm, Great Falls, Mont., landless Indians; Henry Archdale, Oswego, Mont., Assiniboine; Ralph Wing, Poplar, Mont., Fort Peck Reservation;

**ROCKY BOY'S AGENCY,
Box Elder, Mont., April 15, 1950.**

We, the undersigned, original enrolled members of the Rocky Boy's Indian Reservation, have passed around a petition, herewith attached, among the so-called full-bloods and among others of the enrolled members of the above-mentioned reservation, for the purposes of voting, or voicing our opposition against the bills, known as S. 1690, and H. R. 4318, and also H. R. 5570.

The reasons for our opposition to the above-mentioned bills are, because, the sum mentioned in the bills is entirely out of proportion, compared to the size of our reservation. First of all, we have not anything to put up as security for the amount of \$3,510,000, when we only have a 100,000-acre reservation.

Since we adopted the Reorganization Act of June 18, 1934, we have borrowed funds from the Government and we still would like to borrow funds, in the amount of \$100,000, but not any more than that amount.

We have tribal funds roughly, \$10,000, which our tribal council has earmarked for the purpose of purchasing heifers to be used as a revolving herd to be issued among our full-blood members. We have many homeless members among our young people, who have a desire to become stockmen.

Governor Bonner has called a convention to be held at Great Falls and has requested attendance of Indians of all reservations in the State of Montana. The chairman of our tribal council has appointed a member of the tribal council and a member of the full-blood group to represent the Cree Tribe. The half-breeds have appointed a member of the tribe to represent them at this convention.

We, the so-called full-blood or minority group hereby appoint another member of our group to represent us at this convention, namely, Pete Favel, a full-blooded member of the Chippewa Cree Tribe.

This petition was brought before the tribal council in the early part of March to see what attitude they would take and the majority of the council members were against the bills now in Congress.

**India's Objection to Japanese Peace
Treaty**

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, August 28, 1951

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three editorials: Nehru's Gift to the Kremlin, published in the Washington Evening Star of August 27, 1951; Scratch One Yogi, published in the Washington Daily News of August 28, 1951; and India's "No," published in the Washington Post of August 28, 1951.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

NEHRU'S GIFT TO THE KREMLIN

Prime Minister Nehru and his government, whether wittingly or not, have given aid and

comfort to the Kremlin in deciding that India will not take part in next week's San Francisco conference on the Japanese peace treaty. Andrei Gromyko and his monkey-wrench Soviet delegation could hardly have asked for a nicer gift. Propagandistically and otherwise, it should be of considerable help to them in their expected effort to play hob with the meeting and divide its participants as much as possible.

Mr. Nehru's decision, of course, does not come as a complete surprise, though that fact does not make it any the less discouraging or irritating. The possibility of his boycotting the conference was intimated some weeks ago in notes expressing to our Government his strong dissatisfaction with a number of the projected treaty's provisions, and he has now made clear that that dissatisfaction still stands. Our attempt to dissuade him from it has failed, and India will therefore hold itself entirely aloof from the San Francisco proceedings.

The chief of Mr. Nehru's objections may be summed up as follows: First, he is against the fact that the treaty does not specifically provide for Formosa's return to China, and the transfer of South Sakhalin and the Kuriles to Russia; second, he holds that the Ryukyus and Bonin Islands, instead of being placed under an American-administered United Nations trusteeship, should be restored to the Japanese; third, although not ruling out the idea of separate mutual security agreements, he is opposed to having the peace settlement include the article calling for the continued presence of foreign armed defensive forces—meaning particularly United States forces—in and about Japan after the formal occupation ends; and finally, fourth, he considers it wrong that the Chinese Communist regime at Peking has not been invited to participate in the San Francisco conference.

All of these objections coincide with those raised by the Kremlin. Mr. Nehru prides himself on following a policy that he regards as absolutely imperative for India. The policy, besides emphasizing the doctrine of Asia for the Asians, is supposed to be one of strict neutrality—a kind of tightrope act—in the power contest between the Soviet Empire, on one hand, and the United States and most of the rest of the free world, on the other. But somehow, as he tries to do his fence-sitting, Mr. Nehru—again perhaps unwittingly—seems to lean rather noticeably toward the Russian position. At any rate, even though his government has voted—with certain reservations—against the Red aggression in Korea, he has appeared quite anxious to be pleasing to Moscow and Peking.

Maybe India's geographical location and its domestic political situation make Mr. Nehru feel that he can follow no other course. Still, his actions—climaxing now by the decision to stay away from San Francisco—have tended to be less than realistic or even-handed. Why, for example, if he insists that the Ryukyus and the Bonins should be restored to Japan, does he not also insist that Japan get back southern Sakhalin from Russia? And how can he seriously suggest that the Peking aggressors ought to have been invited to next week's conference? And on what common-sense basis, even the dangerous world we have, can he justify his objection to special Japanese-American defensive arrangements against the Red threat in Asia?

These questions speak pretty much for themselves. In all probability—despite Mr. Nehru's arguments and Soviet propaganda barrages—the overwhelming majority of governments represented at San Francisco will sign the Japanese Treaty. Nevertheless, because it is a country of special significance in Asia, India will be sorely missed at the conference. Its absence will cast a shadow on all the proceedings—the kind of shadow

that the Kremlin wants. Mr. Nehru may have felt compelled to make the decision he has made, but in doing so he has definitely hurt himself in the United States and other free nations. More than that, to the world at large, where his mental and leadership qualities have been highly regarded, he has demonstrated a surprising degree of muddle-headedness.

SCRATCH ONE YOGI

Prime Minister Nehru's unmitigated gall is equaled only by his capacity to picture himself as an anguished martyr dedicated to the cause of world peace—Nehru version.

By his timing and uncompromising stand, he has delivered a master stroke of sabotage to the Japanese treaty conference which opens next week in San Francisco.

It is sabotage because his boycott of the conference opens the way for Russia to make the maximum use of India's expressed opposition to the best settlement that could be devised. Thus the Yogi from the upper Ganges runs interference for the big Moscow bruisers who will carry the ball of obstructionism to San Francisco.

Nehru's abounding gall comes in his presumption to tell the United States exactly how we should settle a war with which India had little to do, a war won largely by American blood and resources. His Government was not even in existence during World War II, and India fought the Japanese only briefly as a reluctant auxiliary of the British Empire.

In reaching the long-delayed settlement, we asked nothing from India but approval of a common policy for Japan. It is a policy which a huge majority of the free nations believe will help establish a friendly community in the Pacific. And it is a settlement Japan wants, so Nehru can't pretend he is working for Japan's good.

No elaborate analysis is needed to show that in rebuffing us Nehru has lined up with the Communist camp and that the peace he seeks would be red tinted. At various times Nehru has admitted that he is friendly to communism and that he has found Marxism very helpful. However much he has sought to perpetuate the myth of a middle way, his stated objections to the peace plan go right down the line of Russia's arguments to date.

What, for example, is more transparent than his inconsistency on Japan's former island possession? He objects to a United States trusteeship over the Ryukyus and Bonin Islands, but he favors outright Russian possession of the Kuriles and South Sakhalin. Evidently in Nehru's eyes only the democratic western nations—not Russia—can be guilty of the sin of imperialism.

And, of course, he wants the peace treaty to turn over Formosa to Communist China which his country recognizes, trades with and morally supports—while giving lip service to the United Nations.

We've said before, repeatedly, as the threat of international communism is laid bare, it's high time that our allies and neutral hangers-on stood up to be counted. India has.

When Nehru, the would-be mystic, went before his Parliament yesterday to put the seal on his decision, he wore a bright red rose on his tunic.

Very appropriate, we should say.

INDIA'S "NO"

What bothers the State Department about the Indian objections to the draft Peace Treaty on Japan and its boycott of the San Francisco Conference is Premier Nehru's obvious partiality toward Soviet Russia. It will bother a good many Americans. Never has Mr. Nehru's neutralism shown such a bias—a bias in the Russian direction. The Indians feel that the territories of which

Japan is being deprived under authority of the surrender instruments should be formally ceded to the contemplated beneficiaries. For various reasons the draft treaty merely provides for renunciation by the Japanese. The Indians would give title to China over Formosa, to Soviet Russia over the Kuriles and southern Sakhalin, and they add that the Ryukyus and the Bonins should be returned to Japan.

This last issue brings in the United States, which, according to the draft treaty, will administer the Ryukyus (including Okinawa) and the Bonins, pending a proposal to the United Nations for a trusteeship. Sovereignty would still be Japanese. It should be quite clear from this provision that the door is not closed to a future transfer of these islands to the Japanese. But at present Japan is defenseless. More, it is next door to Soviet Russia, which, since the war, has had such a record of aggression that all countries, let alone neighbors, are living in fear of Soviet expansion at their expense. It is only for this reason that American troops will remain in Japan after the signature of the treaty. They will be posted at bases, including the Bonins and Okinawa, so as to protect Japan while she is getting back on her feet.

The Japanese themselves want these safeguards. To them the country needs to be relieved of the fear under which it would live of a Russian attack if it were left without protection. This is borne out in Japan's statements. Premier Yoshida is quoted in the State Department reply to New Delhi as saying, "The treaty, as it stands, reflects abundantly American fairness, magnanimity, and idealism." How then is Mr. Nehru justified in saying that this clause is a "source of dissatisfaction to large sections of the Japanese people and must carry the seed of future dispute and possible conflict in the Far East"?

Mr. Nehru's comment should more truthfully be made about the Kuriles. It isn't, on the contrary, Mr. Nehru wants Russia's claims to the Kuriles to be formalized in the treaty. This newspaper is glad that this has not been done. Cession of the Kuriles to the Russians was provided for in the compact of Yalta, on the grounds that they were once Russian property. Such was not the case. Only the northern Kuriles—which are part of the causeway between Russia's Kamchatka and Japan's Hokkaido—were formerly Russian. The four islands of the southern Kuriles, known as the Habomais, are an integral part of the Japanese mainland, and had always been in the jurisdiction of the Hokkaido authority. Yet the Russians, taking advantage of the general ignorance exhibited at Yalta, took possession of the southern Kuriles, whence they supervise Japan's vital fisheries in the Sea of Okhotsk. If there is one thing that has caused dissatisfaction in Japan and will promote trouble in the future, it is the Kuriles situation. But Mr. Nehru blithely ignores it.

It is not clear exactly what Mr. Nehru wants in respect of Formosa. Mr. Nehru pleads that the Formosan status should not be left undetermined. Inferentially, therefore, he wants Formosa, in conformity with the Cairo declaration, to be declared the property of China. But what is present-day China, juridically? It is focused on Peking to much of the world, on Taipei to the United States. Clearly, in this matter, the signatories could only provide for Japanese renunciation of title. With Red China an aggressor in the eyes of the United Nations, moreover, it would have been fantastic to have made such a formal disposition of the Japanese island as Mr. Nehru suggests. India has certainly stated a case against the treaty which undermines her own asseveration of neutralism—whether from fright of the Russians or from sympathy with them, we do not presume to say.

Who's Trying To Ruin Our Schools?

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 28, 1951

Mr. MURRAY. Mr. President, on August 6, 1951, I called the attention of the Senate to the efforts of certain groups who are seeking to destroy the confidence of the people in our public education system. At that time I also made some remarks concerning the need to protect American public schools from the danger of exploitation by those who would restrict the freedom of teachers and impose thought control on them.

Since then McCall's magazine for September 1951, has published an article, *Who's Trying To Ruin Our Schools?* by Arthur D. Morse. This carefully prepared article shows clearly the sinister and dangerous character, background, and tactics of the persons who head organizations which are trying to undermine our free public educational system in America.

Mr. President, I ask unanimous consent to have this article printed in the Appendix of the RECORD. Every Member of Congress will thus have an opportunity to read it and be forewarned and forearmed against those who seek to undermine and destroy our public-school system.

I am informed by the Public Printer that this article is estimated to make three pages of the RECORD at a cost of \$246.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHO'S TRYING TO RUIN OUR SCHOOLS?

(By Arthur D. Morse)

Public education in America is under the heaviest attack in its history. This attack is not aimed at the improvement of free education. It is aimed at its destruction. So far it has struck at school systems from Port Washington, N. Y., to Pasadena, Calif.

"We place the greatest importance upon this attack," Dr. Willard E. Givens, executive secretary of the National Education Association, whose membership consists of 850,000 teachers, said recently. "In recent months campaigns against our schools have been intensified in number and effectiveness. Since they strike at the very roots of our system of free public education, they are a very real menace to democracy."

The most notorious success yet achieved by the forces that are undermining our schools was made at Pasadena.

Early in 1948 Pasadena's school board invited Willard Goslin, one of the country's most able and respected educators, to become superintendent of its public schools. Less than 3 years later the board that had hired Goslin asked for, and received, his resignation.

The shoddy developments that led to Goslin's ousting had nothing to do with his talents as an educator. His removal—as David Hulburd makes clear in his book *This Happened in Pasadena*—was the result of shadowy fears generated in the community with the aid of individuals and organizations as far away as New York City.

The shame of Pasadena cannot be undone. Nobody knows what community will be next.

"You say this hasn't happened to my school, to me." Dr. Richard B. Kennan, a well-known educator, told the 1951 convention of the American Association of School Administrators "Maybe not. But it has happened in California, in New Jersey, in Louisiana, in Massachusetts—and your school may be next, particularly if you are in a large school system where new buildings and increased school tax support are needed."

To see how these attacks begin, who is behind them and how the assault is waged, let us look at the case of Englewood, N. J., an attractive, prosperous community of approximately 25,000, situated across the Hudson River from New York City.

Englewood has long been properly proud of its school system, brought to a new peak of achievement under its present superintendent, Dr. Harry L. Stearns. Dr. Stearns, who admits to being politically somewhat conservative, has made many sound improvements in the Englewood school system. One of the most successful was the installation of a child study department, staffed by two psychologists and a nurse. He is firm in the belief that "if public education fails it will spell the end of a free society in America." Until October 7, 1950, Dr. Stearns had no reason to believe that this opinion was not shared by every citizen of Englewood.

Then came the bombshell.

The Englewood branch of the American Association for the United Nations was celebrating official U. N. week with an open meeting at the Roosevelt School. As the principal speaker was being introduced, an Englewood resident named Frederick G. Cartwright rose in the audience and demanded to be heard with regard to the speaker who originally had been scheduled to deliver the principal address—not the man being introduced. Cartwright claimed the originally scheduled speaker was a "suspected Russian agent" who had been denied re-entry into the United States.

The next 20 minutes were chaotic. While the chairman, together with a minister and a rabbi who were on the speaker's platform, attempted to restore order, Cartwright walked to the stage and began reading a prepared speech, cheered on by followers in the audience who had been alerted for this demonstration.

Eventually Cartwright sat down again. Meanwhile the police had been called. Cartwright was arrested and charged with disorderly conduct. As he was being removed from the auditorium a firecracker exploded in a corridor. A young girl in the audience became hysterical.

So U. N. week was thoroughly spoiled, although the speaker went on to trace the North Korean aggression and to discuss the guilt of Soviet Russia in the current situation.

Shortly after the meeting, but before his trial, Cartwright publicly demanded an investigation "into the activities and possible communistic ties of some of the teachers in the Englewood public schools." At the same time the commander and the past commander of the local post of the Catholic War Veterans announced that their organization had decided to support Cartwright (who is an Episcopalian) in this proposal.

The attack was under way.

At Cartwright's trial for disorderly conduct the pattern of the attack began to emerge. It was a pattern familiar to anyone acquainted with the attacks in Pasadena and in other cities, where the anti-public-school elements have, almost without exception, been allied with an organization that is impostingly and misleadingly called the National Council for American Education (not to be

confused with the highly reputable National Education Association or the American Council on Education).

The so-called National Council for American Education is run by Allen A. Zoll, who bears the title of executive vice president. Because Zoll and his organization have figured so prominently in the Nation-wide campaign against the public schools, we will examine them more closely later on. It was to be expected that they would show up in Englewood.

Cartwright said at his trial that he had donated \$200 to the National Council for American Education. In addition, Cartwright, who is in the investment business in Wall Street, said that he was acquainted with Zoll and that his information about the original speaker had come from Zoll.

The judge found Cartwright not guilty of disorderly conduct, though deploring and disapproving of his actions. But the trouble in Englewood did not end there. By that time Cartwright had founded an organization which he called the Englewood Anti-Communist League, and tremendous tension began building in the community.

As the poison of recrimination began to spread through Englewood, Cartwright and two of his Anti-Communist League associates went before the board of education and recited instances in which (they alleged) teachers had displayed pro-Communist sympathies. The board ordered Superintendent Stearns to make a full investigation.

In March of this year Stearns opened an inquiry into subversive activities in his schools. Under his questioning, the evidence presented by Cartwright and the two other complainants turned out to be an assortment of hearsay, gossip, and rumor.

For example, Frederick H. Grein, the past commander of the Catholic War Veterans, said several students had complained of objectionable remarks made by teachers at the Dwight Morrow School. But he admitted that he had got this information second-hand and that one of his informants was not even a pupil of the school.

A mother, who happened to be Cartwright's secretary, charged that her daughter had been reprimanded by a teacher for making an anti-Communist classroom report. But it developed that the teacher, surprised by the peculiar material in the child's report, had merely asked the source of the information. It turned out to be a book titled "Communism Unmasked," by Maj. Gen. Amos A. Fries, retired, whom we shall meet later. It fit the pattern that his name should also turn up in Englewood.

As a witness Cartwright was not impressive. He rambled on disjointedly about a variety of matters not connected with the suspected subversion in the schools, and it required all of Dr. Stearns' patience to keep him on the subject. Eventually Cartwright did attack the textbook American Democracy Today and Tomorrow, though he admitted that he had not read it.

After Cartwright had attacked another textbook that he had not read, the following exchange took place, according to the official transcript:

"MR. CARTWRIGHT. It is possible, I mean very highly probable, in a majority of cases that the teachers can be teaching subversively without being aware of the fact that they are teaching subversion.

"DR. STEARNS. In other words, you are saying that without the teacher knowing it she is teaching subversive activity?

"MR. CARTWRIGHT. I would say in the majority of cases.

"DR. STEARNS. In this particular case? You have not read the book, and you don't know what the teacher is actually teaching in the course?

"MR. CARTWRIGHT. No, I do not."

At the conclusion of the hearing the board of education announced that the charges had been found to be based on hearsay, and it exonerated the teachers of any implications of subversive activity.

Though Cartwright's charges against the schools and his subsequent veiled accusations had not been substantiated, a subtle and distressing change was creeping over Englewood. The teachers were jittery. They were afraid the healthy, open discussion that had previously characterized their classes would somehow be misconstrued. Several teachers told Dr. Stearns they were sure that some students, under instructions from their parents, were trying to trap them into making incriminating statements.

This atmosphere of uneasiness was not confined to the schools.

"There is a community menace that is growing here like a cancer," the Englewood Press-Journal said in an editorial, and went on to observe: "It is arousing religious hatreds—Catholic against Protestant against Jewish. His [Cartwright's] methods are similar to those of Allen Zoll, to whose campaigns against our schools Mr. Cartwright has contributed funds. When he sets group against group, he is endangering our community life and our Americanism itself."

The attack on the Englewood school is still being waged. The Anti-Communist League is holding frequent meetings and distributing literature attacking the schools. Allen Zoll has made several appearances in Englewood. "He is advising us, and we think he is a swell fellow," a leading member of the Anti-Communist League recently remarked.

Frederick Cartwright and Frederick Grein have appeared on a television program emanating from Newark, N. J., during which they repeated substantially the same accusations made during the Board of Education inquiry. Cartwright has become more and more blatant. He now claims to be in contact with the FBI. Innocent Englewood citizens who do not share the Cartwright-Zoll viewpoint are increasingly familiar with rumored threats to report them to the Government for subversive activity.

To counteract the activities of the Anti-Communist League, a number of prominent Englewood residents have recently formed an organization which they named the Englewood Citizens Union. A representative group composed of both the conservative and liberal elements in the community, it is coming to the rescue of Englewood's beleaguered school system. In Pasadena some citizens finally organized to fight the attack on their schools, but only after it was too late. Everyone who is for good education and against government by intimidation must hope that the Englewood Citizens Union will get the widest community support and that its work has been started in time.

Though the nature of the attack on the school varies somewhat from place to place, the general pattern is identical. The attackers use the same techniques, the same literature and the same sweeping charges. They accuse teachers and textbooks of being subversive, they link modern educational practices with communism; and they attempt to stampede parents into believing that our public schools are the breeding grounds of totalitarianism.

Chief among the groups that are exploiting the widespread misunderstanding of modern education and the consuming fear of communism is Allen Zoll's National Council for American Education.

Many well-intentioned people, lured by the dual prospect of fighting communism and reducing school taxes, have joined local groups which, like the Englewood Anti-Communist League are linked to Zoll's organization. Anyone who is a member of, or has been invited to join, one of these groups, should be interested in learning something

about Zoll whose career is not without interest.

Educators are usually cooperative in arranging interviews with reporters, but I found that in this respect as well as in others, Zoll is not in the tradition. When I phoned his office, which is in New York, he was reluctant to grant an interview, until I pretended that I was in sympathy with his aims and wanted to gather material to further the cause. Then he agreed to see me.

This will be the first interview I've granted since I've been in this thing," Zoll remarked, and concluded by saying, "If you smear me, I'll cut your throat." (This is not, of course, the kind of remark that one often hears in educational circles.)

Before seeing Zoll I looked into his background and found, among other things, that he was the founder and national commander of an organization called American Patriots, Inc., which appears on the Attorney General's list as a Fascist organization. The Patriots (now defunct) had their biggest fling during the years immediately preceding World War II, when Zoll, who cannot be accused of lacking a talent for opportunism, exploited the division of sentiment in this country toward the war.

At meetings of American Patriots, Inc., National Commander Zoll presented such speakers as Elizabeth Dilling, who was indicted for sedition three times during the war and was a defendant in the mass sedition trial of 1944 (which was declared a mistrial when the presiding judge died). Other patriots who addressed the group included John Eoghan Kelly, later convicted as an unregistered agent of Franco; Joseph McWilliams, also a defendant in the sedition trial, who once boasted, "I'm 100 percent for Hitler", and the notoriously anti-Semitic Gerald L. K. Smith. Zoll introduced Smith as "without doubt the most dynamic and inspiring speaker on Americanism today."

Zoll had a pretty good year in 1939. In January he appeared at a Senate hearing to oppose the nomination of Felix Frankfurter as a Justice of the Supreme Court. Zoll said he didn't like Frankfurter's record or his religion. Senator Borah was moved to remark, "So far as I am concerned, I do not propose to listen to an argument against a man because of his religion. You are raising the same question that is drenching Europe in blood."

A while later Zoll was in the news again. For months the New York radio station WMCA had been picketed by Christian Front followers of Father Coughlin in protest against the refusal of the station to broadcast the priest's inflammatory speeches. In July, Zoll, who was one of Coughlin's most vocal supporters and one of the originators of the picket line, was arrested on an indictment, charging that he had attempted to extort \$7,500 from WMCA's president, Donald Flamm. In return Zoll had allegedly offered to call off the pickets. Zoll was never brought to trial, and the indictment was dismissed.

The publicity that Zoll received as a result of this untidy affair was not flattering. He accordingly drifted off into the shadows, where he worked for a few years as a salesman (he sometimes refers to himself in print as an internationally known sales consultant) for such professional anti-Semites as Merwin K. Hart and Joseph P. Kamp.

In 1948 the internationally known sales consultant, sensing a new market for a somewhat different brand of goods, organized his National Council for American Education. Ex-National Commander Allen Alderson Zoll now appeared as Allen A. Zoll, Ph. D.

The office of the National Council for American Education occupies a large room on the tenth floor of a shabby building at

1 Malden Lane, in downtown New York. It has a staff of three: a receptionist, a typist and Zoll's secretary. The room is cheerless, sparsely furnished and undecorated except for numerous pictures depicting scenes in the life of George Washington. In the rear, partially blocked off by storage cabinets and stacks of old newspapers, is the small cubicle occupied by Zoll, from which he emerged to greet me.

At the age of 55 Zoll is a man of average height, weighs about 200 pounds and is growing bald. His eyes, which are his most distinctive feature, are narrow and glinting. His manner is restless.

At the outset I told Zoll that I was familiar with his main arguments against the schools; that progressive education is a menace, that most teachers and textbooks are subversive and that children are not learning the three R's, which should be taught to the exclusion of virtually everything else.

"That's about it," Zoll said. "Most teaching and textbooks are socialistic, and the teachers' colleges are implanted with socialism. These Socialist plotters are deliberate saboteurs, and we're in serious danger from them—just as much as from the Communists. There are plenty of bad people who haven't joined the Communist Party, and we're out for them too." Zoll leaned back in his chair. "You're either for individualism or collectivism. The middle is a barbed-wire fence. I tell kids that in my talks to them."

I asked just how he was attempting to improve this situation.

"Well," he began, "neither the FBI nor the Un-American Activities Committee knows what's being taught or what's in the heart of a teacher. The only person who knows that is the person right on the ground. I help these local outfits. Like in Punxsutawney it might be called the School Development Council [in Pasadena the antischool faction was called the School Development Council]. I've also formed a pro-American underground for teachers."

After Zoll had exhausted himself on the subject of disloyal teachers I asked what he was doing about subversive textbooks.

"We have an office in Wisconsin," he replied. "Their job is to review about 60 books a year. It's under the direction of our vice president in charge of research, Verne Kaub."

I had run across Kaub before and knew that he, like Zoll, is a Johnny-come-lately to education. Until recently Kaub was working the religious side of the street, writing articles for the anti-Jewish publication the Individualist, as well as distributing a pamphlet titled "How Red Is the Federal Council of Churches?"

Zoll said that Kaub's job of ferreting out un-American propaganda in the children's books is sometimes pretty difficult. "Once," he said with a straight face, "we had to have a book reviewed eight times before we got a good analysis."

I asked Zoll what he believed the proper aims of education should be.

"That's a good question," he said. "I just sent a memo to our board asking them to give me their ideas on that matter."

That didn't seem like a very good answer, but Zoll was indicating that he wished to wind up the interview.

"Any other questions?" he asked.

"Well," I said, "can you tell me what's right with the schools?"

He did not dignify that query with an answer.

I remarked that nearly all educational authorities agree that approximately 500,000 new classrooms need to be built within the next 10 years, and asked Zoll if he also considered this a vital problem.

"That's a lot of fuddydud, about new buildings, when the old ones are just as good," he replied. "The factor of age has nothing to do with the efficacy of school buildings."

There seemed time for only one more question. Since Zoll now signs his writing "Allen A. Zoll, Ph. D." and prefers to be addressed as "Dr. Zoll," I ask him about the degree.

"I got that from Temple Hall," he said quickly, and then seemed embarrassed by his hasty remark. He rose, and the interview was over.

After leaving "Dr." Zoll I learned that Temple Hall College and Seminary (now defunct) was a one-man diploma mill operated by a man named D. Scott Swain. Swain's qualifications as an educator included the serving of a 6-year prison term on 6 charges, including running a confidence game, obtaining property under false pretenses and passing bad checks. While running his college Swain conferred upon himself the title "Archbishop Primate." Probably the high point of his career was reached at a meeting in New York City, when the "Bishop" got roaring drunk and in a burst of expansiveness passed out Temple Hall Ph. D.'s to his entire audience. The exact moment when Zoll was awarded his doctorate is unknown.

Zoll would be funny, if his aims were not so deadly. He cannot be dismissed as a harmless crackpot, for, though his statement to me that his organization has 10,000 members and is linked to some 400 local groups is an obvious exaggeration, it is nevertheless true that he has been a potent influence in every city whose schools have come under attack.

Zoll's influence is widely exerted through the pamphlets that he publishes and distributes. At the height of the school controversy in Pasadena, citizens picking up their morning newspapers found copies of Zoll's pamphlet *Progressive Education Increases Delinquency* on their doorsteps.

"So-called progressive education," the pamphlet said, "shot through as it is with the blight of pragmatism, has had a very deleterious effect upon the original character of American education. The public-school system in hundreds of cities and towns throughout the land is fatally committed to these subversive principles of 'progressive' education." Zoll goes on to explain that modern education does not permit absolute truth, hence those who believe in it cannot be true Christians. And he makes the further observation that "currently it is popular to plug hard for the democratic equality of all men."

This pamphlet made such a vivid impression on the president of the School Development Council in Pasadena that he recited passages from it almost verbatim in his speeches attacking the school administration.

In Denver the forces attempting to oust Superintendent Kenneth Oberholtzer (who is also president of the American Association of School Administrators—the highest honor his profession accords) presented copies of *Progressive Education Increases Delinquency* to each member of the board of education and to members of many other civic groups.

Other Zoll literature includes pamphlets bearing such titles as "They Want Your Child (the Communists, that is), 'Private Schools: The Solution to America's Educational Problem,'" and "How Red Are the Schools?"

The philosophy in these pamphlets is being advocated by the Parents' Council for Education in Eugene, Ore.; the Citizens' School Committee in Los Angeles; the Parents' Council in Minneapolis; the Three R Parents Committee in Columbus, Ohio; and by similar groups in many other communities.

Zoll's satisfaction in the wide distribution of his literature is not altogether spiritual.

His most popular item, *Progressive Education Increases Delinquency*, sells for 20 cents a single copy; 6 copies for \$1; 1,000 copies for \$60; and customers are offered a special price on larger quantities. In all of his pamphlets Zoll makes a strong pitch for contributions. People who join his council are rewarded with various titles, the rank conferred depending on the amount of cash they send in. They can become an associate for \$5, a patron for \$150, or a benefactor for \$1,000.

By the end of 1949, when Zoll was just swinging into action, his pamphlet sales and contributions had netted him an estimated \$45,000. With the way his business is booming at present, there is no reason to believe that his efforts are not now being even more respectably rewarded.

Though Zoll's organization is the most important rallying point and serves as general headquarters for the enemies of education, other operators are busy turning out weapons for waging the attack.

One of the most destructive of these—a kind of secret weapon—is a quarterly publication called the *Educational Reviewer*. Edited by Lucille Cardin Crain, and financed by a lobbying organization with headquarters in Washington, D. C., the *Reviewer* has been used effectively in Englewood and in other widely scattered cities across the country. Its sole function is to try to discover subversive material in textbooks.

The methods used by the *Educational Reviewer* can be illustrated by its treatment of Dr. Frank Magruder's textbook, *American Government*. This text, which is on the recommended list of all 48 States, has been a classic in its field for a quarter of a century. It was appropriately selected for review in the first issue of the *Reviewer*, which appeared in July 1949. The writer of the review was a woman named Edna Lonigan. How she made her point that the textbook is subversive can perhaps best be shown by comparing excerpts with which she purported to express Magruder's views with actual passages from his text:

Magruder, according to Lonigan:

"Italy and Germany were dictatorships but not the Soviet Union.

"The United States and the Soviet Union are equals fighting for 'world leadership.'

"By democracy we mean that form of government in which the sovereign power is in the hands of the people collectively."

Magruder's actual text:

"Russia is leader of the dictatorial nations, most of which are communistic.

"The United States and the Soviet Union, the most powerful of the allies in the Second World War, now find themselves as the two only powerful contenders for world leadership

"By democracy we mean that form of government in which the sovereign power is in the hands of the people collectively, and is expressed by them either directly or indirectly through elected representatives."

In the last instance above, by deleting half of the sentence, Miss Lonigan was able to prove to her satisfaction that Magruder was an advocate of the collectivist state.

Unfortunately she proved it to a number of others, including Radio Commentator Fulton Lewis, Jr., who, a few months after the review appeared, read considerable portions of it on one of his broadcasts.

The response was big and prompt. The State Textbook Commission of Georgia immediately banned the book, as did the Houston, Tex., school board. Parents in Portland, Oreg., demanded that similar action be taken there. A newspaper in southern California quoted Lewis, attacked Magruder, and concluded that the public schools are bound to destroy this country. In places like Council Bluffs, Iowa, and Trumbull County, Ohio, where the broadcast also caused a stir, some people took the trouble to read

the textbook and so avoided taking precipitate and foolish steps.

Referring to the *Educational Reviewer*, a report recently issued by a committee of the House of Representatives, observed that the review of textbooks by self-appointed experts smacks too much of the book-burning orgies of Nuremberg to be accepted by thoughtful Americans without foreboding and alarm.

That kind of talk infuriates the editor of the *Educational Reviewer*, Lucille Cardin Crain, who is convinced that any critic of her publication is a Communist.

Allen Zoll described Mrs. Crain to me as a charming woman, very lovely, and I found upon meeting her in her office, which is in a brownstone house on East Thirty-sixth Street in New York City, that she does possess the most attractive figure in the anti-school movement. She is 50, has cool blue eyes, a cameo face, and a fondness for using rather fancy words. To indicate her personal interest in children Mrs. Crain sometimes says exuberantly: "I'm a grandmother seven times." This reference is to the children of her husband—who is 71—by his first wife. Mrs. Crain is childless.

Like Allen Zoll, Mrs. Crain joined the educational ranks recently. Her scholastic background consists of the equivalent of a high-school education which she received at a convent in Minnesota. She is suspicious of most recognized educators who hold degrees, and she has expressed strong disapproval of what she calls our compulsory State-operated educational system. What she is in favor of is a mystery.

When I asked Mrs. Crain what she thought the proper aims of education should be, she seemed to be pushed as far out to sea as Allen Zoll had been when I asked the question of him. After remaining silent for a spell Mrs. Crain, moved by a sudden inspiration, said brightly, "I like our little slogan on the *Educational Reviewer*." This reads: "In the light of truth, objectivity and established American ideals, to examine the publications used in instructing American youth." There seemed little point in pressing that subject further.

In other respects my interview with Mrs. Crain was not unusually rewarding, partly because she consumed most of it by delivering a diatribe against the National Education Association, which she thinks is subversive. Her reasons are not monuments of persuasion. Reading from an NEA pamphlet, she remarked, "They say here they're committed to the democratic ideal," adding, as she tossed the pamphlet aside, "whatever that is."

The *Educational Reviewer* has been specific in explaining what it thinks democracy is. "Democracy," the *Reviewer* said in October 15, 1949 issue, "is a government by demagogues leading to the tyranny of the majority over the minority."

A few steps behind Mrs. Crain is another foe of modern education—78-year-old Maj. Gen. Amos A. Fries, retired. The aged general is editor of a widely distributed monthly publication ironically titled *Friends of the Public Schools*. "Anyone who calls our Government a democracy," this publication has pointed out, "is either completely un-American or a moron."

The general stands four-square against nurseries and kindergartens, health, welfare, and recreational activities, services for handicapped pupils and vocational guidance, among other things. "Where one child is overworked," he says, "a thousand aren't worked enough."

The general's educational program, if such it can be called, stems from his apparent belief that things were better in the good old days when fewer children went to school.

These three—Allen Zoll, Lucille Crain, General Fries—by themselves would, of course, be ineffective. What enables them to carry on their programs is the support

of well-meaning but misinformed people in communities across the country, who are frequently prompted to join a local, innocent-sounding school group because its main interest seems to be controlling school taxes or carrying out some other aim that appeals to the pocketbook or the emotions.

To provide facts enabling friends of education to improve our schools and defend them against unjustified attacks, there was founded in 1949 an outstanding organization called the National Citizens Commission for the Public Schools. President James B. Conant of Harvard was instrumental in its establishment. Roy E. Larsen, president of Time, Inc., is its chairman, and its membership includes many other leading American citizens. A nonprofit group, the Commission is financed by the Rockefeller Foundation and the Carnegie Corp., and it works closely with all organizations devoted to better education, including the National Congress of Parents and Teachers and the United States Office of Education.

The National Citizens Commission stimulates and assists in the formation of local committees representing a cross-section of the community—business, labor, church, civic, women's and veterans' interests—devoted to improving the schools. The Commission furnishes its local committees, free of charge, a wealth of material that explains how to organize, what to look for in evaluating the schools, how to work with local educators, and how to carry through a program of action. The Commission acts as a national clearing house of community experiences. One of its most valuable services is the distribution of case histories of school improvement in every part of the country.

All of this material and aid can be obtained without cost simply by addressing the National Citizens Commission, 2 West Forty-fifth Street, New York 18, N. Y.

Our public schools are the firm underpinning of our democracy. Like democracy itself, they are in deadly danger.

"We are threatened from without," Willard Goslin said upon tendering his resignation as superintendent in Pasadena. "I think we are threatened even more from within. I know of no better way to wreck everything that we think is good in America than to begin to destroy ourselves one by one, institution by institution, community by community, throughout the land."

Tidelands Oil Question

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 28, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the *RECORD* an editorial entitled "Clever Oil Grabbers," which appeared in the *Denver Post* and was reprinted in the magazine *Frontier* for September 1951. It discusses the tidelands oil question.

There being no objection, the editorial was ordered to be printed in the *RECORD*, as follows:

CLEVER OIL GRABBERS

Oil interests and extreme champions of States' rights are beating the drums again for legislation to surrender Federal ownership of lands and minerals under the offshore seas to the coastal States.

This may prove to be the big drive which has been in the making ever since the United States Supreme Court in June 1947 held that the tidelands belong to the entire Nation, not merely to the States which border them.

Many oil companies are anxious to have the tidelands turned over to the States. They would rather lease from the States than from the Federal Government, which usually imposes more restrictions on the activities of its lessees than do the State agencies entrusted with such matters.

Texas and California Congressmen will be in the forefront of the battle. Texas has been receiving \$7,000,000 a year or more from tidelands oil leases for its school fund. State profits from California oil leases amount to several million dollars annually.

Oil production from the tidelands now amounts to only a drop in the bucket when considered on the basis of potential production, many experts believe. Texas officials, for example, have estimated that their State may reasonably anticipate a total income over the years of a billion dollars from offshore leases if Congress can be talked into surrendering Federal tidelands rights.

In an effort to enlist the aid of inland Congressmen, which the coastal States must have if they are to pass the tidelands bill, a campaign of fear and alarm has been under way for some time.

If Congress does not give up Federal ownership of tidelands, the Federal Government may next claim the ownership of iron deposits located under inland lakes, oil under navigable streams, and even docks on bays and rivers, it is argued.

Senator O'MAHONEY, Democrat, of Wyoming, is among those who have not been taken in by the scare campaign. He points out that at the time of the Supreme Court decision the Attorney General made it plain that the Government's case involved tidelands only.

The Supreme Court decision itself was based largely on the traditional responsibility of the Federal Government to protect the Nation's shores from other countries, a responsibility which could not by any stretch of the imagination be extended to take in the lands under inland streams and lakes.

Liberal legislation to allow the coastal States the lion's share of oil royalties and rentals from tidelands has been proposed, but men like Senator CONNALLY, of Texas, and other States' righters will be satisfied with nothing less than complete surrender by the Federal Government as represented by Congress.

The big drive seems to be under way. But the principle of Federal jurisdiction over tidelands is sound. It is essential to national welfare and security.

Profligate Spending by the Government

EXTENSION OF REMARKS OF

HON. ANDREW F. SCHOEPPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 28, 1951

Mr. SCHOEPPPEL. Mr. President, the Emporia Gazette, made famous by the late William Allen White, of my home State of Kansas, recently editorialized under the caption "Why not reward thrift?"

Warnings against the profligate spending indulged in by our Government in past years are increasingly numerous from our alarmed constituents.

The Gazette editorial, reprinted in the Rooks County Record in Stockton, Kans., is short and to the point and worthy of careful attention, and I ask unanimous consent that it be printed in the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY NOT REWARD THRIFT?

Only the strongest kind of public pressure can force the Government to economize. That is the theme of a recent article by Stanley High in the Reader's Digest called "In Washington It's Waste as Usual."

Stanley High shows how our money is being dissipated on unnecessary projects of a thousand and one kinds, and says: "Lately there has been a notable increase in mail from constituents—making sharp demands for economy on the part of Congress. These demands already have strengthened the efforts of Congressmen who believe with Senator BYRD that 'our strength and preparedness in all respects depend upon reduction in nonessential spending'."

"But there will be no adequate reductions unless pressure from the people is greatly increased. To add to that pressure without delay is, I believe, an obligation upon every patriotic American."

From every source we are told that the increase in Government spending which has no connection with our military preparedness has been incredible. For example, the Commerce Department's 1950 budget showed a 1,049-percent increase over its 1940 budget. Department of Labor spent 1,283 percent more in 1950 than in 1940. The State Department spent 1,634 percent more—although due to present world conditions, considerable of this increase could be justified. But so it goes, down the line, with Government costing us more and more. Isn't it time to reward thrift?

"Soon" Mr. High writes, "the army of United States Government employees will be nearly as big as the combined total of all the men in the Army, Navy, Air Force, and Marines as of last spring."

As voters, citizens, and taxpayers the people of this country should do something about this. Americans should forsake their false belief in "something for nothing" government. Instead of flocking to the banners of candidates who promise everything, voters should rally to the men who offer some guaranty of reducing Government spending. The Congressman or Government official who can save the Treasury the most money should be the one who gets the most votes. We have rewarded the spendthrifts too long and they've got us nothing but the highest public debt in our history, and still higher taxes.

Price Control

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 28, 1951

Mr. BUTLER of Nebraska. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington Post of last Saturday, August 25, 1951, entitled "Price Control." It is interesting to note that even the most ardent supporters of the New Deal are a little skeptical of the

President's latest request for more controls and regulations as a means of controlling prices.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PRICE CONTROL

President Truman has urged Congress to repeal three amendments that, as he rightly says, are the "worst provisions" of the new control law. They are: (1) the Capehart amendment which permits manufacturers and processors to add all costs, direct and indirect, to their pre-Korean price levels up to July 26; (2) the Herlong amendment guaranteeing pre-Korean percentage mark-ups for distributors, and (3) the Butler-Hope amendment prohibiting slaughtering quotas. Without doubt these amendments will result in needless price increases, hamper enforcement of price regulations, and create an enormous amount of administrative work for stabilization agencies.

Nevertheless, we doubt the wisdom of an attempt to persuade Congress to repeal these amendments only a few weeks after passage of new controls legislation. There is a bare possibility, of course, that Congress may take action now that Republican Senators have introduced a repeal bill—a repeal bill which is obviously designed to deprive the President of the political advantages that he might gain by blaming Republicans for the higher prices expected to result from retention of the amendments. But the chance is slim, since a large number of Democrats joined the Republicans in putting through these amendments. Moreover, the chairman of both the House and Senate Banking Committees have shown a conspicuous lack of enthusiasm for proposals to change the law this year.

More time is needed to test the effects of the amendments; they should be given a fair trial to determine whether they are worse than useless as a means of stabilizing the price structure. That is a somewhat dangerous proceeding, to be sure, since if prices rise, as expected, it would probably be impossible to roll them back to present levels. However, the surest way to secure corrective action from Congress is to try to enforce objectionable laws and show their actual, not their predicted, effects. Another reason for concluding that the President's efforts are ill-timed is that his warning of future inflation comes at a time when inventories are excessively high and scare buying no longer in evidence. The Department of Commerce reports that consumer expenditures for the second quarter of this year (the latest available estimates) were lower than during the preceding 3 months while consumer savings had increased.

The President himself pointed out in his message to Congress that since the imposition of controls the rise in the cost of living has been less than 1 percent and wholesale prices are below the level of last January. It looks as if the buying lull brought about by removal of fears of imminent shortages, rather than price controls, has been the chief cause of the subsidence of inflationary pressure. But we agree with the President that unless controls are strengthened, prices will begin to rise sharply as defense production expands, incomes from defense work increases, and inventories of consumer goods dwindle. There is always danger, moreover, that another wave of consumer buying will be spurred by fears of or actual shortages.

Another item on the President's repeal agenda, however—removal of the restrictions imposed on imports of fats, oils, and dairy products—might well be made the subject of separate repeal legislation, since not only will it tend to raise prices of competing domestic products, but it also conflicts with our reciprocal trade policy.

Veterans of Foreign Wars

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. BROOKS. Mr. Speaker, I offer for inclusion in the RECORD the following timely address by the Honorable Vincent R. Impellitteri at the formal joint opening session of the fifty-second national encampment of the Veterans of Foreign Wars in New York, August 27:

Commander in Chief Ralls, Madam President of the Ladies Auxiliary, Mrs. Ilg, fellow veterans of the Veterans of Foreign Wars, ladies, and gentlemen, as a member of the VFW it is a particular privilege for me as mayor of the city of New York to extend official greetings and words of welcome to you at this opening session of your national encampment. I know that I need not tell you or your encampment directors that for many weeks now all preparations have been made for your convenience and comfort, and to insure that your week-long meeting in our city will be the most profitable and enjoyable one in your long history of service to our country.

All municipal departments and agencies have been alerted, and the city's vast resources are at your disposal.

The Veterans of Foreign Wars of the United States, founded just before the turn of the century in 1899 as a national, non-partisan, nonsectarian, overseas organization, has been a potent force for good in war and peace for more than a half century now. Its current membership of nearly 1,200,000, affiliated through 10,000 posts or local units, has left an indelible mark of service since the days of its organization immediately after the Spanish-American War.

The VFW still includes veterans of the Spanish-American War, the Chinese Boxer Rebellion, the Philippine Insurrection, the Cuban Pacification, World War I, and various armed campaigns and expeditions, such as the Haitian campaign of 1919-20, the Yangtze River campaigns of 1926-27 and 1930-32, the Nicaraguan campaign of 1933; and soldiers, sailors, marines, and coast guardsmen with campaign-ribbon service in World War II, and, more recently, veterans of the Korean war.

As we pick up our newspapers today, the headlines become more ominous, with truce talks stalled and called off, and certain segments of the world intent on destroying the freeman's way of life. It is, therefore, particularly appropriate that your fifty-second national encampment is dedicated to the ideals and principles that found immortal expression in the Declaration of Independence, whose one hundred and seventy-fifth anniversary our country is celebrating this year. In this connection I should like to quote from the encampment message of Commander in Chief Ralls, which tersely sums this up:

"In commemoration of the one hundred and seventy-fifth anniversary of the signing of the Declaration of Independence this year, I am happy to dedicate our fifty-second national encampment to the spirit of that sacred charter. We call upon all loyal Americans to join with us in pledging ourselves to a redeclaration of independence from the forces of evil and a new dependence on a kind and bountiful God. * * *

"Today our way of life is being threatened by the global menace of communism. We

are engaged in a struggle that is demanding tremendous sacrifices from those who are serving in the Armed Forces and from every loyal American on the civilian front. * * *

"In our debates and discussions, let us be guided solely by what we truly believe in our hearts is the best for America."

Those last words of your commander in chief have been the keystone of the more than 50 years of service of the VFW to its countrymen. There is no truer guide to honest action than that we "be guided solely by what we truly believe in our hearts is the best for America."

The limited time allotted to me will not even permit a recitation of the many services for veterans, their families, and for their communities in which the VFW is engaged. Your legislative bureau in Washington sponsors and keeps abreast of legislation for the benefit of all war veterans and repeatedly has urged Congress to enact laws dealing with veterans' employment, education, medical care, pensions, and benefits for widows and orphans of veterans.

Your legislative service sponsored and sought enactment of laws affecting national security, universal military training, immigration, taxation, social security, Armed Forces unification, atomic-energy policies, foreign affairs, and countless other matters of general public interest.

Your rehabilitation service has gone on, uninterrupted, throughout your long history. For instance, during the first 4 years after World War II approximately 1,000,000 veterans' claims were filed with the VFW Rehabilitation Service, and almost a half billion dollars was recovered for veterans through 750,000 appearances of your experts before governmental agencies—all without cost to individual veterans.

Your work for dependents has justly won national acclaim. Since 1925 your national home at Eaton Rapids, Mich., has been a safe refuge for children whose veteran fathers are deceased or totally disabled.

Throughout its existence, the Veterans of Foreign Wars has consistently advocated preparedness against war. The VFW has ever stressed the high price and futility of warfare, but it eternally dedicated to the principle that it will fight, if necessary, to safeguard our democratic way of life.

Last, but not least, the VFW plays a vital role in every community where its maltese cross is emblazoned, through its grass roots community services.

In one of the recent issues of your national magazine, Commander Ralls, in his monthly letter, stresses that your community service programs have given life to VFW activities by doing something.

He very properly emphasized that a post that exists only on paper is doomed to the fate that awaits old soldiers. Says your chief:

"The VFW post that is fading away is just as useless to itself and the VFW as the post afflicted with an acute case of rigor mortis * * * If all of our 10,000 posts can be persuaded to act on the simple formula of doing something, I honestly believe the VFW can become the largest and most powerful veterans' organization in the country."

It is in your community service work that your auxiliary plays such a prominent role, and I feel the good women of the auxiliary are to be commended for this undertaking.

In this connection, I should like also to say just a word of tribute to our city's own Ketchum-Hennessey Post of Coney Island, Brooklyn, which was selected as the leading VFW post in the State of New York in the field of community activities.

In closing may I say that I know the 8,000,000 people of our city are grateful to the VFW for its staunch role on their behalf these past 50 years. I know that I can say

for each and every one of them that they are proud to be your hosts.

I have taken liberties with Commander in Chief Ralls' convention statement, and now I should like to quote briefly the national president of your auxiliary, Mrs. Sue Ilg, of Edgewood, R. I., who states:

"We are meeting in a period of national stress, when loyalty to ideals, faith in our Nation, concern for our fellow citizens and service to those who fight in defense of this Nation and its principles are of major importance."

It is to these principles that the VFW is dedicated.

May your encampment in our city be a most fruitful one so as to help safeguard for all of us the ideals and principles that have made our Nation the beacon light of freemen everywhere.

Missouri Basin Survey Commission

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, August 28, 1951

Mr. HENNINGS. Mr. President, last week, together with 14 other Senators, I introduced Senate Joint Resolution 93, to establish a Missouri Basin Survey Commission. In introducing the joint resolution, I pointed out that I believe the time has come to put an end to jurisdictional disputes and misunderstanding and emotional arguments and to get down to business in formulating a workable, comprehensive, long-range program for effectively harnessing the water resources of the Missouri Valley.

A recent editorial in the Washington Post, discussing the various conflicting approaches to this problem, asks:

Should there not be created a national commission, with no doctrinaire axe to grind, to study the Missouri Valley and make recommendations as to what over-all objectives should be?

Just such a study would be the duty of the Commission proposed in our joint resolution.

The editorial further speaks of the necessity for local participation and states:

Popular participation is basic in any satisfactory program, the people in the areas concerned should have an active voice in deciding what the program should be.

Mr. President, I should like to stress again that this, too, is a basic concept of our proposed resolution. This feature was, I believe, made clear in my remarks on introducing the measure, when I said:

After long study of this problem, I have become convinced that no single plan will succeed in the area unless it has a large measure of local acceptance and support. My resolution, I believe, offers a new approach from this standpoint. It encourages local participation by requesting the governors of the Missouri Basin States to appoint representatives to an advisory committee to the Commission. The members of the advisory committee are invited to attend the meetings of the Commission and present

the desires and views of the individual States. Moreover, the Commission is directed to go into the area and conduct on-the-site surveys and appraisals of resources-development programs. Of prime importance, however, is the provision that the Commission would hold hearings throughout the area. It would go into the valley with an open mind. It would listen to the people who live and work in the region and would learn their sentiments and their thinking on all of the many water problems. I believe this is a healthy approach and I believe that through it the various divergent groups, representing differences in thought, understanding, and judgment on the problem, would find themselves in substantially greater agreement than disagreement on many of the issues.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the editorial from the Washington Post of August 25, entitled Patchwork Valley, which is both constructive and thought-provoking.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

PATCHWORK VALLEY

Now that public interest in the Missouri Valley is aroused as a result of the recent floods, there is an admirable opportunity to develop a fresh approach toward valley development. What has taken place along the Missouri River so far is a patchwork—or rather, a series of patchworks—principally because there is no guiding over-all plan. With the clamor for more flood-control measures in the wake of what happened in Kansas and Missouri, the danger is that there will be a stampede for new dams and reservoirs with no thought of how they can best be fitted into the interests and resources of the Missouri Valley as a whole.

The Federal Government has invested large amounts of money in the loosely-knit Pick-Sloan plan and, in lieu of something better, vast new expenditures are contemplated. The trouble with the Pick-Sloan plan is that it attempts to marry irreconcilables, such as irrigation and navigation, and that by failing to include all the components of water-resource control it leaves the interagency fight unappeased. Some persons feel that the great dams and reservoirs now being demanded in Kansas will be purchased only at the expense of flooding great areas of farm land which would be perfectly usable under a more comprehensive plan. Is it not time for a stock taking before more money is spent? Should there not be created a national commission, with no doctrinaire ax to grind, to study the Missouri Valley and make recommendations as to what over-all objectives should be?

This does not mean that any program of valley development should be imposed from the top. That is the trouble with the proposed Missouri Valley authority, and to a lesser extent with the present plans for flood control. Popular participation is basic in any satisfactory program; the people in the areas concerned should have an active voice in deciding what the program should be.

Perhaps the Missouri Valley is too big an area to tackle all at once. Possibly the most effective plan for the Missouri Valley would be in the integration of smaller programs for individual watersheds, such as the Kaw, the Big Blue, and the Platte Rivers. Although the Federal Government properly ought to have a say where Federal money is concerned, perhaps the most useful role of the Government at this stage would be in serving as a catalyst to get local groups interested in "community watersheds" and in the development of comprehensive regional programs.

In any event, a study by representative citizens of the Missouri Valley as a whole could be of invaluable assistance in promoting broad thinking and in shedding light where there now seems to be largely confusion.

Rural Electrification Week

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. TEAGUE. Mr. Speaker, the Honorable Allen Shivers, Governor of Texas, has set aside a week as Rural Electrification Week in recognition of the outstanding work which has been done by Texas REA cooperatives. The development of REA has brought a new way of life to the farm families in my district and has opened opportunities for new industry and greater comfort throughout the district. The city of Bryan is unique in that it owns and operates a REA cooperative which has achieved outstanding success in providing service to most of the farm families of Brazos County.

The following editorial, which appeared in the Bryan Daily Eagle, gives recognition where recognition is due to the progress made by Texas REA co-ops:

REA WEEK

The week has been set aside, through the medium of a proclamation by Gov. Allen Shivers, as Rural Electrification Week. As a result many of the REA cooperatives that have been organized in Texas, as well as in other States, will take time out to do some celebrating.

The city of Bryan and its citizenship, as well as thousands of men, women, and children in the immediate trade territory, should be interested in this proclamation. Bryan occupies a unique position in the development of rural electric service and in the whole REA development, since it is the only city in Texas that owns and operates an REA system and, from all accounts, now is the only city in the United States engaged in such an enterprise. Today there are 77 REA co-ops in Texas—and Bryan.

The establishment of the Rural Electrification Administration as an agency of the Department of Agriculture does not reach back into history. In fact the rural electrification movement is only about 30 years old and in that period electric current has been made possible to about 4,900,000 of the 5,200,000 occupied farms of the Nation and to about 15,000,000 of the 15,500,000 occupied rural dwellings.

The growth that has been recorded throughout the country has been matched by the progress in this community. The energizing of the Bryan system's first line was in December, 1937, less than 14 years ago. Since that time approximately 3,000 rural families in Brazos County and in sections of Burleson and Robertson Counties have tied into the Bryan REA system. This not only has brought more comfort, as well as light, into rural homes but has made possible such developments as the dairy industry, today an important agricultural activity of this section. It also will be a factor in the development of the broiler

industry, now in swaddling clothes in this county but struggling to get out of them.

The approximately 3,000 consumers which include not only rural homes but churches and schools, and dairies and gins and rural stores—in fact all rural activity has been aided by the availability of electric current—are served by something more than 650 miles of line. The power is produced at the Bryan power plant.

The development of the Bryan REA system is expected to make possible, within the comparatively near future, the development of a rural telephone system for the area served by the REA system. This matter already has been discussed with USDA officials connected with the REA and since this city already has the right-of-way and the poles and line the development of a rural telephone system would be comparatively simple and a survey now being made shows a satisfactory interest despite unfavorable crop conditions.

The REA system and the probability of a rural telephone system which would be made possible by Bryan, are highly important as good-will builders and as community developers. The REA is paying its way and there is no reason to doubt the proposed telephone system would also pay out. This community has every reason to join in the observation of Rural Electrification Week, since making electric light and power available to the rural areas adjacent to Bryan has been of high value to both those served and the people of the city.

Tribute to the AMVETS by Hon. Brian McMahon, of Connecticut

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, August 29, 1951

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Record a statement prepared by me in tribute to the AMVETS as they assemble this week in Boston at their seventh national annual convention.

There being no objection, the statement was ordered to be printed in the Record, as follows:

As the seventh annual national convention of the AMVETS convenes this week in Boston, I wish to say a few words of tribute to that young organization.

It is fitting that such tribute should be paid at this time because of the outstanding work which AMVETS have done in civil defense during the year now ending. They have long been recognized for the solid and constructive programs in foreign affairs, veterans' rehabilitation, and military preparedness which have emanated from each of their annual conventions. But a year ago, at the convention in Cleveland in September 1950 they added new laurels as a result of the sound measures which they adopted regarding civil defense.

By unanimous resolution, AMVETS pledged their full cooperation to civil-defense authorities throughout the country. They directed that civil-defense committees be established in every post and department and that these committees give their active and wholehearted support to the civil-defense programs in their home communities. This

has been done throughout the country in a way that is indeed gratifying.

In addition to these measures, the AMVETS advocated that a national blood-typing program be made a part of the civil-defense preparations in each city and State in order to increase the registers of potential blood donors at hospitals and blood banks, thereby making possible the collection of great quantities of whole blood in an emergency, whether the result of war or civil disaster.

The importance of such a program is underlined by these basic facts.

First, it has been estimated that several million pints of whole blood might be needed within the first few weeks of an attack on our civilian population. In one city alone, hit by a single atom bomb, more than 250,000 pints of whole blood will be needed in the first 3 weeks.

Second, whole blood can be preserved for only 3 or 4 weeks. It would be extremely wasteful and probably impossible to maintain a 3-week stockpile of several million pints. It would mean bleeding several million donors every 3 weeks to maintain such a stockpile.

Blood plasma will be used, of course, because it can be stored for several years and, therefore, can be stockpiled. It is useful in many ways, but it is by no means a complete substitute for whole blood. It lacks the red blood cells necessary to carry food and oxygen to injured areas of the body.

Whole blood, therefore, will be needed immediately, and needed in large quantities. Extensive blood-typing programs in advance of an enemy attack upon this country will greatly simplify the collection of blood when that attack comes.

Advance blood typing does not eliminate the need for retying at the time blood is collected, but it will save valuable time and countless lives. And it will achieve two other vitally important results.

First, it will help train the highly efficient organization that must be ready to stage mass blood collections from persons outside the attacked areas. As one civil defense authority has said: "To activate an adequate and safe wartime blood program without previous, extensive, actual experience in peacetime would be virtually impossible."

Second, extensive peacetime blood-typing programs will bring about immediate expansion in the production of critically short blood typing serum. Today there is only enough serum on hand to blood-type but a few hundred thousand of the several million donors who will be called on to give blood in the first few weeks after a bombing attack.

In conjunction with the blood-typing program, AMVETS urged that there be issued to each civilian an identification tag bearing his name, address, blood group, and Rh type. They entered upon their own program of research to determine the best materials and design for the tag and the basic information that should be included on it. Later, when the Federal Civil Defense Administration began studies of this subject, AMVETS made available the vast amount of information which they had assembled.

Months ahead of others, the AMVETS carried out a blood-typing campaign on a city-wide basis in order to show its practicability and to determine the best methods of operation. With community-wide support of the people of Allentown, Pa., an extensive blood-typing program was launched in that city last December 4. The program there won the support of municipal and civil defense officials, medical authorities, civic groups, business and industrial organizations, and the public generally.

In late December 1950 these pioneering efforts began winning through, for as the

year ended the new Federal Civil Defense Administration announced its approval of extensive blood-typing programs in critical target areas and declared further that "a peacetime, widespread blood-grouping program, not confined to target areas, would be of great help in making large numbers of group O donors available in an emergency."

In complete accord with the ideas which AMVETS had expressed earlier, the Federal Civil Defense Administration pointed out that the process of collecting blood in an emergency would be "greatly expedited and simplified" by a previous blood-typing program.

Early this year the AMVETS undertook to acquaint State and municipal authorities with the progress and results of their long study. This informational campaign is largely responsible for bringing about the widespread discussions now being held in towns and cities throughout the country on blood-typing programs. Today there is hardly a community of any size that is not now turning its attention to detailed consideration of extensive blood typing of its citizens. The impetus for these discussions has come from the AMVETS. Their work has brought nearer the day when such projects will be undertaken everywhere in the country.

The task is far from completed. The real work of putting such programs into operation remains to be done. But AMVETS' past record of achievement is convincing proof that they will be in the forefront in carrying out this work in the communities throughout America.

But more than that, their counsel and help will be sought from many quarters. In the months that they have devoted to research and study, AMVETS have become perhaps the leading nongovernmental lay authority in the Nation on the methods and procedures for large-scale operation of blood typing and blood tagging programs. Their understanding of both the technical and organizational aspects of the problem has prepared them to aid our States and cities in this work.

They have assembled operational data on the problems of organization, financing, enlistment of volunteer workers, and public education through every media of publicity. This vast information would be invaluable as a guide to any community undertaking a blood typing program.

One cannot conclude this story of foresight and courage without paying respect to the two men whose leadership made it possible. Harold Russell, the National Commander of AMVETS, and Gen A. A. Vandegrift, former Commandant of the Marine Corps, now serving as the AMVETS chief of civil defense.

Notable among the others who have played a leading part in this work are Caryl Warner, of Los Angeles, who was chairman of the Civil Defense Committee at the AMVETS 1950 convention and who was instrumental in first developing the program; Paul H. Kern, civil defense director of Allentown, Pa., who directed the blood-typing program in that city; Harold A. Keats, finance administrator of the AMVETS National Service Foundation, who was conspicuous in the early development of the program; Joseph M. Gelman, Ford Forsythe, and James Laverty, who directed the program in Pittsburgh; John G. Hundley, the civil defense coordinator for AMVETS; and John C. Palmer, the deputy civil defense coordinator.

In times like these, we can draw renewed confidence in the strength and well being of this Nation from the noble example of the AMVETS. These young men and women have given us an eloquent demonstration of their great principle—in war a mighty shield, in peace a tower of strength.

Why All This War Scare Talk?

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. WOOD of Idaho. Mr. Speaker, while there is not a particle of evidence to prove that Communist Russia has a single atom bomb—although traitors have tried desperately to furnish Russia all atomic secrets—the President has gone on the radio to picture the havoc to American cities by an atomic attack from Russia. Not only has the atom bomb been overexploited, but the war potential of Russia has been overexploited and greatly exaggerated, as is shown by the reliable and accurate Washington News Bulletin No. 171 of August 27, 1951, hereto appended.

Why then the feverish activity to pour billions into defense armaments not only for the United States but for all countries outside the iron curtain? There are just two reasons: First, the pseudo economists of the 'New Deal-Fair Deal' have made such a mess of our economy that they must promote wars and rumors of wars to keep our economy going; and, second, international conspirators see in this an opportunity to drain away our wealth, destroy our domestic economy, and gain control of the strategic materials of the world and thereby dominate and control American industry and commerce.

Our most dangerous enemies are not in Korea, China, or Russia, but right here in the United States. The United Nations, the International Bank and Fund, and a debauched, manipulated, irredeemable currency supply the tools with which these subversives work and the vehicles on which they are riding to power, and until we strip them of these tools, all the present frenzied efforts for world peace, economic stability, and national security are just so much sound and fury signifying nothing.

Fear of Russia is merely one of the instruments used by these conspirators to attain their objectives.

Communist Russia is the greatest economic hoax in all history; ready to fall apart from her own internal weaknesses when our enemies within and without withdraw their support. Russia dare not start world war III, even if she were economically able, because the Balkans are seething with revolt and ready to rise against their oppressors at the first opportunity, and Russia knows that.

There is no war talk in Europe such as we hear in the United States. But for the two reasons mentioned above the administration is piling crisis on crisis, emergency on emergency; and the beating of the war drums and the barking of the dogs of war have so unhinged our reason and detracted our attention that we seem totally oblivious of the fact that we are being rushed headlong into a

situation many times worse than war—total economic collapse—which means unbridled anarchy throughout the world, the break-down of civilization, and a throw-back to the Dark Ages.

The Senate got us into this mess by ratifying the United Nations, the Bretton Woods monetary agreements, and the Atlantic Pact, and it is up to the Senate to get us out of them.

Common sense dictates that the way to prevent wars and depressions is to eliminate the causes. Every war is, in essence, and economic war; and the underlying causes of wars and depressions, booms and busts, inflation and deflation are unsound monetary and fiscal policies of governments. These causes can be eliminated in 90 days without cost to the American taxpayers, without economic disturbances of any kind, and without sacrificing the life of a single American boy in foreign wars, merely by carrying out a legislative mandate that has been on our statute books for 57 years—section 311, United States Code, Annotated, chapter 8, 28 Statutes 4.

World peace, economic stability, national security, and the survival of constitutional government are predicated on a sound monetary system because money is the measure of the value of all goods and services; and unless that measure is honest, constant, and invariable, millions of people will be cheated in the sale of their goods and services while others will profit unjustly, and chaos, confusion, and war will be inevitable.

A sound, honest, dependable monetary system which maintains and protects the solvency and integrity of the people's money, and guarantees the redemption of currency at face value, on demand, will do more to prevent war, establish justice, insure domestic tranquillity, and promote peace and harmony among nations than all the United Nations, Bretton Woods Agreements, Marshall plans, Atlantic Pacts, or point 4 programs ever devised.

Those who ignore facts and realities and permit themselves to be stampeded into voting away billions and billions of dollars of the American taxpayers' money for global boondoggling and arming European nations that do not want to be armed, at the risk of bankrupting the United States, will probably live to see even the school children point them out as Benedict Arnolds.

Washington News Bulletin, No. 171, follows:

SOVIET UNION TOO WEAK LOGISTICALLY TO FIGHT A WAR AGAINST WESTERN EUROPE AND THE ALLIES AT THE PRESENT TIME

The immediate possibility of a third world war should be considered from a logistic standpoint.

A brief survey indicates that the Soviet Union has several inherent weaknesses, which by all military experience should deter her from an attack on Western Europe and the Allied Nations constituting the present North Atlantic Treaty Organization.

In order to successfully prosecute a war of aggression, certain basic elements are necessary. Among these are men and materials. The Soviet Union has the manpower beyond question. However, when it comes to material, the scales are tipped heavily in favor of the Allies.

There is an old saying that armies travel on their stomachs.

This brings into focus the ability of the Soviet Union to feed and support expeditionary forces for aggression in Europe.

Without giving consideration to the agricultural production of Europe, which might for the time being fall before a quick advance of an aggressor, the agricultural potential of the United States alone is far greater than that of the Soviet Union. Although the Soviet Union has slightly more tillable land than the United States, the rainfall and climate limit the production to no inconsiderable degree. A comparison of the principal agricultural crops of the United States and the Soviet Union is shown by the table following:

Item and year	American production	Soviet Union production
Wheat, 1949.....bushels..	1,146,463,000	1,100,000,000
Winter rye, 1949.....do.....	18,697,000	950,000,000
Oats, 1949.....do.....	1,322,924,000	775,000,000
Barley, 1948.....do.....	315,894,000	315,000,000
Corn, 1948.....do.....	3,681,793,000	140,000,000
Rice, 1948.....do.....	85,056,000	15,555,500
Cotton, 1949.....bales..	16,034,000	2,070,000
Sugar (domestic).....pounds..	3,950,130,000	3,964,000,000
Tobacco, 1948.....do.....	1,980,000,000	380,000,000
Livestock, head, 1949 ¹		
Cattle.....	78,298,000	54,000,000
Hogs.....	57,128,000	15,000,000
Sheep and goats.....	127,651,000	87,000,000
Horses.....	5,898,000	10,800,000

¹ Goats numbered 4,000,000 in 1949. In Russia goats are commonly owned by many families too poor to keep milk cattle.

AGRICULTURAL AID TO RUSSIA IN WORLD WAR II

After the United States entered World War II, lend-lease was made available to the Soviet Union. Eligibility was declared on November 7, 1941, and a lend-lease agreement executed June 11, 1942.

Of the more than \$11,500,000,000 in aid to the Soviet Union, largest single item was agricultural products. The total shipments to the end of 1946 in pounds are shown by the table following:

Item	Shipped under lend lease	Distributed by UNRRA	Total agricultural aid
	Pounds	Pounds	Pounds
Meats and meat products.....	2,152,881,000	264,889,000	2,417,770,000
Fats and oils, butter.....	1,884,806,000	53,760,000	1,938,566,000
Milk processed.....	218,769,000	89,856,000	308,625,000
Eggs and products (dried).....	242,458,000	242,458,000
Rice and rice flour.....	135,808,000	3,983,000	135,791,000
Vegetables.....	53,970,000	33,159,000	87,129,000
Pulses.....	567,186,000	30,415,000	597,601,000
Wheat and flour.....	1,502,820,000	1,502,820,000
Cheese.....	69,814,000	12,063,000	81,877,000
Other foods.....	315,782,000	8,585,000	324,367,000
Total pounds of food supplied.....			7,636,714,000

The farmers in the Soviet Union do not have the advantage of mechanization to the extent enjoyed by American farmers. For example, in 1940, there were 523,000 tractors in the Soviet Union compared with 1,447,000 in the United States. Much of the work done on farms in Russia proper is with draft animals, and the average Russian harvests the crops from about 8 acres of land compared with the average harvest in the United States of more than 27 acres.

It is apparent, therefore, in case of a war with the Soviet Union, the agricultural production of the United States, coupled with that of Canada and other Western Hemisphere nations, gives the Allies a big advantage when it comes to feeding the forces who will do the fighting.

We now move to the consideration of the potentials in steel and petroleum products without which wars cannot be fought along the present strategic plans.

STEEL CAPACITY OF THE SOVIET UNION AND SATELLITES

Steel is a vital necessity in war. Without it in abundance, no nation can long fight a war of aggression. So it is pertinent to compare the quantities of ingots and castings the United States can turn out compared with the capacities of the Soviet Union and her satellites, Poland, Czechoslovakia, Austria, and Hungary.

The American Iron and Steel Institute, in a background memo of February 1951, quotes the following:

"By turning out almost 97,000,000 tons of ingots and castings in 1950, steel companies in the United States of America produced approximately the same amount of steel as all other countries of the world.

"Retaining its position for the fourth consecutive year as second largest steel-producing country in the world, Russia turned out an estimated 26,500,000 tons of steel, or 13 percent of global output. Combined production for the Soviet satellite countries of Poland, Czechoslovakia, Austria, and Hungary was estimated at 7,500,000 tons in 1950. This tonnage, coupled with Russian output, brought to approximately 34,000,000 tons the steel production for Communist-dominated countries of the world."

CRUDE PETROLEUM AND REFINERY CAPACITIES

In 1949, the production of crude petroleum in the United States reached a total of 1,840,307,000 barrels of 42 United States gallons.

By way of comparison the production of the Soviet Union and all of Europe was but 291,726,000 barrels.

Refinery capacities reported by the American Petroleum Institute, as of January 1, 1950, were as follows:

United States: Three hundred and sixty-seven refineries with daily capacity of 6,696,300 barrels.

Soviet Union: Twenty-five refineries with daily capacity 650,000 barrels.

Yugoslavia: Five refineries with daily capacity 8,300 barrels.

Poland: Six refineries with daily capacity 7,100 barrels.

Hungary: Eight refineries with daily capacity 19,700 barrels.

Austria: Nine refineries with daily capacity 26,100 barrels.

Rumania: Sixteen refineries with daily capacity 181,500 barrels.

The table shows that Russia and all her satellites have a combined refining capacity of 892,000 barrels a day compared with the United States total of 6,696,300 barrels a day.

The transport of crude and refined petroleum products is very important in time of war. This brings up the question of pipelines and tankers. The United States had 578 tankers in 1949, with 5,439,000 gross tons

capacity, compared with 16 of the Soviet Union, with a capacity of 106,126 gross tons.

As far as this story goes, we wonder just how scared our military men really are of the big red bear?

PAUL O. PETERS.

Consolidation of Veterans' Administration District Offices in Philadelphia

EXTENSION OF REMARKS OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 29, 1951

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the body of the RECORD a statement I have issued with respect to consolidation by the Veterans' Administration of their Richmond, Philadelphia, New York, and Boston district offices, at Philadelphia.

Although this consolidation affects my States and removes the district office from Richmond, Va., with 800 employees, I favor it, as I am convinced it is a proper move in the interest of retrenchment, simplification and efficiency. The time has come when all of us must recognize that retrenchment in Federal public spending, which is so necessary, means sacrifices in our own localities. This consolidation will save, I am convinced, approximately \$1,300,000, and, for this reason, I favor it and save so announced.

This consolidation will permit the elimination of 372 supervisory positions. There are now 4 division chiefs, and, as a result of the consolidation, there will be only 1. There are more than 12 units in each of the 4 divisions, making 48 chiefs of units, and, under the consolidation, there will be only 1. Carrying this down throughout the managerial operation will mean, I am convinced, that the minimum of savings I have just stated, as estimated by the Veterans' Administration will be realized.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Veterans' Administration, as an economy move, has ordered consolidation of its Richmond, Philadelphia, New York, and Boston district offices at Philadelphia.

Naturally I have received numerous oral and written requests to oppose removal of the district office from Richmond, and in response to these requests I have endeavored to establish the facts in the case.

As a result of my investigation I am assured that there is no basis for fear that service to veterans or their dependents will be impaired by this consolidation.

The savings resulting from the consolidation of these four district offices are real, and I believe they will total more than \$1,300,000 per year.

As chairman of the Joint Committee on Reduction of Nonessential Federal Expenditures, I know from my own investigation that the Veterans' Administration has been overstaffed and overorganized, and I have frequently called upon it to reduce its nonessential expenditures. I believe that this

can be done without impairment of its legitimate services to deserving veterans. As of July the Veterans' Administration was employing more than 182,000 persons with a payroll of more than a half billion dollars a year. This is an employee for every 100 veterans of all wars whether they are participating in veterans' programs or not.

We are faced with the possibility of confiscatory taxation which would destroy the free enterprise system and bleed white those of us paying individual income taxes even in the lower- and middle-income brackets.

If we are to survive we must change this course. We must submit to economies in nonessentials, both at Washington and at the State levels of Federal agency operation.

Under the circumstances I cannot oppose a sincere effort for economy through consolidation in a Federal agency when I am assured that the economy is real and that essential services will not be impaired. On the contrary, it is incumbent upon the Veterans' Administration to institute such efficiency whenever and wherever it is possible.

Naturally I regret that I am unable to accede to the wishes of those who requested me to oppose this consolidation, but I do not feel that I can sincerely talk economy in Washington and oppose economy in Federal operations in Virginia.

Washington Merry-Go-Round

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 29, 1951

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column entitled "Washington Merry-Go-Round," published in the Washington Post on Monday, August 27, 1951, which I wrote, substituting for Drew Pearson.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

WASHINGTON MERRY-GO-ROUND

(By Senator ALEXANDER WILEY, substituting for Drew Pearson)

Sometimes the actual Washington Merry-Go-Round whirls so fast and reverses directions so often that observers get pretty dizzy and confused just trying to follow it. In fact, the contradictions of certain high-up folks in Washington can really make even an expert's head spin. These contradictions remind you of a lot of Alices in a fantastic blunderland.

Do you think, for example, that the present Democratic administration is liberal and that its Republican opposition is reactionary. If so, consider these items which tell a revealing story:

GAS GOUGE

You, the consumer, are soon going to have to pay still more for natural-gas fuel. How come? Well, you can thank the great liberal Democratic Party for those high rates. A Democratic President, Harry Truman, had soundly vetoed a bill (backed by leading Democrats) which would have indirectly resulted in increasing natural-gas rates. Many Republicans like myself supported and applauded the Democratic President's veto.

Later, however, as reported by Drew Pearson and others, the Federal Power Commission (appointed by the same President)

completely reversed the President's action and a Democratic-appointed Supreme Court by exempting independent gas producers from Federal rate control. But do you suppose that the President criticized the Federal Power Commission for its dangerous action? No, definitely not. The President said the FPC decision had no connection with his previous veto (even though it completely reversed the veto).

So here we have a good Democrat, Harry Truman, patting on the back by implication other good Democrats who have completely stabbed one of his own policies in the back. Dose that make sense? Of course not. Moreover, the Republicans whom the President has repeatedly attacked as allegedly not being interested in you, the consumer, have been the principal ones who have fought to protect the consumer from these gas-rate increases.

SEAWAY SABOTAGE

Take another instance. In his recent speech in Detroit, President Truman rightly praised the Great Lakes-St. Lawrence seaway as the most important single project facing this country. Yet, this very same project which would incidentally be self-paying and which has been endorsed by Herbert Hoover, Franklin Roosevelt, George Marshall, and so forth, has been blocked by some of the President's best friends in the Democratic-controlled Senate and House of Representatives. On the other hand, many of the leading advocates of the seaway are Republicans. So, here again we have Republicans supporting the President, while Democrats—with some notable and praiseworthy exceptions—are trying to sabotage the President and are working hand-in-glove with selfish, backward-looking railroad and port lobbies.

Had enough inconsistencies? Here are some more. The merry-go-round spins faster.

SOUTHWEST STEAL

The President says he opposes favors for special privilege groups. Yet, some of his leading supporters in the Senate have succeeded once again in passing—over Republican and some Democratic votes—a fantastic bill, the central Arizona project, which would pour three-quarters of a billion dollars down the rat-hole for the benefit of a few Arizona landowners. Some monkey business.

TIDAL TILL

In another interesting issue, the President rightly says he will veto any bill which quitclaims Federal title to the oil-rich marginal sea. Many Republicans like myself will support the President in such a veto. Why? Because we think—although a good many Republicans disagree—that all Americans are entitled to ownership of the tideland treasures. But who do you suppose is spearheading the effort to destroy Federal title? Why, principally, the very same Democratic leadership in the Senate and House which is usually, amazingly enough, trying not to decrease but to increase and expand Federal power. Is that contradictory? It certainly is. But, as the old saying goes, "It all depends on whose ox is gored."

CODDLING CRIME

Take another example. Back in April, one of the most difficult fights I ever had was to try to extend the life of our Senate Crime Investigating Committee. Who do you suppose fought against the extension? Some of the leading Democrats in the Senate (although they were afraid to do it openly). Now, the Special Crime Committee is coming to an untimely end as of September 1. There will be rejoicing then throughout the underworld. But do you suppose that the Senate Democrats will en-

courage the standing Interstate Commerce Committee to carry on where the special crime group's efforts left off? That remains to be seen. Judging from the past, the anti-crime crusade may now be put to sleep by probe-shy Democratic leaders. Yet conscientious Democratic members of the Crime Committee led the superb fight against crime in a nonpartisan way and worked in complete harmony with us Republicans against crooks and corruption. But that hasn't prevented some other Democrats from trying to hamstring our committee's work. Perhaps, the Democrats are afraid of exposing more shenanigans in the big-city machines (Bronx County, Cook County, etc.) which furnish the hard core of Democratic voting strength. Does that sound likely? Could be.

CONCLUSIONS

What do these examples prove? Just this: 1. Beware of ready-made labels for any political party. Neither party, be it Republican or Democratic, has a monopoly on virtue. But, certainly the Republican Party (and not just its so-called liberal wing) has a lot more virtue than its critics have attributed to it.

2. The term "liberal" itself is often a misnomer. It's easy for many Democrats to be liberal in spending other people's money and taking other people's rights away. I am against such liberalism, just as I would be against a conservatism or reaction which would try to turn the hands of the clock backward or which would attempt to deny certain progressive steps which the American people insist on in this modern age.

O. K., Drew, thanks for the ride on the Merry-Go-Round. You might call it the Carousel of Contradictions.

Political Conditions in the United States

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 29, 1951

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address regarding political conditions delivered by Col. Robert R. McCormick, and broadcast over the Mutual Broadcasting System on August 11, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HOPE FOR OUR FUTURE

(By Col. Robert R. McCormick)

During my recent 2 weeks' absence a considerable number of letters have accumulated, many of which despair the future of our country.

Much of this despair is attributable to petty men rattling around in positions of vast power in the executive branch of the Government and not a little of this despair is attributable to the failure of the legislative branch to throw off subservience to the White House and to assume the vital role contemplated by the founding fathers.

While it is true that a majority of the Democrats and a minority of Republicans are lacking in patriotism, it is fortunate for the country they do not always constitute a majority of the Congress. From time to time the true patriots in Congress have band-

ed together with determination and resolution to resist tyranny, and socialism, and treason, and boodling.

Despair is common in periods of crisis. Each generation is fond of looking at its problems as more difficult than those of the generations that have passed this way before us. The unsolved problem of today appears to be insurmountable by comparison with the solved problem of yesterday, although the latter loomed no less formidable when first it loomed against the horizon of history.

When unsolved problems rear to terrifying heights above us, progress seems slow. It is when we look back over the years that we can truly measure the progress that we have made and take heart in the future.

Almost 20 years ago, Franklin D. Roosevelt was a hero to the majority of the people. He strode the national scene, acclaiming himself as a paragon of moral virtue, a model of political propriety, and a colossus among statesmen. Hundreds of millions of dollars were expended by Federal propaganda mills to create and keep alive the fiction that Roosevelt was an all-wise, all-seeing, and all-honorable philanthropist, political philosopher, and great commander.

Today Roosevelt's stature is dwindling below the heroic and even below the human. He and most of his family stand revealed as having a careless regard for the commonest rules of morality as regards honesty and truth. And Roosevelt stands revealed as a short-sighted dupe, first of Britain and then of Russia, rather than the far-seeing statesman of the profiteering fictioneers.

The personal honesty of the Roosevelts must be measured against the story of John Hartford, head of the Atlantic & Pacific Tea Co. At a time when the company was under the New Deal attack Roosevelt helped Elliott, one of his four sons, borrow \$200,000 from Hartford with some radio stock as collateral. The President clinched the loan for his son by addressing Hartford, a man he had never seen, as "John" over the telephone and inviting him to visit the White House.

But this was not all. The loan was made in 1939. For 3 years Hartford heard nothing from Elliott in the way of payment of principal or interest on the \$200,000 loan. In the meantime, the radio stock left with Hartford rose in value to over \$500,000. President Roosevelt sent his Secretary of Commerce, Jesse H. Jones, to Hartford to represent the stock as worthless and return it on settling the \$200,000 loan for \$4,000, or 2 cents on the dollar.

Jones turned the stock over to the President, who turned it over to Elliott, who in turn turned it over to his divorced second wife and their children as a divorce settlement.

Under no stretch of the circumstances can these transactions be characterized as honest. To be blunt they smack of the operations of confidence men, the most amiable of the crooks. Other devious financial operations have revealed the Roosevelts as something less than nice where money is concerned.

As a statesman Roosevelt was neither truthful nor honest with the American people. In the days before Pearl Harbor it has been disclosed Roosevelt deliberately kept the people and Congress uninformed. He operated by stealth to bring the Nation into war while cloaking his actions in trappings of defense and peace. Roosevelt made the destiny of the Nation the private concern of himself and a small coterie of fellow travelers.

As he did not consult the people in the making of war, Roosevelt did not consult the people, or their representatives in Congress, in the making of the peace.

In the crazy quilt of personal war and personal peace, Roosevelt betrayed allies and the American people to Soviet Russia. Pub-

lication of the secret agreements entered into at Tehran and Yalta demonstrate that Roosevelt betrayed Eastern Europe and China to communism and betrayed the United States to the Soviets even to the extent of furnishing Russia with bases from which to launch a military attack upon this country. I refer to the Kurile Islands, which lie between Japan and the Aleutians and which Moscow radio tells us have been transformed into a bastion of iron.

Rule by coterie under Roosevelt has become rule by crony under Harry S. Truman. Once again the American people are being kept uninformed and Congress is not being asked to advise, in fact, it is more frequently than not even being consulted. At Potsdam Truman ratified and augmented the betrayals of Yalta and Tehran. The conspiracy of communism was encouraged as Josef Stalin, the bloody murderer and bank robber, became "Good Old Joe," and the Communist traitors became nothing more than red herrings, even though their stench rose to high heaven in the nostrils of the body politic.

A little more than a year ago Truman wrapped Roosevelt's mantle of secret power politics and secret diplomacy about himself and declared a personal war in Korea. He defied constitutional war-making provisions, ignored Congress and the people, and embarked on a military operation for which even he himself has encountered difficulty in finding a name. His first choice was police action and his second limited war.

Whatever the name, his personal war has cost more than 60,000 casualties, which is a ghastly total for what is being represented as preventive war.

In recent months intimates of the President have been revealed as personally corrupt and, to say the least, careless of his honor. In fact, the history of the Truman administration is pockmarked with scandal upon scandal. We have a sordid parade in and out of the White House of vote fraudsters, 5 percenters, pardoned gangsters, influence peddlers, RFC favoritism, mink coats, home freezers, surplus profiteers, ship stealers, and assorted chiselers.

Truman's prestige has dwindled to so low an ebb that it is recognized that his only hope is to control the next Republican convention as he controlled the last through Thomas E. Dewey and the New York mesalliance of financiers, internationalists, and Communists. This strange combination has been pretty well exposed by the actions of Dewey and his chief lieutenant, John Foster Dulles. Dewey and Dulles have become synonymous for damaged goods since the revelation of Dewey's corrupt bargaining contained in the now infamous Joe Hanley letter and the disclosure of Dulles' part in the election of Alger Hiss, the Communist perjurer-spy, to the head of the Carnegie Endowment for International Peace.

The Carnegie Foundation is linked by financial and ideological ties in an interlacing of directorate which comprises a solid phalanx of international do-gooders. There is an interlocking directorate in the Carnegie group with the Rockefeller Foundation, the Council on Foreign Relations, the Foreign Policy Association, the English Speaking Union, the Woodrow Wilson Foundation, and the World Peace Foundation. There organizations activated by men of common financial interests in internationalism, have been pouring out tax-exempt funds to promote globalism. Exposure of their activities will doubtless project their dissolution as un-American organizations as an issue in the forthcoming presidential campaign.

Looking backward over the last 20 years, there is no reason to despair of the future. We have made progress in recognizing deceit and trickery. In spite of the many billions

and vast powers at the command of the administration, brave men in Congress have so exposed communism that a score of Communists have been convicted by juries and a number, including Vanderbilt Field, that curious financial angel of destruction, have been jailed for contempt of court or contempt of Congress.

I represent these brave men in alphabetical order by branch of Congress so as not to make any comparisons between their patriotism. In the House, we had former Congressman Dies and Congressmen Busbey, Dondero, Hoffman, Vall, and Velde. In the Senate, we have had Senators Bridges, Ferguson, McCarran, McCarthy, Mundt, and Nixon. These men, with the help of high-minded colleagues, have made communism so unpopular that Harry Bridges is the only conspicuous Communist to hold this high place.

The decriers of McCarthyism and Operation Truth are fully discredited. The quasi-respectables, who go along with them, are beginning to see their peril. The truth is being recognized from the lie repeated a thousandfold. Truth is triumphing over calculated fiction. Fact is replacing myth. In the sense, BRICKER, BYRD, CAPEHART, DIRKSEN, GEORGE, JENNER, KEM, TAFT, and WELKER with those previously named are furnishing the desired patriotic leadership. The return of General of the Army Douglas MacArthur has brought all of his great genius to the aid of the patriots. He has brought the power of truth and military genius to bear on the world crisis.

William Fulton, the Tribune's New York correspondent, has exposed the conspiracy of the Rhodes scholars to subordinate this country to Socialist England. He has traced the indoctrination of these scholars in British ideals and their initiation into the secret society envisioned by Cecil Rhodes—into a secret society aimed at returning 48 States and two great Territories to Britain for the 13 colonies lost almost two centuries ago.

Drawing their inspiration from the decay of monarchy in Europe to socialism, these cabalists would overthrow the sublime concept of our founding fathers, who threw off the yoke of the tyranny state and erected the mighty structure of sovereignty of the people.

Frank Hughes of the Tribune staff has rendered no less yeoman service in exposing the Communist tinged gang that is working to destroy the freedom of the press and poison the foundations of education in order to subject this country to an autocratic world government. These enemies have been drawing their inspiration from all that is abhorrent in Europe to create an all-powerful world state, which would at once be our political master and our spiritual god. Fortunately, the exposures have come at a time when it is still possible to reverse the course of the despots and crackpots.

No, my friends, there is no reason for despair. The tide is turning with the brightening of a new dawn.

If our Congress is slow it is because its Members are largely submerged in the Capital throng of alien diplomats and alien-minded office holders and do not appreciate the public opinion at home. Even the tremendous mail in the wake of the MacArthur dismissal does not seem to have awakened some segments of Congress.

Only after a number of the laggards in patriotism have been defeated for renomination or reelection can we expect America to come to Washington. Then we will get a patriotic Congress to support a patriotic President.

Threat to a Free Press

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, August 29, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Threat to a Free Press," published in the Columbus Evening Dispatch of August 22, 1951. The Columbus Dispatch is one of the outstanding metropolitan newspapers of my State. The editorial deals with the covenant on human rights, and is one of the best discussions I have found of this matter which I have been bringing to the attention of the people of the United States on the floor of the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THREAT TO A FREE PRESS

Members of the United Nations Commission on Human Rights (including Mrs. Franklin D. Roosevelt) have produced a draft on "freedom" of the press which comes straight out of the Fascist notebook.

The Commission hopes that the United States Senate will ratify this covenant. If it does, it will become the law of the land and it will supplant, as far as practice is concerned, the provision in the United States Constitution that Congress shall make no law which abridges the freedom of the press.

But here is what Mrs. Roosevelt and her foreign colleagues have proposed to restrict the press and which they hope the United States Senate will swallow and ratify.

"The right to seek, receive, and impart information and ideas carries with it special duties and responsibilities and may therefore be subject to certain penalties, liabilities, and restrictions, but these shall be such only as are provided by law and are necessary for the protection of national security, public order, safety, health or morals, or the right, freedom, or reputation of others."

It ought to be obvious that any political administration in Washington could use a law like this to stifle the press in the United States or to jail members of the press if they wrote anything displeasing to it. This law is precisely what Hitler or Stalin ordered.

Who is to say what is a transgression on the rights, freedoms, or reputations of others and then assess penalties, liabilities, and restrictions except the rulers of the nation?

With this law they would have the wedge to get the laws passed or issue the edicts imposing the "special duties and responsibilities" on the press they happen to desire, and to assess the "penalties, liabilities, and restrictions" to give their wishes teeth.

Argentina's Dictator Peron operated on precisely such a basis as this in his unlawful, unblushing suppression and seizure of La Prensa.

It ought to be obvious now a national political administration would consider editorial criticism of its foreign policy as contrary to national security which means, in such a case, the administration's personal, political security.

It should be plain how a national political administration would consider editorial criticism of traitors, bribe-takers, ballot-thieves, and the like in its ranks as being an attack on their reputations, however unsavory.

Actually the covenant, by limiting press restrictions only to those provided by law and necessary for the protection of national security, public order, safety, health, or morals or the rights, freedoms or reputations of others, covers everything. What couldn't one suppress under at least some provision of this broad restriction?

The covenant is quite applicable to conditions existing in almost all countries of the world save those of the west, and there are exceptions in that. Certainly the covenant is alien to all that freedom of the press connotes to Americans. It is a restrictive, totalitarian measure from top to bottom.

Mrs. Franklin D. Roosevelt betrayed the traditions of her country and the heritage that is hers, along with all her countrymen, when she allowed herself to be a party to this monstrous proposal.

As an alleged and self-styled "liberal," she falls into a characteristic liberal pattern which seldom visualizes a reform except that it be arbitrarily imposed and governed from a ruling elite. This always has meant the death of individual freedom.

But in view of the record and in view of what they propose, and how they propose it, the liberals are among the least concerned of all in genuine individual freedom, of which freedom of the press is a vital element.

Research Unlimited

EXTENSION OF REMARKS

OF

HON. ZALES N. ECTON

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 29, 1951

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a sermon on the subject Research Unlimited, by Dr. Peter Marshall, the late Chaplain of the Senate, whose daily prayers in the Senate were such an inspiration to all the Members of this body. I ask that the foreword also be printed.

There being no objection, the foreword and sermon were ordered to be printed in the RECORD, as follows.

[From the Washington Post of February 24, 1950]

MANKIND NOW MUST MAKE MORAL PROGRESS FOR WORLD'S SAKE

FOREWORD

There are no other sermons like Peter Marshall's. For there was no other man like Peter Marshall.

The beloved Chaplain of the United States Senate, Peter Marshall, passed away recently at the age of 46. He had attained a national reputation at an age when most clergymen are still unknown.

The Washington Post during the early Lenten season is publishing the richest passages from Peter Marshall's most vigorous sermons. They were preached in Washington's historic New York Avenue Presbyterian Church. They were addressed to the man he called "Mr. Jones," to the multitude of clerks and taxi drivers, butchers and housewives, motemen and the lonely girl in the hospital ward.

Taken from the book, Mr. Jones, Meet the Master, the sermons preserve the emphasis of his words, by a special typographical style. The manuscripts are presented exactly as Peter Marshall prepared them.

RESEARCH UNLIMITED

(By Dr. Peter Marshall)

During the lifetime of most of us, science and invention has made its greatest strides.

Everybody over 40 can remember the mood of optimism that marked the first decade of the twentieth century.

People then were living in the days of the first telephones perfected for general use; the first express trains; the first uses of electricity; the first internal combustion engine.

Great things were in prospect.

The airplane no longer amazes, but whisks us across the continent from breakfast to supper.

Motion pictures have become a weekly diet.

Electric eyes open doors at our approach, and radio enables us to see in the dark.

Penicillin and sulfa drugs have conquered many a germ, and atomic energy has opened a vast new world.

All of this since most of us were born.

These latest inventions and discoveries have made war more terrible, and while they have given us many conveniences and comforts, they have made life more complicated, peace more difficult, and the human heart more troubled.

Undoubtedly we have improved means—but unfortunately we have not improved ends.

We have better ways of getting there, but we have no better places to go.

We can save more time, but we are not making any better use of the time we save.

Everyone agrees that we have made far more advances in the scientific world than we have made in the world of morals and ethics.

Spiritually, we have not kept pace with our progress in the realm of science and invention.

If great advances have been made in the realm of the spirit, then either they have not been reported or publicized, or we have chosen to ignore them, else we are forced to the conclusion that they have not been made at all.

Why is it that we have so little interest in spiritual discoveries—new discoveries of God, of God's working in His world, of God's dealing with His people?

The scientists have forged far ahead.

What they have invented and provided for us has outstripped our moral character, our spiritual quality, and our religious faith. Scientific discovery has gone far ahead of man's progress in the moral realm.

That is the trouble.

Some people have thought that the more science we have, the more religion can be discarded.

But that is not so.

Rather, the fact is that the more science we have, the more we need character-building religion.

We are now at the place where we see that progress simply must be made in the realm of morals and ethics and character, if civilization is to be saved.

The time has come when we must face the solving of the world's true problems—the human problems.

The problem of lying—which is called propaganda; the problem of selfishness, which is called nationalism or self-interest; the problem of greed, which is often called profit or good business; the problem of license disguised as liberty; the problem of just masquerading as love; the challenge of materialism—the hook that is baited with security.

These are the problems that confront us now.

Science has its foundation in research.

Its discoveries all rest upon the patience, willingness, and open-minded seeking of

thousands of men and women who have taken one single proposition and sat down humbly before it to explore and to test it, a great number of times, under varying conditions, and then to report the results.

Suppose that in this way, there were a comparable number of young men and women setting out to get their master's degree, or to write their Ph. D. thesis on their findings, after months of careful experiment with such propositions as these:

"Therefore take no thought, saying What shall we eat? or What shall we drink? or Wherewithal shall we be clothed? for your Heavenly Father knoweth that ye have need of all these things.

"But seek ye first the kingdom of God and His righteousness and all these things shall be added unto you." (Matthew 6:31-33)

Or this one:

"Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you" (Matthew 7:7)

This sort of research could advance much faster than physical science, which requires special laboratories, perfect conditions, and expensive equipment.

For it's the sort of research that anyone can pursue.

You say you have no time?

Anyone of us could delve into it where we are as we are in our present jobs, and it would make our jobs new and exciting, humdrum no longer.

No time?

A tired-out rail splitter, crouched over his tattered books by candlelight at the day's end, preparing for his future, instead of snoring or sky-larking like his collaborators.

Lincoln cut out his path to later immortality in his spare time.

An underpaid and overworked telegraph clerk stole hours from sleep, or from play, at night, trying to crystallize into realities certain fantastic dreams in which he had faith.

Today, the whole world is benefiting by what Edison did—in his spare time.

You, too, have spare time.

Why not use it in this kind of research which pays wonderful dividends in this life and the next?

Suppose, for example, that a group of Christians decided to experiment with the Lord's exhortations to tithe for 1 year.

What do you suppose the results would be?

The tithe is the form of giving advocated in the Bible.

All through the Old Testament, the principle of dedicating the tenth to God is taught and observed.

So much was it a part of the habits and customs of men of that day that in New Testament times it was taken for granted—something that simply was expected of men of integrity.

Jesus expected it of men of God.

He felt it was only when a man began to give above his tenth that he was showing real generosity.

What if we were challenged to try it out for a year?

If you are a skeptic, would it not be worth your while to investigate in those cases where doctors can do nothing?

For you see, there are still miracles being performed.

I have seen them happen.

Still, in these latter days, there are clear evidences of God's power working in human affairs.

That we must admit.

God has not withdrawn any power that was available in the days of the first disciples.

There is certainly no indication in the Bible that the power given to them was for a certain period only, or to work in a certain location.

It was not like a free trial offer advertised "good only for 30 days."

If the other elements in the Gospel message were to have universal application, and to hold true until Christ returned, why not this element of healing, that has always had such a strong appeal to human hearts and is so wistfully remembered by those in trouble?

Everywhere He went, Christ was confronted with sickness and disease, and everywhere He did something about it.

Yet, there were times when He could do no mighty works, as Mark puts it, because of unbelief.

Where there was no faith, He was powerless.

And there were many cases of sickness where no healing was sought. "But," someone will say, "that was all very well for Christ to do these things, for after all, He was the Son of God.

He had powers unique as He Himself was unique.

True—but He promised the same powers to His disciples.

Christ said:

"Verily, verily, I say unto you, he that believeth on Me, the works that I do shall he do also, and greater works than these shall he do, because I go unto My Father."

Now, for some reason or other, we are inclined to skip over that promise, or to spiritualize it as though by the passing of the centuries the words have lost the meaning they apparently had to the first disciples.

The truth is that the church has permitted this breath-taking part of the Gospel to fall out of it.

Is the "good news" only for the soul?

Is it simply for the life to come, with no application to the life that now is?

The answer lies in a lack of researchers.

Men have been willing to let mosquitoes bite them in the interests of science and human welfare.

How many are willing to give themselves away to take risks in spiritual research?

No one yet has ever set out to test God's promises fairly, thoroughly, and humbly, and had to report that God's promises don't work.

On the contrary, given a fair opportunity, God always surprises and overwhelms those who truly seek with His bounty and His power.

We have neglected spiritual food.

Without spiritual exercise, our souls are soft and flabby.

The temptation is powerful to become so obsessed with the urgent, brutal facts of the immediate world that faith in Christ and His way of living becomes like a lovely impractical dream, a pious hope, a frail illusion.

The challenge today, pointed and heated by the atomic bomb, is still what it always was—a challenge to spiritual research.

Selling the United States Out to a Communist-Controlled World Government

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 14, 1951

Mr. WOOD of Idaho. Mr. Speaker, under leave to extend my remarks in the Record, I want to present documented evidence to show that those who are so desperately trying to reduce the United States to the status of a mere province in a world government have

no hesitancy in deliberately and willfully evading the Charter of the United Nations as well as the Constitution of the United States when it serves their purpose.

Article 43 of the United Nations Charter provides, in plain terms, that member nations of the United Nations shall furnish armed forces, assistance, and facilities "for the maintenance of international peace and security" under agreements between such member nations and the United Nations Security Council, such agreements to be "subject to ratification by the signatory states in accordance with their respective constitutional processes."

On April 27, 1951, in a speech before the American Society of International Law, Mr. Harding F. Bancroft, Deputy United States Representative on Collective Measures Committee of the United Nations, said that failure to provide armed forces and assistance when the shooting started in Korea created an "impasse" which "broke the ground for an alternate way around" the situation; that it called for "improvising;" and that troops were furnished for, and were fighting in, Korea pursuant to a "uniting for peace" resolution passed by the General Assembly of the United Nations. Bancroft thus admitted an evasion not only of the United Nations Charter, but an evasion and circumvention of the Constitution of the United States as well.

State Department Publication 3922, United States Policy in Korea, released in July 1950, shows that a Security Council resolution of July 7, 1950, recommended that member nations providing military and other assistance in Korea under United Nations resolutions of June 25 and 27, 1950, make such forces and assistance available to a "unified command under the United States," under the United Nations flag and under a commander designated by the United States. So, it seems, the United Nations started a war in Korea, and delegated its conduct to the United States, without compliance with article 43 of the United Nations Charter or with our Constitution.

In a letter of July 26, 1951, transmitting the 1950 annual report on United States participation in the United Nations, President Truman told Congress that—

The aggression against the United Nations—

In Korea—

brought home to all peoples the imperative need for developing more efficient means to deal with aggression within the framework of the United Nations. The Korean case has demonstrated that the United Nations can act effectively against aggression through recommendations of the Security Council, or the General Assembly, if the Security Council is paralyzed by the veto. But in Korea the participating nations had to improvise their measures from the ground up.

The statement is untrue, for the improvised action was not "within the framework of the United Nations," but it was a willful evasion of the United Nations Charter.

In the 1950 annual report to Congress, Secretary of State Acheson said:

The United Nations had to meet aggression—

In Korea—

without the means which had originally been expected to be available.

And after blaming Russia for member nations not having furnished troops, Secretary Acheson further told Congress:

No United Nations forces existed when on June 25, 1950, the North Korean Communists launched an armed attack upon the Republic of Korea. The United States and many other members carried out their Charter obligations loyally and courageously. However, as will be seen, their entire collective action had to be improvised.

More cold-blooded admissions of evasions and circumventions of both the United Nations Charter and the Constitution of the United States cannot be found, even in the files and reports of our arrogant bureaucracy.

Now, according to the Right Honorable Warren R. Austin, United States representative to the United Nations, these improvisations and evasions are to be made permanent; seemingly without even a belated consultation of Congress.

On August 27, 1951, Mr. Austin told the Veterans of Foreign Wars that "organization of a permanent United Nations peace force is underway at this very hour," under the guidance and direction of a United Nations committee on collective measures, seemingly the same one for which Mr. Bancroft spoke on April 27, 1951.

According to State Department Publication 3580, Postwar Foreign Policy Preparation, released in February 1950, Mr. Austin actively participated in the work of the Advisory Committee on Postwar Foreign Policy, which operated within the State Department from February 1942 in great secrecy to bring about the kind of world that the United States desired after the war. This last-mentioned publication shows, too, that forty-odd Members of Congress actively participated in the work of that committee, the existence and work of which were kept secret.

How much longer will Congress stand by and see the Constitution evaded and its provisions set at naught? It is time to call a halt on the internationalists who seek to destroy this Republic.

Comparison of the United States and Russia

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, August 30, 1951

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a condensa-

tion of a booklet entitled "At the Crossroads of Destiny," which pertains to a comparison of the geographical, political, and social aspects of the United States and Russia.

This booklet was prepared by Mr. Francis H. Buffum, of Concord, N. H., after exhaustive research into many aspects of the two countries. At my request Mr. Buffum, who is an outstanding citizen of the State of New Hampshire and a prominent writer on historical subjects, prepared this condensation so that I could commend it to my colleagues in the Senate for their study.

There being no objection, the condensation was ordered to be printed in the RECORD, as follows:

THE TWO NATIONS COMPARED

In the course of their national development, Russia and America have now arrived at the point where their respective ideas regarding the individual and his relation to government have come into conflict on a world-wide front. Back of these ideas, and giving them practical effect, are the material resources and other factors that constitute national strength.

In area, population, and natural resources, Russia has a considerable advantage over the United States. It extends over one-sixth of the land area of the earth, and is almost three times as large as this country. Its population is about 196,000,000, and is increasing much faster than the population here, which is now 150,000,000. As a result of extensive surveys, it is believed to contain more of the basic minerals than any other country in the world. It is strategically located for defense against invasion and for the extension of its power on the continents of Europe and Asia.

The United States offers a striking contrast to Russia. With only 6 percent of the area of the world, and 7 percent of its population, this country has so far developed its natural resources and productive capacity that it produces 50 percent of the basic commodities of the entire world and, at present, four times as much of these as Russia.

It may well be asked why Russia, with its larger population and vast resources, lags so far behind the United States; or why, on the other hand, the United States, with a smaller population and probably less natural resources, has now four times the productive capacity of Russia and half that of the whole world.

The answer to these questions lies in the histories of the two countries which, when placed side by side for comparison, form one of the most interesting and instructive chapters in the record of human development and the rise of nations.

What concerns us here, however, is not Russian and American history, except insofar as the past of these two countries indicates what their future is likely to be. What does concern us, and concerns us vitally, is that the Russian bear has been awakened from his long sleep by the evil genius of communism, and for 31 years has been gaining in strength and sharpening his claws.

If the reawakening of Russia meant only the peaceful progress of a great people, there would need be no anxiety concerning its growing strength. But such is not the case. Under the ruthless dictatorship of its present masters, Russia's productive machine is being built for political power and geared to a war economy. This is the fact that makes the strength of Russia, in comparison with that of our own country, of such urgent importance to us all. That is why a comparison of Russian communism and American democracy is drawn in the following pages, for the relative strength of the two countries in days to come, as well as the course of

civilization itself, will depend upon which philosophy of life and system of government predominantly wins the allegiance of men and stimulates their productive efforts.

TWO PRINCIPLES OF GOVERNMENT

In looking for an answer to the question as to why the United States has so far outstripped Russia, we will find an answer at the same time to the question as to how the United States can continue to lead Russia and, indeed, the rest of the world—at least, until other countries learn and apply the principle upon which our greatness rests, or until we, in blindness, forsake it.

The answer is simple; so simple that many overlook it. But it is so important that no one can afford to ignore it. It is to be found in the difference that exists between two opposite and conflicting principles of government. These principles are based upon the state on the one hand, and upon the individual on the other.

The individual

The Individualist believes that he has been endowed by his Creator with certain inalienable rights—rights which may be summed up in the term "self-government." He believes that no other man or group of men has any right, divine or otherwise, to claim his involuntary allegiance. He has seen that men the world over, from time immemorial, and almost without exception, have governed in their own interest rather than in the interest of their subjects; and he is thereby confirmed in the determination to govern himself. He looks upon government as his servant, not his master, and joins with other men, equally free, in establishing where possible such a form of government as is necessary to preserve the rights which are naturally his, and to obtain mutual services that can better be obtained by collective action than by individual effort. Believing that he can grow to full mental, moral, and spiritual maturity as a man, only by an untrammelled and undictated exercise of his powers in every field of human endeavor, he strives in this sense to remain the master of his fate, the captain of his soul.

In the assertion of his personal rights as prior to the rights of government over him, he agrees with Thomas Paine who, in writing on the subject, had this to say:

"It has been thought a considerable advance toward establishing the principles of freedom, to say, that government is a compact between those who govern and those who are governed; but this cannot be true, because it is putting the effect before the cause; for as a man must have existed before governments existed, there necessarily was a time when governments did not exist, and consequently there could originally have been no governors to form such a compact with.

"The fact, therefore, must be, that the individuals themselves, each in his own personal and sovereign right, entered into a compact with each other to produce a government; and this is the only mode in which governments have a right to arise, the only principle on which they have a right to exist."

The state

The man who advocates the authority of the state over the individual holds a philosophy diametrically opposed to that of the individualist. He believes that tribal chiefs, monarchs, and other governors by whatever name, rule legitimately by the authority of Heaven or the rightful assumption of power by themselves. He assumes that it is natural and right for one man or group of men to govern another man or group of men, either with or without the consent of those governed. He believes in the divine right of kings and dictators.

According to this political creed, the government has the right to give and the cor-

responding right to take away. The individual is either the recipient of its favors or the victim of its displeasure. It may either rule him with cruelty or give him broad powers that border on self-government. The point here is not whether a government is benevolent or despotic at any given time: it is the fact that it has the power to misuse its authority at any time and to any extent.

In writing on the Bill of Rights, Dean Russell made the following statement on this point. "They (the founders of our Government) knew that without exception every government in recorded history had at one time or another turned its power—its coercive power as the police force—against its own citizens—confiscated their property, imprisoned them, enslaved them, and made a mockery of personal dignity."

Such is the danger inherent in any government which is master of its individual citizens, rather than their servant. In the United States, under constitutional guarantees, the people have established a government subservient to them—one that has given such scope to their creative and inventive energy—to the free enterprise of the individual—that they lead the world in freedom as well as in productive capacity.

THE ALTERNATIVES

The purposes of this work—or, more accurately, of this message—is to focus the attention of every intelligent American who may be induced to read it upon the stark necessity of a new and deeper sense of civic responsibility on the part of every citizen of this country, in the face of impending danger.

The leaders of Russia have embarked upon a campaign to communize the world. They have already imposed their rule upon their own people and are now driving relentlessly westward across Europe and southward from Manchuria through China to bring the continents of Europe and Asia under the domination of Moscow. In the accomplishment of their purpose, they have not hesitated to intimidate, enslave, torture or murder those who oppose them. They have sought to undermine governments not yet under their political control and military power, by posing as the champions of democracy, and at the same time using every form of deceit, propaganda, intrigue, economic disruption and violence short of war known to masters of the black art.

Since Russian communism first raised its ugly head and revealed its evil purpose, hardly a day has gone by without some warning of its threat to our freedom going out from practically every radio station in America. Almost every American newspaper has clearly and amply recorded its sinister activities. Books on the subject by Americans who have lived in Russia, and by Russians who have escaped from its tyranny, line the shelves of our libraries. Congressmen and churchmen, public officials, and private citizens have used the platforms of America to warn us of its dangers.

There are indications that these warnings are taking temporary effect, but equal reason to believe that their effect will be only temporary unless we are willing and able to go all the way in doing what is necessary to put and keep ourselves on guard against the enemies that threaten us from without and those that are already beginning to undermine us from within.

If we have learned so little from two world wars and the threat of a third that we are still blind to the necessity for complete preparedness, and still persist in making appropriations for national defense on the basis of emotion rather than upon a reasoned calculation of what is necessary for national security, we shall have proved our unfitness to survive in a world where nations still resort to arms.

Our contest with Russia goes deeper than military opposition and preparedness against attack, vital as that is. Even though we could withstand all military assaults of the Soviet Union, we should still have to prove that American democracy offers to men more than Russian communism has to offer, if our system is to commend itself to other peoples and to future generations. In its magnitude and political import to the world, and in its spiritual implications as well, the struggle between democracy and communism is an Armageddon of universal scope.

Nature will not long tolerate those who persist in breaking her laws and who refuse to set themselves to the task of fulfilling the purpose for them. If she has decreed that men should climb, however slowly, from the cave and jungle toward the spiritual heights envisioned by seers and prophets, let them be assured that their success lies along that path and no other. But when men refuse to take the line of progress ordained for them, and turn from the light that once shone from Sinai and later from one greater mount, and again invoke the law of the jungle, let them beware, for destiny will already have marked them for oblivion.

The Russian Communists are committed to this latter course. In their vain hope to communize the world they have invoked the law of the jungle and placed their reliance upon coercion and force. In their hope to make Moscow a third and greater Rome, they have forgotten what made Rome great and what led to its ultimate fall. No matter how much temporary power they may exercise, sooner or later they will go the way of all who oppose the primary rights of the individual and the democratic evolution of man.

Let it not be so with Washington. In its rise to a supreme position among the nations of the earth, the United States has proved the case for democracy, at least to date. However, no system of government, least of all democracy, can be once established and left to automatic operation, for democracy is particularly susceptible to decay. Its success depends upon the eternal vigilance and the participation in public affairs of the people who compose it.

The past is secure. In spite of costly delays in preparing to meet attack, we have managed to escape defeat in two world wars. Except for brief periods of economic depression, we have been more prosperous in days of peace than any other people on earth. We have even kept the cancerous growth of greed and corruption from spreading with fatal effect throughout the body politic.

But in common with the rest of the world, we have suffered from an intellectual, moral and spiritual depression that no material success can offset. Crime and delinquency have flourished on our indifference. We have been intent on "getting ours while the getting is good," and in our shortsightedness have not hesitated to kill the economic goose that lays the golden egg. We are suffering from the delusion that we can get more and more by doing less and less. We have squandered our natural resources. We have spent an increasingly large proportion of our spare time and money on amusement, and a correspondingly small part of both on self-improvement and those activities that make the individual a competent member of society. We suffer from confusion and uncertainty, and lack the deep religious convictions and purpose of our fathers.

In Government we have steadily—and in the last 16 years rapidly—drifted toward State socialism. We have lost something of that personal independence that goes with hardihood. We seek security rather than achievement and want all of the privileges of American citizenship without having to meet its obligations.

Let this be bluntly said: That although the past is secure, the future is not. To

make that future secure, to vindicate our faith in democracy, and to stem the Red tide of communism, we can do no less—we dare not do less—than reorient ourselves to those principles by which we have achieved our present greatness and by which alone we can maintain and augment it.

The alternatives and their consequences are as plainly visible as the handwriting upon the wall of Nebuchadnezzar's palace. Either America will lead the world into a new era of freedom, peace, and prosperity, or Russia will plunge it into a new dark age of tyranny and slavery. Today the choice is ours. Tomorrow, if we allow the hour of our opportunity to pass, the decision will go to Russia.

Which is it to be? You and I will have to answer that question and stand responsible for our answer to future generations. As we pause to make our decision it will be well for us to listen again to the prophetic voice of Lincoln. He spoke to our fathers in 1862, and they gave heed to his warning. He speaks again, this time to us in the hour of an even greater crisis. He declared in words that spell either the ultimate doom of American democracy or its ultimate triumph that "we shall nobly save or meanly lose the last best hope of earth."

The Niagara Power Project

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, August 30, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an opening statement I made before the Senate Public Works Committee recently on the Niagara power project. This subject is of widespread interest in my State, and should be to the entire Nation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF HON. HERBERT H. LEHMAN, OF NEW YORK, BEFORE THE SENATE PUBLIC WORKS COMMITTEE, IN CONNECTION WITH HEARINGS ON THE NIAGARA FALLS POWER DEVELOPMENT, AUGUST 21, 1951

The hearings starting today on the several bills dealing with the preservation of the Niagara Falls and the development of water power at the Falls are of the highest importance to the northeastern section of the United States, and, as I hope to show, to the entire Nation.

When these hearings were originally scheduled—and I am extremely grateful to Senator CHAVEZ and to Senator McCLELLAN, chairman of this subcommittee, for setting these hearings at my request—S. 517, my bill, was the only one before this committee. Lately two others on this same subject have been introduced and are also pending before this committee, and are also, I understand, to be considered in these hearings. I am glad for the committee to have this opportunity to study this mighty project, the Niagara project, from the several different approaches represented by the three pending bills.

In the course of my testimony today I shall try to answer four questions which must arise in connection with these hearings:

1. What is the history and background of the Niagara project and of the pending legislation?

2. Why is legislation authorizing the power project at Niagara Falls desirable, necessary, and economically sound?

3. Why should Congress make this authorization now, at this time?

4. Why should Congress approve S. 517, my bill, in preference to the others on the same subject now pending before this committee?

I hope the committee will bear with me during the reading of my statement, which is of some length, but which, I think the committee will find, is factual and highly pertinent to the questions raised by this tremendous undertaking.

As the committee may recall, I introduced a bill similar to S. 517 last year. No hearings were held in the Senate, but brief hearings were held before the House Public Works Committee on a companion bill introduced by Representative FRANKLIN D. ROOSEVELT, Jr. This year Representative ROOSEVELT has again introduced a companion bill to S. 517, H. R. 2536, which is now pending before the House Public Works Committee. That committee, as you may know, has been preoccupied with the St. Lawrence power and seaway bill.

I am very pleased that the Senate committee is now proceeding to take up the Niagara bill. It goes without saying that I hope that you will see your way clear to making a favorable report on S. 517. As I shall indicate later in my testimony, prompt action is called for in the public interest.

S. 517 is very similar to the bill I introduced last year and to its companion measure in the House. No committee action was taken on that bill by the House Public Works Committee because it was so late in the year. This year I have made a few changes in it—and Representative ROOSEVELT made the same changes in the companion bill, H. R. 2536, as a result of comments by some of the Federal agencies and by interested groups and agencies and individuals in New York State.

I originally introduced my bill last year immediately after the President had submitted to the Senate the treaty negotiated with Canada providing for the preservation of Niagara Falls and the diversion of great amounts of additional water for power purposes. That was in May of 1950.

I drafted that bill in consultation with the then trustees of the New York Power Authority and with experts of the Federal agencies interested in power. I hasten to add that the Federal agencies were not committed to the details of this bill last year and reserved their official judgment at that time, although they did indicate in their formal reports to the House committee that "the objective of the bill . . . is wholly in accord with the program of the President." I am quoting from the report of the Director of the Bureau of the Budget, filed with the House Public Works Committee under date of June 2, 1950.

The Bureau of the Budget advised the committee that there were some "basic issues of Federal water-resources policy which demand careful consideration by all interested agencies, as well as by the staff of the Bureau of the Budget. As yet there has not been sufficient time to enable the interested agencies to complete their study of these issues." I am quoting from last year's report by the Bureau of the Budget.

By this time the Federal agencies have completed their study of my bill and of the public-power policy issues involved, and I think they are ready to testify on them. This committee has received formal reports from these agencies, I believe, and representatives of some of the agencies involved will come before you to testify.

Because of this it will be unnecessary for me to go into great detail on the technical and expert phases of the Niagara project, on which these Federal experts are better qualified to speak than I.

The Corps of Engineers, especially, has already started on a detailed study of the Niagara project, under the authorization of a resolution adopted by this committee on June 5 of last year, as well as under the authorization of the United States-Canadian Treaty, itself. Funds were voted in the third supplemental appropriation bill this year for that purpose, and additional funds were voted by the Senate in the civil functions appropriation bill only last week. The chairman of this subcommittee was most helpful in the debate which led to the approval of that item, and I want to take this occasion to thank him.

I should like to offer for the record at this point the resolution adopted on June 5 last year by the Public Works Committee on the survey of the Niagara project.

UNITED STATES SENATE, COMMITTEE ON PUBLIC WORKS.

COMMITTEE RESOLUTION

Resolved by the Committee on Public Works of the United States Senate. That the Board of Engineers for Rivers and Harbors, created under section 3 of the River and Harbor Act, approved June 13, 1902, be, and is hereby, requested to review the reports on Niagara River, N. Y., Black Rock Channel and Tonawanda Harbor, New York; and Buffalo Harbor, New York; published respectively as House Document No. 253, Seventieth Congress, first session, House Document No. 92, Seventy-ninth Congress, first session, and House Document No. 352, Seventy-eighth Congress, first session, and other reports, with a view to determining the most feasible general plans for utilization of the waters apportioned to the United States for power development at this locality consistent with the provisions of the treaty between the United States and Canada, effective October 10, 1950, and the effect of such developments upon the Federal navigation projects at this locality.

DENNIS CHAVEZ,
Chairman.

Adopted June 5, 1951.

Thus, the Corps of Engineers will be in a position to give this committee some very current data concerning this project, based on studies already made, although the survey has been under way only a relatively short time.

The Army engineers have been surveying not only the power phases of the Niagara project but also the remedial works called for under the terms of the treaty, under the general direction of the International Joint Commission, an official body representing the Governments of both the United States and Canada. These remedial works are required not only to preserve the beauty of the Falls, which have been eroding steadily over the years, but also to preserve that magnificent spectacle in connection with the projected diversion of additional water for power purposes.

The diversion of water for power has an inevitable effect on the Falls, and the study of the power project is thus inseparable from the study of the remedial works. The construction of the power projects is likewise inseparable from the construction of the necessary remedial works. This is a vitally important point, as I hope to bring out a little later in my testimony. The Corps of Engineers will, I expect, go into the technical phases of this question, and I presume will be prepared to answer any questions on this point which members of this subcommittee may have.

Since I introduced S. 517, I have received a great many comments and suggestions from interested groups and individuals, and have, myself, carefully reviewed the bill in the light of these comments and suggestions. As a result I have worked out several proposed changes which I shall submit to the committee for its consideration. None of these changes have been studied by the Federal agencies, but none of them affects the essential outlines, purposes, or provisions of S. 517. I will list these amendments at the end of my testimony.

On August 9, 1950, when the Senate ratified the treaty with Canada which makes the Niagara power project possible, the Senate also unanimously approved a reservation to that treaty.

That reservation reads:

"The United States on its part expressly reserves the right to provide by act of Congress, for redevelopment, for the public use and benefit, of the United States share of the waters of the Niagara River made available by the provisions of the treaty, and no project for redevelopment of the United States share of such waters shall be undertaken until it be specifically authorized by act of Congress."

That reservation is the reason why Congress must act before any of the power potential made available under the terms of the treaty can be developed. If the Senate had not attached that reservation, it would have been perfectly proper, once the treaty had been effectuated—as it was in October 1950—for any private company or individual to submit an application to the Federal Power Commission for a license to construct and develop the power from all or any part of the waters made available to the United States under the terms of the treaty.

But the Senate unanimously declared that this should not be the case. The Senate declared that this power should be developed "for the public use and benefit." The Senate declared that Congress should legislate on how these waters from this international waterway should be redeveloped for power purposes "for the public use and benefit."

I submit that this reservation, unanimously adopted, affirms the national power policy—that the waters of the Niagara should be publicly developed for the public benefit—for the benefit of the consumers, of the national defense, of rural consumers, of co-operatives, of public bodies, and of all the people of this country.

I submit that S. 2021, introduced only yesterday by Senator CAPEHART, which is a companion bill to H. R. 3146, introduced by Representative MILLER of New York in the House, flies directly in the face of this policy and seeks to undo what the Senate did when the reservation I have described was attached to the treaty. If the Senate had wished to do what S. 2021 proposes, the Senate would not have adopted the reservation which, along with the treaty, is now part of the supreme law of the land. If that reservation had not been adopted, no further legislation along the lines of S. 2021 would be necessary. Private utilities could have made their applications to the Federal Power Commission and licenses could have been granted for the construction and redevelopment of these waters for power purposes.

This is not a question of public versus private power. Private utilities should be encouraged to expand their facilities to the maximum. All the steam power they can generate can be used in New York State and in the neighboring States. We are counting on the expansion of privately generated steam-power facilities in the years immediately ahead.

We must have that power, and the publicly developed water power, too. The water power, however, must be publicly developed.

This water is a public resource. It has been so recognized for years. This water is not only from a navigable waterway, but from an international waterway, made available for water power purposes by the exercise of the sovereign power of all the people of this country, through their Federal Government.

The Niagara Falls have been a concern of the Federal Government ever since 1906, when Congress passed the Burton Act, which asserted the jurisdiction of the Federal Government over this waterway and over diversions for power purposes.

The State of New York has asserted on numerous occasions—in its constitution—that these waters are the inalienable possession of the people. The major part of the present diversions now being utilized by private companies was preempted before 1906, before the Burton Act. Some additional diversions were made available, under temporary licenses, by executive agreement with Canada between 1940 and 1948, because of the power shortage resulting from the defense and war efforts.

I want to make clear at this point that S. 517 expressly exempts from the applicability of its provisions any valid existing rights under licenses granted by the Federal Power Commission for the use of waters now being diverted from the Niagara River. Thus, the Niagara Mohawk Co. is assured of its valid existing rights under its present licenses. This exemption is provided for in subparagraph (1) of paragraph (b), section 3 of S. 517—page 5 of the bill as printed.

Now we have this new treaty, making available great new diversions of water, sufficient to develop more than a million additional kilowatts of power—around 18,000,000 kilowatt-hours of power annually—and this should and must be developed for the public benefit, for the benefit of all the people. This can be done only by a public development.

Practically all the power on the Canadian side has been developed publicly. The Ontario Hydro Commission which owns and operates almost all the power facilities on the Canadian side is an instrumentality of the Province of Ontario, which is authorized by the Government of the Dominion of Canada to develop this waterpower for the benefit of all the people of Canada. The result in Canada is low-cost electric water power at rates which make the rates for electricity in New York State seem astronomical by comparison.

The development of this waterpower is a Government responsibility, along with the preservation of the beauty of the falls. We could not pass on the responsibility for preserving these falls to a private company; neither can we pass on the right to divert this water for power purposes. As I have said, the redevelopment of this water is inseparable from the preservation of the beauty of the falls.

There is need for every kilowatt of power which can be developed in this area, both by steam and water power. In 1949, the bureau of power estimated that by 1960, there would be a need of 1,500,000,000 kilowatts of additional capacity in the New York area in the vicinity of the Niagara project, and 1,600,000,000 kilowatts of additional capacity in the Ohio-Pennsylvania area within economic transmission distance of the Niagara project.

The Niagara project can furnish roughly 1,000,000 kilowatts of new capacity. The balance will need to be made up by privately owned steam power. The private power companies have their work mapped out for them to meet this demand.

The Niagara project—and the St. Lawrence project, too—are vitally needed, and should be started immediately, as Government-owned projects, to help meet, along with the needed expansion in privately owned steam-

plant capacity, the power shortage which faces us in the Northeast.

I want to emphasize that the estimate I have just cited of power needs was made in 1948 and 1949—before Korea and before we launched our great program of industrial expansion, which even today is only getting under way. New expert estimates made today would, I am sure, greatly raise the figures I have cited.

Before the start of World War II, there was actually a power surplus in the Niagara frontier area. During the war, power facilities were expanded. Increased diversions of water from the Niagara were authorized on an emergency basis. New steam plants were built and old ones were expanded. Power in considerable quantities was imported from Canada.

That did not meet the need. Dim-outs were ordered. Power had to be brought in from the New York City area to meet the requirements of aluminum and other vital defense plants in this area. In 1942, the War Production Board said the Niagara frontier area had the most critical power shortage in the country, and directed that no new plants be established in that area.

Since the war, demand for power in this area has not decreased but expanded. In 1947, the assured capacity was 13 percent less than the peak load. And today Canada, which has been exporting power to this country, can no longer continue to do so.

Reserve capacity in this New York area has been pressed into service. In case of breakdowns there is no reserve. Overage plants cannot be retired, as they should be.

This area is one of the most vital of all areas in the Nation for our defense requirements. Airplanes, steel, abrasives, radar equipment, chemicals, ordnance, parachutes, and, above all, aluminum are produced in this region. During the recent war, this area produced \$5,250,000,000 worth of war supplies.

The Aluminum Co. of America has two plants at Massena, N. Y. There was an aluminum reduction plant at Niagara, but it was forced to move during the war because of the power shortage. Insofar as these defense plants must use high cost steam power—in some cases power brought in from great distances—the taxpayers of this country must foot the bill for any delay in building the projects at Niagara and at the International Rapids section of the St. Lawrence.

In the case of Niagara, there is no controversial seaway or other navigational feature. It is a simple power development. The power development project would, in fact, affect navigation, but that is a matter which can be solved by the engineers.

Under the terms of the United States-Canadian Treaty of 1950, the two countries are authorized to divert for power purposes all the water that is not needed to insure the beauty of the Falls. A minimum of 100,000 cubic feet per second is to be permitted to flow over the Falls for scenic purposes during daylight hours and during the tourist season. At other times this flow may be reduced to 50,000 cubic feet per second. All the rest of the flow can be diverted for power.

This means, according to the studies that have been made, that an annual daily average of 130,000 cubic feet per second of water can be used for power purposes, an increase of approximately 45,000 cubic feet per second over the amount now being diverted for power.

Of this 45,000 cubic feet per second, the United States share will be 32,500; the Canadian share, 12,500. This will bring the total diversions for both United States and Canada to 65,000 cubic feet per second each on an annual daily average. Thus for the first time, the United States and Canada will be on a par in these diversions.

Under the terms of the treaty of 1909, Canada was granted the right to divert 36,000 cubic feet per second; the United States, 20,000 cubic feet per second. Under the terms of this treaty of 1909, plus the wartime executive agreements, these diversions were increased to 32,500 cubic feet per second for the United States and 52,500 for Canada.

Thus, under the terms of the 1950 treaty, the United States is allocated twice what it now uses, and more than three times what it had under the treaty of 1909.

In terms of electric-power capacity, the installed dependable capacity on the American side is now about 445,000 kilowatts. According to the survey of the Bureau of Power of the Federal Power Commission, this amount can be increased to 1,572,000 kilowatts—an increase of 1,127,000 kilowatts of capacity.

These figures, of course, are the result of a tentative plan for redevelopment worked out by the Bureau of Power and are in the process of being reviewed by the Army engineers. There may be some modification up or down as a result of these detailed studies.

In any event, this development is certain, on the American side alone, to be one of the biggest power developments in the United States. It will produce annually an estimated 11,600,000,000 kilowatt-hours of electric energy, compared to the present figure of 3,700,000,000 kilowatt-hours of power now being developed by the Niagara Mohawk Power Co. with its present diversion of 32,500 cubic feet per second.

The larger increase in electric-energy output compared to the increase in water diversion results from the plan worked out by the Bureau of Power for the use of the maximum possible head of water in the new installations. The drop in water level is 300 feet. One of the installations—the old Adams plant, which uses 8,000 cubic feet per second—operates under a net head of only 135 feet. The Schoellkopf plant, which uses the rest of the 32,500 cubic feet per second now being diverted on the United States side, operates under the head of 215 feet.

A major part of the power on the Canadian side is developed at a net head, under maximum load, of 294 feet, although Canada, too, has some older plants which use a lower head, and hence are less efficient.

The greater the head, the more power, and the more efficient the operations. Canada's Queenston plant develops 219 kilowatts of capacity for each cubic foot per second of water. The Adams plant on the American side develops less than 10 kilowatts per cubic foot per second.

Canada is now at work building new plants, not only to use the new water made available under the 1950 treaty, but also to retire those plants which use less than the maximum head of water.

When both the Canadian and the American construction are completed, the Niagara power sites will have a capacity of 3,000,000 kilowatts, by far the largest water-power development on the North American Continent and perhaps in the world.

As I said a moment ago, Canada is already at work on her new plants and power installations. When construction on the Canadian side is completed, Canada will have capacity to utilize 90,000 cubic feet per second, including the older, less efficient plants scheduled for retirement. If the United States does not proceed promptly to build the necessary works to utilize our half of the water, Canada is permitted, under article VIII of the treaty to use such portion of our share as we are not using. Canada will be able to do just that, and we will be losing power whose value is roughly estimated at almost \$100,000,000 per year.

This Niagara power can be developed as cheaply, if not more cheaply, than any other

water power in the United States. The estimated cost of construction, under public financing—and this was the 1949 estimate of the Bureau of Power—is about \$300,000,000. This figure undoubtedly needs to be brought up to date. The cost of producing the power was estimated at about 2 mills per kilowatt-hour at the dam site, compared to a cost of about 8 mills per kilowatt-hour for equivalent steam-generated power, under private financing. This does not include the cost of transmission or distribution.

This figure includes provision for repayment of the cost of construction, at public rates of financing.

This is a self-liquidating project—so obviously so, that private interests would jump at the opportunity of developing this power. They have so expressed themselves, and undoubtedly will do so in the course of these hearings.

I say this in emphasizing that this project is completely self-liquidating and will not cost the taxpayers anything but will, instead, benefit both the country at large and the consumers. The Nation's taxpayers will benefit directly in the lower cost of defense items such as aluminum, the largest cost component of which is, of course, power.

This low-cost power will inevitably force down the cost of power generally, even in areas which are not physically reached by this specific power. This has been the experience everywhere in the country. It will be the experience in New York.

New York has the sixth highest power cost in the entire Nation. At last count, there were 20,000 farm families in New York State which did not have central station power. Rural cooperatives have had a difficult time in New York because of the high cost of power. Yet New York farmers, especially that vast number engaged in dairying, vitally need electric power for refrigerators, separators, and other modern dairy equipment.

I have tried to show briefly the need and the possibilities of this development. Now I should like to speak in some detail about S 517, my bill for authorizing the construction and disposition of this project.

S 517 is designed basically to assure the benefits of this natural resource to the general public and to the consumers. It takes cognizance of national public power policy, developed over the past two decades, aimed at promoting the use of electric power through lower costs, and at providing special preferences for rural consumers, rural consumer cooperatives, and public bodies.

S 517 insures preferences for Government agencies. It insures an equitable distribution of the power among the States within economic transmission distance, accepting the fact that although the power site is in New York State, the waters come from many States, and the benefits must be made available to the people without interstate prejudice.

S 517 is designed to implement the purposes of the United States-Canadian treaty for the preservation of the natural beauty of the Falls, and provides for the remedial works which will be necessary both because of the natural forces of erosion which have been eating away at the Falls and the additional works required to preserve the spectacle at the Falls while diverting additional waters from the river for power purposes.

All this is proposed to be accomplished under terms of an agreement to be entered into between the State of New York and the Federal Government. This agreement would be subject to approval by both the Congress and the State Legislature of New York.

Under the terms of this agreement, New York State would undertake to repay the Federal Government in full for the cost of construction of this project. New York State would, in turn, assume the ownership of

the project facilities and the operation of the project, subject to the conditions and safeguards of the Federal and public interest set forth in this bill and required to be included in the Federal-State agreement.

These safeguards are the heart of this bill. They carry the burden of public-power policy, as worked out in New York State and in the Nation over a period of three decades.

I want to point out here and now that New York State has played a pioneer role in developing this national public power policy. Under Govs. Al Smith and Franklin D. Roosevelt, and during my four administrations as Governor, New York State contributed the major ideas and many of the leaders in the development of the policy of promotional power rates, of preferences for rural consumers and public bodies, and of the primary right of ownership and benefit for all the people in regard to water resources.

Moreover, New York State contributed the primary engineering genius which resulted in the plan for the use of additional waters from the Niagara without interfering with the beauty of the falls.

While I was Governor in 1936, the New York Power Authority launched a comprehensive engineering study of the Niagara River power possibilities. That study resulted in the power authority's report of 1938 which set forth for the first time the plan for redeveloping additional waters, by nighttime and off-season diversion, by storing these waters in reservoirs and pools on week ends and holidays, and for the utilization of these vast waters through an ingenious system of canals, at maximum head, for the vast power projects which are here proposed, and which are actually under development today in Canada.

I submit that all these factors give New York a special right in regard to this project, beyond the fact that the power site is actually in New York, and the consumers of the power must be, for the most part, New Yorkers and New York enterprises.

The New York Power Authority, the agency that New York would designate to handle this project has a long history. It was established by law in 1930, under the leadership of the then Gov. Franklin D. Roosevelt. I was Lieutenant Governor at the time and helped guide this legislation through the State senate.

Since that time, the New York Power Authority has spent millions of dollars in engineering studies, plans, promotion, and organizational preparations to handle the power from the St. Lawrence and more recently from the Niagara. I have already described how the New York Power Authority made the basic engineering studies for the Niagara project. The people of New York have come to expect that this agency would develop this power, in the public interest, in the interest of the people of New York and of the entire Nation.

Unfortunately, the New York Power Authority has never had an opportunity to amass any experience in actual construction. This agency, more than 20 years old, has contributed much to national public power policy and to our sum of knowledge of power development. But New York State has been denied the right to develop the mighty waters along its borders. Power projects have been built in a score of States. Many public waterpower projects are today under construction. The St. Lawrence project and now the Niagara project are still in the blueprint stage. The people of New York feel that they have not gotten a fair shake in this matter, whatever the reasons.

My bill provides that the Army engineers will build this project. The Corps of Engineers has the necessary experience and background. I need not dwell on this fact.

The corps has built, is building and is scheduled to build power facilities of a total capacity of 7,262,400 kilowatts. It is the agency which should build this project. The United States Government will, of course, be reimbursed for the cost of construction. It will not cost the Government a single cent.

Now I want to refer briefly to S. 1963, introduced by my colleague, Senator Ives. I understand that this bill has the support of the present New York Power Authority.

On the surface, there is not a great amount of difference between S. 1963 and my bill, S. 517. Indeed last year, before the House Public Works Committee, Chairman Burton, of the New York Power Authority, said he supported the principles of the Lehman-Roosevelt bill, although he did suggest some amendments. S. 1963 however, departs much, much further from the principles and purposes of my bill than did the amendments Mr. Burton proposed last year.

Mr. Burton stated, last year that what he wanted was additional safeguards to safeguard New York—I am quoting from his statement before the House committee last year. S. 1963 proposes to safeguard New York by handing over, outright, these great water resources to the New York Power Authority, with vague and completely inadequate safeguards for the people of New York and the consumers of New York. There are no safeguards to speak of for the national interests.

I am sure the drafters of this bill did not deliberately set out with this in mind, but the effect of this bill is really to safeguard and enhance the authority and power of the New York Power Authority, while leaving the rights and interests of the people of New York, among others, largely unprotected.

Moreover, I must submit that S. 1963 is, in important aspects, entirely unrealistic if our objective is to obtain legislative authorization for this project. That is what I wholeheartedly desire to accomplish.

The provision for the New York Power Authority to build the power project and the remedial works is unwise and impractical if not impossible.

The New York Power Authority has no construction experience whatever. The Army Engineers have a vast construction experience.

The United States Government cannot be expected to pass on to a State instrumentality the responsibility for building the remedial works. These remedial works are a treaty responsibility of the United States Government. These works are required by treaty to be constructed under the supervision of the International Joint Commission. No reference is even made in S. 1963 to this circumstance.

A major part of the remedial works will be required as a consequence of the power diversions. The Army engineers are now making engineering studies of this extremely complex problem of remedial works. I have been told by the Corps of Engineers that its studies have showed that the diversion of the water for power purposes can, unless proper and extensive countermeasures are taken, completely destroy the beauty of the Falls, both on the American and the Canadian side.

The remedial works and the power works should be undertaken together. They should be undertaken by an agency with the maximum amount of experience in this type of undertaking. This is necessary to protect the interest of the people of New York as well as the national interest. This is a matter of practical engineering, and not of political policy.

Officials of New York State should be consulted concerning the over-all aspects of the projects, and my bill, S. 517, provides exactly that. The public interest—of New York

State and of the United States—requires that the agency best qualified, regardless of whether it is a State or Federal agency, undertake this job. That agency is, I believe, the United States Corps of Engineers.

Moreover, there are highly important defense implications. This project is vital to the defense of the Nation. Its construction must take these defense aspects—vulnerability to enemy attack, among others—into consideration. The Army engineers are qualified to supervise these vitally important aspects. S. 1963 makes no mention of preference in the sale of power to Defense Agencies.

S. 1963 vests in the New York Power Authority final and complete jurisdiction, for the implementation of the rather vague commitments set forth in section 4. The power authority is directed to carry out these commitments in its contracts for sale of power, but there is no provision for supervision of how these commitments are actually being carried out and no provision for review or penalty for failing to carry them out.

S. 1963 makes no mention of rural cooperatives or of public bodies such as municipally owned utilities and does not grant outright preferences even to States, counties and municipalities or to defense industries. S. 1963 merely directs that the Authority should assure the resale of power to domestic and rural consumers at the lowest possible price. If that is not done, no review or penalty is provided.

S. 1963 does not provide for the outright allocation of power from the Niagara project to other States. It provides for an exchange of power between New York State and the other States, by interstate compact, or, in the absence of such a compact, by ruling of the Federal Power Commission. While, as a New Yorker, I might prefer to see my State keep all the power from the Niagara, and not share it with any other State, except on an exchange basis, I do not think this would be fair to the other States. If any comparable public water power projects are authorized for Ohio or Pennsylvania, within economic transmission of New York State, I shall insist on an equitable allocation of some of that power to New York State. But I would not withhold an equitable share of Niagara project power from those States, just because they presently have no comparable development. Yet the language of S. 1963 might very well be so interpreted. It is, at best, confusing and misleading.

S. 517, on the other hand, achieves the objective of safeguarding the interests of New York, without sacrificing the safeguards of the public interest and of a progressive public power policy.

S. 517 lays down, in very specific terms, the safeguards which are to go into the agreement between New York State and the Federal Government. Spokesmen for the New York Power Authority have been quoted as saying that it might be impossible to reach an agreement with the Federal Government, and that consequently, under the terms of S. 517, the power facilities would remain under the jurisdiction of the Federal Government and never be turned over to New York.

I would like to invite the spokesman of the New York Power Authority at these hearings to state exactly what provisions of the proposed agreement as spelled out in S. 517 would prove the stumbling block to the consummation of an agreement. I believe the spokesmen of the Federal agencies will testify that they support all the safeguarding provisions for the public interest which are spelled out in S. 517. To which of these provisions does the New York Power Authority object?

I have spoken with great earnestness because I want this project to be approved, and the power to be developed, in the public interest. I am willing for this bill to be

amended in any constructive way, on the basis of the considerations which members of this committee will give to this legislation, providing that the safeguards of the public interest are retained.

Now, Mr. Chairman, I have completed my formal statement on the legislation now pending, except for the amendments I am, myself, suggesting to my own bill.

I summarize them as follows:

1. Amendments to affirm the national defense interest in the proposed project.

2. Amendments specifically to authorize the inclusion in the Federal-State agreement of provision for the preservation and enhancement of the scenic beauty of the Falls, including the accessibility of the river shore lines.

3. Amendments to grant preferences in the disposition of project power at cost to all defense agencies, and, on fair and reasonable terms to other Federal agencies and to defense industries requiring the power to fulfill defense contracts.

4. Amendments to provide that negotiations for the Federal-State agreement shall commence immediately upon the enactment of the act, rather than after the appropriation of the first funds, and dating the report which the President is called upon to make to the Congress on the status of the negotiations from the time of the enactment of this act rather than from the time of the start of construction.

5. Amendment to insure that even if negotiation and approval of the Federal-State agreement is not completed by the time the first power is available from the project, the project can be turned over to the New York State by subsequent agreement and approval by Congress and the Legislature of New York, or the Congress may make other disposition.

6. Amendment authorizing the making of payments to State and local authorities in lieu of taxes, on the model of TVA.

AMENDMENTS SUGGESTED TO S. 517 BY THE SPONSOR

In line 3 of the title, page 1 after "and other purposes", insert "to promote the "national defense".

In line 7, page 1, section 1, after "floods", insert "and to promote the national defense."

In line 5, page 1, section 1, after "River", insert "including the accessibility of the river shore line."

In line 1, page 5, section 3 (b) after "distance", insert "and provisions for the maintenance and enhancement of the scenic beauty of the Falls, including the accessibility of the river shore line."

Beginning in line 25, page 3, section 3 (a) (1) delete all after "agreement" to the end of the sentence and insert "upon the passage and approval of this act."

In line 7, page 6, section 3 (b) (3) (A) after "Defense" insert "and other Defense Agencies, and on fair and reasonable terms to other Federal Agencies and to private enterprises requiring power to fulfill defense contracts."

In line 17, page 6, section 3 (b) (4) after "Federal Government", insert "rural consumers."

Beginning in line 12, page 8, section 3 (c) delete "beginning of construction of the project" and insert in place thereof "enactment of this act."

In line 8, page 9, section 4 before the period, insert ", pending the negotiation and approval of the agreement provided for in subsections (a) and (b) of Section 3 of this act or pending further disposition by Congress."

On page 8 after line 11 add the following: "(9) (a) In order to render financial assistance to those States and counties in which the Agency carries on its operations and acquires properties previously subject

to State and local taxes, the agency of the State of New York shall pay to such States and counties for each calendar year such amount as the agency deems fair and equitable, taking into account the State and local taxes which would be payable if such operations were carried on by private corporations, but in no event more than — percent or less than — percent of the gross proceeds derived from the sale of power by the agency for the preceding calendar year, except as hereinafter provided.

"(b) The payment for each fiscal year shall be apportioned among such States and counties in the following manner: One-half of such payment shall be apportioned by paying to each State (including payments to counties therein) the percentage thereof which the gross proceeds of the power sales by the Agency within such State during the preceding calendar year bears to the total gross proceeds from all power sales by the Agency during the preceding calendar year; the remaining one-half of such payment shall be apportioned by paying to each State (including payments to counties therein) the percentage thereof which the book value of the power property held by the Agency within such State at the end of the preceding calendar year bears to the total book value of all such property held by the Agency on the same date. The book value of power property shall include that portion of the investment allocated or established to be allocable to power. *Provided*, That the minimum annual payment to each State (including payments to counties therein) shall not be less than an amount equal to the 2-year average of the State and local ad valorem property taxes levied against power property purchased and operated by the Agency in such State. Such 2-year average shall be calculated for the last two tax years during which such property was privately owned and operated or such land was privately owned. The Agency shall pay directly to the respective counties the 2-year average of county ad valorem property taxes (including taxes levied by taxing districts within the respective counties) upon power property and reservoir lands allocable to power, determined as above provided, and all payments to any such county within a State shall be deducted from the payment otherwise due to such State under the provisions of this section. The determination of the Agency of the amounts due hereunder to the respective States and counties shall be final."

Mr. Chairman, I have one additional point to make in regard to this legislation. I have been thinking for some time about one aspect of our public power legislation in general and about my Niagara bill in particular involving the right of collective bargaining for workers engaged in construction work on these projects and for the workers engaged in operating them.

I have been trying to figure out some formula whereby these workers on Government projects can be protected and given the same rights that other workers engaged in the same work under private ownership and construction have.

I do not have legislative language worked out on this point, but I want very much to submit my ideas on this for the RECORD. As soon as I do have legislative language worked out I would be glad to submit it for the committee's consideration. I would suppose that many of you have been thinking about the same subject and may have ideas on this point.

I think the workers on these projects and operating these projects should have not only the protection of the Walsh-Healey Act but also the protection of collective bargaining and unionization if they desire it.

Appropriations for Aid of Countries in the Near East

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 30, 1951

Mr. WILEY. Mr. President, because I am leaving this afternoon for the San Francisco treaty conference, it will unfortunately not be possible for me to be present for some of the vital debate and votes which will occur during the next several days.

There are a great many features in this legislation in which I am deeply interested. One particular feature relates to the matter of aid appropriations for the Near East. It is obvious that this area is one of the most critical points in the entire world scene—a point which the Soviet masters of the Kremlin are eyeing with the deepest of craving, in view of its strategic position, in view of its proximity to the rich oil field area, and so forth.

I have received a considerable number of communications from inside and outside my State which have pointed up our people's sound recognition of the importance of that area, and I wish that I might have the time to comment upon this issue in detail in the Senate.

Because time is lacking, however, I am going to ask unanimous consent that there be printed in the Appendix of the RECORD several of these materials. The first is an excellent memorandum prepared by the American Zionist Council on United States aid to Israel and for Arab nations. This memo analyzes the differences between the House of Representatives version and the Senate Foreign Relations Committee version. I particularly invite attention to its comments on the crucial military importance to the west of the brave new Republic of Israel.

The second is a communication from distinguished Americans associated with the American Christian Palestine Committee; and I ask unanimous consent that it, too, be printed in the Appendix of the RECORD. It represents the views of a great many Americans of non-Jewish faith who are deeply sympathetic with the needs and aspirations of our good, democratic friend, Israel.

There being no objection, the memorandum and telegram were ordered to be printed in the RECORD, as follows:

MEMORANDUM—UNITED STATES AID TO THE NEAR EAST

1. We respectfully submit that the growing crisis in the strategic Near East—an exposed and vulnerable area on the very frontier of potential Communist expansion—justifies raising the authorization for economic assistance up to the totals voted by the House.

2. The action of the House: The House cut \$1,001,000,000 from the administration's mutual security program, but made most of its reductions in title I (Europe)—\$955,000,000. Taking note of the needs and dangers

in the Near East, the House increased the authorization for that area from \$125,000,000 to \$175,000,000.

3. The Senate Proposal: The Senate Foreign Relations and Armed Services Committees, effecting a total cut of \$964,000,000, took a different course. They voted a flat, across-the-board, 30-percent reduction in the economic aid program requested by the administration. This brought the Near East allocation down to \$87,500,000. Fortunately, the Senate committees then took into account the House figures on the Near East and voted to use them as a base before applying the 30-percent slash. This brought the Near East to \$122,500,000.

4. The differences between the two proposals: Thus, the Senate and House bill authorizations for the Near East vary as follows:

	Senate	House
Economic aid to Iran, Arab States, Israel, Libya, Liberia and Ethiopia.....	\$42,500,000	\$75,000,000
Resettlement of Arab refugees.....	40,000,000	50,000,000
Resettlement of Jewish refugees in Israel.....	40,000,000	50,000,000
Total.....	122,500,000	175,000,000

We urge the adoption of the House proposals for the following reasons:

5. The relative needs of the Near East and Europe: We agree that every effort must be made to trim unnecessary expenditures. However, we question the advisability of drastic cuts in title II, the Near East. Since the end of the war most European countries have received generous assistance from the United States and are today well on their way to complete recovery. In contrast the Near East has not yet been included in the foreign-aid programs. Living standards of its people are depressed—far below those of Europe. Governments are unstable. Lacking the will and capacity, the region is ill-prepared to resist aggression or Communist subversion. It is evident that to spend large sums on Europe and to ignore the Near East, which lies directly in the path of Soviet invasion, is to build a high wall on one side of that path. Accordingly the announcement that the United States planned for the first time to extend its aid program to the Near East reassured those concerned for the strategy of our over-all defenses and at the same time kindled hope among the peoples of the area. But the amount envisaged, in relation to the total proposed in the security program and measured by the critical needs of the area, evoked keen disappointment.

6. The growing crisis in the Near East: Events following the presentation of the President's program underline the urgency of a comprehensive assistance and development program commensurate with needs and opportunities. There is a persistent drive to expel western influence from the Near East. It is stimulated by jingoistic nationalism. It is exploited by Communist propagandists who brand the United Kingdom and the United States as imperialists bent on colonial domination and conquest.

7. Iran: In Iran, the assassination of Prime Minister Ali Razmara and the nationalization of the great oil refineries at Abadan were followed, just last week, by the collapse of negotiations between Iran and the United Kingdom. Our Government attempted—but in vain—to achieve a reconciliation. The free world is in imminent danger of losing an enormous supply of refined petroleum products.

8. Jordan: In Jordan, the one Arab country considered friendly to the West, King Abdullah, symbol and spokesman of that

friendship, was assassinated in a conspiracy organized by followers of the ex-Mufti of Jerusalem, one-time collaborator of Adolf Hitler.

9. Lebanon: A few days before the murder of Ab'ullah, Riad el-Solh, former Prime Minister of Lebanon, and a moderate, was assassinated by Syrian nationalists.

10. Egypt. The Egyptian Government proclaimed its neutrality between East and West and reiterated its determination to abrogate the Anglo-Egyptian treaty and to compel the United Kingdom to withdraw its troops from the Suez and from the Sudan. And, in defiance of the United Nations, Egypt continues its interference with international shipping, including American shipping, through the Suez Canal.

11. Friend of the West: In contrast to the Moslem trend of withdrawal from and rejection of the West, recent developments confirm and strengthen the mutuality of friendship between the United States and Israel. Last week, Israel and the United States entered into a treaty of friendship—the first comprehensive treaty that Israel has signed with any power. Last month, at their second national elections, the people of Israel rejected extremism of right and left and increased the strength of centrist and pro-Western elements which now predominate in the national legislature by large majorities. The Communist Party, largely Arab, received only 4 percent of the vote—an insignificant fraction when compared to its strength in European countries.

12. Israel's consolidation and American defense. The economic consolidation of Israel will strengthen American defenses. The Israel Army grows as new immigrants enter the country, for there is compulsory national service for men and women alike. Israel Army officers are now studying in American military colleges. Israel is the one country in the Near East with the mechanics and facilities to repair and maintain essential military equipment. It has steel fabricating, precision engineering and casting plants, foundries and machine shops and rapidly growing construction, fertilizer, chemical and pharmaceutical industries. In World War II, with half the present population and half the present plant, it was manufacturing for the allied forces land mines, machine gun parts, cable, batteries, wire and many other essential items. The total war production was estimated at more than \$100,000,000. Today Israel is producing much of its own armaments. The influx of labor and capital together stimulate agriculture and industry, and the country has become the potential industrial workshop for the free world—the guarantor of our logistics and supply in the Near East in the event of another conflict. The blunt truth is that the West has only two secure ports of anchorage in the turbulent Near East—Turkey and Israel.

13. Israel's refugee problem: Since Israel was established, in May 1948, it has received almost 700,000 refugees, many of whom are still in tents and only partly employed. They come at the rate of 200,000 a year and they are still coming, driven by the pressures of disaster—from Moslem countries, from Africa and Asia, from Europe. Never before in history did a people double its population in 3 years and propose to triple it in six. The cost of the resettlement program for 1951 is estimated at \$500,000,000. This will be financed by taxation, austerity and savings, investments, loans and private philanthropy. The grant of \$50,000,000 as proposed in the House bill is about 10 percent of the total cost. Israel and its people, assisted by the philanthropy of the Jewish people of the United States, have strained every resource before turning to the United

States Government for aid. These considerations are offered in support of the plea that the Senate raise the allocation for the Jewish refugees from \$40,000,000 to \$50,000,000, the amount voted by the House.

14. The Arab refugees: The resettlement of the Arab refugees is essential to economic health and the attainment of peace in the Near East. Displaced by the war of the Arab States against the 1947 United Nations partition decision, the Arab refugees can be resettled in Arab countries which have the necessary fertile land but lack the people needed to work it. A partnership fusing the imagination of western engineering, the co-operation of Arab States and the contribution of the United States and other members of the United Nations can effectively solve this tragic problem. Hopes that a real beginning on the resettlement program could now be made were raised when the United Nations approved this policy last winter and the Arab States finally indicated their readiness to cooperate and participate. The administration proposed \$50,000,000 as America's contribution to the United Nations reintegration fund for Arab refugees. It is feared that the proposal to cut this amount to \$40,000,000 may retard the resettlement program. It may result in a proportionate reduction in the amount to be contributed by other nations. This would lead to a prolongation and intensification of the suffering of innocent people who are not responsible for their present plight. It is therefore urged that the Senate approve the \$50,000,000 authorization for the Arab refugees voted in the House.

15. The restoration of United States-Arab confidence. Deterioration of relations between the West and the Arab States should not be permitted to continue. Recent developments argue for an increase—not for reduction—in American economic and technical assistance. It is sometimes claimed by those who regret the establishment of the State of Israel that the threatened estrangement between the Arab world and the West is a consequence of American support of Israel at the U. N. This dubious argument is generally advanced to immobilize and neutralize our own Government and to stultify its policy. It is not an objective evaluation of the forces at play. The fact is that Arab hostility is directed primarily against the United Kingdom, which supported the Arabs—not Israel—at the U. N. Arab attitudes to the west are determined by other factors. The Moslem world won political freedom within the last quarter of a century. But it did not achieve economic liberation for its people. They are told that they are dominated and exploited by the colonial powers—a propaganda myth sedulously circulated by those who would maintain their own feudal place and privilege. They stir up agitation to rid the Near East of British influence. They preach distrust of the United States, charging that our own country stands with and for and seeks to restore the vanishing imperialism of the nineteenth century. It is imperative that we overcome this suspicion and distrust. The Near East needs our help. And we need its friendship. The entire area deserves greater consideration—in the interest of the United States. We regret that the Senate bill would drastically cut down the amount of economic assistance envisaged for the Near East in the House bill. We urge reconsideration and acceptance by the Senate of the \$175,000,000 authorization approved by the House.

16. Conclusion: In submitting these observations we acknowledge with appreciation the fact that the two Senate committees took action to insure substantial aid to Israel, despite the general percentage reductions. We who have been advocates of the

establishment of the State of Israel for a generation are gratified by this renewed expression of good will, the welcome affirmation of the friendly relations between Israel and the United States that grow increasingly significant to the progress and defense of the free world.

But in this memorandum we speak for more than Israel. Israel cannot live by itself—isolated from its neighbors with whom it would be at peace. We speak for the entire Near East, which is so vital to American interests. Today it is a weak spot in our democratic armor. Rich in resources and strategic in location, the Near East cannot be defended unless its standards are raised, its economies are stabilized, its people are lifted to new levels of opportunity and fulfillment.

This we deem crucial to the promotion of our defenses in the Near East, to the security and welfare of our own people.

(This document is submitted by the American Zionist Council, 305 Ring Building, Washington, D. C.)

AUGUST 27, 1951.

NEW YORK, N. Y., August 29, 1951.
Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

May we urgently remind you of the critical importance of the Near East. Our way of life has not yet won its spurs in this area except in Israel. Unresolved problems such as those of the Jewish and Arab refugees may yet overwhelm incipient democratic developments unless we, the representatives of the western way of life, step in with the help necessary to bring order and a measure of prosperity to these oppressed peoples. We therefore plead with you to use your good offices in the Senate to restore \$50,000,000 for Arab refugees and \$50,000,000 for Jewish refugees, bringing the Near East allocation into conformity with the \$175,000,000 authorization voted by the House of Representatives, which will substantially help to resolve this tremendous and tragic human problem.

Respectfully,

DANIEL A. POLING,
SAMUEL GUY INMAN,
HENRY A. ATKINSON,
CARL HERMANN VOSS,
KARL BAEHR,
American Christian Palestine Committee, 41 East Forty-second Street.

Fundamental Government

EXTENSION OF REMARKS OF

HON. RALPH E. FLANDERS

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, August 23, 1951

Mr. FLANDERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Fundamental Government, delivered by a fellow Vermonter, former Representative Charles Plumley.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Vermonters, I did not choose the subject on which I am to talk to you this afternoon, though confessedly I am glad it

was selected for me. My text is *Fundamental Government*.

On the 30th day of April 1789 was consummated a work commenced years before but not accomplished till that day, when the people of what we now know as the United States, those fearless colonists, acting under the deepest sense of responsibility, achieved and completed the most transcendent act of power that social man in his mortal condition can perform.

The Declaration of Independence and the Constitution of the United States are parts of one consistent whole, founded upon one and the same theory of government, then new in practice, though not as a theory, for it had been working itself into the mind of man for many ages, and had been especially expounded in the writings of Locke, though it had never before been adopted by a great nation in practice.

There are yet, even at this day, many speculative objections to this theory. Even in our own country there are still philosophers who deny the principles asserted in the Declaration, as self-evident truths—who deny the natural equality and inalienable rights of man—who deny that all just powers of government are derived from the consent of the governed. . . . I speak to matters of fact. There is the Declaration of Independence, and there is the Constitution of the United States—let them speak for themselves. The grossly immoral and dishonest doctrine of despotic State sovereignty, the exclusive judge of its own obligations, and responsible to no power on earth or in heaven, for the violation of them, is not there. The Declaration says, it is not in me. The Constitution says, it is not in me.

So said John Quincy Adams on the 30th of April 1839. . . .

When Thomas Jefferson . . . was first inaugurated he delivered an oration which contained the best definition of democracy ever propounded. Let me quote briefly:

"It is proper you should understand what I deem the essential principles of our Government, and consequently those which ought to shape its administration. I will compress them within the narrowest compass they will bear, stating the general principle, but not all its limitations. Equal and exact justice to all men, of whatever state or persuasion, religious or political; peace, commerce, and honest friendship with all nations, entangling alliances with none; the support of the State governments in all their rights, as the most competent administrations for our domestic concerns, and the surest bulwarks against anti-republican tendencies; the preservation of the general government in its whole constitutional vigor, as the sheet-anchor of election by the people; a mild and safe corrective of abuses which are unprovided, absolute acquiescence in the decisions of the majority, the vital principle of republics, from which is no appeal but to force, the vital principle and immediate parent of despotism; a well-disciplined militia, our best reliance in peace and for the first moments of war, till regulars may relieve them, the supremacy of the civil over the military authority, economy in the public expense, that labor may be lightly burdened; the honest payment of our debts, and sacred preservation of the public faith; encouragement of agriculture, and of commerce as its handmaid, the diffusion of information and arraignment of all abuses at the bar of the public reason, freedom of religion, freedom of the press, and freedom of person, under the protection of the habeas corpus; and trial by juries impartially selected. These principles form the bright constellation which has gone before us, and guided our steps through an age of revolution and reformation. The wisdom of our sages and blood of our heroes have been devoted to their attainment; they should be the creed

of our political faith; the text of civic instruction; the touchstone by which to try the services of those we trust; and should we wander from them in moments of error or of alarm, let us hasten to retrace our steps and to regain the road which alone leads to peace, liberty, and safety."

So much for some of the fundamentals of government.

At a time when this country faces the greatest crisis in its total history; when we are suffering the humiliation of the most ignominious defeat at arms ever experienced by any Christian nation since Christianity fell to the Turks at Byzantium, it is a supererogation of my duty and my obligation to suggest that when and if this war continues for 10 years it is picaresque to complain about the possible rise in the price of gasoline, or of rubber, or of automobiles, or of a lot of things, when the fact is, we are at war.

If we are at war, as we are at war, without a declaration I admit, but nevertheless involved in it up to our necks, if what they tell me from Washington is true. It is my opinion that nobody should be concerned about paying an additional gasoline tax, and nobody should be troubled about paying more for tires, and nobody should over-exert themselves to save money to buy an automobile, for it is my honest opinion you won't even get gasoline, or tires, or an automobile if this thing clamps down. . . .

Every sensible man must know that it means that he will have to pay more taxes out of his jeans. I mean out of his pockets. I mean out of what he saved. . . .

No appropriation for anything in excess of that which has heretofore been made . . . should be made at this time by Congress or by the legislature of any State.

It was 55 years ago the 10th of April, that upon my return from Bellows Falls where I had, as a cadet, represented Norwich University at a Young Men's Christian Association convention, I was met by Prof. C. C. Brill, then superintendent of Norwich, to be told that I had been selected to be a commencement-day speaker, and that I could choose between "The Future of Heaven Than Air Machines," and "The Future of Arbitration as a Substitute for War," as the subject of my oration. . . .

So I went to New York to the Public Library and found there a compendium of scientific treatises prepared by the then leading physicists who absolutely, scientifically, mathematically demonstrated that no heavier than air machine would ever be able to lift and transport a load. It might lift itself off the ground for a short distance, but fly—never. So I decided to select arbitration as a substitute for war. I made some speech that commencement day. I convinced myself at least, that I had solved the problem of the ages. My peroration was as follows:

"Down the dark future
Through long generations
The echoing sounds grow fainter and then
cease
And like a bell with solemn sweet vibrations
I hear once more the voice of Christ say,
"Peace."

"Peace! and no longer from its brazen portals
The blast of war's great organ shakes the
skies
But beautiful and sweet as songs of the
immortals
The holy melodies of love arise."

And almost before I could take my seat some Spaniard blew up the *Maine* in Habana Harbor. And there has been either hot or cold world war and no peace ever since I spoke in June 1896.

The pacifist policies of refraining from adequately preparing ourselves militarily for defense have led us into two world wars and threaten us with a third. * * *

In every Republic the due cultivation of a proper military spirit and a general diffusion of military information are indispensably necessary for the preservation of liberty.

I have lived long enough to find out * * * that there is no peaceful diplomatic solution to these problems. So far as this war in which we are involved is concerned, we forfeited any solution when we sold Poland and China down the river, meaning the Volga, when we eliminated the war potential of Germany and Japan, which were the only natural dams or obstacles in the way of the Bolshevik tides, and when so foolishly and unwisely, on top of all our diplomatic adventures, we financed and promoted the total disarmament of Europe. What a catastrophe! * * * We have done too much erroneously and have done too little right, too late.

Our national existence is at stake. I am one of those who believe that we should use any and all means within our power to put a stop to this war right now, and we have the means and we have the power, and there is no reason under God why American boys should be slaughtered longer in Korea, so long as at our hands and in our possession are the means wherewith, and by the use thereof, we could and can put a stop to it. Some say it is unethical to wage a bomb war against an aggressor. I am one of those who believe that any method which we can use to put a stop to the sacrifice of the best blood of America is justified by the circumstances which confront us, in an attempt made to go outside our boundaries to establish the ideals in which we believe, or do we? If we do not * * * believe in the use of the bomb as a means to an end, then we are nothing more or less than conscientious objectors, and we should surrender and quit, and we should roll ourselves up into an America self-contained. In this policy I do not believe. . . .

We are at war although we have not concluded the Second World War. * * * Just how long will we feed our boys and our girls for slaughter, so long as we have the means with which in 48 hours to put an end to all this? I am free to admit I do not understand why we do not act in the premises, and at once, to end all war by putting an end to it, for it is high time for a showdown too long delayed.

Our destiny requires that we should have made and should use the power to accomplish the salvation of civilization. To wait much longer is to inherit a place with the other buried civilizations, some five in number, which never had the intestinal fortitude to sustain and to maintain the principles for which they stood.

Remember Pearl Harbor, and threatened by the situation in Korea and elsewhere, with Rudyard Kipling we may truthfully say:

"Far called our navies melt away
On dune and headland sinks the fire,
Lo, all our pomp of yesterday
Gone with Nineveh and Tyre.
Lord God of Hosts, be with us yet,
Lest we forget; lest we forget."

The road to universal peace is a tortuous path which leads down the dark future through long generations, involving the Christianization of the world—an end devoutly to be sought, eventually to be obtained—but obviously ages hence.

The sober realization of a people who fail to allow their idealism to divorce them from stark reality and a clear conception of the foibles and idiosyncracies of human nature impresses the fact upon them that just so long as racial hatred and discrimination, economic rivalry between nations for world

markets, and arrogant nationalism remain, disarmament and a pacific world cannot be. * * *

I would like to believe that there would never again be another world war. I would like to feel that the dawn of everlasting peace was near at hand. * * *

I would like to believe that human nature has changed, but the hard cold facts are that no plan has been promulgated in our day or generation, or ever will be, that will change human nature or bring about the millenium by contract. No covenant, as such alone, which has ever been made or will be entered into in this day of grace between and among nations can or will prove a perfect panacea for or perfect preventative of war. The truth is that neither you nor I, our children or great-grandchildren will live long enough to see the day when it will be unnecessary to maintain a sufficient force to guarantee safety and to keep the peace.

We all agree that war is evil. We agree that war is the prolific mother of every other evil known to men; disease, want, cruelty, destruction, hatred of man for man, dictatorships of every kind. We agree that whatever values may come out of war are far offset by the brood of evils it invariably spawns. We agree that the eradication of war is the prime business of both ethical religion and modern civilization. We simply refuse to accept the inference or assertion that war is natural and unavoidable. When Cordell Hull said: "War is not an act of God; it is a crime of man," the religious conscience said: "Amen."

My private opinion is that unless we are prepared to back not only with dollars but with the necessary force the edicts issued by the United Nations we stand helpless. * * *

Whether we shall come through standing up to survive or lying down to lose all our liberty, to find ourselves in the limbo of those who do not appreciate what they have until they have it not, is something we must decide. It is later than you think.

Our country is losing its soul.

It has taken me some time, fellow Vermonters, to realize that as individuals we do not appreciate our opportunities nor do we discharge our responsibilities. I am not going to preach at you, I am going to tell you that we are responsible for the situation that obtains, and nobody else.

Because we have assumed the attitude, "let George do it." We have presumed that someone else would take care of us and everything else while we undertook to take good care of ourselves.

The self-seekers, the weaklings, the so-called and would-be liberals, the wild-eyed progressives, the crack-pot fellow travelers who follow or are followed by the Commies or affiliated with them, the parlor pinks, in short, the opportunists in every field dedicated to subversion and perversion have swarmed into all activities in which we should have indulged, and taken over our responsibilities everywhere right before our face and eyes. With ears to hear and eyes with which to see, we have neither heard nor seen. * * *

Our country has come a long way in 176 years, and yet at the peak of a material greatness with which no other nation has ever been blessed, there is a feeling of inner insecurity spreading over the length and breadth of the land among all classes of people, affording exactly the opportunity sought to be obtained by those who would destroy us. This threat has reached a point where it very seriously threatens our existence as a nation. * * *

The house cleaning which is needed everywhere might well commence in Vermont, the summer home of Alger Hiss, and a place where are to be found too many of his friends and admirers. We can get along without

them, and the fact that we tolerate them and undertake to alibi the reason for their being here is no credit to the State of Vermont in the eyes of those who look at us from outside the State. For years our schools and colleges, Nation-wide, have neglected to bring into the lives of millions of young Americans the basic spiritual truth which is the root of American strength. * * *

There is very little religious teaching, but instead it has become popular to claim to believe that man is nothing more than a superior animal. It is trite, but it is true, that ordinary honesty and loyalty are being disregarded on all sides. * * * Men and women in important positions in Government have acted as traitors and have given away precious secrets to those who would destroy our country, and nobody knows how many like them have not been caught. While communism of the registered variety may to some extent be controlled by law, the problem which confronts us is not subscribed by our fight with communism nor to be treated with complacency.

Men of great force and persuasion, gifted with many attractive qualities, extremely disarming, ranking today among the famous men of our time have probably shaped the trend to godlessness in America more than all other forces combined. In my opinion, not only have they rejected the fundamental idea on which our Republic is founded, but have been the means of causing millions of others to follow in the same godless path.

So far as the future is concerned, I wonder if there will be a future for my grandchildren, or if they will ever enjoy the privileges and opportunities which have been accorded me and you, if such a standard of living as we have enjoyed shall be maintained, or is it worth the price? So I wonder, and have wondered, and one night, believe it or not, I wrote what I call a poem. I called it I Wonder, and this is what I said:

"As once I wandered at eventide alone
In rain-drenched garden paths through
flowers and weeds,

I wondered if any day and sun would ever
follow to atone

For all the wind and dark had done; to
which no heed in world at large

Is paid by those who idly pass to waste
both lives and time and money never
earned,

Lightly burdened by thought or care of
whence these came or what a burden
some must bear

To save us from the catastrophic flair
For reckless, wicked waste of things they
claim do make men great!

"Still stand I wondering what will be their
fate—

The fate of those who measure not nor
calculate

The depth to which by ill-considered reck-
lessness with lives of other people's
son, and dollars, not their own,

They have condemned those generations
yet unborn

To travail such as other age has never
known."

But that which my friend, Hurd, said in answer put me in my place poetically and otherwise when he wrote:

"The scythe that severs life lays waste the
world;

The hate which cumulates to wrath is
hurled

Against the peace which trembled like a
flower

Upon the stalk of hope. The fatal hour
Has struck. * * * Is this the end

Of Hope? The ultimate for which men
spend

Their years in never-ending toil and sweat?
Is this the doom to which our days curvet

Like moths unable to resist the light
Whose flame is death?

"Thus fell the boasted might
Of Nineveh and Troy * * * thus
Carthage fell * * *

And Babylon. Shall future centuries tell
A similar story of our rise and fall
To depths too deep for resurrection? Call
The roll of systems grown obese and weak
From glutton; apply the pure critique
Of reason to historic facts and know
The ageless truth that nations cannot sow
The retroactive earth with hate and reap
The fruits of love. Oblivion lies deep
Upon the names of tyrant men and states.
Be not deceived, for time reiterates
The unlearned lessons of the fruitless past.

"The slashing scythe cannot destroy the vast
insistence within the root. The ground
Grows quick with promise; without audible
sound

Or visible motion, life thrusts toward the
light

Like secretive grass that grows despite
The devastation of the scythe. Madmen
sow

The soil with steel, indifferent to woe
Implanted! Ignorant of Nemesis.
Tomorrow is a deep and dark abyss
Into which the cruel and unjust
Will slide and vanish. Empires fall to
dust—

Democracies will follow if they dare
To break eternal faith with man—despair
Is fertile soil for change. Lay waste the
earth—

Apply the blade to beauty and to mirth—
Reduce each city to a cluttered grave—
Destruction is not final if we save
A single fibered root of freedom. Now
Is not forever! Wait! Somewhere, some-
how

The severed stalk of liberty shall rise,
Grow green, and flower under friendlier
skies."

God alone knows how late the hour is for
our civilization. It may be later than we
think. But, until the hour of midnight strikes
and all hope vanishes, we must work at our
task of trying to do our duty as God gives
it to us to see it, seeking peace without
fear or alarm, but ready and prepared to
defend ourselves as we save civilization.
More than this we cannot do; to do less
than this would be quite useless.

"God bless our native land!
Firm may she ever stand,
Through storm and night;
When the wild tempests rave,
Ruler of wind and wave,
Do Thou our country save
By Thy great might.

"For her our prayer shall rise
To God, above the skies;
On Him we wait;
Thou who art ever nigh,
Guarding with watchful eye,
To Thee aloud we cry,
God save the state!"

The Anticrime Crusade

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 30, 1951

Mr. WILEY. Mr. President, I am tremendously gratified that there is apparently an excellent chance that the Senate Commerce Committee will carry on the anticrime crusade which we of the

Special Crime Investigating Committee have been conducting since May of 1950.

I have previously placed in the RECORD—on August 22 on page A5317 and on August 24 on page A5390—various materials which I have issued, or which have been published, on the need for the continuation of the investigation, particularly in connection with the need for a probe of crime and corruption within the District of Columbia area.

The newspapers in the District are to be congratulated for their tremendous interest in seeing such a probe conducted. In addition to editorial comments, there has been a very wide news coverage of this whole matter, and I am sure it has served to stimulate the thinking of Members of the Senate.

I should like to place in the RECORD at this time various additional materials pertinent to this general theme.

First, I should like to include the text of the release which I sent out last Sunday on the subject.

Second, I should like to include the text of an editorial which was carried in the Evening Star on Tuesday, August 28. This editorial was entitled "In Fairness to Police," and I agree thoroughly with the sentiments which it expresses. It rightly pointed out that in all fairness to the police of the District of Columbia they should be given the opportunity to clear their collective name.

During the last several days I have had to cite various anonymous letters which have come to me—letters with a ring of authenticity, letters which have cast a reflection on District law enforcement. I have had no alternative in doing this, because these anonymous tips are the only thing that can be presented at this stage in lieu of complete investigative findings. I have very carefully refrained, of course, from citing any names mentioned in those anonymous tips, because I realize more than anyone that the whole procedure of honoring anonymous letters is extremely dangerous, and can do irreparable harm to innocent people.

I would infinitely prefer that the senders of anonymous letters have the courage to write their names and addresses so that they might be fully questioned. However, they often fear retribution and so are careful to avoid specific reference to themselves. I feel that it is my public duty to at least mention the subject matter of which they wrote as an indication of the type of material that could be uncovered if we had a complete investigation.

The third item is a very fine letter which I recently received from Mr. William F. Hadler, Jr., chairman of the home rule committee of the Democratic Club of the District of Columbia. Mr. Hadler points out the relation between the home-rule fight and the fight to clean up crime. It is not very often that I receive such splendid letters from a Democratic club, but seriously speaking, I am grateful to have received it, and I ask unanimous consent to have it printed in the Appendix of the RECORD, preceded by the listing of the officers, directors, and honorary vice presidents of the club—all very good Democrats, and

including many folks whom I have the honor of considering fine personal friends.

Finally, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an editorial from the Milwaukee Journal, of August 14, entitled "Public Apathy to Crime."

There being no objection the matters were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

ANONYMOUS LETTERS REPORT PAY-OFFS TO POLICE IN DISTRICT OF COLUMBIA AREA RACKETS: WILEY RENEWS PLEA THAT COMMERCE COMMITTEE CARRY ON CRIME PROBE

Time is running out in our Senate Crime Committee's probe and the Commerce Committee has but a few days to decide whether or not it will carry on after September 1st the job which we have initiated. If the Crime Committee dies at the end of this month and the Commerce Committee delays its decision (because of its preoccupation with other affairs), then our expert staff, assembled over a period of many months will disperse and the whole momentum of the investigation (which already has been somewhat lost) will be completely dissipated.

A great many messages have come to me endorsing my effort to try to get a thorough probe made into District of Columbia vice affairs. Included among such messages have been numerous anonymous letters (many with a clear ring of authenticity) reporting

(a) A considerable amount of pay-offs to law enforcement officers up and down the line so that they would ignore numbers and horse race betting operations being carried on in their areas in both the District and in adjacent Maryland and Virginia counties.

(b) A consequent vast increase in the wealth of certain law enforcement officers—wealth which even on its very face is completely disproportionate to the amount of income which they would have from their regular duties.

Organized crime cannot exist without police protection

The Senate Crime Committee has proved that no major organized crime, whether it be the policy racket, horse race betting, or other forms of gambling can possibly exist under the noses of the police without police connivance and protection in any American city. This is as true in the District of Columbia as it is everywhere else. The Crime Committee has also proved that there is probably no city in the country where organized rackets cannot be smashed practically over night if the wraps are taken off and if policemen honestly and fearlessly set out to do the job which they are supposed to do. Organized rackets exist in the District of Columbia, and it is obvious that there have been pay-offs all along the line. It is a very unhealthy situation where the seat of a national government is partially poisoned by the existence of crime and corruption, particularly amidst a grave national emergency while men are giving their lives for decency and freedom overseas. It is discouraging to the morals and morale of the Nation's youth in particular.

Home-rule legislation can be partial remedy

Part of the answer will come when District home-rule legislation—which I have previously supported and which I still support—is passed so that there can be more local responsibility in administration of local problems. The present home-rule legislation, while it is far from perfect, at least holds out the possibility of citizen participa-

tion in Government here. I think it is unfair to inform the people of the District of Columbia that crime exists in their midst and yet to deny them the opportunity to help eradicate such crime by their own judicious use of the ballot.

Suspicion should, of course, not be cast at the overwhelming bulk of District area law-enforcement officers, who comprise probably as fine a body of policemen as any American area enjoys; but it is clear to everyone concerned that the big shots in organized crime in the Capital area have been immune from prosecution for far too long, and it is up to us to find out why. Immunity does not happen accidentally.

Anticrime flurries tend to die down

The public should not be fooled into thinking that a flurry of local investigations and headlines are going to solve District crime. Flurries like this tend often to pass over with comparatively little permanent good accomplished, and that is why it is essential that the Senate investigation dig deeper and help strike at the taproots of crime here and elsewhere throughout the country.

Criminal establishments will open up on September 1

Criminals all over the United States are marking the days off on the calendar until Friday night, August 31, when the Crime Committee expires. They will breathe a lot easier when our special committee dies. It is reported that in a great many American major city areas, like the parishes outside New Orleans, organized gambling—now under the lid—expects the green light to be flashed on September 1, and expects to open up its establishments bigger, wider, and more profitably than ever.

A great many missing criminals and alleged criminals will also suddenly turn up out of hiding after September 1, having successfully defied the United States Government, unless new subpoenas are issued for them by the Senate Commerce Committee. At this stage of the game, it looks as though the top criminals of America may have the last laugh.

I do not discount all of the many excellent investigations by grand juries, local prosecutors, and other officials now under way, nor the progress which has been made in many other respects as a result of our Senate Crime Committee probe; but I do think that there is an unfortunate false sense of security being built up in the American people, a great delusion to the effect that the Senate Crime Committee, by the waving of some magic wand, has dealt a permanent blow to crime. There has been a considerable public awakening and much progress has been made, but a great deal more must still be done, and done by a United States Senate committee itself.

From the Washington Evening Star of August 28, 1951]

IN FAIRNESS TO THE POLICE

District Commissioner Donohue says the people of Washington have a right to know whether there is a close and unholy alliance between mobsters and officials of the District government. He is right in requesting a thorough investigation of flying rumors and anonymous charges that something is rotten with the Washington Police Department.

The District grand jury already has begun an inquiry into phases of the testimony given to the Senate Crime Committee by Charles E. Nelson, Maryland horse breeder who netted profits from a business he said might have been the numbers racket. Some of the information obtained by Senate investigators is reported to date back to gambling operations in this area beyond the statute

of limitations. Because the grand jury's investigation will be limited in scope by that statute, Mr. Donohue suggests a congressional inquiry. The Davis subcommittee of the House District Committee already has made an extended investigation of District crime conditions, is it true, but recent developments indicate that further probing by some congressional group might be productive.

Some of the anonymous communications to Senators are said to name names and describe incidents reflecting on the integrity of certain local police officers. Senator WILEY says the letters assert that a considerable amount of pay-offs to law-enforcement officers up and down the line has been made to protect numbers and race-betting racketeers. The Senator's public disclosure of these anonymous charges tends to raise questions in the mind of the public which ought to be settled one way or another without delay. If the grand jury cannot get at the truth, due to statutory limitations, Congress should direct one of its committees to conduct an investigation. It is only fair to the officers accused and to the police department as a whole that the allegations be checked for fact or falsity.

DEMOCRATIC CLUB OF THE
DISTRICT OF COLUMBIA,
Washington, D. C., August 21, 1951.
HON. ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: It was good to hear your statement advocating the development of Washington into a model American city, one of which all of us can be justly proud.

As you so knowingly pointed out there is a need for a clean-up of the gambling and narcotics rings that have infested the District of Columbia for some time and this vital work must begin at once.

In all American cities, through our cherished democratic processes the local citizenry can prevent such a menace from taking root by electing officials who will be diligent in their duty of discharging their public trust. These officials must serve the best interest of their people because they must answer to them directly—not indirectly.

All American cities, Senator, except one, the one that you and others have pointed out, where crime conditions are the worst in America today, our own voteless, voiceless National Capital.

The burdening and time-consuming duties of the congressional "city fathers" often cause the local problems to be slighted, and this is such a case brought to light.

The gambling rackets and narcotics trade are not new to the people of Washington, they have suffered with these things for years, but have been helpless to take direct democratic action to correct this evil condition.

The hearings of the Senate Crime Committee have clearly brought out before the public that any city government can stamp out the rackets, flourishing therein, within 24 hours if it is of the disposition.

At this time the people of Washington have taken renewed hope in the compromise home rule bill now passed by the Senate District of Columbia Committee to provide a good American city government which can clean its own house and give the Nation a model American city for its capital.

You may surely have the appreciation of all the people of Washington for your leadership in bettering the Nation's Capital.

With every good wish, I have the honor to remain,

Most respectfully yours,
WILLIAM F. FADLER, JR.,
Chairman, Home Rule Committee.

Officers: Arthur Clarendon Smith, Sr., president, William F. Fader, Jr., executive vice president, John K. Evans, vice president;

Mrs. Estelle Whiting, vice president; Capt. Edward Everett, treasurer; Miss Utha Gray Smith, assistant treasurer; Mrs. Vivian House, recording secretary; Mrs. Gertrude Jay Scott, corresponding secretary.

Publicity chairman: Paul A. Thels.

Board of directors: Arthur Clarendon Smith, Sr., chairman; Mrs. Estherlene Bell; Reidar D. Claffy; Maynard DeWitt; Capt. Edward Everett; William F. Fader, Jr.; Mrs. Anne T. Kelly; Herbert Leeman; Robert Mars; George Moriarity; Mrs. Arthur Clarendon Smith, Sr.

Honorary vice presidents: Hon. Charles F. Brannan, Mrs. Charles F. Brannan, Mrs. Oscar Chapman, Hon. George Neese Clark, Hon. Jesse M. Donaldson, Mrs. Jesse M. Donaldson, Mrs. Julien N. Friant, Senator Clyde R. Hoey, Senator Hubert H. Humphrey, Senator Estes Kefauver, Hon. J. Howard McGrath, Hon. Burnita S. Matthews, Senator Matthew M. Neely, Senator Claude Pepper, Brig. Gen. Louis H. Renfrow, Mrs. Louis H. Renfrow, Senator John J. Sparkman, Maj. Gen. Harry H. Vaughan.

[From the Milwaukee Journal of August 14, 1951]

PUBLIC APATHY TO CRIME

The district attorneys of the country are in better position than most men to appraise our current moral atmosphere. They are also among the least likely to exaggerate our shortcomings.

So when the National Association of County and Prosecuting Attorneys at its national convention expresses "deep concern over the evidence of a breakdown in the moral and spiritual life of our citizenry," the Nation can well believe that there is indeed "an alarming indifference to moral standards and basic ideals."

The keynote of the convention was a demand for a return to high concepts of morality by the people generally. The prosecutor, it was pointed out again and again, cannot enforce the laws against such evils as gambling and dope "unless the psychology of our people is affected with an abhorrence of the kind of crime they promote." In a climate of "public apathy" on many phases of crime, the prosecutor is in difficulty at the outset. He is lucky if he can get the courts to assess even a small fine against evildoers—a fine which will be looked upon merely as "an expense of doing business."

The district attorneys, are, of course, right in what they say. Any law can be enforced if the people are solidly behind it, no law can be a complete success in the face of public indifference. And there are today many indications that indifference has become widespread.

The astonishing reaction of many of those caught cheating at West Point is one evidence of how low some of us hold the fundamental virtue of common honesty. The "influence" selling and buying, revealed in the RFC and other investigations, is another proof of low standards.

In a truly moral society, such aberrations would bring forth high and general indignation. Today they seem merely to encourage others to go and do likewise. The general feeling seems to be: "If he got by with it, so can I."

To remedy such a situation, we must have an entering wedge. The police, the district attorneys, and the courts can here do their part. They can give better enforcement of the law than the people demand. If they themselves are convinced of the vital importance of getting their necks out. The educators and the church people can also do a better job than they have so far done, measured by results.

The decent forces of our country must still be a big majority. If they will band together, apathy will end. So long as they timidly "mind their own business," crime and "getting by with murder" will flourish.

United Nations Council's Action on Covenant on Freedom of Information

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, August 30, 1951

Mr. BUTLER of Maryland. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Freedom Unadulterated," reprinted from the Akron Beacon-Journal, which refers to an address by the distinguished and able junior Senator from Ohio [Mr. BRICKER] on the floor of the Senate a few days ago relative to the proposed covenant on freedom of information.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FREEDOM UNADULTERATED

Senator JOHN W. BRICKER, of Ohio, does not make a habit of presenting bouquets to the State Department, but he had a moderately kind word to say for the Department the other day. Taking note of the fact that the American delegate to the United Nations Economic and Social Council had denounced a proposed covenant on freedom of information, the Ohio Republican said it appeared that the State Department had finally become aware of the impossibility of drafting a universally acceptable definition of fundamental freedoms.

The sort of freedom of information described in the UN covenant was no freedom at all, judged by American standards. As BRICKER said, it would legalize a host of restrictions on the liberty of the press.

Perhaps naively, the United States took the lead, 5 or 6 years ago, in the attempt to establish through the UN a world-wide acceptance of the American concept of freedom of information. It soon became apparent, however, that many foreign governments were determined to hedge freedom with restrictions and penalties. The covenant finally drafted guaranteed no gains anywhere and as far as the United States was concerned, it represented an unthinkable retreat from the Constitution.

BRICKER stated an unpleasant fact, but a fact nevertheless, when he said:

"Most of the members of the United Nations subordinate the rights of the individual to the power of the state under some form of communism, fascism, or socialism. It was fantastic to expect that these countries would enter into any agreement recognizing the principles of economic and political freedom embodied in the Constitution of the United States and the Declaration of Independence."

The Senator believes that its experience in the futile effort to spread freedom of information should be a lesson to the State Department. He wants the Department to serve notice that "the basic liberties of the American people will not be compromised for the sake of obtaining agreement on an international bill of rights."

A declaration of this kind might put an end to the effort to achieve such a bill of rights. But if additional liberties can be gained for foreign peoples only by sacrificing freedoms which are traditional here, the subject may as well be dropped at once. The State Department would only be dealing frankly with the U. N. if it were to make the announcement urged by BRICKER.

The Yalta Agreement

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 30, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Yalta Agreement Was Great Tragedy," which appeared recently in the Washington (Pa.) Observer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YALTA AGREEMENT WAS GREAT TRAGEDY

The eight Republican MacArthur investigators who term Yalta a great tragedy are right. The secret protocol on China is an ugly chapter in American diplomatic history. It was at Yalta that the United States sacrificed principle for expediency, and this shameful fact should not be overlooked in the controversy over whether (or by whom) the United States was betrayed.

In the Atlantic Charter, later adhered to in principle by Russia, the signators agreed to seek no territorial aggrandizement from the war. Yalta violated that by giving Russia the other half of Sakhalin Island and the Kuriles. A promise publicly made to the people of the world was secretly violated.

In the Cairo declaration, moreover, Roosevelt and Churchill had proposed complete restoration of Chinese sovereignty over Manchuria. But at Yalta they also dishonored that promise by giving Russia special privileges in Manchuria, including what amounted to half ownership of two railroads. This act was also a betrayal of America's traditional open-door policy.

That this deal gave away the territorial rights of this country's ally China, without China's knowledge or consent is another of its shocking aspects. The Yalta protocol stated that Roosevelt would undertake to make Chiang give Russia what FDR promised. This is not the sort of role in the world that is consistent either with American principles or the national interest.

The world picture might be no less dark today if Roosevelt had made no such deal at Yalta, but American hands would be cleaner.

Dispersal of Industry

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 30, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "How Not To Prepare," which appeared in the Bridgeport Post of August 28, 1951. It refers to the President's dispersal-of-industry policy.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW NOT TO PREPARE

It is about time that the Nation as a whole and the industrial East in particular woke up to the true inwardness of President Truman's dispersal-of-industry policy. He does

not want future contracts for war supplies awarded in industrial communities like Bridgeport or industrial States like Connecticut. He wants new factories to be built out in the prairies, the woods, and the deserts so they can't be hit with atom bombs.

That's what the man says.

As a matter of fact, assuming that the Russians have the atom bomb and assuming that they might want to drop it on us some fine day, there is only one real defense against it, and that is to have such a network of radar and interceptor planes as to make it virtually impossible for any Russian plane to get over us.

Otherwise the Russians would be quite content to drop their bombs on New York City, Chicago, Washington, or other targets which they couldn't possibly miss, without bothering to hunt up industry in the woods. They could strangle our whole transportation system by knocking out the important rail centers, unless President Truman also intends to move the railroads into the woods where there aren't any people, as a matter of safety.

But let's consider the practical aspects of the President's program. If the word "practical" can be applied to any such monstrosity

1 It means that the present factories which have the men, the machinery, and the know-how to produce what the Army, Navy, and Air Force need in the minimum possible time, are to be neglected.

2 It means that new factories are to be built and that the job of equipping these factories with the necessary tools and machinery will constitute a terrific drain on our materials and manpower, all of which must be subtracted from our actual production of materials needed for war use.

3 It means an enormous increase in the cost of the whole preparedness program plus a long delay in making the program effective.

Aside from that it's a good idea. It comes pretty near to being tops among the dam-fool ideas which emanate from Washington these days.

The Morgan Horse Farm

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, August 30, 1951

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Morgan Horse Farm," which appeared in the Washington Star today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MORGAN HORSE FARM

People interested in equine affairs will be glad to hear that the famous United States Morgan Horse Farm in Weybridge Township, 2 miles north of Middlebury, Vt., is not to be closed. The Department of Agriculture, in charge of the place since 1908, has released it to the University of Vermont, and the breeding of noble Morgans will continue. Back of this news lies a fascinating mystery story which probably never will be solved.

Nobody knows where the first Morgan horse came from or what his ancestry was. His owner at the moment when his career as a historic steed began in 1795 was an obscure New England school teacher, Justin Morgan by name. How the animal was acquired by Morgan never has been settled. Tradition

tells that he accepted the horse in part payment of a debt owed by an acquaintance in Springfield, Mass. Morgan called the little critter—he was only 14 hands high—a "Dutch horse," but why he applied that designation to the forefather of all the Morgan stock is a question.

What matters is that the school teacher's steed was strong, docile, obedient, quick in response, intensely energetic, capable of out-pulling much larger horses. His contemporaries named him "Figure," but later he was entered in the books as "Justin Morgan" in memory of his owner. The teacher died in 1798, his "Dutch horse" lived until 1821. Meanwhile, the valiant little stallion had proved his power "to project his own characteristics through successive generations to remote descendants." Among his progeny were the celebrated General Gates, Bennington, Mansfield, Magellan, Ulysses, Canfield, Niles, Goldfield, Nadir, and Mentor—all magnificent creatures. The tribe now runs into thousands of members.

Much of the credit is due to Col. Joseph Battell, the founder of the official register of the breed. He established the farm at Middlebury in 1907 and gave it to the United States Government the following year. The Department of Agriculture made the place a center of the science of hippology—the practical art of producing and raising fine horses. Statistics compiled there are used by breeders throughout the world. The Bureau of the Budget recommended discontinuance of Federal supervision when the Army ceased to be interested in Morgans, but a way has been found for carrying on the stock under Vermont State management. Such direction should be and undoubtedly will be appreciated by all human friends of horses.

Freedom of the Press

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, August 30, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "This Press Freedom," which appeared in the Columbus Evening Dispatch on August 28, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIS PRESS FREEDOM

It is axiomatic in a frightened and confused world that control and repression and restriction should suggest themselves as guarantors and protectors of freedom.

But they are, in fact, betrayers of freedom. And it has happened in our own times that they have been the executioners of freedom.

It is easy enough, for instance, to say that the guarantee of freedom of the press in the United States—or anywhere—carries with it an obligation on the part of the press to present accurate, factual information, or, as Mrs. Utterback in a letter on this page today quotes the New York Times as saying, that freedom of the press and of information is so complicated that the U. N. decided to handle the subject under a special and separate commission.

What this commission might do better than the experience of mankind has done in hundreds of years of difficult and painful effort toward defining and establishing

freedom of the press may, however, be questioned. And it has been questioned by the United States representative on the commission who has opposed the U. N. convention on press freedom as too restrictive; as, in fact, constituting control of the press rather than freedom of the press.

It was 140 years from the time of John Milton's defiance of the press licensing laws of Great Britain when, in 1644 the great poet and pamphleteer printed his "Areopagitica, a speech for the liberty of unlicensed printing to the parliament of England" (and got away with it) to Lord Mansfield's definition of press freedom.

Mansfield finally summed up the whole and complete idea of freedom of the press in 1734 when he said, simply, that "the liberty of the press consists in printing without any previous license, subject to the consequences of the law."

And that is the basis for the prohibition on Congress in the first amendment to our Constitution forbidding it to pass any law abridging freedom of the press.

The "responsibility" of the press to present accurate, factual, or any other kind of information is wholly irrelevant to the basic and all-pervading importance of freedom. To raise the question at all is to drag a very red and very odorous herring into the discussion.

The responsibility of the press is to be free to print anything it decides is worth printing. Then, if it has offended by injuring the reputation of an individual, the moral sensibilities of a people, the financial integrity of a corporation, it may be called to account by the courts.

Any attempt to define the responsibility of the press is an attempt to restrict and suppress it. Any attempt to restrict it as the U. N. convention has attempted to do—to make it responsible for the feelings of foreign monarchs or other foreign governmental agencies—is to deny freedom of the press the very soul of its being.

Genuine responsibility is self-imposed. The press of America naturally knows what is decent and what is truthful and factual. It naturally knows the fate of those publishing ventures which mislead, which lie, which print lascivious and obscene material, and which libel individuals or maliciously and wrongfully attack corporate structures. The press itself is one in opposing these practices. Its sense of responsibility is unusually high.

Responsibility imposed by law—or, as in the case of the U. N. Convention, by treaty—is not responsibility at all.

It is merely a tightening and a lessening of the field in which a free press naturally and normally performs.

In such restrictions lies the evil of even greater misrepresentations and misunderstanding among nations, for unless the full light is permitted to play on what is happening in the world the destruction which could (and perhaps would) be devised in the great areas of darkness arbitrarily imposed by a legal definition of responsibility could well bring ultimate ruin, with desolation and death for us all.

Future International Manpower Action

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 30, 1951

Mr. WILEY. Mr. President, during the years of consideration of the im-

portant displaced persons, expelled persons and related problems, it has been my pleasure to have had numerous contacts with Msgr. Edward Swanstrom, director of war relief services of the National Catholic Welfare Conference, and with his able associates, including Rev. Aloysius J. Wycislo.

Monsignor Swanstrom serves also as chairman of the American Council of Voluntary Agencies, Displaced Persons and Refugee Committee, and in that capacity, as in others, he has been a source of invaluable suggestions for those of us who have been interested in America's fulfillment of her humanitarian responsibilities down through the years.

Because I am leaving for the Japanese Treaty Conference in San Francisco this afternoon, it will not be possible for me to comment in a Senate address regarding the subject matter of Monsignor Swanstrom's telegram, namely, provisions of our mutual aid bill dealing with movement of surplus manpower. I do however, ask unanimous consent that its text be printed in the Appendix of the RECORD. I earnestly invite the attention of my colleagues to it because I feel that it represents not only the seasoned judgment of church and lay leaders who have been working with might and main on Europe's manpower problems, but it represents a clear voice of America's own conscience in dealing with this issue.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

NEW YORK, N. Y., August 29, 1951.

HON. ALEXANDER WILEY,
United States Senate,
Washington, D. C.:

As chairman of the American Council of Voluntary Agencies' displaced persons and refugee committee composed of the major voluntary immigration agencies in the United States, among whom are American Friends Service Committee, American Jewish Distribution Committee, Church World Service, Hebrew Sheltering and Immigrant Aid Society, Lutheran Resettlement Service, United Service for New Americans, United States Committee for the Care of European Children, War Relief Services—National Catholic Welfare Conference, and others, I urge your fullest support of H. R. 5113 and am particularly concerned that there be clearly established during the debate that it is the intent of the Congress to provide that the use of ECA funds for the movement of surplus manpower from Western Europe will be withheld from any international organization, institute, or office which has among its membership nations which are Communist or Communist-dominated. The provision that a specialized temporary operational organization which has as its sole purpose the movement of surplus manpower from Western Europe to areas of the world where manpower is needed for economic development is the soundest approach in meeting this gravest of human problems confronting the Western World in its efforts to establish common security. This is the position of the agencies I have the honor to represent and has been clearly indicated by us to Assistant Secretary of State Hickerson and members of the Foreign Relations Committee.

Msgr. EDWARD E. SWANSTROM,
War Relief Services—National Catholic Welfare Conference.

The Veto Power in the United Nations

EXTENSION OF REMARKS OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Thursday, August 30, 1951

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a guest editorial written by A. D. Quaintance, which appeared recently in the Denver Post. Mr. Quaintance is a profound student of the United Nations Organization, and is anxious to get rid of the veto.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET THREE-FOURTHS VOTE REPLACE DEADLY VETO POWER—AMERICA'S PATTERN COULD MAKE REAL U. N.

(By A. D. Quaintance)

The great Professor Barr tells us that the whole world is in a condition of chaos and revolution and instead of being in for one more war we will be in for perpetual war until everyone joins the human race and studies the bold new program series.

Rather, what we need, I believe, is to go back to the bold old program of our forefathers and Independence Hall in Philadelphia where we can learn the history of the founding of the greatest Nation in the world.

The immediate past President of the United States thought so little of our form of government that he spent billions of dollars of the taxpayers' money to propagandize the word "democracy" in order to perpetuate the Democratic Party, a trick which was quite simple and effective.

Our own children and most of our citizens do not even now know that we are not a democracy but that we have a constitution, or fundamental law, which is the rock foundation upon which this, the greatest Government of liberty and freedom and individual initiative and incentive in the world, is founded, and that this constitution provides that we are a republic and have a republican, or representative, form of government.

In the face of the confusion at home we have a world begging us to give them the kind of liberty and freedom that we have always enjoyed and to give them a fundamental law and constitution similar to our own and which will work for them as successfully as it has for us. They ask for bread and we give them a stone. They want something—the something that has enabled the class- and caste-ridden peoples of the earth to come to our shores and be freed from.

Instead of our amending the Charter of the United Nations by doing away with the veto power and making a three-fourths majority the controlling factor, the same as it was under the Articles of Confederation of the United States of America, we have permitted Russia, by abuse of the veto power, to block the United Nations and to make it absolutely ineffective and helpless.

I had the temerity to offer in the Bok peace contest after the First World War, the plan or pattern of our own government of the world. I was not ashamed of this simple plan of republican, representative government as an ideal pattern for the world, but this plan, which acknowledged God Almighty has been derailed and the world, in its search for false gods, is falling into chaos, anarchy, and revolution. There is no venture capital and no incentive for honest labor and the fires of liberty and freedom are dying.

How shall we rekindle these fires of liberty and freedom and cause them to burn brightly throughout the whole world? I say by amending the Charter of the United Nations, first to recognize God, the Supreme Being. Second, to do away with the veto power, which has enabled Russia to block all progress, and to adopt in place of the veto power, a three-fourths vote of the nations belonging to the United Nations, which was the method adopted by our forefathers under the Articles of Confederation of the United States of America.

With these changes the fires of liberty and freedom will be relighted and burn brightly, for we can then have law and order in the world and a new sense of security, peace, and safety that will enable us, with the use of atomic energy in peaceful pursuits, as suggested and sponsored by the University of Michigan in its Phoenix project, suggested by its great ex-president, Alexander G. Ruthven, to make great progress in the art of peaceful living, and a return to the idea that every man should work and earn an honest living.

It is fitting that the United Nations Organization is located in this country where we can influence it as an instrument of law and order and peace in the world. It may take 100 years or more to make it work completely but in the meantime we can maintain peace and law and order by a representative body of the whole world rather than having any one country seeking to master and control and dominate.

We have truly in our own United States of America, the pattern for a genuine United Nations of the World.

Department of What's This

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. BENDER. Mr. Speaker, Army engineers figure 182 projects would cost \$2,500,000,000 when they asked Congress to approve them. They now say the cost will be almost six billions. Eight hundred million dollars of this comes from poor engineering. Do we need new engineers or not?

Tidelands Oil

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, August 31, 1951

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by me as guest columnist for Drew Pearson, published in the Montgomery Advertiser of August 26, 1951. In the article I discussed the question of tidelands oils.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON MERRY-GO-ROUND

(With Hon. LISTER HILL, of Alabama, as guest columnist)

(SYNDICATE NOTE.—While Drew Pearson is on a brief vacation, the Washington Merry-go-Round is being written by several distinguished guest columnists, today's being by Hon. LISTER HILL, United States Senator from Alabama. Senator HILL is the author of the Hill-Burton Hospital Act, the rural telephone act, and co-author of the TVA Act and the Vocational Education Act.)

WASHINGTON.—The life of a Senator is not always a happy one. In these days when the problems are so complex, so grave, and so global every Senator imagines himself an Atlas with the world on his shoulders.

But every once in awhile he is abundantly rewarded for all his pains by the finding of a sound solution to a problem of large proportions. He knows that if he is able to win application of his solution he will have rendered a service to the American people. That becomes his new challenge.

Today I want to tell you about my new challenge. I call it oil for education. You may wonder what oil has to do with educating the children of this Nation.

Let me tell you about the oil. Off the coasts of Texas, California, and Louisiana are billions of barrels of oil under the sea. The geologists of the United States Department of the Interior and of private oil companies estimate there is at least \$40,000,000,000 worth at present prices. There may also be fabulous quantities of gas. The Supreme Court of the United States in two famous lawsuits has said this oil does not belong to the three States alone but to all the people of this country—the United States of America.

But with no better claim to the oil than that they are closest to it, these States with the help of big oil companies have introduced a bill to overrule the Supreme Court and have Congress make them an outright gift of the oil. They recently got their bill through the House of Representatives and it is now in the Senate. It is exactly the same kind of give-away bill that the President vetoed about 5 years ago before the two lawsuits were decided.

Every teacher, every parent knows the desperate financial condition of education all over the United States—of grammar schools, high schools, and colleges.

Meanwhile the Federal Government is up to its neck in debt, unable because of mounting military requirements to foresee a balanced budget. The American taxpayer is already carrying a heavy tax burden and sees a still heavier one ahead. If he is a parent or teacher he says to himself that he knows our schools are in serious condition, but he doesn't for the life of him see where he is going to get the money to put them in the shape they should be.

But if we put these three things together—oil, education, and the tax burden—you get a result, a solution that will work. My new challenge is put all three together.

That is what is proposed in the "oil for education" amendment sponsored by myself and Senators DOUGLAS, of Illinois; KEFAUVER, of Tennessee; MORSE, of Oregon; NEELY, of West Virginia; TORY, of New Hampshire; HENNING, of Missouri; BENTON, of Connecticut; HUMPHREY, of Minnesota; CHAVEZ, of New Mexico; LEHMAN, of New York; my colleague, Senator SPARKMAN; and Congressman MIKE MANSFIELD, of Montana.

The amendment provides that the royalties from this public undersea oil resource shall be paid into the United States treasury

and used for education. This is the policy that Congress adopted in the Morrill Act, providing grants of public land for the establishment of our magnificent system of land-grant colleges. Applying the same policy to this great new land resource at the bottom of the sea would be like placing an oil well in the back yard of every grammar school, high school, and college in America.

This oil offers education's big chance—the means given by providence without taxes for meeting a large part of education's pressing needs. It is America's big chance to turn the trend away from illiteracy and educational deficiency that has caused the rejection of over 300,000 young men by the armed services since Korea—the equivalent of over seventeen infantry divisions. Our potential enemies outnumber us many times in manpower. Our industrial and military superiority rest upon the education and scientific training of our people.

As the Atlanta Journal recently pointed out in a splendid editorial, this vast store of undersea oil is one of our greatest potential sources of oil. The late secretary of national defense, Mr. James Forrestal, defending Federal ownership, called it one of our most priceless weapons. For all our atom bombs, we could not carry them to the enemy without oil. Forty-two percent of the total world supply lies in Russia's back yard in the Middle East. The oil tremors in Iran at this hour point up the importance of keeping the withdrawal of our oil under the conservation supervision of the United States Department of the Interior, in cooperation with the Department of National Defense.

The oil must be used in the interest of national security. The royalties should be used for the education of the children of the entire nation.

The oil-for-education amendment should have the active support of every parent, every teacher, every educator.

Fumbling in Civil Defense

EXTENSION OF REMARKS

OF

HON. BLAIR MOODY

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, August 31, 1951

Mr. MOODY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column published in the Washington Post of today, written by Millard Caldwell, the distinguished former Governor of Florida, who is now the Federal Civil Defense Administrator, on a subject which in my judgment should have the serious consideration of every American.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON MERRY-GO-ROUND

(By Millard Caldwell)

CALDWELL HITS FUMBLING IN CIVIL DEFENSE

(While Drew Pearson is on vacation, the Washington Merry-go-Round is being written by several guest columnists, today's being by Millard Caldwell, Federal Civil Defense Administrator.)

While time is running out, the cracker-box strategists fumble civil defense.

Some of them know that air power at its best can stop only 30 out of 100 attacking enemy bombers. Yet they insist that more

air power is the sole answer to protecting the home front.

Others blow hot and cold. One day they think the situation is so hopeless that civil defense could do no good. The next day, the world situation looks brighter, so civil defense is not needed.

Still others insist that retaliation is the answer. What we can do to the enemy blinds them to what the enemy can do to us. They forget the trigger for our retaliation will be a mass atomic attack on our own cities.

Then, another group, the ostrich thinkers, insist that no nation would dare attack this country, because nobody ever has, and besides we're too strong.

Some, bored with crisis after crisis, wake up now and then, say "it can't happen here," and doze off again.

The timid pin their hope on Russian backwardness and say, "that atomic explosion in Russia wasn't really the bomb."

While the pseudo-strategists grope in a smog of truth, half-truth and fantasy, time is running out. We stand in danger of war.

We can lose a war

Too many seem unable to grasp the fact that we can lose a war. Their stock answers are: If it takes production, we'll out-produce the enemy. If it takes atomic bombs, we'll build bigger and better atomic bombs. If they hit us, we'll hit 'em harder.

These prevalent American beliefs are ingrained, basic, but unfortunately, stop short of an adequate answer to the sharp question sired by reality. They were incomplete by three things—Red imperialism, the global bomber, and the atomic bomb.

This trio has forced on Americans a whole new concept of war. Today or any day, America itself can become a battleground. Civilians are the first targets in this new kind of war. If the enemy first smashes the home front, the military may have little left to fight for and less to fight with.

The Kremlin knows that our American home front must be knocked out quickly, if it is to be knocked out at all. For this reason the first attack must be a grand slam using all the modern terror weapons.

Those who doubt the likelihood of war on the home front should heed what Representative CLARENCE CANNON, Democrat, of Missouri, chairman of the House Appropriations Committee, had to say on the floor April 9. He said "If war comes—which God forbid—it will be fought in this country as well as abroad."

Vandenberg's warning

General Vandenberg (speaking for the Air Force) said that "in spite of all our radar fences, our walls of shipping, our networks of communication, and our clouds of interceptor planes, 70 percent of the enemy planes carrying atomic bombs would get through. We might as well face that fact. Every center of production, every center of wealth and population, and civilization would be devastated. We have only to look at the cities in Germany to see how the cities of America would look within 1 week after war started."

W Stuart Symington, while chairman of NSRB, said "who can be a bigger fool than the fool who continues to fool himself, especially when his own existence is at stake." Those who will read the record must see where the 30-year pattern of Russian imperialism leads.

The retaliationists have an empty answer. To devastate Russian cities would not restore our own.

Unrealistic thinking has sapped our strength and robbed us of precious time. No American city is prepared to cope with an enemy attack. We must use our time wisely and well. There is no time for fatalism or fantasy.

Our Vindictive Little Man

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, August 31, 1951

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Our Vindictive Little Man," published in the Chattanooga (Tenn.) News-Free Press of July 30, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR VINDICTIVE LITTLE MAN

In his speech, or tirade, at Detroit Saturday, Harry Truman demonstrated anew the magnitude of the tragedy which has befallen the United States in having Harry Truman as President at this critical time in the history of this Nation and the world.

The President gave a realistic summary of evidence that Communist Russia is preparing for a new war—even while the present negotiations for "peace" are proceeding in Korea. He cited warlike moves in Bulgaria, Rumania, Hungary, the Russian provinces, and in North Korea, and warned the people of America must be ready for "any emergency."

The people know that, in fact have known it for a long time. They have long been ready for any emergency.

They backed Mr. Truman with surprising unanimity when he decided to intervene with American armed force to block Communist aggression in Korea. They backed him strongly until the Truman-Acheson administration turned the war in Korea into a war of appeasement—after Red China became the enemy instead of Red Korea.

Mr. Truman used strong language in his denunciation of the Russian war plans. His strongest language was reserved, however, for his attack on Americans who disagree with him.

Though he did not mention any names, Mr. Truman accused men who are fighting patriotically for what they are convinced is the best interest of their country of "using the smear and the big lie for personal publicity and partisan advantages, heedless of the damage they do to their country."

Since his speech came immediately after the Boston address by Gen. Douglas MacArthur, in which the general criticized policies of the administration, it is reasonable to assume the President's remarks were directed in part at General MacArthur.

But if Harry Truman, the Pendegast machine President, whose administration has been shown by its own supporters to be shot through and through with the vilest corruption, thinks he can impugn the honor, integrity, and patriotism of a man of General MacArthur's stature, then the power and the glamor of his office have indeed gone to his head.

Mr. Truman charged his critics with "trying to stir up trouble and suspicion between the people and their Government."

As a matter of fact, the critics to whom the President referred have been trying hard to remove from the Government causes of the people's suspicions—and causes of suspicions which are justified.

There is no doubt that Republicans have sought partisan advantage of the faults of the administration. But the outstanding critics of the administration, both Republicans and Democrats, have sought the adop-

tion of policies and measures which they, along with millions of good American citizens, sincerely believe necessary for the safety and welfare of the Nation.

These people are denounced by Mr. Truman as liars and self-seekers.

There could be no more impressive evidence of the fact that Harry Truman is too small to be President—at this time or at any other.

The stubborn intolerance of this little man is the cause of much, if not most, of our country's present trouble.

Infiltration of Communists in Democratic Party in Hawaii

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, August 31, 1951

Mr. BUTLER of Nebraska. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a short article from the Honolulu Star-Bulletin of August 28, 1951, entitled "No Party Members Among Suspects, Democrats Report." As long ago as the 1949 report, and again in my minority reports on Hawaiian statehood in 1950 and in 1951, I called attention to the infiltration of the Democratic Party in Hawaii by the Communists. The newspaper article I have referred to states that none of the seven Communists seized by the FBI are any longer members of the Democratic Party. It makes it very clear that at least three of the seven were members of the Democratic Party until about a year or so ago. In short, this article sustains completely the charges I have made regarding Communist infiltration of the Democratic Party. Furthermore, there is nothing in the article to indicate that this Communist influence has been removed, since the great majority of Communist top-liners in Hawaii are still at large.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NO PARTY MEMBERS AMONG SUSPECTS, DEMOCRATS REPORT

Democratic Party leaders were quick to point out today that not one of the seven persons arrested by the FBI as Communists is a registered Democrat.

Edward P. Toner, former member of the Standpat Democratic Territorial Central Committee, says he checked the party records early today.

He found that four of those arrested are not Democrats, and three resigned more than a year ago.

Here's the way Mr. Toner tabulated the score:

Jack Wayne Hall, regional director of the ILWU: A former Democrat who resigned from the party 18 months ago.

Jack D. Kimoto: Resigned from the party in 1950 after charges were filed against him by Mr. Toner.

Dwight James Freeman: Not a Democrat. Charles K. Fujimoto, chairman of the Communist Party in Hawaii: Not a Democrat.

Mrs. Charles K. Fujimoto: Not a Democrat.

John E. Reinecke: Resigned from the party in 1950 after charges were filed by Mr. Toner

Koji Ariyoshi, editor of the Honolulu Record: Not a Democrat.

The Return of Gromyko

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, August 31, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Gromyko's Back," which appeared in the Patriot, published in Harrisburg, Pa., on August 29.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GROMYKO'S BACK

Andrei Gromyko arrived in this country the other day

He and a large staff will represent Soviet Russia at the Japanese Peace Conference in San Francisco.

There is no reason for Russia to have anything to say about the Japanese Peace Conference. Russia contributed nothing to the defeat of Japan. She jumped into the Japanese war after Japan was beaten and the world knew it. She just got in in time to fulfill the technical condition of having declared war. If it had not been for the frightened men of Washington who made needless concessions to Russia in order to get her into the war, she might never have got into the Japanese war at all. It would have been over too soon for her to do so.

The man who did so much to defeat Japan and who was almost entirely responsible for the rehabilitation of the Japanese people to date, General MacArthur, will not be at the peace conference. But Gromyko will. That such a weird condition could come about must be attributed to the sheer genius with which this administration has messed our foreign affairs in the Orient.

Gromyko will be on hand to throw monkey wrenches into the peace conference if he can. Failing that, he will make the whole business an organ of Red propaganda for the Far East.

Too bad the Asiatics could not see the picket signs which greeted Gromyko when he landed in New York. They were carried by a delegation of Americans of Hungarian origin. Their story in slogans went this way:

"Gromyko in luxury, Hungarians in slavery"

"Gromyko—Slave labor paid for your luxurious trip"

"Gromyko—You and your bosses talk peace but make war"

"Gromyko—Back again to confuse the issues"

You see, Hungary has had communism; Hungarians have really had it.

Yes, Gromyko is here again to carry on the Red sabotage of western institutions. While we talk about peace in our above-board, fair-play, give-and-take way, Gromyko will be making Red propaganda and scuttling the fine relationship built up by MacArthur between the Americans and their vanquished foes who can and should be valuable allies against the spread of Communist aggression.

Gromyko is back and facing a splendid opportunity to hurt us again, thanks to the fact that we have lost MacArthur's firm hand on Japan.

We will continue for a long time to collect dividends of trouble from President Truman's ill-advised and hasty and utterly wrong and petty action in dismissing MacArthur.

Communist Penetration of the Hawaiian Islands

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, August 31, 1951

Mr. BUTLER of Nebraska. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the lead article from an extra edition of the Honolulu Star-Bulletin of August 28, 1951, entitled "FBI Seizes Seven Isle Reds." It is very interesting to note that of the seven Communists who were taken into custody in Hawaii several days ago, six were named by me as leading Communists in the Territory as long ago as 1949 in my report, entitled "Communist Penetration of the Hawaiian Islands," based on my personal investigation there of the question of Hawaii statehood. At the time I made that report, my charges of the Communist menace there were sneered at, and I was told that I was imagining dangers where none existed. It is very gratifying to see that the FBI feels exactly the same as I do regarding this threat to our American institutions.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FBI SEIZES SEVEN ISLE REDS—BAIL IS SET AT \$75,000 EACH; ALL SEVEN ARE SENT TO JAIL

Bail was set at \$75,000 each—a total of \$525,000—this morning for seven alleged leaders of Hawaii's Communist Party.

Unable to raise the sum immediately, all seven were committed to the Honolulu city-county jail.

They are scheduled for a preliminary hearing at 9 a. m. Thursday before United States Commissioner Harry Steiner, the official who signed their arrest warrants and set their bail today.

After their dawn arrests, the seven first were taken to the FBI offices in the Dillingham Building on Bishop Street.

NONE HANDCUFFED

It was about 8:45 before they arrived at the United States commissioner's office on the third floor of the Honolulu police department building.

Each was accompanied by an FBI agent, but none was handcuffed.

Jack W. Hall was the first to come up in the elevator to the hearing room. The others followed in a next elevator.

The FBI agents had a tight hold on Denichi Jack Kimoto but simply walked alongside the others.

Harriet Bouslog and Myer C. Symonds, the two attorneys who defended the hostile witnesses in the 1950 un-American activities hearings, appeared as attorneys for the seven.

ATTORNEY PROTESTS

They had not been allowed to see the seven at the Dillingham Building and Mrs. Bouslog protested they were being held virtually "incommunicado."

Commissioner Steiner spoke first to Jack Hall, and asked if he was aware of the charge against him.

Hall said, "Yes, I know."

The commissioner then told him that he is entitled to a hearing and asked if he wanted one immediately.

"I'll have to wait for advice of my counsel," Hall said. He then turned to Mrs. Bouslog to ask her advice.

The commissioner called each of the seven to ask them to identify their counsel and all named Bouslog & Symonds.

TWO-WAY ARGUMENT

The attorneys for the seven and Howard K. Hoddick, United States attorney, then argued over two points—bail and a hearing time.

Mr. Symonds asked for the hearing at 2 p. m. today. Mr. Hoddick asked for a week's delay.

Commissioner Steiner finally set 9 a. m. Thursday.

On bail, Mr. Hoddick said the United States Attorney General requested that the figure be set at from \$75,000 to \$100,000.

(This is comparable to the figures set in the mainland arrests, although some were later reduced.)

HIT HIGH FIGURE

Mrs. Bouslog and Mr. Symonds, speaking for the defendants, said the high figure would be tantamount to denying bail.

"You have to take the charges into consideration," Commissioner Steiner said, and set the \$75,000 figure.

He then asked Mr. Symonds if his clients could make the bond—a total of \$525,000.

Sarcastically, the attorney replied, "You'll have to give us time to make arrangements to rob a bank, Judge."

TWENTY-FIVE ATTEND HEARING

The seven were officially in custody of Emmanuel Moses, Deputy United States Marshal.

About 25 people were in the hearing room—the seven, their attorneys, the commissioners, about five newspaper and press association reporters, and the rest FBI men.

Mr. Symonds asked for a larger hearing room.

"I want to consult my clients without a lot of FBI agents around," he said.

Poland and Her Tragic History Since September 1, 1939

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address commemorating the twelfth anniversary of Adolf Hitler's wanton attack on Poland:

POLAND AND HER TRAGIC HISTORY SINCE SEPTEMBER 1, 1939

The beginning of World War II, September 1, 1939, is a tragic landmark in Poland's history. On August 23 of that year, when the Nazi-Soviet nonaggression pact was signed, then it seemed probable that Poland might become the first victim of that pact. The

subsequent train of events unfortunately proved that the first objective of that pact was the destruction of Poland as an independent and sovereign nation, the largest nation in northeastern Europe. Molotov had cynically described Poland as "the ugly offspring of the Versailles Treaty," but the Poland created at the end of World War I was infinitely better governed and a far better place to live in than the dismembered Poland created after World War II. It is now little more than a concentration camp for some 24,000,000 unhappy Poles.

On September 1, 1939, Nazi hordes swooped down upon Poland without a declaration of war, and in a few weeks they were able to eliminate most of Poland's organized forces from battle areas. On September 17, Stalin's Red hordes began to move into Poland on pretext that the nation had ceased to exist. On September 28 almost all of Poland lay prostrate under the occupation of her two neighbors, and on that day Poland was partitioned between the two conquerors. This fact itself proved to the world that in the destruction of Poland's independence Communist Russia was as guilty as Nazi Germany. Whether the invaders were Russians or Germans, the impact upon Polish citizens was the same—the destruction of their liberties. Stalin's henchmen literally drove out millions of Poles from eastern Poland to the Soviet Union, to the far-off corners in northern Russia and Siberia where many of them are still toiling under abominable conditions. The Nazi leaders planned the extermination of many Polish citizens in concentration camps and in gas chambers. It is impossible to say how many innocent and helpless Poles lost their lives in the hands of their cruel conquerors.

No country in Europe was more tragically and fundamentally affected by World War II than was Poland. After its legal government fled the country, after its regular fighting forces were destroyed by the invaders, and after millions of Poles had been uprooted from their native homes, millions of others carried on their underground fight against the enemy within Poland. For more than 4 years these valiant souls, undaunted by the terrible punishment imposed upon them, kept the fire of freedom and independence going in the hearts of their unfortunate countrymen. Dispersed and refugee Poles were able to reorganize themselves under General Anders and fight aggression side by side with the Western Allies.

It is a strange commentary on modern diplomacy that since the first shot was fired on September 1, 1939, the fate of the Poles, and the destiny of Poland have not been in Polish hands. That, one might say, is the curse of our days—that the fate of small and weak nations is in the hands of statesmen from large powers. During the last war the conferees at Yalta decided upon several provisions regarding Poland's future, and these were later confirmed at Potsdam. The disastrous course of political events in Poland was set in motion during these conferences, yet no qualified Polish leaders were consulted. They were not told of fateful arrangements which ultimately resulted in Soviet occupation.

Today, Poland, the largest of the Soviet Union's European satellites, is a vast concentration camp behind the iron curtain. There some 24,000,000 souls are being ordered and schooled in Soviet ideology. All the ways of liberty and freedom are proscribed. The ways of life must conform to communism as practiced in the Soviet Union. These helpless millions have only one hope, that of gaining their lost freedom through the aid of all free people, and especially with the constant help and encouragement which they hope to receive from this country. We Americans cannot be deaf to their appeals and entreaties. The homeland of Kosciusko and Pulaski, of Chopin and Paderewski, of Pilsudski and Anders, certainly deserves our help in its fight for freedom and independence.

Our Country

EXTENSION OF REMARKS OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, August 31, 1951

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject *Our Country*, by Capt. Eddie Rickenbacker, president and general manager of Eastern Airlines, Inc., following a pageant staged by Karem Temple, AAONMS, in Tyler, Tex., on June 29, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am grateful indeed for the privilege and the opportunity to join with you this evening and to witness this beautiful ceremony portraying Shrinedom and Masonry in all its glory and significance.

Particularly is this true for that portion dedicated to the crippled children's hospitals, so dear to the hearts of all Shriners. Let us remember that this work was made possible through the vision and leadership of the Honorable W. Freeland Kendrick, former imperial potentate of our fraternity, and now carried on under the inspired leadership of Hon. Galloway Calhoun, 33°, past imperial potentate and chairman of the board of the hospitals, one of your fellow townsmen and one of God's noblemen. No man in America more nearly represents the conscience of the Shriners who are doing this great work than Noble Calhoun, whom I am delighted to call my friend.

Let us remember that it costs more than \$3,500,000 per year to operate these hospitals, and that we have failed to do our share toward meeting this obligation.

Let us Shriners never forget this worthy cause when budgeting our yearly contributions, so that some of the pleasures and happiness enjoyed by our own children may be shared by these less fortunate kiddies.

And, as Texans, I trust you will always remember the plentitude of rewards bestowed upon your great State, God must have in mind some special destiny for a community, almost a race apart, which in the span of two generations has created, deep in the heart of America, wealth and productivity

on a scale that dwarfs the much publicized state developments of the Soviet Urals.

A great shearing movement is going on among the American people tearing many away from the fundamental beliefs and aims upon which this Nation was erected. False doctrines are undermining the old faiths that made for unity, and we stand in great danger.

If you want an example of how fast a powerful nation can disintegrate once it deserts its ancient principles, I suggest you take a look at Great Britain.

About 67 years ago, the Fabian Society, composed principally of intellectuals, was founded for the main purpose of reconstructing society in accordance with the highest moral possibilities. At that time the labor movement was in its infancy, but eventually labor captured its program.

In contrast with Marxism which advocated the overthrow of society by force, the Fabians regarded the state—in other words the government as a social machine to be captured and used for the promotion of social welfare.

They coined a remarkable phrase to explain their seemingly mild but adroit policy, "The inevitability of gradualism."

And slowly, but surely, as the Fabians have accomplished their purpose, the living standards of the English people have been lowered until today British power has sunk to its lowest ebb in three centuries, and the Promised Paradise of the common people has failed to materialize. Their taxes are higher than at any time in the history of their country; their freedoms are gradually being taken away from them.

Let us heed the lesson implicit in the dismal outcome of this British experiment in "The inevitability of gradualism." Slowly and surely we ourselves have begun to succumb to the same dreary philosophy of drift.

Can the process be stopped? It can if we who loathe all that statism implies take full and constant advantage of our right to speak out—if we register our convictions whenever the issues are raised in elections.

Speaking about elections, do you know that in the last Presidential election only 48,836,680 citizens voted out of an estimated 87,000,000 who were eligible?

The victories, along with the sacrifices, which have accrued to this Nation during the two great world wars that I have witnessed in my lifetime prove that the sense of duty has not yet been dulled by the softness that some cynics profess to see in our "creature comfort" civilization, unapproached by and unknown to the rest of the world.

The time is past when wars were decided by armies alone. Wars now engage the entire energies of whole peoples. The struggle reaches into every resource at a nation's command—human, intellectual, industrial, political, and moral.

The name we give it is total war. It had not even been invented when I first went off to war in 1917. The old-fashioned idea prevailed that business as usual would continue at home, but that comfortable illusion was quickly dashed along with many another.

When nations clash the idea is to pile up more and more resources for the fighting forces until one side or the other collapses. That goes for manpower. It goes for weapons. It goes for anything that might affect the balance of power.

But now we find ourselves faced with an entirely different kind of situation—war that is not yet completely war. We have large forces on the Korean peninsula engaged in a shooting war with a nation of 400,000,000 people controlled by the men in the Kremlin that has not bothered to declare war.

We have stationed substantial air units in Great Britain. We are sending additional divisions into Germany. We are rearming Europe. We are building air bases in North Africa and negotiating for others in

the Middle East. Meanwhile we are rearming ourselves at home.

Yet, no war has been declared. And nobody in our Government or the military can tell us when we shall be involved in an all-out war, or whether, for that matter, war will ever be declared.

It is a terrible thing to lose the power of decision over one's destiny. The dilemma in which young men now find themselves was unknown to other generations of Americans. Nevertheless, let me assure you, all is not chaos.

Frankly, we have been too successful for our own good. Too many of us have believed that we alone are responsible for the welfare of this land, that we alone have made it the greatest Nation in the world. Again, frankly, I say to you, that we had nothing to do with it.

We simply took advantage of God's gifts—nature's gifts—and capitalized them, but we have too often failed to appreciate our blessings. We have failed to the degree that America has lost much of its spirit in the hearts of its people within the boundaries of our land. We have failed to remember that liberty is not license; that the price of liberty is eternal vigilance.

And I know of no greater hazard to our leadership than to continue on the path that we have been following in the past decade or two. Because if we intend to retain our leadership in the world we can only do so by being strong—spiritually, physically, and materially.

If you think back, if you study our history, if you recognize what our forefathers have handed down to us, you will be eternally grateful as I have been.

I think that I can speak with some authority on the subject of citizenship and the obligation that goes with it, because I am a first-generation American.

My parents migrated from Switzerland. They taught me and six other members of our family to enjoy and appreciate the freedom of this country. They taught us how to work. They taught us that we could never expect something for nothing, nor more for less. They taught us to be frugal. They taught us, above all, to love America.

And I say to you, frankly, there is nothing in the world, nothing that I love more—not even life—that compares with my love for America.

Let us, therefore, remember to be grateful. Let us recognize that the men and women who migrated to this country and pioneered came here for the freedom of speech, for the freedom of religion, and for every other fundamental freedom they craved. They hewed a great nation out of the wilderness. They had no automobiles or radios. They had no technocracies or great industries. But they used their hands and coordinated them with their heads. And they were people of stout hearts.

They were brilliant. They had to be because they left to the world two of the greatest instruments that God ever let man create. And I specifically think in terms of the Declaration of Independence and the Constitution of this great land of ours that have withstood the onslaughts of dictators and peoples who would destroy them if they only could.

Yes; they believed in the freedom of worship. They were Christians at heart—something the peoples of this country have lost to a great degree through the capitalization of the opportunities that they helped to create and handed down to us. We have been selfish to the extent that we felt we needed more and more of the material things of life, and forgot the need for more and more of the spiritual side of life.

With the events that have taken place in the past few months every thinking American must realize how close we are to World War III, and what that will mean America, as we know it, will be gone forever. The

American way of life will be gone forever, because no one can win world war III, morally and financially.

But world war III can be prevented. How? By unity of purpose, through faith and prayer, and recreating the true, fighting American spirit into the heart of every man and woman who claims citizenship in this land of ours, no matter what color or creed.

If that can be jelled and solidified, America will always be strong enough, morally and physically, to withstand any type of attack that may be made.

Stripped to its bare fundamentals, American strength is built upon its power to produce. And this power is the result of our system of shared free enterprise and open opportunity—two blessings that have given us the highest standard of living ever achieved by any people in the world.

And yet, strange as it seems, this very system still must be sold to some of our own people. Certain types of minds, usually self-styled intellectuals, enlarge on the imperfections and shortcomings of a system which, obviously, is not fully developed even now to its greatest good. Why? Because we do not remember all that we know. Therefore, we are destroying or helping to destroy that spirit which has made America the greatest land in the world.

If that trend is not reversed, it will eventually destroy this land, as other lands have been destroyed.

It is the responsibility of every one of us, individually and collectively, as members of such a group as this, to prevent it.

Surely, you will not confess or admit that there isn't sufficient spiritual strength in this group, to go out and influence thousands of others in your community—your neighbors, no matter what their color or creed, to inspire them to become good Americans again?

This country must have men of character and statesmen instead of politicians at the helm, the same as you in your own group here must have statesmen instead of politicians at the head of it in order to get the quality of leadership that will carry Shrinedom and Masonry on to greater heights.

For I believe that you and I as brothers in Shrinedom have a greater opportunity today than ever before in our history to prove to the world what unity of purpose and faith in God can do toward putting the world on an even keel.

Therein lies our great opportunity to be prepared to carry the torch of liberty to the generations of tomorrow, and inspire in others the interest, obligations and the responsibilities they owe to this great land.

Then, and then only, will we be able to look back when the candle of life burns low and say, "Thank God I have contributed my best to the land that contributed so much to me."

(P. S.—Captain Rickenbacker, thirty-third degree Mason, is a member of Moslem Temple, Detroit, Mich., and is an honorary member of Salaam Temple, Newark, N. J. and Karem Temple, Waco, Tex.)

The Kem Amendment

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, August 31, 1951

Mr. WATKINS. Mr. President, the senior Senator from Missouri [Mr. KEM] has conducted a long and valiant fight to prohibit United States military, eco-

nomic, and financial assistance to nations which send arms, ammunition, and strategic materials to iron-curtain countries.

It seemed for a while that the Senator from Missouri had won his fight when the Congress adopted the Kem amendment to the third supplemental appropriation bill. Now, however, the administration has forced through a bill which nullifies the Kem amendment.

The passage of H. R. 4550, the so-called Battle bill, repeals the Kem amendment, which made it mandatory for the administration to shut off American assistance to nations which trade in war materials with Russia and her satellites. Under the Battle bill, the administration may continue to send assistance to countries which trade in war materials with the Soviet and other iron-curtain countries.

The passage of H. R. 4550 is hailed by the administration and its friends and supporters as a great victory. That victory, if it can be called a victory, is not a victory for America.

The people of Missouri have reason to be proud of their Republican Senator, JAMES P. KEM. The Kem amendment was a product of his courage and persistence. He fought for enactment of the amendment with the conviction which comes to men when they know their cause is just. He fought to prevent its repeal with the kind of patriotic devotion which marks the difference between an ordinary American and a great American.

I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Washington (D. C.) Daily News of August 29, 1951. The article points out some of the probable consequences of the repeal of the Kem amendment.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IFFY SOVIET TRADE BAN IS VICTORY FOR TRUMAN

(By Earl Richert)

The Truman administration has won a major victory in getting Congress to vote to permit free nations to do some trading in strategic materials with the Soviet bloc and still receive United States aid.

And Republicans, who wanted a mandatory end to United States aid if such trading went on, now have what party leaders think is an important campaign issue.

The Senate approved with minor changes a House-passed bill which sets up a somewhat flexible system of rules governing United States aid to nations doing business with Russia and her satellites.

The bill provides that no United States aid shall be given to a country that permits the shipments of arms, ammunition, implements of war, and atomic energy materials to the Soviet bloc countries. No discretionary authority is given to the administration to continue aid if such trading goes on; the cut-off is automatic.

The bill also lays down the general rule that the countries receiving United States aid should embargo shipments of petroleum, transportation materials of strategic value, and items of primary use in the production of armament to the Soviet bloc countries.

CAN TRADE IF

But on trading in goods of this type, discretionary authority is given to the President to continue aid if he finds that the goods which our allies are receiving from the Soviet

bloc are of even greater strategic value to them than the goods which the Soviets are getting.

Presumably, this would sanction for aid purposes such trade deals as the one now existing between Britain and Russia whereby Russia sends timber to Britain and gets rubber in return.

Republicans thought they had won on this issue in June when Congress adopted a rider, authored by Senator JAMES KEM, Republican, Missouri, to an appropriations bill. This ordered United States aid cut off whenever a recipient country traded in strategic materials with Russia. But it left one loophole. Discretion was given to the National Security Council, a group composed of the President, Vice President, Defense Secretary, and other top officials.

The council set the whole Kem amendment aside for 90 days, declaring it was unworkable.

TRIED AGAIN

A House subcommittee headed by Representative LAURIE BATTLE, (Democrat, Alabama), was working on the problem and proposed the discretionary bill. The State Department supported the Battle bill wholeheartedly. The Senate adopted it with a surprising show of Democratic unanimity. Senator HARRY BYRD (Democrat, Virginia) being the only Democrat to vote with the Republicans on the key test vote.

Democrats headed by Senator JOHN SPARKMAN (Democrat, Alabama), argued that it was almost impossible for the European countries to shut off all trade with the Soviet bloc and that such a shutoff would immeasurably increase our costs of supporting Western Germany.

Senator SPARKMAN said that Western Europe received, and had to have, 11,000,000 tons of coal from the Soviet bloc countries last year. This, he said, was just barely sufficient to keep the homes heated and the average home then was allowed only 1 ton to supply all its household needs that year. If the 11,000,000 tons had come from the United States it would have required a fleet of 100 vessels in continuous operation to haul it. Cost would have been about \$250,000,000 more.

"CAVIAR FOR BLOOD"

Senator KEM argued that this was a question of human rights versus property rights—that regardless of all the arguments about the necessity of trade, etc., Russia was being strengthened by the trading. He called it an exchange of Russian caviar for American blood, and said it was identical with sending scrap iron to Japan before World War II.

Senator KEM predicted that the people would speak on the issue at the next election and the next Congress would vote differently. Senator EVERETT DIRKSEN (Republican, Illinois) also predicted that United States aid to countries trading with Russia would be a major campaign issue, to the benefit of the Republicans.

The Parents and Wives of Soldiers in Korea Are Entitled To Know That Their Loneliness, or Their Losses, Have Not Been Futile

EXTENSION OF REMARKS OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. ELLIOTT. Mr. Speaker, out of the maze of confusion, name calling,

backbiting, and disunity which has to a much too great a degree characterized the United States during the past year there emerges certain facts which I believe to be worthy of the attention of all of us:

The aggressions of North Korea, and the aggressions of Red China have been turned back. Formosa has been saved from invasion. UN armies have expanded a little beachhead at Pusan into firm control of South Korea.

Our intervention in Korea has blunted the Communist threat on Japan.

The pinch of circumstances has been felt by the Red Government of China to the extent that it has postponed or abandoned many of the social and economic reforms promised to the Chinese people, thereby undermining the confidence of the Chinese Reds in their government.

Today, the Japanese people stand reassured of our integrity and good faith, and they march forward to assume their role of responsibility in the Far East.

The Chinese Dictator Mao, at the urgings of Moscow has poured his troops into Korea in an unending stream. Though greatly outnumbered, the American soldier has sent his message to Mao and Moscow in the form of staggering casualty lists, and disastrous defeats. In the meantime our war has been held to narrow geographical limits, and we again have had time to prepare.

Our sacrifices in Korea have not been in vain. They will live on as a great epic in the history of our times.

Mr. Speaker, under leave to extend my remarks, I include an article entitled "Losses in Korea Are Not In Vain" from the Disabled American Veterans semimonthly, July 24, 1951:

LOSSES IN KOREA ARE NOT IN VAIN, COLUMNIST SAYS

I see by the papers that one evaluator of the Nation's policy in Korea believes we have sacrificed our boys for nothing and we have been humiliated by a lot of barefoot Chinese. This is perhaps the most compact summary of a year of intervention in Korea; but it is not the wisest. It begins with the false assumption that the only valid object of war is total and decisive military victory. It ignores the many constructive and valuable results of our Korean operations. And it does gross injustice to American and other UN troops by implying that the barefoot Chinese, being an inferior race, have humiliated us by not collapsing entirely.

It might be well to recall some of the real accomplishments of our intervention in Korea. The parents and wives of soldiers in Korea are entitled to know that their loneliness or their losses have not been futile. And American judgments of our war policy would be wiser if account were taken of what has been achieved.

In the first place, the North Korean aggression of 1 year ago was the first outright military aggression by a Communist country since shortly after World War II. It has been repulsed and the territory of the victim country, the Korean Republic, has been recovered. A second aggression, that of Red China, also has been repulsed, and the Korean Republic again cleared of invaders.

It is worth something to America and to the world to have turned back two aggressor armies in 1 year. It is worth something because much of the world lives in fear of other such aggressions and has a new confidence in the capacity and the will-

ingness of the United States and the UN to deal with Red aggression.

In the second place, it seems fairly certain that Formosa would have been invaded before now, probably with success, except for the Korean intervention. An island of some strategic importance has been denied to the Communists. That is well worth while, from the standpoint of American security alone.

In the third place, the heat has been taken off of Indochina, where the French and their native allies were in a fair way to lose everything a year ago. Helped by the drain on China's resources caused by the Korean conflict and also by the aircraft we have supplied, the French are doing very much better against the Communist forces they have been battling for years. A gain for France, in this case, is a gain for all the non-Communist world.

Fourth, the war and accompanying economic warfare have so punished Red China as to have forced Mao's government to postpone or abandon many domestic reforms and projects he had promised the Chinese people. This has greatly augmented the unpopularity of the Chinese Communist Government, and possibly has laid the basis for new cleavages and additional resistance. Added to outright losses in battle, these setbacks may be at the bottom of the recent peace overtures—overtures born of China's wish to end the war, passed on by Russia to save Mao's face and advance Russia's "peace offensive."

Fifth, and very important, our intervention in Korea has greatly reduced the Communist threat to Japan and has given us a far better chance to hold the Japanese to a pro-American, anti-Communist policy. And this is vital if we are to maintain a long-term defensive system in the island chain off eastern Asia.

To apprehend the immense value of this accomplishment, one needs only to imagine how Japanese leaders would feel today if, 1 year ago, the United States had allowed the Communists to take all Korea—or how they would feel if UN forces had been driven out of the Korean Peninsula.

In either case, realistic Japanese would have been compelled to write off American protection of Japan as a myth and to prepare for a policy of conciliation and compromise vis-a-vis Red China. Japan is today an anchor for our far-eastern defensive system only because we have proved our willingness and capacity to meet a Communist challenge in Korea.

Finally, our intervention in Korea, always within the framework of UN policy, has made possible the build-up of the UN itself as a means of combating aggression by the use of collective force. For the first time in history, an international armed force of various nations, under the authority of an international organization, has undertaken punitive action in the field against an aggressor—two aggressors, in fact.

The techniques of using the collective strength of the world community have been developed. Precedents for such collective intervention have been set. And during this year the machinery of the UN has been considerably strengthened, at the urging of the American State Department.

In the face of such a record of accomplishment, which could be extended, I do not see how anybody wishing to be fair in his appraisal can say that "we have sacrificed our boys for nothing." It is unjust to the men who have made and are making great sacrifices in Korea to pretend their sacrifice is futile. It is injurious to their morale and to that of their families at home. And it is misleading for Americans who sincerely want to form a balanced judgment of our Korean War policy.

As for our being "humiliated by a lot of barefoot Chinese," it seems to me the reverse is the fact. Whether they wear shoes or not, the Chinese are not a contemptible foe.

China had able generals before this country was settled. The Chinese soldier has great courage, whenever he has confidence in his leaders. The Chinese Reds have outnumbered our forces at all stages of the war since last December, and yet they have been defeated in a succession of battles and driven from the territory of the Korean Republic.

If anybody has been humiliated it is Mao Tse-tung, who has had great numerical superiority at all times and supply lines only a tiny fraction the length of ours, and still has been unable to push the imperialist aggressors into the sea as he promised to do. Mao has been further humiliated, for he was maneuvered by his good friends the Russians into taking on the United States and then was denied the Russian support that might have saved him from a series of disastrous defeats. The greatest humiliation is to be made a sucker, and that was Mao's fate.

Admittedly, our Korean intervention is a disheartening and frustrating kind of campaign. That is likely to be true of any war of limited objective, fought with only a fraction of one's total resources. But we have accomplished very important things by our Korean effort, and we have done so (1) without allowing it to draw us into a massive conflict in China and (2) without slackening our build-up of defensive and offensive strength in more important theaters and at home.

To me this is reason for pride, not humiliation. I believe the sacrifices made by Americans in Korea have contributed to the security of our own land, and to that of the whole world of free men.

The Moral Weakness of United States Leadership

EXTENSION OF REMARKS OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 31, 1951

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Moral Weakness of United States Leadership," published in the Daily Plainsman, Huron, S. Dak., of August 20, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MORAL WEAKNESS OF UNITED STATES LEADERSHIP

"They had no right to send men to die without intending to win."

That is a sentence which should be cast in bronze and affixed to the entrance to "Foggy Bottom," Washington's name for the new State Department building, and affixed also to the White House entrance.

It is a sentence written by Mrs. Katharine Tabor, of Dallas, Tex., whose Army lieutenant husband was killed at Taejon, Korea, in 1950, when she quarreled with an editorial by Life magazine. Her argument, graciously reprinted in full by Life magazine in its current issue, gets to the heart of the matter much more clearly and logically and accurately, in this newspaper's opinion, than Life magazine's original editorial.

The Life editorial had said that the Korean war was part of the price paid for the education of President Truman and Secretary of State Acheson, and the Korean effort would serve as firm notice that the United

States would oppose any further Communist aggression.

Mrs. Tabor's argument in her letter is reprinted on this editorial page and a thorough reading is urged.

It is impressive that after her husband was killed she got down to work and read all she could about United States foreign policy and Communist policy. She finally reached the conclusion—and this is highly significant—that the makers of United States foreign policy since World War II had never been determined to defeat world communism.

This is the conclusion which many other observers reached during the formation of that policy. The United States attitude toward China was the best indication of a leadership that was willing to let communism spread and take over the Western World bit by bit. The Yalta and Potsdam Treaties, all the Nation knows now, were to the advantage of Communist Russia and the disadvantage of the United States. We reversed our attitude on Korea several times. That is, Acheson and Truman reversed it.

But the worst crime of all was sending American men into the toughest, bloodiest war in United States history with no intention of winning it.

It may well be, as Dorothy Thompson writes in the current Ladies' Home Journal, that "the greatest experience of the twentieth century that requires digestion is that war no longer serves any ends—ideological, material, or spiritual."

But it is certainly true that every war up to Korea was fought with the intent of winning it. Even no professional soldier ever envisioned a time when he would be asked to fight without some ultimate objective of victory. Senseless as war already was, it had only one vestige of sense and that was that out of it one side would be victor and one the loser.

But now in Korea we are talking of an armistice and a buffer zone that puts the situation back exactly where it was in June 1950. It is, as Mrs. Tabor says, "compromise with evil" and it adds up to appeasement.

It is worse than that. It is equivalent to cheating the purpose for which more than 100,000 American men have been battle casualties (the Army says 80,000 but does not count those who lost arms and legs from being frozen in the December and January fighting).

The concern over the violation of the honor code at West Point has been out of proportion to its significance to the Nation. It was an index to the moral depreciation in the United States but it drew the attention of everyone.

But where is everyone's concern about the violation of the honor code of American leadership holding in stewardship the welfare of the American people? Where is the honor in sending men to war for a country that uses their deaths only as bargaining power?

The manner in which the Korean War has been handled since its birth in postwar foreign policy to the talks now going on at Kaesong spell moral weakness in United States leadership.

There is one other point to make in reference to Mrs. Tabor's letter.

That is the fact that General MacArthur said, in effect, the same thing. For it he was relieved of command by the President and attacked bitterly by the President's partisan supporters.

Mrs. Tabor can be relieved of nothing.

The MacArthur-Truman affair had no effect upon her. If the reader will note Life's story on Mrs. Tabor, he will see that Life said she reached her conclusions last November about the purpose of United States foreign policy.

Her personal tragedy broadened her concern into a study that gave her greater insight into United States leadership. Tragedy

does not need to be a prelude to insight, but understanding of tragedy does. Every American with close friends and relatives can understand it and should have the insight into the obvious moral weakness of United States leadership that cannot be brushed away by Harvard legalisms nor by earthy Missourian epithets.

When an infantry battalion commander has to order a company to attack and a company commander has to order his close friends to do what looks like certain death to attempt, the soul-searing is deep beyond words. Such orders can never be given unless there are directives to take a certain hill or ridge. No one close to the carnage can bring himself to say, "O. K., men, get out there and fight just for the hell of it."

What, then, is to be said of the leadership that sends men into battle by the hundreds of thousands with no specific objective of winning?

This newspaper agrees with Mrs. Tabor and the hundreds of thousands who must believe as she does that.

"It is not right. It is intolerably unjust." It is a display of "moral weakness."

Wanted: More Faith and Less Fear

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, August 31, 1951

Mr. BREWSTER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Wanted: More Faith and Less Fear," published in the Portland Press Herald of August 15, 1951. It deals with the necessity for counsel from wise leaders of America.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WANTED: MORE FAITH AND LESS FEAR

We would do well to listen to the big men of America who counsel us against acting like neurotic jack rabbits.

General MacArthur has said frequently that a nation as strong as America need have no fear of absorption by communism if we will only pull ourselves together and use latent energies in a bold defense, here and abroad. A living symbol of our strength, MacArthur urged in his Boston speech that we abandon the policy of fear, face our enemies with more courage and less panic.

General Eisenhower preaches the same sermon: "The material, intellectual, spiritual, technical, and professional resources available to the free world are so overwhelming as compared to what the iron-curtain and satellite countries have, that it is almost ridiculous for us to be talking in terms of fright and hysteria, which we often do."

Another great American, Capt. Eddie Rickenbacker, put it this way in a recent speech: "World war III can be prevented. How? By unity of purpose, through faith and prayer, and re-creating the true, fighting American spirit into the heart of every man and woman who claims citizenship in this land of ours, no matter what color or creed. "If that can be jelled and solidified, America will always be strong enough, morally and physically, to withstand any type of attack that may be made."

"Stripped of its bare fundamentals, American strength is built upon its power to produce. And this power is the result of our system of shared free enterprise and

open opportunity—two blessings that have given us the highest standard of living ever achieved by any people in the world.

"And yet, strange as it seems, this very system still must be sold to some of our own people."

This distinguished trio is not complacent in the face of Communist power. Far from it. They understand the threat as keenly as anyone. Their approach is different in that they will have no truck with appeasement. They wish to substitute a patriotic faith in America for cowardly fear. They want us to stop whimpering and use our material and spiritual resources in a bold fight to maintain freedom.

Faint heart never won fair lady. A faint America, an America lacking in self-confidence and courage, an America that is afraid, cannot successfully champion liberty. It's time we ditched fear and developed a more vocal faith in democracy. It's a faith that can make us strong and protect us forever.

Freedom of the Press—Case of Lake Charles American Press

EXTENSION OF REMARKS OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, August 31, 1951

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared regarding the case involving the Lake Charles American Press and its representatives.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

From the founding days of our Republic, our people have held the principle of freedom of the press to be inviolate. We have believed—and rightly so—that fearless, alert newspapers, uncoerced by any source, are essential to the workings of a democracy.

That principle has been challenged many times during our history. It has been challenged by the forces of corruption, brutality, and "home-grown" dictatorship. But each time, the challenge has been repelled successfully and the press has emerged the victor.

It was with a sense of shock and a feeling of shame that I read about the latest challenge a few days ago. By this time, I assume that every Senator is familiar with the facts. The case involves the Lake Charles American Press and its representatives.

The facts are simple. This newspaper launched a crusade to rid Calcasieu Parish of the criminals who had become so heavily entrenched in that area. In the classic tradition of American journalism, its reporters went out and got facts. They named names; they printed truths; and what is most important, they got results.

I am familiar with conditions in Calcasieu Parish—familiar with them because of the information given to the Senate Crime Committee. It has not been too long since crime in its most blatant and violent form was fastened upon the good residents of that community.

After investigation of the Senate Crime Committee in New Orleans a group of determined citizens got together in Lake Charles and decided to do something about conditions there. They set out to clean up their parish, and they were backed solidly by the

Lake Charles American Press. As I said before, they got results—at least partial results. Indictments were returned and crime in that area went underground.

Then came the reprisals. A grand jury, formed to hand down indictments against the criminals, suddenly indicted the newspapermen. And they indicted them for defaming three convicted gamblers and some local officials.

Mr. President, if this outrage is allowed to stand it will be to the shame of all Americans. Are we to tell the world that this is a country where we prosecute not the law-breakers but those who seek to have the law enforced? Are we to proclaim openly that the lords of crime have become so powerful that we have turned our judicial processes to protecting them from defamation of character? Are we to permit this mockery of justice to go unchallenged?

This is more than a minor criminal court case. This is a direct challenge to a foundation stone of our form of government. I believe the people of the Nation and of Louisiana will give an affirmative answer upholding the high principles for which these good people of the Lake Charles American Press stand.

Question of the Week

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. BENDER. Mr. Speaker, what happened to the Kefauver investigation? Answer. Nothing.

Private Bills in Congress

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 5, 1951

Mr. KILGORE. Mr. President, as a member of the Judiciary Committee I have been very much concerned with the problem of private bills. In the present session of Congress there have been referred to the Judiciary Committee a total of some 1,500 bills, of which more than 1,250 are private bills. There has been a good deal of criticism of the whole system of private bills, with suggestions that they be further curtailed or abolished. To those who know the time and energy which the consideration of private bills requires, these proposals often appear to have much to recommend them. In the August 1951 issue of the magazine *Nations Business*, published by the Chamber of Commerce, there is an interesting article on private bills which presents a different view—it is a discussion which has a good word to say for private bills. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEN TO USE YOUR RIGHT OF PETITION

(By Alfred Steinberg)

Not many of us realize that the Congress of the United States has a judicial function that stretches from here to there. Yet every time Congress makes a private bill award, it sits as a court of last resort for some poor fellow who has a gripe against the Government but doesn't have the legal right to take his claim to a regular court.

Matter of fact, in sheer output, the judicial function of Congress is generally more impressive than its legislative work. Three of the last four Congresses passed more private bills for individuals than they did public bills, which affected at least a broad class of us. The last Congress—the Eighty-first—passed 1,081 private bills and only 905 public bills. And stacked side by side, the private bills probably were crammed with as much emotion as the public ones.

Take the recent private bills, for example. A baby was blinded at birth in an Army hospital in Germany by an Army doctor who used a wrongly labeled medicine. A business firm found its costs had skyrocketed because it struck rock unexpectedly while operating under a rigidly priced Government contract. If it could not recoup \$500,000 in extra costs, it would be in serious financial trouble. An American was unable to bring his Indonesian bride home because of the Oriental Exclusion Act. A homesteader discovered that his house and barns were not on his property because of a slipshod Government surveyor. A boy left his keepsake camera with a guard in the Capitol and when he completed his tour of Congress, the camera was missing. An Indian named Abe Lincoln was charged money by the Department of the Interior for living on Government property when he actually lived in a private home.

The common theme running throughout these private bills is that in not a single case did the petitioners have a legal claim against the Government which would have permitted the courts to grant them a hearing. If they hadn't been able to appeal to Congress, they would have been finished.

But fortunately for them, the Constitution guaranteed them the right to petition Congress for a private bill. The first amendment permits anyone to ask Congress for a redress of grievances against the Government. How well even our earliest Congressmen knew this. From 1789 to 1793, while our fledgling legislators were organizing such monumental institutions as Federal departments, tariffs, and currency, they had to take the time to consider more than 1,000 petitions from private citizens.

Often, the only thing private about a private bill is its name. Some have packed a terrific wallop and have resulted in Cabinet crises, Senate filibusters, and a falling out among party regulars.

George Washington found them handy in promoting foreign trade. In his first term as President, the British had blockaded France and American merchants hesitated to send their wares abroad. Trade dipped ominously. Finally, Secretary of State Thomas Jefferson promised the merchants that Congress would consider their petitions for redress of injuries suffered on the high seas. Only after this assurance that private bills would be made available did trade rise again.

Nevertheless, "private bill" historically has been one of those bad-sounding terms linked with logrolling. Until the Legislative Reorganization Act of 1946, one great form of national sport was to petition Congress for a pension, for a change in military records, or for the construction of a bridge over a local

stream. The Fifty-ninth Congress, in 1905-07, hit the jackpot with 6,248 private bills, which came to 90 percent of all the bills it passed. And most of the private bills were of these logrolling varieties.

More than one Congressman complained there were so many pensioned widows of soldiers from our earlier wars still in circulation that perhaps medical science should investigate their remarkable longevity. And even the private bills Washington's administration promised foreign traders—called the French spoliation claims—still were being dropped into the hopper as late as 1945.

But times are different now.

The only private bills Congress will consider today are those dealing with money claims against the Government, land claims, and immigration and naturalization claims. French spoliation claims have been tossed out the window and Congress has assigned pensions, military records, and bridge building to administrative agencies. Claims more than 15 years old will not be entertained because of the difficulty of determining the true facts. And a private bill once rejected will not be reintroduced unless overwhelming new evidence is produced.

On petitions dealing with money claims against the Government, Congress will hear no claim from anyone injured by a Government employee who was acting "within the scope of his employment." If a Government messenger delivering six volumes of the 1950 census dropped them accidentally on your head, your petition would be handled by the Federal agency involved if you wanted less than \$1,000, or by a Federal district court if you claimed greater damage. Congress would say he beamed you within the scope of his employment.

However, should that same messenger wallop you with a baseball bat while delivering those six volumes, no Federal agency or court will hear your case. They would say he was not acting within the scope of his employment. To get any satisfaction, you could let the State try him for attempted murder, which the State would anyway, or you could petition Congress for a private bill.

Government agencies and the courts operate under the strictest possible interpretation of the term "within the scope of his employment." There is actually a 1943 case on record where Pentagon officials held that the Government was not liable for damages involving one of its motorcycle messengers because his accident occurred as a result of his returning to the Pentagon from an errand via the Key Bridge and not over the Highway Bridge, the route they had blue-penciled for him.

During the last war the commander at a southern training center forbade pilots to fly farther away than a radius of 50 miles from the airfield. Two young pilots residing only a few miles beyond limits buzzed their home town one day. They flew too low and crashed into some houses. The Government took the view that it had no liability to the townspeople because the boys had not acted within the scope of their duties. Since no court would award damages, it took a private bill to settle the claims.

As a court of last resort, Congress pays little attention to cold legal precedents. Its chief consideration seems to be whether justice is being trampled underfoot. It is the only court extant which publicly acknowledges that it often arrives at a decision simply because it feels sorry for the party involved.

A typical action of this sort involved a mailman of Oakland, Calif. While on the way to his post office to drop off a registered letter containing \$681.33 in bills and currency, he found a man lying on the ground bleeding profusely. Without hesitation, he stuck the letter in his hip pocket and gave the man first aid, saving his life.

But after the ambulance arrived he discovered the registered letter was gone. Someone in the crowd had filched it while he was bent over the injured man.

The Postmaster General said that the carrier's failure to follow instructions forbidding mailmen to carry mail in their pockets apparently caused the loss. The Comptroller General pointed out, however, that the Federal Tort Claims Act specifically excludes claims based on lost mail. The carrier had to make good the loss.

After making small monthly payments on the missing letter for more than 2 years, the mailman decided he, too, would write a letter. He wrote his to his Congressman. Shortly afterward a private bill was introduced, his claim was examined and passed by Congress. The President signed it, ordering the Treasury to pay for his loss.

In reporting out the bill, the House Judiciary Committee told Congress that while there was no legal basis for the mailman's claim, "the humanities are such as to justify the reimbursement of the claimant for the loss sustained by the Government."

Despite Congress' fondness for petitions that cry out for justice, don't think it is lenient with the Treasury's gold pile. A person with a claim against the Government ordinarily will fare better in court than he will before Congress. Back in 1945, an Army plane crashed into the Empire State Building and killed a man working on the seventy-ninth floor.

His widow petitioned Congress for a private bill and was in line for a \$10,000 award. In the midst of these proceedings, Congress passed the Federal Tort Claims Act, permitting her to transfer her case to Federal court. She did and won an award of \$47,000.

In making awards, Congress has no fixed standards, but utilizes rule-of-thumb methods. These are chiefly the handiwork of Walter R. Lee, long-serving staff member of the House Claims Subcommittee, whose determinations dollarwise generally are heeded by Congress.

He graduates death claim awards according to the age of the deceased. They run from \$2,000 for children up to 8 years of age, to a maximum of \$10,000 for adults. Before the current inflation descended, Lee's maximum death claim proposal was \$5,000.

Injury claims often are puzzlers. Each by necessity is decided on its merits. A farmer who loses a leg as a result of a Government action can expect a higher award than a clerk who loses a leg. During World War II, a soldier on a troop train threw a hardboiled egg at a railroad fireman on a passing train, and managed to destroy an eye. The Army ruled that the soldier had not acted within the scope of his duties and that the injured fireman could not bring action against the Government.

But Congress passed a private bill awarding him \$4,300. Lee computed this figure by determining what his future earnings might have been as a railroad engineer, a job requiring two good eyes, and deducting from this sum a fireman's salary for the same length of time.

What looks like logrolling today unquestionably is the strongest point in favor of private bills. They take up little time on the floors of Congress. Last fall a tourist walked into the House galleries and sat down to watch the proceedings. The Clerk was calling the Private Calendar.

Thirty minutes later, when Mr. Tourist rose to leave, 75 private bills had been passed without a single dissent. No doubt he went home less certain than before about the honesty and earnestness of Congress. Of course, what he did not see was the long-drawn-out scrutiny each of those private bills got before coming to a vote.

The average private bill takes 9 months to get through Congress. After Representative Doe drops the bill in the hopper he has

to file the evidence for the petitioner with the hearing committee. The Government agency involved gets 60 to 90 days to make its report on the case. Then the bill has to clear the rungs of the subcommittee and the full committee, and only if they approve it unanimously will it be placed on the Private Calendar of the House. And even here, before the vote, the majority and minority leaders appoint six official objectors to screen the bills and weed out ones they feel are unworthy. When the vote finally is taken, if any Member present objects to a private bill, it is passed over, and if two Members object, it is recommitted to the committee for further consideration.

Then, of course, there is the Senate, where the process must be repeated, and here again action must be unanimous. If a private bill fails in one House, the other will not consider it.

Even after a private bill clears Congress, it still needs the President's signature. Few Presidents have sloughed off private bills as an inconsequential duty. Last August, during a low ebb in the Korean fighting, President Truman spent most of a White House staff meeting arguing the merits of a single private bill. This bill would have permitted a dead soldier's insurance money to go to his adopted sister. The Veterans' Administration was objecting because the law specifically restricted such payments to blood relatives. At the end of the staff meeting, the President signed the private bill.

Only once since the Cleveland administration has Congress overridden a veto of a private bill. This happened in 1949, after a Tennessee tobacco factory had burned down and \$8,337.98 worth of internal revenue stamps were lost in the fire.

Congress examined the claim and passed a private bill reimbursing the firm for the stamps. But President Truman vetoed the bill on the grounds that a refund could be legally made only if the stamps had been returned to the Treasury in a recognizable condition or if they had been destroyed under the supervision of a deputy collector. In a wrathful mood, Congress overrode his veto.

There are many ways private bills can be improved. Most Congressmen feel obliged to introduce any private bill a constituent may petition him for. Take such private bills as frequently are introduced which would order the Treasury to return money paid as fines for violating Government regulations. Once they are introduced, committee staffs and Government agencies involved must spend time and money investigating them. Yet their chances of getting by are nil.

Other private bills have been introduced which would return money to designated individuals who used the wrong tax form. One such bill, which cleared Congress only to be slapped down by a Presidential veto, would have returned \$32 to a taxpayer in North Dakota. Think of the actual cost in promoting a bill of this nature.

More uniform decisions would also help. Today there is no certainty that identical cases will get identical treatment. Recently, one Senator objected to the private bill award for a constituent and held the Senate floor for 2 hours until his colleagues agreed to raise the amount by an additional \$10,000.

Still another improvement would be to lower the voting requirements so that a private bill can be passed without a unanimous decision. Of course, unanimity is one deterrent to logrolling. Yet there has been times when a single Congressman, irked by one matter, has objected to every bill on the Private Calendar.

With the development of the mobilization program, two types of private bills will grow in number. One will pertain to injuries and damages caused by the growing ranks of the Armed Forces who will not be acting within the scope of their duties,

The other will deal with contract claims. Some will come about because of unexpected cost increases above those computed in signed Government contracts. Others will result from relying on well intentioned Government officials who lack authority.

During the last war, several boatbuilders signed contracts to construct small speed-boats for the Government for \$8,500. Shortly afterward, Navy supervisory engineers made the rounds and told them to add various improvements which would make the boats sturdier and faster. "The Government will take care of the extra costs," they assured the builders.

By the time the boats were built, some cost as much as \$15,000. The Comptroller General's office ruled that as long as the improvements were not specifically listed in the contract, the builders would have to stand the loss.

As a result, the firms were stuck; the Government would not settle and, because of legal technicalities, it was determined that the courts could not enter a judgment against the Government. All the firms wanted was compensation for out-of-pocket losses. A private bill was the only recourse.

A petition to Congress in behalf of these builders came next and another successful private bill was born.

By the law of averages, there will be many similar experiences this time. And private bills will continue to be the last hope for those who have nowhere else to take their complaints about the Government.

Attacks on the Public School System

EXTENSION OF REMARKS OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 5, 1951

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks of Elmo Roper over the CBS radio network, Sunday evening, August 19, 1951. This article has reference to the barrage of attacks being leveled at the American school system in recent months. Mr. Roper dwells particularly on the book entitled "This Happened in Pasadena," by David Hulburd.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHERE THE PEOPLE STAND

It is becoming more evident all the time that many parts of our day-to-day lives are suffering as a result of living in the same world with the Russians. The constant war of nerves, the uncertainties of war or peace, the recurring waves of imminent battle and of overtures of peace, all take their toll on American public opinion and patience. These stresses show themselves in many different ways. One man was recently recorded as saying that his back begins to ache whenever he picks up his morning newspaper. Another claims that his tooth aches him every time the truce negotiations in Korea are about to bog down. Several people have blamed a virus infection on the atomic bomb tests out in Nevada and even in the Pacific. We are establishing a close relationship with the events of the world about us in personal and intimate fashion. Maybe you can chalk it all up to the external pressures generated by the world-wide guerrilla warfare we are waging against communism.

But there are signs that even some of our oldest and best established free institutions are also being afflicted with the tensions. Not the least of these is our educational system. And if we are embarked on a 30-year war of nerves with the Communists, as many say we are, then what happens to the education of our young can be pretty important. If, indeed, education ever needed a crisis to justify its long-range importance.

Education trouble will almost always break out on a local basis here in this country, because each town or city as a rule runs its own public-school system. The place where education takes hold or fails to work is right back in the home towns of the Nation. There have been a number of reports lately of unrest over education in many towns and communities. Part of the problem is the fact that we are laboring with a bumper crop of children these past few years, and the schools are vastly overcrowded. And the prospects are that things will get a good deal worse before getting better. But in the past year or so, there are signs of strains of still another variety. These newer strains were recently summed up in one local experience in a well-documented little book of 163 pages by David Hulburd, called *This Happened in Pasadena*. The Hulburd book tells what to many has been a terrifying story.

It is a tale of battle which took place in the latter part of last year and the early part of this year in the city of Pasadena in southern California. This is what happened in Pasadena, as told by David Hulburd: In early 1948 Willard Goslin, then superintendent of schools in Minneapolis, was asked by the Pasadena School Board to come to that city to head up its growing school system. Goslin had reached the high point of a distinguished career that year when he was elected national president of the American Association of School Administrators, the organization of all the superintendents of schools in this country. Yet hardly more than 2 years later Goslin was forced to resign his job in Pasadena. He had been ousted by substantially the same school board that asked him to come there in the first place. But a lot of water had gone under the dam in those 2 years.

Willard Goslin instituted a good many changes in the Pasadena schools. He brought in some new people, began new teacher-training programs, summer workshops, brought in visiting lecturers on education; fundamentally he introduced methods which have grown over the past 10 years to be accepted by most educators as sound techniques of teaching. But, beginning with a new school-tax program, followed by a delicate redistricting of school zones which brought children of different races and income levels into the same school, Goslin ran into increasing difficulty. A series of groups sprung up to fight each of his proposals. His school-tax program was beaten. The opposition to the school administrator took on more and more the appearance of a frontal assault on the entire concept of education as Superintendent Goslin saw it. When visiting lecturers came from Columbia Teachers College they were branded as dangerous radicals. Literature and advice were received from superpatriotic organizations as far away as New York who saw in Goslin's every effort an attempt to communize Pasadena's school children. Even members of the Pasadena School Board began to be beset by personality clashes amongst themselves. They grew increasingly suspicious of Goslin. Many of the people who were in opposition to the school administration were of the honest belief that modern education methods were synonymous with teaching socialism and immorality. Others were cranks and crackpots who had special purposes and designs in their opposition.

Finally, in the fall of 1950, the whole issue came to a head, and while Willard Goslin was in the East at an education meeting, he received a telegram from the school board asking that he resign. The main body of criticism against him was that he was trying to head the schools toward socialism; that he was encouraging sexual immorality by teaching sex education in the classrooms; that he was trying to undermine the patriotism of Pasadena's children; that he was being extravagant in his requests for more taxes for the schools; that he belonged to such organizations as the United Nations Educational, Social, and Cultural Organization and the National Conference of Christians and Jews, which many strongly hinted were subversive; that he had too many visiting lecturers, especially radical visitors from the East. The opposition finally succeeded in getting Goslin out. But after his resignation the citizenry of Pasadena became outraged. After his resignation, Goslin addressed an overflow crowd in an auditorium in Pasadena at which people demanded that he come back. Too late and futilely, the people of Pasadena rose up to claim that they had unwittingly been tricked into scuttling a modern education leader and an enlightened school system for their children. Goslin could not come back. The damage had been done.

As Hulburd describes Goslin's final appearance before the school board in Pasadena, he describes what happened this way: "Mr. Goslin said he wished to make his position clear—how he felt about education as it stands in the United States. 'We are,' he said, 'in an exceedingly difficult position. Each of us feels that our freedom is in jeopardy. We are threatened from without. I think we are threatened even more from within. I know of no better way to wreck everything that we think is good in America than to begin to destroy ourselves, one by one, institution by institution, community by community, throughout the land.' With that, Mr. Goslin bowed out. His final words were: 'I shall take away no ill feelings when I leave Pasadena—rather, a deep regret that I was unable to lead this community to a level which would have produced the best school system in America.' As the people slowly left the conference room that November afternoon, some of them were crying," Hulburd concludes.

The Pasadena story is a moving one, and one which has aroused the interest of a good many other people in other communities. But from reports of the National Education Association, the National Citizens Commission for the Public Schools, and other education groups, the Pasadena pattern is not entirely an isolated case. Reports from such widely scattered places as White Plains, N. Y., Englewood, N. J., Los Angeles, Chicago, Minneapolis, and Denver indicate that many of the same charges are being made as were made in Pasadena. Many of the same sort of organizations are springing up.

We have some recent evidence from Denver, one of the reportedly embattled cities, which might cast at least part of this controversy in quite a different light. Over the past 2 years, groups in Denver have charged that the schools are bent on teaching socialism to the children, are destroying the patriotism of our future citizens, are engaged in such subversive activities as holding special teacher training programs, and having visiting lecturers from such so-called radical places as Teachers College. The pattern, while not as pronounced as Pasadena in its latter stages, appears to Mr. Richard Kennan and other educators to be much the same. Well, just about the time that Pasadena was in the process of asking for Willard Goslin's resignation, Denver was just getting the results of a special public opinion survey of the citizens of that Colorado city on what they thought of the way the education system

was working. Some of the results shed some interesting light on some of the more vociferous charges which have been made in Denver and elsewhere.

The people of Denver were asked what they liked most about the school system in their city. Three out of the top five things cited as being most satisfactory to the people hit right at the heart of the issue. The fifth most popular phase of public-school education in Denver are health subjects, especially sex education. The issue of sex education is one which in many cities has been fraught with a good deal of emotion. We found in a Nation-wide survey last year that a majority of the parents of this country are in favor of sex education. But it has been attacked as introducing immoral subjects into the classroom. In Denver, as in the Nation, most people are satisfied with the fact that courses in sex education and other health subjects are taught. Another source of controversy is the teacher-training programs. Superintendents like Willard Goslin believe that teachers should have more opportunity to swap their experiences in the classroom, that they should have special training courses and workshops which will allow teachers during the summer months and just before school opens to learn the latest, up-to-date developments in education. All sorts of tales have been told about these out-of-school sessions, ranging from secret Communist or Socialist briefing sessions to immoral behavior. Yet, in Denver, one of the cities where it is said the Pasadena pattern is emerging, the fourth most popular part of the school system is the training the teachers receive, the manner in which they are indeed brought up to date on educational techniques.

Perhaps at the root of the controversy is the explosive atmosphere which surrounds any mention of modern or progressive education in these cities I've just mentioned. This is apparently also true of Denver. Yet, Denver's citizens say that they are more pleased with the modern, progressive teaching techniques used in their schools than almost any other phase of their public-school system. Progressive education methods are outranked only by people's satisfaction with the modern new school buildings and equipment. Rounding out the first five is the feeling that children in Denver's schools are well trained to get along with other people, in what the educators call in a fancily turned phrase, "social-psychological skills." Significantly, on three of the most controversial issues in Denver, the people take a progressive approach. Progressive education, methods of training teachers, and the teaching of health subjects, particularly sex education, apparently strike a responsive chord among a large number of the city's citizens.

But let's take a look at the negative side of the ledger for a moment and see what the people of Denver don't like so well about their schools. Interestingly enough, the most disliked part of the school system is what many parents think is not enough emphasis on fundamental English. Not enough reading, spelling, grammar, and pronunciation, say the parents. Next most unpopular is the amount of homework the children are given. Apparently, the parents have grown tired of helping junior with that "math" problem and they feel that their children's complaints about homework are justified. Down in third place on this unfavorable list is a complaint about the overcrowded condition of the schools, a perennial problem now abundant throughout the Nation. Going down the list, in fourth place comes the feeling on the part of many that not enough mathematics are taught. Many parents **no** doubt feel that they could have used more. But the next most frequently mentioned dislike is a curious one. People say that they object to too much emphasis on fundamentals, especially the attention

that is paid to getting young boys and girls ready for college.

Well, let's go back for a moment and take a look at the top five likes and five dislikes which the people of Denver have for their school system. Among the first five most liked things were three points which the so-called modern educators have especially emphasized, progressive educational approach, teacher training, and sex education. And on the list of the five things most disliked were none of the common complaints which were so successful in ousting Willard Goslin in Pasadena and which have in the past placed Superintendent Kenneth Oberholtzer under attack in Denver. In fact, you have to go further down the list of things people don't like about Denver's public schools to find those people who agree with the organized opposition. Some 7 percent of the people in Denver say that they believe the schools don't teach enough religion, Americanism, and other patriotic subjects. And then, 8 percent say they are opposed to the progressive education methods, the platoon system, the additive method of subtraction, and other techniques.

And finally, some 9 percent say they think not enough discipline is taught the children. Interestingly enough, too, there was no significant opposition to the teaching of sex in the schools, with hardly more than 1 percent of the people mentioning it in a negative way. Of course, some will say that the desire for more teaching of math and English is a criticism of progressive education, too. But that's debatable. In Denver, then, it appears that no more than 15 percent of the people go along with the vocal charges of subversion in the classroom, of spreading socialism in the schools, or dark and diabolical plots being hatched by teachers and school officials, according to the results of the survey which was conducted by Research Services of Denver.

One might naturally ask how in the world could the Pasadena pattern be emerging in Denver when so few people actually believe what the organized critics have to say. The answer which was evident in Pasadena was that the citizens became awakened to the dangers too late, after the damage had been done. Groups such as the Parent-Teachers Associations and others did not effectively organize to defend those who were vested with the responsibility for running the school system. Everyone has a vital stake in the future of public education in the United States. But do people generally recognize their obligations? Do they help make the school system strong? Do they understand that the independence of the American public-school system constitutes its greatest strength? Good evening.

Did Our State Department Plan It This Way?

EXTENSION OF REMARKS
OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. BENDER. Mr. Speaker, the identity of the State Department official who conceived the grand strategy, if it can be called strategy, behind the San Francisco Japanese Treaty Conference will probably remain anonymous for reasons of both state and health. Apparently, our diplomats believed that the Soviet Union would choose to absent itself from

these proceedings. Such a theory was seemingly based upon the projected agenda for the meeting which contemplated a few pleasant platitudes, limited speech-making, and a good time for the visitors at fascinating San Francisco, with the treaty signed and no questions raised.

Nothing could be more absurd, and nothing so short-sighted should ever have been permitted to emanate from our State Department, short-sighted as it has proved itself to be on repeated occasions. Mr. Andrei Gromyko is very much on the scene, with no less than 31 aides and fellow delegates, prepared to offer him aid and comfort in blasting our Secretary of State's formula for a happy treaty party.

With the whole fate of Asia at stake, with the discussions in Korea still wavering from day to day between a resumption of hostilities and the drafting of a buffer zone line, the San Francisco affair has offered Russia one more vehicle for the airing of its propaganda lines for European and oriental transmission. Tell us, Mr. Acheson, did somebody in your office plan it this way, or is this just another fiasco like Formosa?

The Japanese Peace Treaty

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 5, 1951

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement I released to the newspapers yesterday regarding the Japanese peace treaty.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Senator WILLIAM E. JENNER, Republican, Indiana, issued the following statement today from his Washington office, in relation to the Japanese Peace Treaty. His statement follows.

"In the Washington Times-Herald of August 30, Walter Trohan reported that the State Department has assured a group of Senators Japan will sign a peace treaty with Nationalist, not Red, China, but the Senators must not say so publicly because release of the plan to bypass Communist China would disrupt the ceremonies at San Francisco.

"What a shameful spectacle. How low our country has fallen when an anonymous State Department official whispers behind his hand what our policy is going to be, and a few Senators are allowed to learn of that policy if they will be good and not tell anybody how the fate of our country is going to be settled.

"Senator McCARRAN, of Nevada, in a brilliant review of the many Soviet victories over us on the Japanese issue, points out that 24 governments have recognized Red China, and of the remaining 25 nations or so, only a dozen, perhaps only 4, are determined to support Free China.

"Why are we afraid to stand alone? If it is both morally right and essential to our national interest, to support Free China, what choice do we have but to take our

stand? How can secrecy and double-dealing help us?

"Whom are we afraid of? Red China? The Soviet Union? The Soviet fifth column in Britain and France? What country makes the State Department tremble with fear? What kind of allies are we trying to win, if we cannot hold them if they know the truth? Why should our allies trust us if our State Department itself says we have a plan to bypass Communist China, but are hiding it from them?

"This is only one aspect of the threat to our security still hidden in this draft treaty. Immediately after the signing of the peace treaty, we are to sign a treaty of mutual aid with Japan. All our defenses in Asia hang on this treaty. Our troops will have no legal right to stay in Japan after the first of the year. We will have no legal right to the bases we are building. Those rights will be created de novo in the Mutual Aid Treaty. But the text of that treaty is not available to members of the United States Senate.

"It is 'classified' material, for the eyes of the State Department personnel and their satellite columnists but it is not available to Members of the Senate, to members of our free press or to the American people. The State Department has about 28,000 employees, but it cannot find time to complete the draft so the Senate can study it for a whole week before it is signed.

"I want to know one thing about that treaty. Are we negotiating for American troops and American bases in Japan? Or, is there an escape clause by which we will soon find we have only U. N. troops and U. N. bases there?

"Mr. Truman transformed the United States Armed Forces in Korea into U. N. forces by the stroke of a pen. We entered Korea as an American police action. The next day by Executive fiat, obediently ratified by the U. N., we were part of a U. N. police action. The Senate was never consulted about the change, as it was never consulted about the war in the first place.

"Every military move and every political move in Korea has been twisted, confused, and blocked in the maze of U. N. control, but Congress has been helpless.

"Will Mr. Truman, a few months after the treaty signing, change our American troops and our great military installations into U. N. forces and U. N. installations by a stroke of the pen, as he did in Korea? Does anyone think the Senate will be consulted over the second breach of the Constitution, if it was not consulted over the first?

"Will we find next spring that we cannot stop Soviet moves on the Asian chess-board because we are bound by U. N., and 25 (or 45) members of U. N. favor Red China and a specious neutrality? Will we have another flood of State Department press releases about peace-loving nations and defense against aggression, while our men are fighting and dying, trapped in the coils wound about them by U. N. diplomacy?

"So far, the Members of the Senate have seen these problems rolling in, and have waited to speak their minds until the never-never time when the administration would put them before Congress.

"It is time to stop this newest impending catastrophe before it starts, and not after we have 150,000 or perhaps 500,000 casualties, among the innocent youth now in our high schools and colleges.

"It is time for the Members of Congress to use their wits, to trust their own judgment, to admit what they cannot deny, that this 'peace' in Japan bears all the earmarks of a repetition of the Acheson-Marshall-Lattimore 'peace' in China in December 1945. It is time for us to set up total safeguards against another such 'solution in Asia.'

"We must insist that Free China be invited to this conference at once. If she wishes to appoint one of her representatives now

in this country, he can be in San Francisco in 24 hours.

"The Mutual Aid Treaty with Japan must not be signed until 30 days after its final publication. It must contain unequivocal promises for American troops and American bases in Japan.

"Congress must make sure that no American funds go into Japan if she signs a trade treaty with Red China.

"Then we must make sure that never again can our President transform American troops or American installations into U. N. forces by fiat.

"It is time for each of us in conscience to recall our oath of office to preserve the Republic against any danger from without or from within."

VFW: Defenders of Freedom

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, September 5, 1951

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an article entitled "VFW: Defenders of Freedom," written by Harry H. Schlacht, and published in the New York Journal-American of August 30, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VFW: DEFENDERS OF FREEDOM

(By Harry H. Schlacht)

"In the name of our God we will set up our banners."—Psalms 20:5

Today we salute the Veterans of Foreign Wars of the United States on their fifty-second annual encampment in New York. We hail them. We honor them.

The VFW is composed of overseas veterans. It was born at the close of the Spanish-American War. It was headed in the early stages by Gen. Arthur MacArthur, father of Gen. Douglas MacArthur.

They are the defenders of democracy.

They are the heroes of humanity.

Their deeds unite to light the fire on the shrine of human glory which shall spread its illuminations throughout all nations.

They are the priceless legacy of the centuries. They are the spirit of America sweeping onward under the star of destiny.

Loyalty to our American institutions and their ideals, eagerness to defend them against all our enemies, undivided allegiance to our flag, and a desire to secure its blessings of liberty to ourselves and our posterity are the purposes of the VFW of the United States of America.

We must all believe in these ideals, or we are not worthy to enjoy the God-given blessed privileges of our heritage bought with their sacrifice.

An evil tyranny is abroad. Aggression stalks rampant and the jungle law prevails as the strong devour the weak.

Communism challenges democracy. Communism and democracy cannot survive side by side.

Our immortal heroes have fought and died on a thousand blazing battlefields and crimsoned the seven seas to destroy the roots of the insatiable ambitions of fiendish tyrants who sought to enslave humanity. In the world of communism force reigns supreme.

We shall not permit the sacrifices of our heroes to be in vain. We shall not permit

the adventurous derelicts to weave a crown of thorns for our brow.

We shall not permit the Red devils to spin the wheel of fortune which shall determine the future destiny of our country.

Hear ye—VFW: You are the warriors of liberty. You are the sinews of our Nation. You are the guardians of our security. We need you on the firing line of democracy.

Hear ye—the still voice of our martyred buddies. They challenge you to beware of freedom's foes. They challenge you to preserve our ideals for which they died. They challenge you to preserve our American way of life.

Let us today at the VFW convention rededicate ourselves to the preservation of liberty which is the very heart of our country.

Let us lift our heads as high as our flag. Let us march forward into the future, for we are the future. May the glorious banner of the VFW march onward behind the Stars and Stripes toward new glory for Old Glory.

We commend Charles C. Ralls, of Seattle, Wash., retiring VFW commander in chief, on his splendid achievements.

We congratulate Frank C. Hilton, of Reading, Pa., on his election as commander in chief.

Europe the Battleground

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, September 5, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article entitled "Europe the Battleground," written by Mr. Michael Straight and published in the current issue of the New Republic. It merits careful study and thought.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EUROPE THE BATTLEGROUND

I. THE NATURE OF THE BATTLE

(By Michael Straight)

"Europe is a battleground," said Milton Katz in his final speech as European head of the Economic Cooperation Administration. In the continuing battle, recovery from the devastation of war is only one short phase, and rearmament, another. The United States and Western Europe are bound together. We are part of a long-range, vital effort to transform feudalism into capitalism in Europe, class rule into democracy, continental anarchy into European union.

That effort includes the creation, through armaments, of an earned confidence in Europe's ability to defend against Soviet aggression the new life it is creating. But while fear of Russia may be the greatest spur to common action, it is not and cannot be the central binding force. "For that," Katz maintained, "you must add an affirmative element." He added: "We can find the key in the historical process of moving West in the United States. . . . As we moved West . . . it was necessary to be ready at all times to fight Indians. . . . If the people had not been prepared to fight . . . they would not have moved West. On the other hand, if the sole purpose of moving West were to kill Indians, we likewise would not have moved West. It was

the job of building a new world and realizing the great American dream that kept people moving. * * * It was a creative movement, with a deeply felt sense of purpose."

The goals are still obscure in our new Westering. But the emergence of clear goals is the outstanding experience of Europe today. Our ideas are often archaic and our supposed allies are our worst enemies. Yet, on balance, we stand as the true revolutionaries. It is we who hold the initiative. It is we who press for needed change.

At each stage our effort may be overthrown in free elections. So the struggle resembles a continuing election campaign. In this campaign the basic contest is for the loyalty of the European worker, described by Dan Goldy of the ECA as one "who lives largely on bread because its price is controlled, who lives in substandard quarters which he can afford because its rent is strictly controlled but is seldom able to heat, due to the high price of fuel, who must defer marriage sometimes for years because of the scarcity of suitable dwellings, who owns one pair of overalls and one suit and who must constantly choose between food or clothing for his family because he can't afford both."

The faith of this man in the future of democracy is all we have to build on. The reason why so many appeals for action necessary for survival meet with a disappointing response stems from two inner convictions on this man's part. The first is that nothing he does in a divided Europe can make much difference. The second is that he has little to lose if democracy should go down. His stake is minor. His outlook is forlorn. His return for harder effort is unjustly small. His incentives to work harder are consequently weak. He looks with suspicion on all political leaders. He casts his protest vote for a party which intends to destroy his right to protest. He asks with skepticism of all new programs: *Chi me lo fare?*—What's in it for me?

A program which could clearly lead to new schools, low-cost housing, shoes, at prices European workers can afford, would generate great enthusiasm. The Marshall plan has prepared the way for these gains by expanding basic capacity. Yet, thanks to continuing low productivity and poor distribution of wealth, the workers' living standards have not risen above prewar levels and now are falling.

These trends can be reversed but only by drastic change. Paradoxically the European worker stands as a champion of revolution and an opponent of change. One reason is the conservation induced by a century of stable population. In addition, progress in material conditions has seemed so far beyond the reach of the European worker that his demand for change has shifted from the realities that surround him to sterile and false abstractions.

The Communist Parties of Europe, of course, exploit the duality in the working class with great skill. They formulate and press the illegitimate abstractions. They organize the resistance to change and for their own good reasons band together with conservatives to prop up an indefensible status quo.

The battle with the Communists is the open battle, fought on the surface of Europe. Every large wall in Europe has "peace" or a hammer and sickle painted on it. Every lamppost has its notice: Americans, go home. Between January and June 1951 the Communist Party distributed 3,000,000 posters, 18,000,000 leaflets, and 2,000,000 booklets in Paris and its suburbs alone.

To speak of communism as an idea in Europe is absurd. Communism is the Communist Party, a heavily financed, carefully trained, superbly organized paramilitary force. It has broken Europe down, region by region, profession by profession, prejudice by prejudice, age group by age group, city block by city block. There is nothing sur-

prising about the votes it polls on election day. All summer long the children of city workers go to Communist camps where indoctrination accompanies fun. All winter long the party's block captain is the man who knows where coal can be bought cheap. The trade union, controlled by the party, is the one a worker must join to get a job. The party is the group which offers specialized training and rapid advancement for young men with organizing skill. Communism may have started as an idea in Europe. Today Stalinism is an organization, not an idea.

In France and Italy, Communist Party publishers own the finest job printing presses, print the biggest comic books, farmers' papers, and radio, screen, and fashion magazines. The Communist Party owns huge chains of theaters. It controls farm cooperatives and draws from them a large part of the income from food distribution. Communist bankers handle all trade with Russia, China, and the satellites and draw their commissions of 5 and 10 percent. Direct subsidies are transferred through Soviet- and Communist-controlled banks such as the Banque Commerciale pour l'Europe du Nord. In international solidarity funds alone the Communist-controlled CGT acknowledged receipts of \$2,000,000 from Prague, Moscow, Sofia, and Budapest between November 1948 and January 1949. In turn, the Communist Party spent \$2,000,000 in 5 months on the Paris elections, and in Italy budgets one billion lire a month for propaganda alone.

To speak of communism as a movement which seeks to gain its ends in Europe by social and economic pressure is equally absurd. Every strike and demonstration staged by the Communist Parties is organized under military formations as a rehearsal for a general uprising. The factory workers are trained in sabotage, and sabotage occurs every day across Europe. Luigi Longo, in Italy, and Laurent Casanova, in France, command large armed forces, well-trained and well-equipped with weapons stolen from factories and constabularies and smuggled in from abroad. In January, in Rome alone, the police haul of hidden Communist armaments included 4 mortars, 21 machine guns, 49 submachine guns, 180 automatic rifles, 655 rifles, 314 pistols, 3,431 mortar shells, 3,160 artillery shells, 8,462 hand grenades and 198 tons of explosives.

Behind these armed forces stand the 80 Soviet divisions that ring Europe. At first, Western European Communists carried out door-to-door campaigns, taking money from charwomen and concierges and giving them chips in return reading "present this for protection purposes when the Red army arrives." The threat of invasion still glares through every Communist leaflet and poster. Alexander Werth and his friends may insist that Stalin is a loveable old pacifist. But Aldo Cuccini and Valdo Magnani, when they toured Russia in September 1950 as loyal Communists, were shocked first by the frightful impression of more cannon than trees. They saw, as they later reported, divisions on the march, divisions at garrison posts and high military officials prominent in every public meeting. It was the new emphasis placed by Communist leaders in the conquest of power in Europe through Soviet invasion that led to their break with the party. Magnani's first criticism, voiced at the Emilia Congress of the Italian Communist Party, was that—

"There is an opinion, fairly widespread amongst party members, that revolution can advance only by means of war. The peace campaign is regarded merely as a kind of camouflage. It is thought that at the present stage of the world struggle, revolution can triumph only thanks to the bayonets of an army invading our country. The comrades holding this opinion regard the Red army * * * as the only force capable * * * of freeing the colonial peo-

ples and the working classes of the world at present subjected by capitalism."

In France and Italy, until recently, the Communist Parties have operated as a state within a state, directing their work of espionage, sabotage, violence, and intimidation almost independently of governments. As masters of propaganda they went almost unchallenged. Now that, at least, has changed.

For every poster calling for peace in Europe there is today one published by Europeans calling for peace with liberty. For every Communist propaganda unit, there is an ECA sound truck pushing its way into Communist suburbs throughout France and Italy with films on reconstruction. Against the experts of the Communist agitprop departments with their 30 years of training, and with a fraction of their budgets, ECA information officials are doing a tremendous job. Forty-five radio programs each week dramatize Marshall-plan goals to Europeans. One in three Europeans have seen the ECA's five series of documentary films entitled "The Grand Design," treating housing, health, power, transportation, and food on a European-wide basis. Twenty-six million Europeans have passed through Marshall-plan exhibits set up at fairs and in market places. "Italy is not alone" proclaims the first section of the ECA exhibit which has toured every major Italian city. Italy is a part of western civilization, it continues, drawing on reproductions of art and literature. Italy will rebuild and defend this civilization through unity with her partners, it goes on, and, it concludes, here is what you can do to help. This exhibit drew 1,500,000 Italians in Milan alone.

ECA in Italy, under the brilliant direction of Frank Gervasi, has told its story in spectacular and convincing ways. An ECA art contest for children drew 7,000 entrants in 3 weeks from all over Italy, a motor-scooter rally, held this month in Bari, is drawing entrants from every town in Italy who, with a tractor for first prize, must visit and report on every ECA-sponsored project in the region of Apulia.

And there are many projects worth dramatizing. In Milan, Genoa, Naples, Bari, Palermo, and Rome, ECA funds have been used to build low-cost cooperative housing.

On balance, our record is good. In contrast, the Communist record is terrible. Their slogans are discredited. The major strikes and attempted insurrections they have launched have all been broken. Yet they remain a major force.

One reason is that there are two battles on Europe's battleground. The first is the open, surface battle against the Communists. In that battle we have done well. The second is the silent, undercover battle against an enemy, unidentified, unheard of, and unknown in America—the European right. By the right, I do not mean a political group tagged with the archaic labels of the past. If liberalism implies a responsiveness to new ideas, then the civil servants and military leaders who are developing the Schuman plan and the European army without regard for labels are far better liberals than the band that is gathered around Aneurin Bevan to buttress the relics of irrationality and romanticism that cling to the British Labor Party. By the right, I mean simply the forces massed in Europe to perpetuate class division, low productivity and barren nationalism. They do not cover the walls with posters or hand out leaflets in the streets. Instead they control legislatures and set the policies of governments.

In the secret battle against these groups we have done badly. We have been hesitant, fearful, half-hearted. We have been restricted by the uncreative alliance of American and European industrialists, the outworn doctrine of nonintervention, and the foolish illusion that we must not criticize capitalism in Europe because capitalism is our own way of life. In these ways we have

been disarmed in the secret battle. We have barely begun to recognize the necessity for battle. Yet as long as reaction dominates in Europe and resists all efforts to create a better life for Europeans the Communists will be strong.

The Reconstruction Finance Corporation Investigation

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 5, 1951

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a number of editorials from Indiana newspapers commenting on the investigation of the Reconstruction Finance Corporation.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

[From the South Bend (Ind.) Tribune of August 22, 1951]

TRUMAN'S "BABY"

Shakespeare's "he doth protest too much" comes to mind as Senator J. WILLIAM FULBRIGHT, Arkansas Democrat, speaking for the Senate RFC investigating committee majority, and Senator ERNEST W. McFARLAND, Arizona Democrat, majority leader in the Senate, denounce the committee minority report. The authors of the latter, Senators HOMER E. CAPEHART, of Indiana, and JOHN W. BRICKER, of Ohio, have merely amplified the committee majority charge of last February that "an influence ring with White House connections" was involved in RFC irregularities. In the final report the majority reiterates that charge in slightly different phraseology.

In their report, described by Chairman FULBRIGHT as "scurrilous," Senators CAPEHART and BRICKER refuse to draw a sharp distinction between the White House and President Truman himself. Mr. Truman, it must be remembered, tried to nullify the RFC investigation from the very beginning. His patronage dispenser, Donald S. Dawson, has not been discharged or even obliquely rebuked by Mr. Truman although the Dawson involvement in the RFC mess is a matter of official record. Senators CAPEHART and BRICKER also refuse to collaborate in President Truman's rather airy dismissal of the charge that William S. Boyle, Jr., now the Democrats' National Chairman, was a member of the influence ring.

Those two Republican Senators actually have not emphasized anything in the RFC mess that could not have been emphasized, in equal detail, with full propriety by the Senate investigating committee majority. As has been remarked the majority cannot be fairly accused of perpetrating an outright whitewash but it was overly polite in its refusal to go into more detail where White House connections were concerned. The RFC scandal is definitely President Truman's "baby." Democrats denunciations of Senators CAPEHART and BRICKER cannot obliterate that fact.

[From the Indianapolis (Ind.) Star of August 21, 1951]

BUT YOU SAID, MR. FULBRIGHT—

Democratic Senator FULBRIGHT charges that the minority report on the RFC scandal prepared by GOP Senators CAPEHART and BRICKER is partisan and scurrilous. How-

ever, it is clear from Mr. FULBRIGHT's own comments that he does not dispute the facts presented by CAPEHART and BRICKER. He only objects to the strong language attacking the Truman administration for corruption and stating that morality in government has declined to the lowest ebb in the Nation's history.

The facts that Senators CAPEHART and BRICKER presented in their sharply worded report are fully supported by the Democratic majority report and previous reports already on the record. They reveal nothing new, nothing that Senator FULBRIGHT can claim has not happened.

It is strange that Senator FULBRIGHT, of all people, should attack Senators CAPEHART and BRICKER for denouncing immorality and corruption in the administration. Last March 28 Mr. FULBRIGHT made a resounding speech on the Senate floor that was fully as strong in its denunciation of the scandals exposed by his committee. Said Senator FULBRIGHT, "What seems to be new about these scandals is the moral blindness or callousness which allows those in responsible positions to accept the practices which the facts reveal."

What happened to Mr. FULBRIGHT's righteous indignation? When Senators CAPEHART and BRICKER say much the same thing as he said about the influence peddlers and the White House mink coat episode he says they are partisan and that what they charge is scurrilous. Has the nearness of election caused the Democratic Senator temporarily to succumb to the moral blindness or callousness which allows those in responsible positions to accept the practices which the facts reveal?

Senator FULBRIGHT was roundly applauded throughout the Nation when he attacked the low state of morals in the Truman administration. And he was quite right when he said, "Democracy . . . is more likely to be destroyed by the perversion of or abandonment of its true moral principles than by armed attack from Russia." But when Republicans say the same thing he calls them partisan. How come?

[From the Richmond (Ind.) Palladium-Item of August 23, 1951]

INFLUENCE DOMINATES RFC

Both Democrats and Republicans agree that politics had a part in loan grants by the Reconstruction Finance Corporation (RFC).

The Democratic members of the committee which probed operation of the RFC did not like the language used by the Republican minority. But in substance they, too, condemned the manner in which politicians had used the RFC.

So the big difference actually is one of tone rather than of guilt.

Republican Senators CAPEHART, of Indiana, and BRICKER, of Ohio, traced the racket to the doorstep of President Truman. They saw in it the effects of his early political schooling under the wing of the crooked Pendergast machine of Kansas City.

Democratic National Chairman William Boyle was linked with Truman as having been a party to transferring corrupt Pendergast politics to a national level.

Senator FULBRIGHT, Democratic chairman of the subcommittee which investigated, regretted the partisan nature of the Republican minority, but he did not dispute the fact that the RFC had become a tool of administration politicians.

President Truman, early in the investigation, had termed as asinine the original charges that the RFC was influenced by political figures with White House connections.

But the Fulbright committee said in its report that its original charges had been proved by their inquiry.

The Democratic majority report declared that the committee had proved charges the RFC fell prey to a political influence ring "with White House contacts."

That is only the soft way of saying that the President had permitted members of his official family to influence the granting of loans. It is the nice way of admitting that the RFC had been used for political purposes by those who rub elbows with the President in and out of the White House.

It is splitting hairs to condemn the Republican minority report because it calls a spade a spade.

Crookedness is still reprehensible by any name. The fact that the RFC has been an instrument of political influence under Truman's administration is confirmed. That, alone, indicts Mr. Truman, and he cannot attribute it to "red herrings."

[From the Bedford (Ind.) Times-Mail of August 24, 1951]

BUT WHY AN RFC?

Republican Senators BRICKER and CAPEHART, reporting as minority members of Senator FULBRIGHT's subcommittee which investigated the Reconstruction Finance Corporation, called a spade a spade, and said that President Truman and Democratic National Chairman Boyle have "transferred Pendergast politics to the highest level." No, no, said FULBRIGHT in the majority report. Such a statement is "scurrilous." Put it this way, said FULBRIGHT: RFC fell prey to "an influence ring with White House contacts."

So that's the way the majority report will read, instead of being specific about Pendergastism and Kansas City ward politics played on a national stage.

The wording of the report is actually unimportant. What is important is the fact that the committee investigation "fully sustained" charges that it was accepted practice for those who wanted to borrow from RFC to get Democratic politicians to let them in on the ground floor—and that those politicians had White House contacts.

These charges of influence were, earlier, called asinine by Mr. Truman. They now are buttressed by testimony and evidence. RFC made some sound loans. But mixed in with the good were many which would not have been made if there had not been White House contacts. And the taxpayers hold the bag on loans which go sour.

RFC is now presumably in good hands, under Stuart Symington's direction. Symington's "goldfish bowl" methods have cut down RFC lending appreciably. The very publicity surrounding a loan has scared off those with dubious pleas; and the political side entrance has been barred by Symington, who is making an excellent record.

The falling-off of RFC business indicates that Symington may be working himself out of a job. If good risks are properly referred to private lenders, if bad risks are refused; if political influence can no longer sway RFC decisions, there is no real reason why RFC should exist. True, RFC has made some disaster loans and some military loans; but such loans should be handled by agencies specifically limited to lending for disaster relief and military purposes.

We have proved in practice that a Government lending organization like RFC affords a continual temptation to use the people's money and credit for political purposes. The best that RFC can now prove, under model management, is that it wasn't necessary for RFC to be misused. But why go on with RFC to prove that point, when it has not been satisfactorily explained why there is an RFC at all in times of ample credit for any who have a venture worth selling?

[From the Indianapolis (Ind.) Star of August 17, 1951]

NO MORE WHITEWASHES

The Democratic majority in the RFC investigating subcommittee has decided to soft pedal charges of influence peddling and favoritism against members of the Truman

administration. Another whitewash seems to be in the works. The majority also seems to be getting ready to attempt to suppress a minority report containing these charges prepared by Senators CAPEHART and BRICKER.

If the committee majority tries to refuse approval of this minority report the Senators should release its contents to the press anyway.

The Fulbright committee has only scratched the surface of corruption and political favoritism in the RFC. The disclosures already out, however, make it clear that the RFC has been an evil influence, has been used to further the political fortunes of the party in power and has even approved some loans that have all the earmarks of fraud.

Both ex-President Hoover, who set up the RFC, and Jesse Jones, who administered it for so long under Roosevelt, have demanded that the RFC be abolished for good. No matter how often it is cleaned up the very nature of this agency makes inevitable that its tremendous powers will be used to punish administration enemies and aid administration friends. Its original purpose, to combat depression, has long since been fulfilled.

The RFC is also an engine of inflation. It makes to businesses loans that the Government itself will not permit banks to make. The administration insists that banks cut back their loans to private business to combat inflation. But the RFC goes merrily on inflating the currency by making loans the banks will not or cannot make.

The RFC should be abolished. If the Senate has a chance to see the minority report of Senators CAPEHART and BRICKER its Members will know how far the agency has gone toward becoming a political weapon and how evil its past activities have been. The people want no more whitewashes of corruption from their Congressmen. The RFC scandal should get a thorough and complete airing.

[From the Richmond (Ind.) Palladium-Item of August 19, 1951]

WANT RFC REPORT SOFTENED

The Democratic majority on the committee probing the Reconstruction Finance Corporation (RFC) is critical of the pending minority report.

Republican members have a report ready which is too harsh for the thin-skinned Fair Dealers of the Truman administration.

Senator HOMER E. CAPEHART, of Indiana, and Senator JOHN W. BRICKER, of Ohio, wrote most of the minority criticism.

But whatever may be the results of the attempt of the Democrats to tone down the minority report, Senator CAPEHART says he is going to release it Monday.

The Reconstruction Finance Corporation has become an instrument of political privilege. Evidence of the past year has shown how millions of dollars have gone to concerns that enjoyed official influence.

Even Senator FULBRIGHT, Democratic chairman of the subcommittee making the probe, was named among others as having sought favor.

The mess into which the RFC got itself brought about a revamping of the direction, with a five-man Board being replaced by a single head, named by President Truman.

Hundreds of millions of dollars have been thrown around by the RFC as a form of political sugar for those who knew their way around Washington.

It has become an agency for huge grants which in many cases would not be considered for a moment by any soundly operated private banking institution.

When the RFC was set up under President Herbert Hoover it was designed to help finance the worthy enterprises which needed working capital. It should have been liquidated after serving its purpose.

The New York Times, often champion of the Truman administration, states the case well editorially when it says:

"Are we to go on forever trying to run down charges against every individual who takes advantage of the morally insidious dual character of the RFC to use the institution as an instrument for financial or political aggrandizement, as the case might be?"

"Or are we to do the intelligent thing and rid ourselves once and for all of the corrupting influence of this agency, which was erected 20 years ago to deal with a temporary emergency and has perpetuated itself as a potential paradise for political shysters and chiseling businessmen?"

[From the Marion (Ind.) Chronicle of August 21, 1951]

IT'S NOT WHAT YOU SAY—

It is not what you say but how you say it that counts in Washington today. Senators CAPEHART and BRICKER filed a sharply worded minority report on the Senate's RFC investigation. The report charged President Truman and William M. Boyle, Jr., Democratic national chairman, "have transferred Pendergast politics to the national level."

Senator FULBRIGHT, committee chairman, asserted the minority report was politically motivated but he wrote, and other Democrats on the investigating group joined, in a majority report which itself renewed charges made by the committee last February that the big Government lending agency had fallen prey to "an influence ring with White House contacts." The new report from the Democrats, adopted by the full Banking Committee and sent along to the Senate, said those charges were fully substantiated in a new series of public hearings held after Mr. Truman had called the preliminary report asinine.

The minority report has been substantiated by the conviction of several of the Missouri gang in court. Others have been involved in the reports of influence peddling but have not been convicted. The public needs little additional evidence, however, on this score.

The Democrat national chairman was the latest to be involved in the RFC scandals. A St. Louis newspaper charged, and submitted proof when he attempted to deny, that he had received fees from a printing firm which succeeded in obtaining an RFC loan. The loan was not granted until after Boyle had been retained. Mr. Truman asserted, however, he would stand by his longtime friend and national chairman, because he was honest. When one irate Marion citizen heard what the President had said, he declared that none of the Missouri gang has the slightest idea of what honesty is.

It is a sad state of affairs when an administration sinks so low in public esteem that the average citizen questions the honesty of the highest officials. The cheating scandal at West Point was simply the latest in a series of shocking developments within and without the Government. There has been corruption, graft, bribery, cheating, and dubious practices in former administrations. But rarely, if ever, have they been on so wide a scale as in very recent times.

The Capehart-Bricker report may serve to awaken the public to what is happening in the Nation's Capital. To date, there is a tendency to regard graft and sharp practices in and out of Government as inevitable and of relatively small importance. It is a dangerous feeling.

[From the South Bend (Ind.) Tribune of August 21, 1951]

RFC REPORTS

The final report of the Senate investigating committee majority does not mod-

erate the RFC procedures criticism made in a preliminary report last February. The gist of it, in the majority members' words, is that the RFC was used by an influence ring with White House contacts. On behalf of the committee majority, however, Chairman J. WILLIAM FULBRIGHT, Arkansas Democrat, denounces as scurrilous the Republican minority report in which President Truman and National Chairman William M. Boyle, Jr., are described as graduates of one of the most corrupt political machines in the history of any State.

The committee majority effort to minimize the Truman-Boyle political background while admitting existence of an influence ring with White House contacts is essentially incongruous. The minority report authors Senators HOMER E. CAPEHART, of Indiana, and JOHN W. BRICKER, of Ohio, have really gone to the root of the matter. President Truman tried to sneer the Senate RFC investigation out of existence. When he was unable to do that he failed to speak and act in a manner indicative of regret that the RFC had been misused by an influence ring with White House contacts. The majority report is not, strictly speaking, a whitewash but the minority report is more realistic.

[From the Evansville (Ind.) Courier of August 21, 1951]

THEY SAY THE SAME THINGS

Senator McFARLAND, Democratic Senate leader, says the RFC minority report issued by Senators CAPEHART and BRICKER is "political poppycock" and filled with "demagogic political inference and innuendo."

It seems to be all a matter of language.

The majority report, written by Senator FULBRIGHT who pushed the investigation against Mr. Truman's wishes, said:

"It became accepted practice in many instances for loan applicants to seek introduction to the Directors of the RFC, or to some of them, through officials of the Democratic National Committee."

"It became apparent that the [RFC] Board of Directors, as then constituted, tacitly acknowledged its responsiveness to external influence."

This is pretty tangible support, it seems to us, for the Capehart-Bricker statement that some Democratic leaders have moved "Pendergast politics to the national level."

Isn't that about as good a definition of this kind of business as you can get?

[From the Goshen (Ind.) News-Democrat of August 23, 1951]

WHAT OTHERS SAY

BUT YOU SAID, MR. FULBRIGHT—

(The Indianapolis Star)

Democratic Senator FULBRIGHT charges that the minority report on the RFC scandal prepared by GOP Senators CAPEHART and BRICKER is partisan and scurrilous. However, it is clear from Mr. FULBRIGHT's own comments that he does not dispute the facts presented by Senators CAPEHART and BRICKER. He only objects to the strong language attacking the Truman administration for corruption and stating that "morality in government has declined to the lowest ebb in the Nation's history."

The facts that Senators CAPEHART and BRICKER presented in their sharply worded report are fully supported by the Democratic majority report and previous reports already on the record. They reveal nothing new, nothing that Senator FULBRIGHT can claim has not happened.

It is strange that Senator FULBRIGHT, of all people, should attack Senators CAPEHART and BRICKER for denouncing immorality and corruption in the administration. Last March 28, Mr. FULBRIGHT made a resounding speech on the Senate floor that was fully

as strong in its denunciation of the scandals exposed by his committee. Said Senator FULBRIGHT: "What seem to be new about these scandals is the moral blindness or callousness which allows those in responsible positions to accept the practice which the facts reveal."

What happened to Mr. FULBRIGHT's righteous indignation? When Senators CAPEHART and BRICKER say much the same thing as he said about the influence peddlers and the White House mink coat episode he says they are partisan and that what they charge is scurrilous. Has the nearness of election caused the Democratic Senator temporarily to succumb to "the moral blindness or callousness which allows those in responsible positions to accept the practices which the facts reveal?"

Senator FULBRIGHT was roundly applauded throughout the Nation when he attacked the low state of morals in the Truman administration. And he was quite right when he said, "Democracy . . . is more likely to be destroyed by the perversion of, or abandonment of, its true moral principles than by armed attack from Russia." But when Republicans say the same thing he calls them partisan. How come?

National Vegetable Week

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, September 5, 1951

Mr. O'CONOR. Mr. President, it was my pleasure to introduce the bill designating the week beginning with the first Sunday of August of each year as National Vegetable Week, because I was convinced that Nation-wide observance should be given to this worth-while cause.

In this connection I should like to bring to the attention of the Senate an editorial which appeared in the Packer, the national fresh fruit and vegetable industry newspaper, on the success of National Vegetable Week, which was observed this year August 5-11, and I ask unanimous consent that this editorial be printed in the RECORD as part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATIONAL VEGETABLE WEEK

It strikes us that National Vegetable Week (observed this year August 5-11), the big promotion of the Vegetable Growers Association of America, is definitely coming of age.

This year's event was in the big-time class beyond a doubt—28 governors proclaimed the August 5-11 period officially as National Vegetable Week in their States, and trade press, daily press, radio, TV, and the various other mass media backed the event with wonderful and virtually priceless publicity for vegetables—and nothing could be finer for all concerned because, who benefits from increased consumption of fresh vegetables? Everybody.

And we say everybody advisedly. That includes all segments of the industry—the producer first, then on through the distributive factors. And finally, the consumer, for what better food than fresh vegetables—and fruits—in the daily diet. Here are all the required vitamins, and in a form that ap-

peals to all the senses—health-giving foods with taste appeal and eye appeal. Dream products for the high-powered promotion man.

We congratulate the enterprise of the Vegetable Growers Association of America—and their astute and wide-awake publicity director, Max Chambers, on a job well done. The Packer is pleased that it could have a part in such a universally worth-while cause, and we promise VGA our full and complete cooperation in making next year's National Vegetable Week truly bigger and better than ever. Let's have the other 20 governors on the bandwagon in 1952, and the President of the United States as well.

As we said above, the Packer is proud to have had a part in the success of the big week for vegetables, and, if we may be pardoned for doing so, we are quoting below excerpt from a letter of thanks received from VGA's Max Chambers.

"I know all vegetable growers throughout the Nation will appreciate the full recognition you gave National Vegetable Week on the front page of the August 4 Packer.

"VGAA is growing just as is National Vegetable Week and the queen program. Much of our progress is due to the splendid support we have received from our friends and papers, especially the Packer and related interests. Would you please convey to your editor our sincere appreciation."

"Tis done, Max, for all the world to see. And we thank you.

Attacks on Public Schools

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 5, 1951

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news article from the New York Times dated August 25, 1951, dealing with attacks on public schools and appeals to bias. This article tells of a number of tax exempt organizations which have sprung up in various localities, carrying on scurrilous attacks against teachers in public schools in many parts of the country. The article indicates that these baseless attacks are being made by local tax savings and superpatriotic groups supported by wealthy reactionaries and powerful national organizations. It warns the country that public education is under a barrage of attacks expressed in irrational appeals to prejudice, undermining the stability of our American school system.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AFL TEACHERS ASK EDUCATION DEFENSE—VITUPERATIVE ATTACKS ON PUBLIC SCHOOLS AND APPEALS TO BIAS ARE CHARGED BY UNION—MEMBERS URGED TO FIGHT—CONVENTION, IN CLOSING SESSION, ALSO SEEKS EXTRA PAY FOR EXTRACURRICULAR DUTIES

(By Murray Ilson)

GRAND RAPIDS, MICH., August 24.—Warning that public education was under a barrage of vituperative attack expressed in irrational appeals to prejudice, the American Federation of Teachers, AFL, called upon its entire membership tonight to fight for the defense of the Nation's schools.

The federation's action came in the closing session of its thirty-fourth annual convention and was based on a unanimously adopted report of its committee on national educational trends and policies. The report said that federation members welcomed all genuinely constructive criticism of the public schools and that no group of citizens was more aware of present educational deficiencies or of the need for continual improvement. Referring to the campaign against the schools, however, the committee said:

"The stated purpose of these attacks is to reduce the funds spent on education in a period of rapidly rising school population and of increased needs of youth, and to destroy the very processes by which youth learns how to accept his moral and civic responsibilities.

"Special interests demand that tests and curriculum be distorted to their advantage. Guidance, counseling, and the development of wholesome relationships in the classroom are denounced and penal discipline based on submission, not on creative participation, is demanded. The right of teachers and administrators to the normal use of their privileges as participating citizens is denied and individual teachers are publicly attacked without chance for answer or defense."

THREE GROUPS NAMED

The report declared that the attacks were being made by local tax savings and superpatriotic groups that were stimulated and supported by powerful national organizations. It said that federation members should be made aware of the local activities of such groups as the Friends of Public Education, the National Council for American Education, and the American Education Association, whose misleading names entrap the unwary.

Also by unanimous action, the delegates adopted a resolution declaring that if extra-curricular school activities could not be incorporated into the regular school program, teachers taking part in them should be compensated for the extra time and work. The resolution was based on a report dealing with the recent stoppage of voluntary after-school activities by New York City's public-school teachers in their campaign to win higher salaries.

The report said that "in no other occupation is a worker employed to perform exacting and highly technical duties of one sort and later forced to render, on his own time, service often unrelated to the job he is supposed to do."

It went on to say that "just as the carpenter or the plumber is compensated for all additional time spent on his job—and not at the expense of his fellow workers, either—so every teacher should be compensated fairly for his additional labor."

SAYS TAKE-HOME PAY DROPPED

A report of the federation's standing committee on taxation said that, although revenues for public education had continued to increase last year, the rise was nullified by soaring costs.

The committee put the Nation-wide average of teachers' salaries at \$3,080, compared with \$1,580 in 1938-39. In terms of purchasing power in 1938-39, however, the current average is worth \$1,657, it was said. The committee added: "Taking into account the considerable increase in the rates and amounts of taxation at the local, State, and Federal levels that has taken place since 1938-39, it is obvious that teachers' take-home pay is actually less in 1950-51 than it was in 1938-39."

At least 520,000 additional classrooms will be needed during the next 10 years to provide necessary replacements and new facilities for children now in school and for prospective pupils in all grades, the committee

reported. It observed that these new facilities would require an investment of about \$14,000,000,000 and that this would involve "average annual expenditures of considerably more than three times what we are now spending for school-building purposes."

Alabama's Forests

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. ELLIOTT. Mr. Speaker, the forests of Alabama are one of her greatest natural resources. More than one-half of the total land area of Alabama is in forests.

Alabama forests contributed more than their share to the Nation's needs for forest products during World War II. They likewise contributed heavily to the need for housing and industrial building in the postwar period.

Now, again, as our country finds itself in a great national emergency, when the war drums of Korea beat in our ears, and we, from day to day, do not know when we will be called upon to fight a bigger war to preserve our national freedom, Alabama's forests are again being called upon to furnish the sinews of war.

These unprecedented demands on our forests, which are indicated by the fact that more than 9,000,000,000 board feet of lumber were cut in Alabama during the 5-year period 1944 to 1948, inclusive, imposed a drain on our timber resources greatly in excess of replacements by natural growth.

PROSPERITY OF SEVENTH CONGRESSIONAL DISTRICT OF ALABAMA DEPENDENT ON ITS FOREST RESOURCES

The prosperity of Alabama and, to even a much greater degree, the prosperity of its Seventh Congressional District, which I have the honor to represent in the Congress, is dependent on its forests.

The forests of the Seventh Congressional District of Alabama—Blount, Cullman, Fayette, Franklin, Lamar, Marion, Pickens, Walker, and Winston Counties—furnish a major source of employment and income for our people. That pillar of our well-being must be preserved. Wise planning and prudent efforts to restore and improve this base of our wealth are called for.

Happily we are so situated geographically, our mild climate and heavy rainfall are such, that our timber grows rapidly. We have thousands of acres of vacant land, not needed, or too poor and eroded, for the growth of annual farm crops. Our forest resources can be restored. They must be restored.

ALABAMA HAS THREE NATIONAL FORESTS

As a part of its total forest resources, Alabama is fortunate to have three great national forests. They are:

First. The William B. Bankhead National Forest, situated in Winston, Franklin, and Lawrence Counties in

Northern Alabama. Within the boundaries of this forest are 560,604 acres—876 square miles. Eighty percent of this forest area—448,841 acres or 701 square miles—is in the Seventh Congressional District of Alabama, in Winston and Franklin Counties. The Government actually owns 178,184 of these forest acres—278 square miles—88,921 acres—139 square miles—of which lie in Winston and Franklin Counties in the Seventh Congressional District of Alabama.

Second. The Talladega National Forest in central Alabama.

Third. The Conecuh National Forest in the southern or flatwoods section of Alabama.

ADMINISTRATION AND SUPERVISION OF ALABAMA'S NATIONAL FORESTS

These national forests are under the jurisdiction of the United States Forest Service, presently headed by the Honorable Lyle F. Watts, Washington, D. C., as Chief. The United States Forest Service divides its operations into 10 regions. Region 8 is made up of 11 Southern States, of which Alabama is one. Mr. Charles A. Connaughton, with headquarters in Atlanta, Ga., is the regional forester for region 8.

The three Alabama national forests have a forest supervisor, Mr. C. F. Burnham, who has offices in Montgomery, Ala.

A district forest ranger is in charge of the William B. Bankhead National Forest, with headquarters at Haleyville, Ala. The Conecuh National Forest also has a district forest ranger in charge, and the Talladega National Forest, because of its larger size, is divided into three ranger districts.

PURPOSE OF UNITED STATES FOREST SERVICE

The purpose of the United States Forest Service is to develop and demonstrate the best methods of managing forest lands. On these national forests owners and managers of timberlands can oftentimes find the answers to the problems which confront them in growing a crop of trees.

RECREATIONAL VALUE OF FORESTS

The national forests have another value which cannot be measured in dollars and cents. I refer to their facilities for hunting, fishing, swimming, hiking, and other types of healthful outdoor recreation. These facilities have been developed for public use. They belong to all the people.

THE FUTURE OF FORESTRY

There are great undeveloped possibilities in the field of making a more valuable use of our forests. Less than one-half of the total tree is converted into lumber. The other half is usually waste. We do not know how to use it. This opens up a wonderful field for scientific research for new methods of using that part of the tree that we now throw away. Think what it would mean to Alabama if we discovered profitable ways to use that part of the tree that we now throw away.

A few years from now our scientists may lead us to make motor fuels, food, clothing, and explosives from the odds and ends of the sawmilling process. We

already know that a ton of dry sawdust or chips, when carried through the proper chemical processes, will yield 1,000 pounds, or half its weight, in wood sugar, and another 500 pounds of a brown powder known as lignin residue. Before and during World War II German scientists carried their experiments in the use of wood waste to what were for them very practical results.

LET US PUT OUR VACANT LAND TO WORK

In most sections of this country we take our forests for granted. Their depletion, however, in recent years brings us face to face with the fact that if we are going to continue to enjoy their benefits we must do something about it.

We can at least do these things:

First. Plant seedlings to replace the trees cut and otherwise destroyed in the lumbering process.

Second. Apply the latest principles of conservation, fire, and insect control, worked out by our State departments of conservation and by the United States Forest Service.

Third. Plant our vacant lands to forests and accomplish the practical purpose of growing an income on land not now producing, and at the same time saving our topsoil together with the life-sustaining minerals it contains for the generations that will come after us.

Planting trees is perhaps the cheapest and most effective soil conservation we can do on lands that are unused, and whose fertility has been impaired by erosion.

Will Controls Be Permanent?

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. BENDER. Mr. Speaker, our Director of Defense Mobilization is a man who has always fought regimentation in industry. He is, in fact, one of the Nation's biggest businessmen. In his role as head of our defense set-up he has often been called upon to explain his advocacy of controls, and his answer is invariable. He says, "Controls are necessary now, because we are in an emergency."

But the disquieting fact is that there is every evidence from the administration that it regards this emergency as a continuous process. Almost daily some official spokesman predicts that the era of tension may last for a generation. Some say that this is another One Hundred Years' War. All of which means that to this group of planners of the Nation's economy the need for controlling production, prices, wages, and through tax devices, profits and investments as well, will probably go on for an unforeseeable future. This is what some of us fear—the possibility that we are witnessing the end of the free-enterprise system—without the approval of Defense Mobilizer Wilson at all.

Salaries of Postal Workers

EXTENSION OF REMARKS
OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. MILLER of California. Mr. Speaker, it was my privilege to file with the House of Representatives the report of the Post Office and Civil Service Committee on H. R. 244, a bill to increase the salaries of postal workers. The bill, H. R. 244, was introduced by me on January 3, 1951, the day the Eighty-second session of the Congress convened.

As recommended for passage by the committee the bill differs from that originally proposed. The bill does not completely bridge the ever widening gap between the salaries of postal workers and the ever rising cost of living. It goes a long way in this, however, and is the best bill we can get at this time.

A brief analysis of it follows:

Salary increase: (a) Grants to 500,000 postal employees salary increases of \$400 for all such employees paid on an annual basis, except fourth-class postmasters who will receive a 20-percent increase. Hourly employees will receive a 20-cent-an-hour increase.

Raises entrance salary: (b) Eliminates the first three grades for all employees and rennumbers the remaining grades in sequence beginning with No. 1. This increases the entrance salary by \$300. When combined with the provisions of (a) above, it raises the entrance salary for clerks, carriers, and motor-vehicle employees from an annual rate of \$2,670—\$1.31½ per hour—the present rate, to an annual rate of \$3,370—\$1.66½ per hour. Rural carriers presently receive permanent appointments and are appointed in grade 3. Their entrance salary will be increased by one grade.

Grade increases:

(c) Grants two grade increases to those employees who have entered the postal service since July 1, 1945, and have not received any grade increase by operation of law counting increases under this bill. Grants one grade increase to those employees who have received only one such grade increase. Employees advanced in grade under this section will still retain their time in grade toward their next promotion.

Other provisions:

(d) Provides that increases under this act shall not be counted as equivalent increases in compensation within the meaning of the Classification Act of 1949, so that employees who might be transferred to the Classification Act, such as transfer of buildings to GSA, will not be denied within-grade increases when due.

(e) Is retroactive to July 1, 1951, but shall not apply in the case of employees who have been separated from the rolls on the date of enactment, with the exception of those who are in the Armed Forces or who have retired since July 1, 1951.

Salaries of Government employees, including postal workers, have continu-

ously lagged behind the cost of living as determined by the Bureau of Labor Statistics in the Department of Labor.

The tendency of the Congress has been to let the cost of living run away from Federal salaries, then to adjust them to meet the minimum difference. This policy has always been repugnant to me. It means that we require our employees to progressively work for less and less.

This unhealthful policy and the current tendency of carping criticism of those who work for Government has had a serious effect upon the esprit and morale of the workers. It has driven good men and women out of Government and made it increasingly hard to attract the same type to Government.

In discussing the salary situation with representatives of the Postal Central Council of Alameda County, Calif., some time ago, I suggested that they gather certain data in support of their plea for an increase in salary. This very efficient group has undertaken this study and I submit their findings for the consideration of my colleagues. Here is the report:

COST OF LIVING POLL COMPILED AUGUST 13, 1951

To secure a true and accurate picture of what the postal employee in this area is confronted in his fight to maintain his family and home in a decent manner under present conditions and to secure conclusive evidence that the postal employee is in need of an immediate increase in salary, a questionnaire with many important questions was submitted to all the postal employees in the East Bay area. Over a thousand replies were returned.

We believe that the results of this poll depicts an honest and fair cross-sectional check on this grave problem. We also feel that these results or averages would be similar in any California community.

Category	Percentage	Average
Single.....	10.0	-----
Married.....	90.0	-----
Number of dependents.....	-----	3.1
Years of service.....	-----	6½
Average take-home pay (monthly).....	-----	\$244.90
Wife working.....	25.3	-----
Doing outside work.....	24.6	-----
Other income.....	12.0	-----
Used cash reserves.....	70.0	-----
Cashed savings bonds.....	70.0	-----
Had to borrow money.....	70.0	-----
Debts increased in past year.....	83.0	-----
Average cost per month for essentials ¹	-----	\$54.00
Rent.....	-----	19.62
Utilities.....	-----	121.50
Food.....	-----	6.00
Entertainment.....	-----	16.32
Insurance.....	-----	14.40
Clothing.....	-----	11.20
Medical expense.....	-----	13.65
Transportation.....	-----	-----

¹ It is obvious that the figures used in this category are not sufficient to maintain a family of 4 properly. They indicate only what the employee has to spend, not what is needed to maintain his family.

Question: Will you be forced to resign from the postal service if an increase in salary is not forthcoming?

Answer: Forty-three percent of those answering this question said "Yes."

Study and analyze these figures. The average man has 6½ years of service and has 3.1 dependents. His average take-home pay of \$244.90 is insufficient to support his family in our proud American tradition with round steak at over \$1 a pound and milk 22 cents a quart.

Over 61 percent must seek outside work, get a job for his wife, or supplement his income from other sources. These are American postal workers in this the year of our Lord 1951 of whom we speak.

The \$64 question is the one that directly affects the efficiency of the postal service and the great investment we have in it.

Here is the answer: Forty-three percent of the employees interviewed said that they would be forced to leave the postal service and seek work elsewhere if a salary increase was not forthcoming.

What will this turn-over of manpower mean in cold cash? What will it mean in lower morale among those who remain? What will it mean in service to the public? One thing it does mean, and there is no gainsaying the fact, that Uncle Sam will pay more for less efficient service. The continuous introduction of new untrained men, the great majority of which look upon the postal service as stopgap employment, can be directly translated in higher costs.

We in Congress have a high moral responsibility toward those who work for Government. They are entitled to more than just a subsistence wage; they are entitled to the same standard of living that others enjoy.

Study the figures set forth above. They are typical of those found in all of our larger communities.

Government workers should be secure with a fair living wage and only when we accept this thesis can we hope to build back loyalty and pride in the job they do. These are requisites in any smooth-working, efficient organization.

Dividends From Federal Farm Mortgage Corporation

EXTENSION OF REMARKS
OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, September 5, 1951

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Farm Credit Agency Earns One Hundredth Million," published in the Washington Star of August 25, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARM CREDIT AGENCY EARNS ONE HUNDREDTH MILLION

A Federal Government activity that has been a consistent money maker for 16 years paid another million into the United States Treasury today.

When a check for \$1,000,000 was handed to Treasury Secretary Snyder by Gov. I. W. Duggan, of the Farm Credit Administration, it raised to \$100,000,000 the sum the Federal Farm Mortgage Corporation, a subsidiary, has earned in dividends since it was set up in 1934 to meet a need for farm-mortgage credit.

The Government earlier had been repaid for its original \$200,000,000 investment in

the project, which was created as a depression aid.

The money was turned over to the Treasury at the White House, and President Truman issued a statement saying that the FCA has always been self-supporting and will probably be able to pay off \$30,000,000 more in dividends.

Thought Control: United States Style

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 5, 1951

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Thought Control: United States Style," by Dr. Alonzo F. Myers, chairman of the department of higher education at New York University. This article deals with certain organizations and pressure groups seeking to force boards of education to establish little gestapos within each school system, the members of which must spy and report on their colleagues. They adopt the principle of indictment by association and cause much confusion among the teaching profession in our American schools.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THOUGHT CONTROL: UNITED STATES STYLE

(By Alonzo F. Myers)

Today, fear of Russia, or of communism, dominates our national life. "Stop Russia" comes very close to being our national policy. Negative policies and negative actions possess greater vitality and popular appeal today than do positive actions and policies. It almost appears to be true today that nobody is interested in strengthening or preserving our traditional democratic liberties. It is feared that to preserve them will leave us vulnerable to further Communist infiltration.

We are engaged in a futile effort to defend democracy by abandoning its principles. This attitude indicates a shocking lack of faith in the efficacy and strength of democratic processes. It suggests a fear that if the American people were given all the facts and the right of free choice they might choose Communist totalitarianism in preference to our great democratic liberties and traditions.

We used to ridicule "thought control" in Japan. Yet the Japanese were only doing then what we are doing now, trying to protect their system against dangerous thoughts infiltrating into the minds of their people. The Japanese had an understandable reason for doing this, just as have the dictators in the Kremlin today. They did not dare permit their people to become informed about our great democratic freedoms, our living standards, and our system of private enterprise. We in America today, with no such justification, can think of no better way of protecting our system than that of aping the totalitarian practices of our adversaries.

We first castigated Hitlerian Germany, and then Communist Russia, for the ridiculous practice of condemnation by association. We ridicule Russia for not permitting her people to associate freely with American citizens in Russia. Just how safe is it for

non-Communists to associate with Communists in America today? We are up to our ears in this business of thought control and condemnation by association here in America right now.

We condemn the Russians for their refusal to permit free cultural interchange with the democracies. If there is anything certain, it is that an essential condition for a secure and lasting peace must be the resumption of the free flow of goods, services, people, and ideas throughout the world. Suppose the Russians were to take us up on that proposition. Specifically, suppose the Russians should suggest the exchange of teachers between their colleges and ours, and suppose they should suggest that 100,000 Russian youth should come to America to study in our colleges and universities in exchange with 100,000 of our students who would study in Russian colleges and universities.

Nothing that could be done at this time would hold greater promise for long-time peaceful relations between the United States and Russia. Is that not what we want? But what would we do if the Russians were to make that offer? How safe would it be for an American boy or girl to become one of the participants in such a program? How safe would it be for an American teacher to participate? Would we permit the Russian professor, who unquestionably would be a Communist, to teach in one of our State universities? Are we, in fact, any more ready to lift the iron curtain than are the Russians?

It is in this setting that academic freedom is making its feeble struggle for survival in our American schools and colleges. Its prospects do not appear to be too good. Teachers are being discharged because they hold, or are alleged to hold, unpopular political and economic views. A number of the States appear to be engaged in competition with each other to see which can devise the most obnoxious and repressive kind of special loyalty oath for teachers.

II

Perhaps the most vicious and dangerous legislation ever enacted against the teaching profession is the Feinberg law, introduced in the New York Legislature about 2 years ago by a legislative lieutenant of Governor Dewey and rushed through to passage in the closing days of the legislative session without an opportunity for the educational forces of the State to appear in opposition to it.

It forces boards of education to establish little gestapos within each school system, the members of which must spy and report on their colleagues. It frankly adopts the principle of indictment by association, one of the most vicious of all totalitarian practices.

The Texas Legislature at the last session enacted legislation requiring that staff members in all State-supported colleges and universities take a particularly objectionable kind of special loyalty oath in which they must swear that they are not Communists, never have been Communists, and are not and have not been members of any organization that has been declared to be subversive. It is freely predicted in Texas that presently all public-school teachers also will be required to take this loyalty oath.

Such legislation accomplishes no good purpose. It undermines confidence in public education and in teachers. It singles out teaching as a profession and says in effect that the teaching profession is subversive and is not to be trusted. It uncovers no Communists. It intimidates and terrorizes honest teachers. It causes independent and courageous young people to avoid teaching as a career. Perhaps these are the things such legislation aims to do.

Businessmen and other responsible community leaders are being propagandized to the effect that there is a great Red menace

in the schools. Students and student organizations are being subjected to inquisitorial investigation designed to suppress liberal thought and to enforce unquestioning conformity. Increasingly, colleges are building up permanent dossiers on students which go far beyond official needs. Students are afraid to join respectable organizations such as international relations clubs for fear that at a later date the organization may be labeled as subversive. In school and college classrooms today there are just too many things we don't dare talk about and too many questions that it is inappropriate for our students to ask.

III

In Springfield, Mo., I sat beside a banker at a luncheon. There were many teachers there. I observed that the banker was well acquainted with many of them; he appeared to like them, and they him. Toward the end of the luncheon, after the banker and I had discussed a good many subjects, he said to me "I am troubled about something that I am sure you know much more about than I do. Just how much communism is there among members of the teaching profession?"

I thought about that question for awhile before making a reply. I realized that it was a serious question asked by an honest man. Finally I said: "I think communism is just about as common among teachers as embezzlement is among bankers."

The banker thought about that for a bit and said: "I suppose you're right." He admitted that he was being propagandized with printed material to the effect that there is a great Communist menace in the schools.

I asked the banker about teachers that both he and I knew who were employed in the local public schools and in the State college located in Springfield. In each case he assured me of what I already knew, that these teachers could by no stretch of the imagination be considered Reds. He said he was not worried about the Springfield teachers, he knew they were all right. It was teachers elsewhere in the United States that he was worried about. I assured him that the teachers he knew were no different in their economic, political, and social views from the vast majority of teachers all over this country.

I told him that there are some Communists in the teaching profession, but only a small number, probably a smaller number than in almost any other profession or occupation. On the basis of his experience with Springfield teachers, he agreed that this must almost surely be true. We then discussed embezzlement among bankers, how rare it is, how unfair it would be to the banking profession, and how destructive of public confidence it would be if there were to be a persistent propaganda campaign designed to convince the public that bankers are embezzlers.

Our teaching profession has permitted itself to be placed on the defensive in this matter of defending itself against unjust attack, primarily because most of us are so timid, and because our profession is not strongly enough organized to combat such attacks. There is evidence that even a reasonable amount of intestinal fortitude coupled with effective organization could help greatly.

A few years ago a professional speech maker, apparently in order to compensate for a declining popularity, began making the most violent attacks against the teaching profession in his speeches. In an address before a convention of hardware dealers in Toledo, Ohio, he was particularly bitter in his attack, referring to teachers as Reds and loafers.

Dr. Bowsher, superintendent of schools in Toledo, initiated correspondence with the speaker, asking for his evidence. Unable to get any satisfactory reply, Dr. Bowsher re-

ferred the matter to the National Education Association's Commission for the Defense of Democracy Through Education, of which I was then chairman.

Dr. Donald DuShane, then executive secretary of the Commission, tried to make an appointment with the lecturer. The lecturer replied that he was too busy with his lectures to see Dr. DuShane. Repeated efforts brought the same response. Finally we decided on another approach to the problem. In an address before the Oklahoma Education Association I reported on the gentleman's activities, recounted Dr. DuShane's successful efforts to secure a conference with him, and said that I thought the lecturer was too busy with his speech making, and that something should be done about it.

Teacher members on the committee of a civic lecture series in Tulsa persuaded the committee to inform the lecturer's booking agency that the lecturer would not be re-engaged in Tulsa until he was at least willing to confer with official representatives of the organized teaching profession regarding his reckless attacks upon teachers.

Presently, Arthur Garfield Hays, the civil liberties lawyer, informed me that he had been retained by the lecturer and the speakers' bureau to bring suit against me and against the Commission. Mr. Hays was good enough to invite me to give him our side of the controversy. I did, with the result that he evidently advised his clients against bringing suit. Soon we had a communication from the lecturer stating that he was willing to discontinue his attacks on teachers and asking that we inform the teaching profession that he was discontinuing these attacks. This we were happy to do.

The teaching profession must give positive indication of a determination to preserve academic freedom. Further, we must recognize that the teaching profession alone cannot preserve academic freedom. There can be no greater degree of academic freedom than public opinion will support. We must recognize that academic freedom cannot stand alone, and that destruction of civil liberties inevitably means destruction of academic freedom. Academic freedom is merely freedom of speech operating in the classroom. It is part of the same piece as freedom of the press, freedom of radio, freedom in the pulpit. We must make common cause with those who would preserve civil liberty in all its applications, and we must invite them to make common cause with us.

IV

Fundamentally, it is the task of the teaching profession to make it clear to the American people that safety lies, not in repression and suppression, but in enlightenment and education. I am confident that this can be done. But to do it we must approach the task with clean hands. We must be clear as to what it is we stand for, and we must have nothing up our sleeves. We must not demand the right to indoctrinate for communism, nor for any other ism, under the cloak of academic freedom.

We, the organized teaching profession, must be prepared to expose and discredit all such attempts. Unless the teaching profession has the courage and the forthrightness to expose and discredit those few subversive members of our profession who would pervert academic freedom in order to propagandize for totalitarianism, the task will be handled by those who would destroy all liberalism and all academic freedom.

On one particular issue directly affecting academic freedom I am convinced that we must take a positive stand. There is a growing tendency to dismiss teachers on the allegation that they are members of subversive groups or that they associate with persons who are members of subversive groups. We should insist that no person should be fired for what he thinks or is

alleged to think. If he is to be dismissed it should be for what he does or fails to do. Admittedly it is more difficult to prove overt acts than it is to accumulate evidence in support of dangerous thoughts. But the threats to civil liberties and to academic freedom in the policy of indictment by association and of dismissing people because of what they believe or are alleged to believe, are so great that we must take a strong stand at that point.

There is a growing tendency to restrict the freedom of students as well as that of teachers. We seem to be moving in the direction of requiring young men and women to pass a loyalty examination as one of the requirements for admission to college. Unless we have completely lost faith in the strength and validity of our great democratic principles and traditions, we need not fear the effects of having a few young people on our campuses who have decided that communism looks more attractive to them than does our American brand of democracy and private enterprise. I would say that such young people particularly need the benefits of a good college education.

Recently, in New York City, the superintendent of schools suspended eight public-school teachers, charging them with being Communists. Certain student organizations in one of the municipal colleges requested permission to have one of these suspended teachers present his side of the matter at a meeting on the campus. A faculty committee denied the request. The board of presidents of the four municipal colleges supported the faculty committee's action.

This is symptomatic of what is happening all over the country. We have become so jittery over the Communist menace that we are afraid to have our students listen to anybody who has not been tested for complete orthodoxy. We seem to have lost faith in the ability of American college students to think for themselves, to distinguish between true and false, and to detect a phony when they see and hear one in action.

V

I do not advocate hiring Communist teachers. I would not knowingly hire one. But neither would I become unduly alarmed over the presence of a Communist teacher on a college campus. I think if he behaved the way a Communist is supposed to behave he would be spotted as a propagandist and as an intellectually dishonest person by the students whom he sought to indoctrinate.

I have enough confidence in the great body of intellectually honest college teachers to have no fear that the lone Communist would capture the minds of the students in spite of their efforts. Any possible damage that a Communist teacher could do is small indeed as compared to the damage that already has been done by the witch hunters who have succeeded in intimidating and demoralizing college teachers and administrators to such an extent that, unless we get over our hysteria, perhaps it will be true that one Communist might be more effective than a hundred scared rabbits masquerading as teachers.

Back to College, United States Style

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. BENDER. Mr. Speaker, All over America, millions of youngsters are

going back to school. In larger numbers than anywhere else in the world, many of them are enrolling at the Nation's colleges. Poor or rich, there are few boys and girls in our country who cannot afford to attend a college somewhere. For those of special talent, opportunities virtually unlimited beckon encouragement.

This is no new phenomenon, but the freedom which the colleges display in these times of international tension merits more than passing notice. At Long Island University, for example, a course will consider the effects of the Russian Revolution on the people of Asia. Another will analyze the history of the Soviet power in Europe and present it in objective relationship to the rest of the world. Nowhere are there restraints upon what may be taught in this land—only in the Western World can this be said. The Communists who prate so loud and long of human freedom do not permit it to be discussed or studied.

When Joe Stalin can say of his country that it welcomes American professors to choose and discuss any topic of their own choosing, he will be able to talk to us as a champion of free honest education. Until then, he belongs with the bigots.

Before Congress Adjourns

EXTENSION OF REMARKS OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. GAMBLE. Under leave granted by the House, I present for insertion in the CONGRESSIONAL RECORD an editorial which appeared in the Daily Times, of Mamaroneck, N. Y., entitled "Before Congress Adjourns":

BEFORE CONGRESS ADJOURNS

If the Senate can catch up with the bills already passed by the House of Representatives, while Members of the latter take a 2-week vacation, and if Members of both Houses buckle down to the job instead of junketing around the world, there is a possibility Congress may adjourn around the first of October. In such event, they might not be called back into session before the regularly scheduled meeting time in January.

We have an idea the adjournment might be in the public interest. After all, the people can digest only so many new laws at a time. And since a large proportion of these laws affect the earnings of individuals, it might be wise to allow the sheep to graze quietly and fatten up before they are called up again at shearing time.

But before Congress can adjourn, there must be specific legislation passed. At the present time, for example, only 1 of 13 regular appropriation bills has been signed by President Truman and a large share of our Government is running on a series of stopgap appropriations.

The record shows that as of the start of this week the Eighty-second Congress has enacted into law only one-third the legislation passed by the Eightieth, which Mr. Truman characterized in his 1948 campaign as the "Do-nothing Congress."

In the list of "must" legislation faced by Congress, it is significant that a large proportion of the bill pledged in both 1948 and 1950 by the administration are missing. The Truman pledge included enactment of the Fair Deal civil-rights bills, repeal of the Taft-Hartley labor reform law, a compulsory health insurance program, and the Brannan farm subsidies. None of these can be found on the "must" list of today.

Also missing is the proposal by President Truman at the time of signing for revision of the control laws, statutes on which he found himself deserted even by his own Senate leader as well as many others of his own party. Neither is universal military training on the calendar of requisite legislation. The framework for UMT has been legislated but necessary laws for implementation are still lacking.

The "big three" on the "must" list, which may be about all of the major legislation which can be anticipated before October adjournment, are: (1) appropriation bills; (2) foreign aid, and (3) the 1951 tax bill.

Even with prompt passage of these three groups of bills, the Eighty-second's record will still be far behind that of the Eightieth. It was on his exhortation of the latter that Mr. Truman rode back into the White House. It may be he plans a similar campaign next year on the record of the Eighty-second.

But how is he going to get around the fact that while the Eightieth was Republican, the Eighty-second is strongly Democratic?

California State Admission Anniversary, September 8, 1951

EXTENSION OF REMARKS OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. DOYLE. Mr. Speaker, under unanimous consent and authority heretofore granted me, I am pleased to call to the attention of yourself and my other distinguished colleagues the fact that California's one hundred and first birthday will be fittingly observed in the city of Oakland, Calif., on September 8, 1951. When this memorable occasion, known as Admission Day, comes around in my native State, it is historical that the appropriate observation of California's birthday is more particularly noted and emphasized and observed by the Native Sons and Daughters of the Golden West. These two organizations, devoted to high ideals, including the preservation of the history of California, have rendered great and enduring service to the preservation of historical landmarks and events in this far western outpost of our great Nation.

I have always been proud that my own parents were very early settlers in the Golden State and that I, therefore, am a native son thereof.

Native sons and native daughters of California from every corner of this Golden State will participate in the one hundred and first birthday observation in Oakland. Other streamline events are also planned to make California's 1951 State celebration a notable one.

A word about the metropolitan city of Oakland in the early days is related in

the magazine, *Grizzly Bear*, and I am pleased to relate it here from that magazine as I am sure it will be of certain interest to all who read it.

The relative and strategic importance of the State of California in these latter days is indicated by the fact that up to July 1, 1951, more than 13 percent of all the prime contracts awarded the prime contractors of our Nation in connection with the current program of national defense and security have been awarded to producers, manufacturers, and contractors in appropriate plants in the industrial manufacturing world within the border of the State of California.

The quotations from the History of California by the noted western historian, H. H. Bancroft, follow:

H. H. Bancroft, *History of California*, volume VI, page 475, states: "In 1850-53 the greater portion of the Peralta grant, from Point Isabel to San Leandro Bay, was bought by different speculators, yet not until the most desirable section of Oakland had been occupied by squatters, who were mainly instrumental in giving a start to the place and procuring town and city charters. The rush of the squatters, which in 1850 set in for Oakland, was headed by the lawyers A. J. Moon and Horace W. Carpenter, and E. Adams."

A. J. Moon laid out the town of Oakland, so named from the many oak trees which grew in the open plain bordering the bay. The city was incorporated in 1852.

Carpenter was elected the first mayor of the city. The original site of the city was located on one side of the San Antonio slough while on the opposite side were two small settlements. Clinton, among whose first settlers was Moses Chase, then there was the small settlement of San Antonio. These places constituted the town of Brooklyn in 1856. In 1870 Brooklyn was incorporated with the city of Oakland.

Bancroft, volume VI, page 476 "In early times large numbers of wild cattle roamed here, which led to the establishment of tanneries and regular slaughter yards for the San Francisco market. An occasional steamboat service was soon replaced by a ferry, the *Hector*, followed by the *E. Corning*, of the Contra Costa Ferry Co. The first public school was organized in 1853, at the corner of Market and Seventh Streets, about the same time that H. Durant opened the Oakland College School preparatory to the College of California, which was incorporated in 1855 and organized in 1860, to merge before the end of the decade into the University of California." Oakland continued to grow; its water front was developing, which gave impetus to its steady growth.

The first train over the newly completed railroad across the country arrived in Oakland on November 8, 1869.

By 1870 states Bancroft's *History of California*, volume VI, page 477 "By 1870 the population had risen to 10,500, strong enough to begin the struggle in earnest for the county seat, which was won in 1874, by 1880 the census showed more than 34,500 inhabitants, including Brooklyn, with all its appurtenances of a well regulated city, and with certain harbor advantages, procured by deepening the outlet of San Antonio Creek through the mud flats.

"Brooklyn which in 1872 was annexed to Oakland, as its east suburb, was a landing place in 1849 for lumber cutters in the redwoods 5 miles inward. The dwelling of the Peralta brothers stood nearby, and a Frenchman kept a dairy about Clinton Point for a time."

According to Historic Spots in California Counties of the Coast Range by Mildred Brooke Hoover: "Lake Merritt, containing 160

acres of water, is unique in that it is a wild-fowl sanctuary in the midst of a populous city. It was named in honor of Samuel B. Merritt, a graduate from the medical department of Bowdoin College, who died in 1890. Dr. Merritt served as councilman and was chosen mayor in 1868. He furthered many projects favorable to the development of the young city."

Many well-known personages in early California days lived in Oakland, among them being Ina Coolbrith, later California poet laureate, and Oakland's first librarian; Bret Harte, Joaquin Miller, and Jack London.

The port of Oakland developed from its early days into a waterfront covering many miles. The first airplane flight from the United States to the Hawaiian Islands started from the Oakland airport June 28, 1927, when Lts. Lester J. Maitland and Albert F. Hagenberger, took off, this was one of Oakland's historic events.

Oakland, which is named for the sturdy California oak tree, grew from the days of the gold rush to be one of the largest cities in California.

Anything To Win

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. GAMBLE. Mr. Speaker, I requested and received permission of the House to insert in the CONGRESSIONAL RECORD an editorial which appeared in the *Daily Times*, published in Mamaroneck, N. Y., entitled "Anything To Win."

I wish also to insert an interview which I gave to newspapers in Westchester County at the time of the disclosure of the tragic situation at West Point.

[From the Mamaroneck (N. Y.) *Daily Times*]

ANYTHING TO WIN

The revelations subsequent to the West Point announcement that 90 cadets would be dismissed for cheating on examinations now make it evident that Representative RALPH A. GAMBLE, of Larchmont, put his finger squarely on the spot where the disease germinated—the recruitment of football stars by the Academy's athletic committee.

Earlier this week Congressman GAMBLE, a one-time Princeton track star himself, who has officiated at West Point athletic meets, pointed to the policy which began at the Point before World War II when Army's football team first started to put together long victory strings.

Under this procedure, the athletic committee, through alumni and scouts, located promising high-school material or even stars in colleges.

Requests were then made of Congressmen in such districts by the West Point Academic Board that the youths in question be appointed to the Academy.

Recent revelations, including frank admissions from Army Coach Earl Blaik, show that such applicants were carefully tutored in order to pass entrance examinations. Once entered, they were assigned to the football training table, and it was there, it now appears, the cheating formula was evolved. Gradually, this spread to roommates and close friends of members of the football squad.

That is a capsule history of the developments over recent years. The genesis of the scandal was obviously in the desire to win

regardless of what methods were used. And this spirit was not confined wholly to the cadets. When Gen. Robert L. Eichelberger reorganized Army football with the hiring of Coach Blaik he flatly stated:

"It is important in these times that people should think of West Point as a place that can win."

We have no argument with that philosophy provided General Eichelberger inserts the word "honorably." For it is much better to lose honestly than to win dishonestly. That is what we are now finding out, but only after shame and disgrace have been brought upon 90 cadets and their families.

There is the tragedy of it all—we have learned that the policy of anything to win can have disastrous effects on the spirit of our youths and can prove saddening to a nation which is based upon the principle of fair play.

GAMBLE SEES ATHLETIC TAIN IN WEST POINT CADET OUSTER

WHITE PLAINS, N. Y.—West Point's present difficulties stemming from dismissal of 90 cadets for cheating on examinations—in the opinion of Representative RALPH A. GAMBLE, of Larchmont—may be traceable to the World War II law by which Congress gave the academic board authority to fill vacancies in the Military Academy.

"In many cases, according to the grapevine," said Congressman GAMBLE today, "these vacancies have been filled with appointments of young men recommended to the board by the athletic committee at West Point. And many of these recommendations were of star athletes in high schools and colleges."

Representative GAMBLE, a former trackman at Princeton who has officiated in track and field meets in Madison Square Garden and at West Point, explained that the law was passed to keep the Military Academy at full personnel strength of 2,520 cadets. The law gave authority to the board to fill vacancies, including those where cadets had been dropped for failure to keep up with classes or for other reasons.

SOLONS NAME APPLICANTS

"Each Congressman has the privilege of naming one applicant each year to West Point," said Mr. GAMBLE. "They may be selected by competitive examination, as I do in my Westchester district, or by certification based on high-school credits or after the applicant's having spent 1 year in college."

"Each Congressman has the privilege of naming a principal and three alternates. Now, it may be that there is a vacancy at West Point. Some cadet has failed, or for some other reason has had to drop out. Accordingly, the academic board may go to some Congressman, point out that there is in his district an outstanding athlete recommended by the West Point Athletic Committee, and ask that the Congressman list this athlete as an alternate. Then the academic board can name him to the vacancy."

Address by Hon. Dennis Chavez, of New Mexico, to the People of Texas

EXTENSION OF REMARKS OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an address I delivered before the American GI Forum of Texas, at Austin, Tex., on August 25, last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My good friend and fellow American, Dr. Garcia, delegates to the GI Forum of Texas, and friends, viva Texas.

We shall start from there.

Texas of the glorious past and of the more glorious future. Texas, of Indian lore and life—first seized in 1538 by Cabeza de Vaca and actually discovered by Pineda in 1539. Texas originally settled in part by the Spaniards of the sixteenth century. Texas, later explored by that brave Frenchman, La Salle, some 100 years after the Spaniards first saw Texas. Incidentally, La Salle died in Texas and his remains are in Texas soil. Texas, the beneficiary of the philosophy of government of Benjamin Franklin, George Washington, John Adams, and Thomas Jefferson.

Texas, which through the fortunes of the god of nations had to take its part in trying to obtain the freedom and the liberties which the followers and descendants of the peoples of the Thirteen Colonies made. Texas, who through the efforts of Moses Austin, Sam Houston, Stephen Austin, and Lorenzo de Zavala, and many others tried to work with the free peoples of Mexico for life, liberty, and pursuit of happiness, but because of the greed of the dictators of the moment in the Republic of Mexico, Texans could not succeed, and had to take up arms and fight for life, liberty, and the pursuit of happiness. [Alamo]

Texas—the empire—large enough to be a country within a country, with its wonderful progress in a few short years, its beautiful cities, its farms, its forests, its mines, its ranches. But more than all—a State of grand people who believe in life, liberty, and the pursuit of happiness.

Texas, populated by Americans and when I say Americans, I mean just that.

As you boys know, it was this idea of fighting for life, liberty, and the pursuit of happiness which gave birth in the original 13 colonies to the Declaration of Independence. The Declaration of Independence—to the moment the greatest expression of freedom ever voiced. As a result of that Declaration of Independence, the forefathers of America built a government based upon a constitution, or the law of the land.

The Constitution of the United States defines an American citizen. There is not one word in the Constitution which says that in order to be an American citizen and be the beneficiary of this Constitution, you have to be of any particular race, of any particular religion, of any one chain of ancestry or background.

Now, Dr. Garcia and your associates have done a grand job, you and the people who have helped you in forming this organization, whose purposes are so noble, deserve the gratitude not only of the people whom you are trying to help, but also that of all liberal and progressive people who know that the cause of democracy and freedom can only be served by according rights, social, and economic advancement among all people, without regard to race, color, national origin or religion.

When I see this assemblage, I think back to my youth, when penance, low wages, poverty, illiteracy, disease, and political bossism prevailed in New Mexico. We have not quite overcome our problems there but the enthusiasm which you and this young group of GI's are showing here today brings to mind how a few of us felt some 40 years ago in New Mexico when we set out to change what existed there then, and which to a great extent we have succeeded in doing.

What Dr. Garcia, the delegates to this convention, our good friends, Gus Garcia in San Antonio, Bill Maldonado of the American Federation of Labor, George Garza, Judge Canales, R. A. Cortez, and countless others have done has been the work of heroes. Texas and the Spanish-speaking people your great State and our country owe you and the countless others a debt of gratitude. In your youth, enthusiasm, vision, and guts, I see a future for our people in Texas.

May I pause for a moment to pay special compliment to Dr. George Sanchez of the University of Texas. He has for years, championed the poor and the downtrodden. A tower of strength, unmindful of his own welfare, Dr. Sanchez has led the way patiently and tirelessly for many years. I am happy and proud to call him a friend, and to be a coworker with him in the cause.

Texas is blessed with natural resources exceeded by no other State. It is blessed with a further resource in its tremendous manpower potential, but if 20 percent of the manpower is poor, illiterate, diseased, badly housed, burdened with crime and delinquency, how can the remaining 80 percent ever hope to progress and not be concerned?

I need not dwell on the problems which grow out of the poverty of our people. I think I need only say that the prejudices and discriminations which arise out of these conditions are not the exclusive properties of our Spanish-speaking people. They are attributes of the poor white tenants in the southern regions of the United States. They are certainly characteristic of the Negroes of our country. The slums of New York, Baltimore, Philadelphia and Chicago have their same problems.

The problem is one which primarily, you yourselves should face, but it affects all segments of the population as well. The cotton grower, the citrus fruit grower, the industrialists and other business concerns in Texas may hold some citizens in disdain, but crime and disease respect no boundary. Polio, diphtheria, tuberculosis, and whooping cough spawned out of poverty do not hesitate to cross from the poor barrios in San Antonio to the homes of the wealthy and the more secure. The problems must be faced by all.

I fail to see how I can counsel you. I am sure that you know what you have to do, and I am equally confident that you are going to do it. Your presence here is evidence of that. These problems are a challenge to the Anglos of Texas, because in the long run they probably will suffer the most. As long as a part of the people remain in a perpetual state of poverty Texas can never attain the position which she deserves because of the vastness of its territory and resources until all the people are raised from their present conditions of poverty and enjoy the benefits of their American heritage.

I should be not advising but complimenting you. You have done a great job in bringing the problems to light and in correcting them, in many instances.

I suggest that you encourage organizations such as yours, the American GI Forum of Texas, the Lulac, the Texas Pro-Human Relations Committee, the Pan-American Progressive Association who are developing in Texas something which our people have never had before and that is a community spirit. You have to help yourselves and after that you can seek and without question obtain the help of others, but it is your primary responsibility. I am happy to note you have assumed that responsibility.

With community service organizations in localities in which the Spanish-speaking population exists, you can obtain for the relatives of the six Texas heroes of Mexican descent who won the Congressional Medal of Honor in the Second World War, the rights, privileges and opportunities which, as loyal and patriotic American citizens, they deserve.

Many Texans of Spanish or Mexican descent are suffering the agonies of the damned in Korea, fighting for freedom, democracy and against Communist aggression, yet, the most powerful argument of communism is food and future for the hungry and social justice for all men. A person who is hungry and whose children are starving, ill-fed, ill-clothed, ill-housed, must necessarily find the arguments of communism appealing on account of their hunger and poverty. I am of the opinion we can never beat communism with guns alone. Guns plus ideas will do the work. Thank goodness the ideals and ideas of democracy as envisioned by the founders of this country are sound and they must be applied all over the United States.

Basic rights have been denied too long. The cause has been the greed and ignorance and prejudice of ignorant people. Now is the time to fight back. The very safety of our country and the security and peace of American families is at stake.

I know that you good people are not here for the purpose of showing resentment, nor for the purpose of indicating anger or arrogance or for getting even for so-called bad treatment at the hands of individuals carrying on as good citizens. The law will prevail, Texas will do what is right by its citizens and its people. I know of individuals who have a right to resent, and I do not blame you, but do not blame the whole State and millions of fine people for the work perpetrated by some individuals who through ignorance behave not like an American but rather like an uncivilized person.

Great progress has been made in Texas in the matter of human relations, in the matter of good will and understanding. I congratulate the people of Texas. Through the efforts of your governors, through the efforts of your local officials, of your businessmen, civic groups, but mainly through the efforts of the University of Texas, Texas is putting democracy into effect.

Carry on. Do your duty. Participate as citizens in all the endeavors of good citizenship. Express your opinion—not rancor or malice, always remember that while citizenship carries benefits, and that as citizens you are beneficiaries of all the laws and good that comes from those laws. Remember also that citizenship carries with it an obligation and duty. Obey those laws.

Here in Texas there are probably 1,500,000 Americans of either Spanish or Mexican ancestry. I want you to listen to the words of wisdom expressed many years ago—some 100 years ago by a German immigrant who went to the State of Wisconsin. His name was Carl Schurz. He became a great American, a patriot, a hero, as a United States Senator from the State of Wisconsin, addressing German immigrants in that State he told them, in effect: "You as Germans did not come to this country to put into effect the ideas of the Old World or your former home, but you came to this country to contribute in brains, in mental attitudes, physical work, what you could to carry out the philosophy of government of this country."

Proceeding from there, remember that you, as descendants of former Spanish or former Mexican ancestors, did not come to Texas to impose upon the people of this State what you may think is good in any other country. You are here to contribute with your spirit, with your help, with your brains, with your labor to carry on as American citizens and other help.

Before closing, a word of appreciation for Archbishop Lucey and Bishop Gariga, of Corpus Christi, and the heads of other religious bodies in Texas, who rendered noble service in seeking to ameliorate the condition of millions of people that deserve their never-ending thanks. When the question of Bra-

ceros came before the Congress these holy men, and among them Archbishop Byrnes, of Santa Fe, came to the defense of the native Spanish-American population which has been displaced as a result of the illegal and discriminatory introduction of wage-depressing Mexican nationals into our agricultural regions.

My quarrel was not with the poor Mexican who wanted to help himself and his family, but with the greedy and selfish flaunters of the law who would like our Spanish-speaking American or Mexican-American people to remain in bondage and slavery as long as they could make a larger profit than those who paid the farm worker fair salaries and afforded them decent American standards of living.

We must insist on the protection of decent wage standards, working conditions; if greed and avarice prevail against justice and human decency, then it is time that you should fight for your rights just as your forefathers and you fought to protect and preserve the very institutions that guarantee us those rights.

For political advancement I would advise you to take full advantage of your right of franchise. Support those candidates who will help you irrespective of names, religion, ancestry—support them if they are good people. Ask for no special privileges, ask for no special rights—ask only that you be accorded that which you are entitled to, the rights, privileges, opportunities of American citizens.

Urge your people to register, to find the necessary money to pay your poll tax, and be in position to express an opinion on the primary or election date.

I have been in the Congress of the United States for 20 years. I have sought to champion and uphold every liberal cause which came before the Congress and the Senate during that time. I hope to continue serving my State and my people, not only in New Mexico but throughout the country in every way I can. I am willing to fight, I am willing to help, but I know that the future rests elsewhere. As far as you are concerned, the future is in your hands and in the State of Texas, you have to carry the ball—you will have to go ahead. What remaining years the Lord grants me will be dedicated to the same cause, because I am with you, heart and soul in this struggle, for life, liberty, and the pursuit of happiness.

Again, viva Tejas!

God bless you all, and good night

The Japanese Treaty and Point 4

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject The Japanese Treaty and Point 4, delivered by me on September 1, 1951, and broadcast over the facilities of the National Broadcasting Co.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE JAPANESE TREATY AND POINT 4

In 4 days delegates from the four corners of the world will meet with representatives

of the Japanese people for the purpose of signing a treaty of peace.

The treaty draft is the result of months of study and negotiations. There has been giving and taking by all parties. It is a good treaty in most respects, and it certainly gives lie to the scurrilous charges of the Communists that our aims are imperialistic. It doesn't give the Japanese everything they ask for, but from all reports from Tokyo they are most anxious to sign. Unlike the Treaty of Versailles, this treaty can be described as no less than magnanimous, benevolent, and humanitarian.

The proposed treaty will assuredly be signed, despite delays and obstacles which the visit of the Soviet delegation headed by Gromyko presages. That is the one sour note in connection with the San Francisco conference. Russia has decided at the last minute to send a delegation headed by Gromyko, the icy-faced, hatchet man of the Kremlin, whose tirades and harangues so often delay and obstructed otherwise peaceful and harmonious sessions of the United Nations. We know what to expect from Mr. Gromyko.

Further, well-known Communist official newspapers, such as *Izvestia* and *Pravda*, have attacked the treaty on the ground that it is not acceptable to the Asiatics, that it makes an American colony out of Japan, and is a move to further American imperialism.

So we can expect Mr. Gromyko to show up at San Francisco with his usual paraphernalia of parliamentary tricks, lies, and rantings. He doesn't want a fair and just treaty. He wants to use the occasion of the conference as a sounding board to disseminate Communist propaganda throughout the world.

I suspect that he will use as bait the stalled Korean cease-fire negotiations as a means to introduce into the sessions of the conference the wholly irrelevant subjects of Formosa and the admission of Red China to the United Nations.

But there is one sure way of stopping Mr. Gromyko and his gang, and that is by beating him at his own game. Let Mr. Gromyko know at the conference that although we cherish peace, we are prepared physically and spiritually to uphold our rights and defend our way of life, and that neither threats nor aggression can intimidate us.

Let Mr. Gromyko and his master in the Kremlin be shown at the conference that America is truly the arsenal of freedom, that this Nation is arming to the teeth, that we have the guns, the ships, and the planes ready if they move against us.

Further, let Mr. Gromyko and his master in the Kremlin know that we not only can beat them with guns but we can beat them with ideas. Guns never decide issues. Ideas do.

It is with ideas that we must lick the Communists and at the San Francisco conference we must keep in mind the fact that communism flourishes best where there is ignorance, poverty, and unrest. We must acknowledge the fact that a large part of the world lives in such abject misery that the people can hardly be described as human. But these people are human, they have souls, and the individuality of the most miserable of the lot should and must be respected.

Communism has exploited the misery of these masses to further its global expansion. In order to counteract and defeat communism the free world must offer something better than communism.

I contend that we have something better. We have the know-how to teach them to help themselves. While helping themselves they can also enjoy that precious commodity known as freedom. Communism can never offer as much.

The signing of the treaty is most important. The Japanese people must join the family of free nations. But if we are to achieve the goal of world peace, that treaty must be strengthened by actions on our part to raise the standard of living of the unfortunate and backward peoples of the world. We are doing just this in our point 4 program. The program is not a vast and gigantic world WPA project. It is a program of humanitarianism and brotherly love by which our materials and our know-how are placed at the disposal of backward peoples, and through them they are being taught to help themselves, to improve their lot and thus make it possible for them to become the good neighbors we want them to be.

Our system, which Messrs. Stalin and Gromyko call imperialistic, is not only furnishing arms to the free world, but it is furnishing the material and technical knowledge needed to restore it to economic and political self-sufficiency.

We are in a life or death struggle with communism. It is ridiculous to hope that we can live in harmony with a nation whose government is based on godlessness, slavery, oppression, and aggression. The Communists have never deviated from their goal of world domination. Their prophets, Marx, Lenin, and Stalin, told the world what they intended to do and unless we act boldly, they are apt to reach their goal.

Since the end of World War II without firing a shot, Stalin has become the lord and master of more territory and more peoples than any conqueror in the history of the world—Poland, Bulgaria, Rumania, Hungary, Albania, and Czechoslovakia have been gobbed up, and their peoples willingly or not are behind the iron curtain and its terror.

Stalin's puppet Mao is master of China and another puppet, the President of North Korea, is responsible for the order to cross the thirty-eighth parallel more than a year ago and he is the cause of the misery and suffering that resulted, including our own 80,000 casualties.

It is time we told Mr. Stalin and his stooge, Gromyko, and the San Francisco Conference would be a good time to start, that we have adopted the rattlesnake slogan of South Carolina's State flag "Don't Tread on Me." Force is the only argument that Communists understand.

To the rest of the world and especially that part which lives in poverty and whose standard of living needs improvement, we extend the firm grasp of friendship and aid. We are doing this by the point 4 program and other forms of economic assistance. Point 4 agreements have been negotiated with 32 countries, including such Far Eastern Asiatic countries as India, Ceylon, Pakistan, and Indonesia.

Communism holds promises of food and a better life, but promises are not enough when the world is fully aware that by any standards the condition of the common man in Russia is that of the poorest man in any third rate country. The world also knows that the poor unfortunates behind the iron curtain fail to enjoy life's greatest treasure—freedom and respect for the individual.

It is significant that the Western Hemisphere, the inner citadel of freedom and democracy, is united in approving the signing of the Japanese Treaty. It is significant because here the point 4 program is working with tremendous success. Its guideposts have been the programs initiated 10 years ago by the Institute of Inter-American Affairs.

In this hemisphere 300,000,000 people are striving together to elevate their standard of living. Assistance comes from the strong but with complete cooperation from the weak. Thus the nations of the New World have improved their lot through the gener-

ous hand of Uncle Sam and these mutual assistance programs. We live in peace in the Western Hemisphere. There is no iron curtain, and we would like the rest of the world to enjoy similar blessings.

Every nation on the American Continent will sign the Japanese Treaty. This is not because we have a gun pointed at our heads or because we have troops on our territory. We are signing because we are good neighbors and we shall continue to be good neighbors.

The Japanese Treaty will be signed, but if it is to be a success, it must be implemented by mutual-defense pacts. The accord entered into by our Nation and the Philippines is an example of what must be done, but, still further, and more important, the treaty must be strengthened by spiritual and economic forces.

Our materials, our machine tools, and our technical know-how must be placed at the disposal of the unfortunate peoples of the East in order that they can help themselves to achieve a better way of life. The point 4 program must be augmented.

We will all enjoy the benefits of the peace that will derive from this. This is what I mean by beating the Communists at their own game. Beating them with ideas. We can and will beat them.

Thank you.

Rebuilding Strength in the Land

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD an address by Secretary of Agriculture Brannan entitled "Rebuilding Strength in the Land," delivered at the awards ceremony of Piedmont communities soil conservation contest, Spartanburg, S. C., Wednesday, September 5, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REBUILDING STRENGTH IN THE LAND

It is a privilege to have the opportunity of being here with you today. You are celebrating a most important event. You are making real progress in rebuilding strength in your land.

This occasion officially brings to a close 2½ years of intensified effort directed toward the betterment of your soil—the lifeblood of your communities.

It is most inspiring to see such a large number of farmers receiving prizes for accomplishments in soil conservation—prizes for both individual accomplishments and for group action. Nearly 1,500 farmers have participated from the six counties in the contest. That is a highly impressive number. I salute you each and every one for your interest and effort in getting better soil conservation on your farms.

Also, the 214 merchants, business firms, and industries who contributed prizes for this contest are to be congratulated. I understand that in total your prizes have a cash value of more than \$25,000. You most certainly have expressed your interest in soil conservation in a dramatic manner. Your contributions have provided a potent incentive for stimulating more soil and water

conservation in these farming communities. You have vividly demonstrated your understanding that productive soil is essential to general prosperity.

I also want to congratulate the supervisors of the five soil-conservation districts who sponsored this Piedmont communities soil-conservation contest. You have put into action the program for greater service being recommended by the National Association and State Associations of Soil-Conservation Districts. You have demonstrated that such programs are effective when a majority of the people get behind them.

I especially want to compliment Mr. J. A. Bridwell, chairman of the contest committee, for his part in this affair. He gave willingly and freely of his time and energy in the community interest to help make the contest such a big success. Your effort—and the efforts of those who helped you, Mr. Bridwell, have redemonstrated that local leadership plays a key role in getting more conservation practices applied to the land, as it does in any other worth while agricultural undertaking.

Today we are celebrating much more than the closing of this 2½-year contest. We are celebrating a new high point in the march of conservation progress. You have reached a new high in applying conservation farming to your land. Complete farm-soil and water-conservation programs are now in effect on about 750,000 acres of land operated by more than 6,000 farm families in these five districts.

Since your districts were organized, you have put more than 77,000 acres in soil-building grasses and legumes. You have started rotating crops on 27,000 acres. You have terraced nearly 20,000 acres. You are strip cropping 10,500 acres. You are farming 37,000 acres on the contour. You have planted trees on 4,500 acres. And, you are practicing better woodland management on a much larger area.

You have built farm ponds, waterways, and made plantings for wildlife. You have limed, fertilized, and planted cover crops. And you have applied many other soil-conserving practices.

You should be proud—and I am sure you are proud of your progress. But, I know you don't want it to stop with the closing of this contest. Never before has the need for conservation farming been so great—or so urgent. Now, more than ever, we need renewed strength in the land.

That's what I want to talk over with you today. First, I want to say a few words about why we need new strength in the land. Then, we'll talk about ways of getting it.

Free men are in grave danger. The threat is more serious than many want to admit. Millions of people in foreign lands have already lost their freedom. Millions more are threatened—including ourselves—because communist aggression is on the march. Our Nation has taken a firm stand to bring that aggression to a halt.

Our mobilization program has created a new and sudden demand for greatly increased quantities of agricultural commodities. Agriculture faces the immediate challenge of producing enough to supply the Nation's growing military forces with food and clothing, the growing defense industries with raw materials, and a rapidly growing civilian population with food, clothing, and shelter.

Farmers must produce enough to supply this demand, and enough more to carry at the same time a safe margin in strategic reserves. For example, we need to maintain a substantial reserve of cotton.

On top of all this agriculture must produce enough to back up the Nation's foreign policy by continuing to share our abundance to the fullest possible extent under sound arrangements with friendly countries in need of help.

The need for greater production is immediate. And it will be enduring.

Military mobilization, in itself, stimulates the rate of consumption of agricultural commodities. Also, special military needs must be met. The Nation's huge industrial machine is leaning more and more on agriculture as a source of raw materials. As industry further mobilizes and expands, that demand will increase.

Our population is increasing at the most rapid rate in this century. The latest census report shows that we already number more than 154,000,000. We are growing at the rate of a little more than 2,000,000 persons a year, or about 6,000 every day. In another 10 years at this rate we will have 20,000,000 more mouths to feed and backs to clothe. By 1975 our numbers may swell to 200,000,000.

There can be no question about it: the future requirements from agriculture will greatly exceed our current rate of production.

Already, American agriculture is producing at a record level. Farmers are maintaining in production just about every acre of the land now available to economic crop production.

The situation means that American agriculture cannot look to new land and expanded farm acreages to satisfy the Nation's growing needs for food and fiber. It means that, Nation over, farmers must concentrate largely on making existing acreages produce more abundantly—not only next year and the year after, but on a continuing basis so that the increased demand can be met 5 years from now, 10 years from now, 25 years from now, and so on through the years.

The problem is to increase production immediately and—while doing it—to build renewed strength in the land so as to be able to meet future demands. Failure to meet demands could threaten this Nation's ability to meet world responsibilities. This in turn could endanger our democratic way of life and bring about a drastic lowering in American standards of living.

To help prevent this is really what soil conservation is all about. That's why town folks have as much at stake as country folks in soil conservation. That's why we have national programs to aid with the adoption of conservation farming. That's why today we are celebrating the progress you are making with conservation farming in the five soil-conservation districts represented here.

I want to take a few moments to trace the history—the evolution—of the problem we face. It's a well-known story. But, we need to review it to bring our problem into focus.

The American pioneers were farmers. When they came to America in search of freedom, they found a new land of opportunity. They found their new land so productive that one man could grow more than enough for himself and his family.

Not all were needed to grow food. Some could be spared to make tools and provide services for the rest.

As more and more land was put to production, more and more people could be spared from the farms. Towns and cities sprang up across the country. Railroads were built. The fertile soils fed the growing industries. And, the country expanded.

In the Midwest, corn grew in abundance. In the Great Plains, wheat was supreme. Here in the South, cotton was king.

And the soils' capacity to produce was taken for granted. If a farm wore out, the family moved west. "Go west, young man," was the motto for progress.

Then, we ran out of new land. Still, the demand for agricultural products continued to rise. More farm products were needed to feed the blood stream of our fast-growing

Nation. So, agriculture concentrated more on exploiting the available soil resources.

During World War I we plowed the plains to meet the heavy demand for wheat. In the depression years that followed, economic pressures forced farmers to continue mining their soil to eke out a bare existence.

Erosion had set in on much land. On some fields water erosion had washed away much of the topsoil. Other fields were being depleted by wind erosion.

Dr. Hugh H. Bennett deserves the Nation's thanks for focusing public attention on the erosion problem. He recognized in the early 1900's what was happening to our soils. And, he told the Nation about it over and over again.

Finally, his warnings were heeded. By 1933 the Congress of the United States established the Soil Erosion Service, with Dr. Bennett in charge. It was then that the Nation's first organized effort in soil conservation was set into action.

I will say more about that action in a moment. Right now I want to go ahead with the evolution of our current soils problems.

World War II brought with it unprecedented demands on agriculture. Farmers were called on to produce enough to feed and clothe million-man armies and, at the same time, to food the working force and supply raw materials for enormously expanded industrial production.

To meet this new demand, agriculture was forced to further exploit our soil resources. We won the war, but in the process we drew heavily on the Nation's reserves of soil fertility.

When the fighting stopped, the demand on agriculture did not let up. Huge quantities of our agricultural commodities were needed to rebuild war-torn countries, and to maintain the peace.

By 1950 postwar demands on agriculture were becoming less pressing. But Red aggression was actively on the march. And our Nation took a firm stand to protect freedom.

Again, agriculture is confronted with a new high in demand. And all prospects for the future point toward continuing increases for an indefinite period.

I have taken considerable time in reviewing this history. And I have done it for a specific reason—to underscore the key part that soil fertility has played in the growth and development of our great Nation.

There is no doubt about it, strength in the land always has been the foundation for building strength in our Nation.

Also, it is true that over the years we have drained off, or lost through neglect, much of the original natural strength in our land. We have dissipated much of the inherent productivity of our soils. Consequently, some people have jumped to the conclusion that we have about reached our pinnacle in national strength—that our soil resources cannot long support the United States in a position of world leadership.

I cannot agree. I am more optimistic. Events such as the one we are celebrating here today are convincing cause for encouragement. You are moving forward in rebuilding strength in your land. Your progress, and similar progress in other parts of the country, demonstrate what can be done through conservation farming, along with the various other advancements in modern agricultural techniques.

During the last 18 years we have seen numerous significant advances in soil and water conservation. We've come a long way from where we were in 1933 when the original Soil Erosion Service was established.

In the middle 1930's dust from wind erosion in the Great Plains darkened the skies all the way to our eastern shores.

In 1935 the Congress promptly passed the first broad national Soil Conservation Act adopted by any country. The renamed Soil Conservation Service became a permanent agency in the Department of Agriculture. In 1936, the President, at the suggestion of a number of States to the Secretary of Agriculture, recommended the framework which made possible the establishment of local soil conservation districts, by vote of the landowners under State enabling laws. This program, now in operation in every State, Alaska, Hawaii, Puerto Rico and the Virgin Islands, makes available, at Government expense, the services of trained technicians to help farmers plan and put into effect complete soil conservation programs for their farms.

Complete farm plans have now been worked up for about 275,000,000 acres of land on approximately a million farms. You have made good use of these services here in the Piedmont in developing complete soil conservation programs for your farms.

In 1936 the Congress augmented its earlier action by establishing the agricultural conservation program. The objective here was to help farmers to finance the cost of applying soil conserving practices. Each year since 1936 a major portion of the Nation's farmers have received conservation assistance through the agricultural conservation program. This assistance has had an important impact on the ability of the land to produce.

You know the help that agricultural conservation program assistance has been to you. I'm sure you have also found that agricultural conservation program assistance was most effective after your farm was planned completely for soil and water conservation. Farmers generally find that maximum benefits can be obtained when the services from both programs are brought to bear simultaneously.

Of course, soil conservation has not been limited to governmental action programs. In 1937 the first farmer-organized and farmer-managed soil conservation district in the United States was established in Anson County, N. C. Since then, more than 2,360 soil conservation districts have been organized—an outstanding achievement from democracy in action. The districts include more than three-fourths of all of the land on farms in the United States. South Carolina is 100 percent covered with soil conservation districts and North Carolina's farm land is 95 percent covered.

Also, during recent years at the colleges and universities, at the State agricultural experiment stations, and in the research agencies of the United States Department of Agriculture, research scientists have given intensive study to our soil problems. They have continued to make important progress in determining causes of soil deterioration and developing methods for combating it.

They have found, for example, that some soils, although naturally infertile, can be made highly productive. Many fields once considered worn out can be made to yield abundantly. You are finding that out here in the Piedmont. Farmers elsewhere, with similar soil problems, are finding it out, too.

Soil research has also revealed that naturally fertile soils that have lost productivity through use and abuse often can be rejuvenated. Already, productivity is on the comeback on many farms where yields were falling off because of declining soil fertility.

As a result of these findings over the years there has gradually evolved a changing concept of soil conservation. No longer do we consider soil conservation as limited to controlling erosion. We now know that soil deterioration through cropping also may be extremely serious. For soils subject to erosion it is often necessary to check cropping

losses and increase fertility along with application of erosion control measures.

We have also come to understand that conservation farming can seldom be achieved by a single practice. Instead, a combination of practices is usually needed, a combination fitted to the specific soil characteristics and needs. The basic physical objective of soil-conservation activities by Department agencies is the use of each acre of agricultural land within its capabilities and the treatment of each acre of agricultural land in accordance with its needs for protection and improvement.

The modern concept of conservation farming has come to mean applying the necessary practices on a farm to increase production and to build up soil productivity, both at the same time. It means making soils yield abundantly year in and year out for an indefinite period. It means rebuilding strength in the land.

Many modern measures for soil conservation serve triple duty. They increase production. They lessen the effect of soil deterioration from cropping. And they reduce the erosion hazard. All at the same time.

Improved winter legumes, for example, fall into this category. First—they produce winter forage, which permits increased livestock production. And they act as a nitrogen factory gathering nitrogen from the air and depositing it into the soil. The added nitrogen helps to increase yields on crops following in a rotation.

Secondly, when plowed under, legumes add to soil organic matter, helping to offset the loss of organic matter from cropping.

Thirdly, while growing, legumes provide a cover to protect the soil against erosion and, when plowed under, continue to help the soil resist erosion.

Today, improved grasses and legumes are available for many areas. Here in the Piedmont, for example, you are growing Ladino clover, crimson clover, sericea, and kudzu, Kentucky fescue, and others. In the early years of conservation these crops were available to you in only limited amounts, if at all. The fertility needs and management practices for growing them successfully or extensively have been perfected only recently. Their development has given you new opportunities for rebuilding strength in your land.

I have mentioned improved legumes and grasses merely as an example of the modern conservation measures that farmers now have at hand. I could name many more. But, you know better than I about those that fit your farms best. You have been about the business of putting them to use. After all, that's why we are celebrating here today.

I sincerely hope that you will continue to increase your effort in applying conservation measures to your land, and that you will encourage your neighbors to do so. Now, more than ever, we need to concentrate on applying those practices that increase production and improve conservation both at the same time. Not only here in the Piedmont, but all over the country.

While agriculture has made much progress in soil conservation during the past 18 years, we still have not done enough. Gains from conservation have not completely offset losses from soil erosion and deterioration. On many farms the soils have been improved. But hardly enough to offset soil deterioration on other farms.

Reversing the general downward trend in soil productivity offers one of our greatest opportunities for expanding the capacity of American agriculture to produce. It offers tangible means for meeting the increasing demand for agricultural products currently,

and for continuing to meet those demands over the long pull.

Opportunities here in the South are at least as great as anywhere in the country. In fact, I believe the possibilities for agricultural advances have been, and still are, larger in the South than for the Nation as a whole.

Already you have brought about spectacular increases in per-acre crop yields. Your cotton yields have gone up substantially during the past decade. Grain yields are on the increase. Corn yields in the South generally have been increased 75 percent during the past 5 years. Your increases in pasture production have been phenomenal.

Increasing yields are making it possible for you to grow your row crops on the less erosive soils. Thus, you can devote more of your rolling lands to hay and pasture.

You are increasing farm mechanization.

You are diversifying your crops.

You are expanding livestock production.

Ten years ago there was a great deal of doubt in many minds as to whether the South could feed a profitable livestock industry. Feed crop yields were low, and there was a popular belief that the South had poor soils.

Now we know that although some of the soils of the South were low in plant nutrients to begin with, most of them are very responsive to fertilization, use of the right kind of crops, and other good management practices. They can be made highly productive. In fact, the productivity of soils in the South can be raised to, and maintained at, levels that compare favorably with the soils of other major agricultural areas. Many of you are demonstrating that for yourself on your own fields.

Climatic conditions that have made your soils what they are also offer unusual opportunities for increasing levels of productivity. So far you have made only a good beginning in cashing in on these opportunities.

Department of Agriculture scientists believe that progress in research with feed crops on a scale comparable with that now in effect for cotton and tobacco would probably make it possible for southern farmers to grow enough feed to support three times your present livestock numbers.

Is that goal too high to shoot at? I think not. But, it will take much doing to reach it. In fact, it will take much doing by farmers in all parts of the country to meet current and future demands for agricultural products.

American farmers generally face the job of bringing most of the land now in use to a high level of economic production on a sustained basis. The job is so big that it calls for full cooperation from everyone—farmers, businessmen, consumers, church and civic organizations, State institutions, and Federal agencies. Throughout the Nation we need the kind of cooperation that you have had here in the Piedmont in conducting your soil conservation contest.

We in the Department of Agriculture are doing everything we can to help. We are marshaling our forces to bring them into sharp focus on the production job. We are doing whatever we can wherever we can, to get widespread adoption of farming practices that will increase production as needed. We are continuing intensive research to develop improved practices.

Last winter we set in motion a reorganization of soil conservation and agricultural research activities to enable the Department to do its work more efficiently and economically. We are making progress toward the objective of a single county headquarters for the Department agencies directly serving farm people. We are trying

to give the Nation more and better soil conservation per tax dollar and at the same time make for a stronger and more successful defense mobilization.

In every State and county, agricultural mobilization committees have been organized to help farmers get the information and working tools they need. Production guides are being worked up for 1952 production. Guides for winter grain crops have already been announced.

We are insisting as forcefully as possible that adequate machinery, fertilizers, and pesticides—your tools of production—be kept available.

We are working to help farmers retain enough skilled manpower on farms.

And, we are working to provide reasonable price assurances to agriculture so that you can go ahead with the business of expanding production with some assurance that your markets will not come crashing down about you.

We are reviewing all of our agricultural programs to make sure that they are serving family farms as effectively as possible. I consider this review to be highly important, because the family farm is the very foundation of American agriculture. We want to be sure that the services we offer to help increase production and achieve conservation will also help to provide farm families with a high standard of living.

Those are the policies under which your Department of Agriculture is functioning.

In conclusion, I again want to congratulate all of you who have taken part in this five-district soil conservation contest. Your accomplishments are especially encouraging at this time when increased agricultural production can mean so much in the free world's struggle for peace and security.

It is wonderful to see what can be done by a resolute, determined free people, using the services of their democratic government, to rebuild strength in the land.

The True Dedication

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD an address by Secretary of Agriculture Brannan entitled "The True Dedication," delivered in Anderson, S. C., Tuesday, September 4, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE TRUE DEDICATION

(Address by Secretary of Agriculture Charles F. Brannan at dedication of county agricultural building in Anderson, S. C., Tuesday, September 4, 1951)

Any person who takes pleasure in the productivity of agriculture, anybody who likes good farms and modern living on family farms, would envy me the invitation you people have so kindly extended. I consider it not only a privilege but a genuine personal pleasure to have this occasion to visit Anderson County and your attractive city which is its county seat.

It is especially appropriate, it seems to me, that we are meeting to dedicate a building

which houses your center of agricultural service. I might better say that this building houses one of your centers of agricultural service, for in a very real sense your progressive merchants, your banks, your farmer cooperatives, your radio stations, and your newspaper are all centers of agricultural service. It is appropriate to dedicate such a building in Anderson County because, as you know, there are almost a quarter of a million acres of good cropland in this county, and for about every 10 of those acres there is a citizen of Anderson County living on a farm. In short, this is a county in which agriculture is tremendously important.

In getting acquainted with your county, I have been happy to see how productive your farms are and what a variety of things they produce: Beef, poultry, many kinds of vegetable, lumber and its products, lespedeza seed, cotton, tobacco, corn, and small grains, and many other things.

How highly you value this agriculture is indicated in the magnificent building we are here to dedicate. I can tell you that very few counties in the Nation have facilities as good as you have. We in the Department of Agriculture are much interested in county agricultural buildings, and while many counties are doing a good job in spite of less attractive, less modern, less desirable facilities, it is fair to say that you are to be congratulated in having the fine building you have erected here.

The Department of Agriculture is interested in county buildings because, as you know, we are constantly trying to make our service more efficient, more effective. We have, for one thing, been trying to bring all county agricultural services together throughout the Nation, as you have here. We wish they could be brought together in a single building in each county. With such varied histories as the different agricultural agencies have had, is it not surprising that in many places they have been scattered all over a county. In our efforts to bring them together, we have not tried to sit in judgment of that history. On the other hand, we believe that it should now become possible for farm people to go to one place in each county, to make one stop, park the family car or truck once, and be able to contact all the different agencies they need to. Not only that, but by so doing it should be possible for these various agencies all to be together in a spirit of teamwork, together in their use of such facilities as auditoriums, like the fine auditorium you have here, and together in the interests of economy—for example, being housed together should reduce expense for heating, storage space, office rental, and so on. Practically all our experience points up the importance of the very kind of thing you folks have done here. That is why I am hoping that all county offices of Department of Agriculture agencies and of the cooperating agricultural services can be brought together in a single building in each county for greater service to farmers and to the Nation.

We have taken steps, also, to bring together the different agencies of the Department of Agriculture not only at the county level, but at the State level and the national level. You probably know that we are bringing into closer working relationship the agricultural conservation program of the Production and Marketing Administration and the Soil Conservation Service. Moves as far-reaching as these take time to accomplish in the 3,000 and some counties of the United States; but progress so far has been very gratifying, and we expect further progress in the future.

Nor can we stop there. In fact, I cannot see that we shall ever be able to say we

have finished in the job of bringing about better organization and integration in the Department of Agriculture, or in any Department of Government. Every single division, agency, and bureau of the Department of Agriculture came into being because it had a job to do. No doubt others will come into being in the future, as new jobs arise. Older agencies have been consolidated or abandoned as need for them has changed. Certainly it is in the interest of the Nation that there shall be enough flexibility in our administrative organization that we can accomplish with efficiency anything the Nation requires of us.

Some people seem to believe that an agency such as the Department of Agriculture can be cast into one mold for all time—that you can organize it and then fit all activities into a rigid organization pattern. But the truth is that no rigid mold is desirable. The organization must be adapted to the job that the people want done. I expect we will have to keep on adapting our organization as long as the Department of Agriculture is working on real problems of live people. It is true of any person or any group working on real problems that it must keep on improving, changing with the times.

Certainly farmers know about that.

The shift of your own agriculture from essentially one-crop farming, with cotton as your primary product, to your present diversification into grasslands, livestock, tobacco, poultry of several kinds, hogs, grain, lespedeza seed, and cotton indicates how much your agriculture has changed with the times.

The fact that you have been able to change, and change wisely, to increase your own prosperity and to produce more agricultural output for the Nation is due primarily to your own efforts, your own ingenuity and hard work. Without them, you would never make any progress.

But your progress is due partly to the very things for which this building stands. You have come to rely heavily upon your county extension workers, your soil conservationist, your farm loan association and your production credit association, your home demonstration work, your 4-H work—and the others. They are here, some of them as your own cooperative agencies, some of them selected by you to help run national farm programs, some as channels through which you can get the results of the latest scientific work done at Clemson, in your very fine State college of agriculture, and the latest work of the Department of Agriculture. As markets change, as old opportunities pass by and new ones arise, the folks in this building are constantly bringing such matters to practical terms for Anderson County. The people in this building represent one of your most dependable resources. They are here to serve you—all of you.

They are part of a great team that has been formed to serve agriculture because agriculture is of basic importance to our Nation, because agriculture must be strong if our Nation is to be strong.

Those of us who are employed to serve you must be thoroughly aware at all times of our responsibility to provide not only good but economical service. The tax money that pays for our service to agriculture comes from all taxpayers and must promote the welfare of the whole Nation.

In these times when so many things are going higher in price, you will be interested to hear that expenditures of the Department of Agriculture have gone down. The actual number of dollars we have been authorized to spend for the coming year is about 25 percent less than it was in 1940, the last year before World War II. Not only that, but dollars will buy less now, and if

you take into account the buying power of these dollars, the expenditures of the Department of Agriculture have gone down 60 percent.

That situation didn't just happen. As some of you know, we have made a real effort, and it has been effective, to keep down the costs of agricultural service; to avoid overlapping wherever possible; to close any little loopholes and in every way to be good custodians and stewards of the public's money.

To be perfectly honest, I wish that we had the means to do a number of important jobs we cannot now do. A good deal of the reduction in cost I have mentioned has been legitimate economy that we have learned how to bring about through experience. But we have lost some good people because they could not be paid as much for public service as they could get from private industry. We are not able to go ahead as fast as we should with the job of soil conservation. Farmers do not yet have as much protection against low prices as they are entitled to on the basis of their contribution to the strength and welfare of the Nation. Some farmers do not have enough credit to produce at peak efficiency. Farmer cooperatives are not receiving adequate service. More scientific research would repay the cost many times over.

On the other hand, we all recognize there are limits to the amount of money that can be used in any particular year. The Congress decides what those limits are, and the Department of Agriculture will do its best within those limits. What really counts is the over-all strength of America. But let us never forget that agriculture has a great part to play in making America strong.

Agriculture faces a bigger job in the future than we have ever faced in the past. There was a time when people who lived on farms needed to produce only enough for themselves and a little bit more. They bought very few manufactured goods, so they didn't need much cash; and cities were small compared to farm population, so the cities didn't need to buy very much. In colonial days perhaps 5 percent of the national farm production moved from farm to city. And in the years when these colonies became the United States the population of our whole country was just about twice the population of South Carolina now. It was no trouble feeding that few people from this great land. Hunting alone could play a large part.

But we have grown. Our standard of living has risen. Our way of life has changed drastically. It is more important today that a man be able to use a telephone than he be able to stalk a deer. It is more important that he know how to use fertilizer and modern farm equipment than that he know which wild roots and berries are edible.

Now a very small proportion of our people grow their own food. Most of the people are absolutely dependent upon others—upon farmers—for their food and much else. This trend is continuing and nobody can tell how far it will go. Our national population is rising. I am sure that we can well take care of our people for many years ahead, but to provide them with food and a good standard of living will require that farmers be very productive.

Although from time to time we may have what looks like surpluses, in the longer pull we will need just about all the production we can get. We may from time to time need to cut down on some item to produce more of another; but the job of feeding this mighty Nation will require our best efforts. With allowances for short-time disturbances, basically it means that the farmer's market is assured for a long way ahead.

Today our population is between 150,000-000 and 155,000,000 people. I am told that in 25 years it could well be 200,000,000 people. Nobody knows exactly what it will be.

But this is sure: The farmer, who used to be in the majority because almost everybody had to be a farmer, is now in the minority.

He is a specialist; and his industry is the only great industry in the Nation that is organized on family lines. It is the only great industry in the Nation in which the worker and his family live amidst the means of production and, in most cases, own those means of production. It is a way of life that is famous as a seedbed for the finest kind of citizenship.

In a very real way the changes that have come to your agriculture in Anderson County are the changes that have come to agriculture everywhere.

The new agriculture has not sprung spontaneously from the soil, full-grown. It has been built. It has been built by farmers out of their own intelligence and hard work and by the whole people of this Nation, who have provided the services needed by agriculture.

That service is exemplified in Anderson County by this splendid building that we are now dedicating.

Does it seem a little strange, to you, that today we dedicate this building which has been finished and in use for 2 years? Does it seem strange to you that the ceremony of dedication should come now, after the building has been in use for hundreds of busy days, by thousands of busy people?

I think it is altogether appropriate that we should take part in this ceremony now—that we should gather here for the ceremony.

We might cut a ribbon stretched across the open door of this building, symbolizing its opening to the public, but it has been open for a long time.

We might go through any ceremony, regarding this building and its service to your county, but that is not essential to the true situation.

In a sense, as it seems to me, a building cannot be dedicated. By itself, this building is no more than an aggregation of minerals and wood and other materials. For itself alone, the building would never be worth building.

What you people of Anderson County built, when you made this agricultural center, was not just a building, but an instrument of human purpose; you made it easier for people to work together better.

It is not the roof, but the people it shelters, not the floor, but the people who walk on that floor; not the telephones, but the people who call and those who answer the telephones; not this fine architecture, but the people of the county for whom it stands.

So, as we come to dedicate this building, we come rather to dedicate something that is renewed each morning with the rising of the sun; something that is greater than any building. We have come to dedicate the strength that can build buildings, and will in time outgrow them, however big and fine they are. We have come to dedicate ourselves.

The human purposes of proud men standing upright in the light of day, of strong men who will defend the things they hold dear, of freemen for whom freedom is a way of living dearer than life itself—these are the purposes we have come to dedicate.

Nothing we might say or do here could deepen the dedication this building has already received, for it has had the dedication of daily use, the dedication of life itself.

For the dedication of men and women living upright lives, to the noble purposes of all mankind, is the true dedication of this building, and of this Nation.

The Genocide Treaty

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, September 5, 1951

Mr. CAIN. Mr. President, the United Nations Assembly at its Paris meeting in December 1948 adopted the Genocide Convention. On June 16, 1949, the Genocide Convention was submitted by the President of the United States to the Senate for ratification, and was referred to the Foreign Relations Committee.

In the August 1951 issue of the *Rotarian*, I read an article by Mr. Frank E. Holman on the subject: Should the United States Ratify the Genocide Treaty? Because the Genocide Treaty may be reported by the Foreign Relations Committee to the Senate at some future date, I believe that the written observations by Mr. Holman will be of real interest to every Member of the Senate and to every reader of the *CONGRESSIONAL RECORD*.

Mr. Frank E. Holman is a past president of the American Bar Association, and is presently a member of the Commission for Peace and Law Through United Nations. Mr. Holman is a respected and prominent resident in Seattle, Wash. He is an outstanding American. I am deeply pleased to offer his views on an important question to my colleagues. I ask unanimous consent that the article by Mr. Holman be printed in the Appendix of the *RECORD*.

There being no objection, the article was ordered to be printed in the *RECORD*, as follows:

SHOULD THE UNITED STATES RATIFY THE GENOCIDE TREATY?—No; It Is A Legal Bramble, Says Frank E. Holman

In 1946 a Human Rights Commission was appointed as a subagency of the Economic and Social Council of the United Nations. Mrs. Eleanor Roosevelt was made its Chairman. Early in 1947 this Commission announced that it proposed to draft a Declaration of Human Rights and a Covenant on Human Rights. A little later it took up the matter of formulating a genocide convention.

What is "genocide"? The word was coined by a Yale professor, a Polish refugee. Translated into simple Anglo-Saxon, it means "race killing." It goes without saying that all decent men and women are opposed to any program, official or otherwise, which contemplates the destruction of a racial group in whole or in part. But out of this generality of the term "genocide" a whole new class of individual crimes is to be created. Acts are made punishable which are not only purely domestic in character, but public officials as well as private citizens are to be made amenable to international tribunals for a variety of ill-defined and ambiguous so-called acts of genocide—to the extent that the causing of mental harm to a member of a group, or complicity in so doing, is an act of genocide.

The United Nations Assembly at its Paris meeting in December 1948 adopted a Universal Declaration of Human Rights. In the

dying hours of the same session of the Assembly, at which the declaration was passed, the Genocide Convention was hurriedly adopted. At the time little or no publicity was given the matter by the United States Department of State. On June 16, 1949, the Genocide Convention was submitted by the President to the United States Senate for ratification and referred to the Foreign Relations Committee.

At a hearing in January 1950 before a subcommittee of the Senate Foreign Relations Committee members of the American Bar Association committee on peace and law through United Nations appeared and submitted reasons and arguments against its ratification, pointing out the serious loopholes in its content, the failure of its language to include "genocide" committed by governments—as, for example, the liquidation of political groups in Russia and Russian satellite countries—and the dangerous effect of the document on basic American rights if ratified by the United States as a treaty.

It should be kept in mind that in nearly all nations except the United States, even after the ratification of a treaty, each particular government may decide when and to what extent, if at all, it is ready to implement the treaty by the passage of national legislation, even though the signatories have agreed generally to enact such legislation. The United States is the only important country (except France and Mexico to some extent) that faces the peculiar legal situation that when a treaty is ratified by our constitutional process (to wit, by the Senate) its provisions become a part of the supreme law of the land without either State or national legislation.

Article VI of the United States Constitution provides that a treaty when ratified becomes "the supreme law of the land"—"anything in the constitution or laws of any State to the contrary notwithstanding." In this very fundamental respect the American Constitution is unique.

Unfortunately, those in charge of attempting to "sell" the United Nations human-rights program, including the Genocide Convention, to the American people have chosen to disregard this distinction. They persist in discussing treaty obligations as though the effect of a treaty were the same in America as in other countries.

They undertake to clinch their position by pointing out that certain proposed treaties, like the Genocide Convention, contain a provision binding the parties "to enact in accordance with their respective constitutions necessary legislation to give effect to the treaty," and they argue that this leaves each signatory country free to put the treaty provisions in effect or not, as each country may determine. Such a clause does not and cannot operate that way in the United States. The position taken by certain lawyers in the State Department with respect to this matter is legally fallacious, because no such treaty provision can unwrite the self-executing effect of article VI of our Constitution, under which no legislation is necessary to put a treaty into effect.

Hence, if an international agreement like the Genocide Convention is ratified as a treaty, it will supersede every city ordinance, every county ordinance, every State law, and every State constitution, as well as every Federal statute on the same subject. This has been specifically decided in such a recent case as the California alien land case *Jaff v. State of California* (217 Pac. 2d 481). See also *Perez v. Lippold* (198 Pac. 2d 17), in which case the Supreme Court of California overruled the long-established law in that

State against mixed marriages. Of course, no decent person can quarrel with the announced objective of the Genocide Convention—to wit, the outlawing of mass murder of groups of people—but the present document is so drawn that it does not apply to liquidating political groups as “enemies of the state.” Hence, it does not apply to genocide as practiced by Stalin in Russia or in the Russian satellite countries. In drafting article II of the convention and in order to appease the Russians, genocide was limited to “national, ethnical, racial, or religious groups.” The political group was omitted. Under the Russian technique of attacking political groups as “enemies of the state” genocide occurs and will continue to occur on the theory that such liquidation is not for the purpose of destroying “national, ethnical, racial, or religious groups.”

Hence, dictators can sign the Genocide Convention with complete immunity. All they need to do is to classify a particular group as “enemies of the state.” George A. Finch, of Washington, a member of the Committee on Peace and Law through United Nations of the American Bar Association and editor in chief of the *American Journal of International Law*, testified before the Senate Foreign Relations subcommittee in January 1950.

“The Genocide Convention is an outstanding example of an international agreement upon which the public has been and is being misinformed. As genocide is defined in the convention, it does not apply to the mass killings and destruction of peoples by totalitarian governments, but appeases such governments by making it possible for them to continue, as they are doing today behind the iron curtain, the monstrous treatment of thousands of human beings whom those governments regard as enemies of the Communist states. . . . There is not a word in the convention which denounces as genocide the mass killing and destruction of peoples by governments.”

Article I of the Convention commits all signatory nations “to prevent and to punish” genocide “committed in time of peace or in time of war.” Therefore, if the United States ratifies the Convention, it will be committed to go to war to prevent genocide in some distant country, as, for example, India, Iran, Russia, Argentina, or elsewhere. The definite obligation is to prevent and punish genocide wherever it appears in the world—whether in civil, racial, and religious wars, or in national and ideological struggles. This would require a procedure of interference in the internal affairs of other nations, and in the case of countries able to defend themselves, such as Russia, would mean war.

The Convention invades the field of domestic law and changes and nullifies domestic law. In his letter of transmittal to President Truman, James E. Webb, Acting Secretary of State, quoted the United States representative on the United Nations Legal Committee as agreeing that—

“If an individual is murdered by another individual, or by a group, whether composed of private citizens or Government officials, as part of a plan or with the intent to destroy one of the groups enumerated in article II, the international legal crime of genocide is committed as well as the municipal-law crime of homicide.”

What does “intent to destroy” mean? Was it absent from the race riots in Detroit and Harlem? In lynchings in Georgia? Was it absent in the civil war in China? In border conflicts between India and Pakistan? Are we to be committed to stop genocide wherever it occurs in the world and have a series of experiences like that in Korea?

Again, George A. Finch testified before the Senate Foreign Relations Subcommittee in January on “intent to destroy” and “mental harm” as follows:

“Can it be successfully denied that segregation laws are susceptible of being denounced as causing mental harm to all members of the group against which such laws discriminate? Minority groups in this country are vigorously seeking to have such discrimination abolished by Federal legislation. Can there be any reasonable doubt that if Congress fails to enact the civil-rights laws now being urged upon it and if this Convention is ratified as submitted, members of the affected groups will be in a position to seek legal relief on the ground that this so-called Genocide Convention has superseded all State legislation?”

When is “mental harm” serious, when is it harmful, and when is it only mental? No American judge or jury will be the last arbiter of that question. It will be answered finally by the International Court of Justice if the United States Senate ratifies this convention as a treaty. Thus, the International Court of Justice is in a position to determine when an American citizen should be punished—a prerogative up till now reserved exclusively to our own laws and our own courts.

The Genocide Convention, if ratified, constitutes a threat to freedom of speech in the United States, for article III sets forth “that incitement to genocide” and “complicity in genocide” is punishable as genocide. As to this, the American Bar Association committee on peace and law, through United Nations, made the following observation:

“This was adopted in spite of repeated objections of the United States representative that it was a plain infringement of freedom of speech and freedom of the press. Who shall judge if political speeches are incitement to genocide? [An international court.]

“Who shall judge as to freedom of the press? As a prevention of genocide, shall censures be provided by the State? Representatives of many countries insisted that as between genocide and freedom of speech and freedom of the press, the latter must give way. The position of our representatives seemed to be incomprehensible to many of them. The representative of the United States boldly said that genocide should stop where freedom of speech begins. He warned the other nations more than once that inclusion of incitement to genocide would present an obstacle to the ratification of the convention by his country. [Nevertheless, this provision was retained to appease the views of other countries.]

“If the effort to promote human rights in the world is to mean anything, it would seem to be essential that freedom of speech and freedom of the press be preserved, and that no treaty, no matter what its purpose, which seeks to deny those rights, should be considered by the Senate of the United States.”

Under article VI a specific provision is made for the trial of American citizens in courts in other countries, and under article VII for extradition to a foreign jurisdiction. If the United States ratifies this treaty, it will mean that we have agreed to set up the machinery for extraditing Americans charged with genocide and for shipping them overseas to be tried for acts committed in their own home towns, and this, it has been pointed out, may be for as little as having been charged with inflicting “mental harm” on a “national, ethnical, racial, or religious group.” It may even mean that the telling of a story reflecting on the characteristics of a particular racial group may be treated as inflicting “mental harm” or as “incitement to genocide.”

The Genocide Convention may be briefly characterized as follows:

First, it falls as to its primary purpose of preventing genocide committed by Government and hence is a document of appeasement as far as Russia and other dictator nations are concerned.

Second, it commits the United States to go to war, if necessary, to prevent genocide

in any distant part of the world where the members of any “national, ethnical, racial, or religious group” are being killed.

Third, it invades, changes, and nullifies American law as heretofore exclusively determined by our own Congress, our own State legislatures, and our own courts.

Fourth, it threatens the American concept of freedom of speech and of press as guaranteed by our Bill of Rights.

Fifth, it denies Americans the right to be tried in their own courts and the right to invoke such safeguards as trial by jury and presumption of innocence until proved guilty.

Because of the foregoing considerations, the Genocide Convention is an outstanding example of emotional internationalism and loose and hurried draftsmanship. As pointed out by the American Bar Association, it should certainly not be ratified by the United States Senate.

Concerning Honor in Public Life

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by former President Herbert Hoover in Des Moines, Iowa, on Thursday, August 30, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

I am indebted to the Governor, the legislature, and the people of my native State for a most distinguished honor at this celebration of Iowa's centennial.

In view of our serious national situation I would like on this occasion to review a few things for you to think about. They are mainly related to honor in public life. Let me say at once that honor is not the exclusive property of any political party.

I may start with the idea that all things in government which bear the prefix “new” are not necessarily new. They may not all of them even be good. Truly every generation discovers the world all new again and knows it can improve it. It is a good thing that they do—or our race would shrink in vitality and grown senile.

Each generation also wants to find out for itself that the stove is hot. A renewal of that sort of information is valuable.

But we have overworked this word “new” in trying to get out of this age of misery from our 37 years of hot and cold wars, with intervals of hot and cold peace.

In this period we have either been cured or made over new about 14 times. We have had the New Order, the New Freedom, the New Day, the New Era, the New Outlook, the New Epoch, the New Economy, the New Dawn, the New Deal, the New Religion, the New Liberalism, the New War, and several new foreign policies. None of these were really new discoveries.

And the New Testament is too often omitted. After each “new” we have a relapse and take another pill, labeled “new.”

Some of these somethings “new” have value. Too many have been false signposts on the road of national progress. Some point to will-o'-wispes of security not to be had on this earth. Some lead the Nation over the precipice of inflation and socialism. Some just lead to the land of make-believe.

Certainly some of them are tainted with untruth and a diluted intellectual honesty.

The word "new" applies better to physical things than to human forces. Indeed when the sun rises in the morning we had it as a new day. We cheer the passing of the night. But it is a false analogy in the march of civilization.

Most of our chores for the new day were assigned the night before. Our abilities to perform them were formed not only last year but over centuries or even geologic time. If the new day has no link with yesterday we would be without know-how and morals today. The loss of that link can bring chaos to the whole economic, the moral and the spiritual world.

AN ADJOURNMENT FOR A WHILE

As an aside, I suggest at least we adjourn trying to make America over into some other shape until we get out of this cold or hot war. Our present crisis is dangerous enough to require one concentrated undeviating purpose in Washington.

Many of our so-called social and economic gains will go by the board, anyway, if this hot and cold war keeps up. After all, the great social gains of the last century were a mixture of liberty, compassion, unlimited meat, automobiles, and washing machines. These are at least getting scarcer.

There will be plenty of time to exercise our muscles on "new" experiments after these violent changes in international temperature are survived. And these programs of making America over add an especially destructive new—that is new taxes.

Think about it.

LET US USE THE WORD "OLD" ONCE IN A WHILE

The practical thing we can do if we really want to make the world over again is to try out the word "old" for a while. There are some old things that made this country.

There is the old virtue of religious faith.

There are the old virtues of integrity and the whole truth.

There is the old virtue of incorruptible service and honor in public office.

There are the old virtues of economy in government, of self-reliance, thrift, and individual liberty.

There are the old virtues of patriotism, real love of country, and willingness to sacrifice for it.

These old ideas are very inexpensive. They even would help win hot and cold wars.

I realize that such suggestions will raise that cuss word "reactionary." But some of these old things are slipping badly in American life. And if they slip too far, the lights will go out of America, even if we win these cold and hot wars.

Think about it.

THE FLIGHT FROM HONOR

We might explore some of the things that have happened to the old virtues of integrity, truth, and honor in public life. During the recent past we have had a flood of exposures by congressional committees, by State legislatures, by grand juries in scores of cities, and the press.

A few days more than 175 years ago, the 56 Members of the Continental Congress of the United States unanimously declared a program of action and certain principles of American life. The concluding words of the declaration are a pledge of our sacred honor.

I sometimes wonder what the 56 founding fathers, from their invisible presence in our congressional Halls, would say about the procession of men in responsible position who have come before its committees of this day. What would they have thought of the "sacred honor" of the 5-percenters, mink coats, deep freezers, and free hotel bills? Or favoritism in Government loans and Government contracts? Or failures to prosecute evildoers who spread cancerous rackets and gambling rings with their train of bribed officials?

But I am less concerned at stealing public money than with the far more destructive forms of dishonor. What would the founding fathers have thought of those who coquette with traitorship? Or of secret and disastrous commitments of our Nation which were denied at the time? Or high officials under oath contradicting each other as to facts? Or the failure to keep promises to the people? Our civilization moves forward on promises that are kept.

We thus have a cancerous growth of intellectual dishonesty in public life which is mostly beyond the law. One of its chief instruments is corrupt propaganda. There has been such propaganda by foreign governments and our own designed to get us into war. Then we have the propaganda to keep up our pep. Then the habit continues in peacetime. And some pressure groups have learned this trick to get something they ought not to have.

The mildest form of corrupt propaganda is a process of persuasive part truths. At times it even rises to the high moral levels of selling snake oil.

But the malignant form of propaganda spreads deadly poisons. Its process is to create suspicion, hate, and fear. Its purpose is less to persuade than to conceal truth and to crush opposition.

The machinery of propaganda is made of standardized gadgets by which you can detect it.

One of these standard gadgets is slogans. They freeze the real process of thought.

If you will examine the two-score loud slogans created during this last third of a century, you will find most of them, like the "apples of Sodom," have turned to bitter ashes in our national mouth. Most of them became ripe in a year or two, some lasted a little longer. Some very new ones are already turning moldy.

One of these gadgets is to create fear by describing the horrors of invasion of the United States by foreign armies. This one always arises to its maximum decibel when pressuring legislation and elections. While aircraft can come our way no armies on earth can land on our shores.

Another gadget is to give new meaning to old, simple and well-understood expressions until the integrity of our language is polluted. The term "liberalism" has turned pink inside. The term "welfare" never before meant the "welfare state" with its red or pink colors. The Chinese Communists were not "agrarian liberals." From that perversion of truth alone, we suffered a gigantic defeat of freemen in China.

You can test malignant propaganda from another of its gadgets. That is the smear. This gadget has wide potency. When Mr. X presents an inconvenient fact or argument, the propagandists can simplify matters by pointing out that he was once a banker or was fined for speeding. With this gadget you can get your opponent either way in the international field by just suggesting he is an appeaser, or a warmonger, or an isolationist. On the issue of Government spending, he can be flattened out by calling him an inflationist or he is against the underdog. If he comments on either side of ideological matters, you can defeat him going or coming by calling him a Fascist, or a reactionary, or a fellow traveler, or just a red herring.

There is still another of these propaganda gadgets. That is to squelch debate by cries for unity. Unity. The implication is that the citizen is disloyal to his country if he disagrees with the powers that be.

I suggest that these are not operations of rugged intellectual honesty. They are attempts to coerce men into the intellectual concentration camp named "Fear." These gadgets have been very handy tools for making America over into these 14 new varieties and getting us into hot and cold wars.

Think about it.

UNVEILING TRUTH BY DEBATE

It is difficult enough to debate against the gadgets of propaganda. But there is something worse. That is the concealment of truth and commitments. I am not here discussing our foreign policies. But may I ask you a question?

Does anybody believe that the propaganda-promoted foreign policies over the past dozen years have always been right? Or that there has always been a disclosure of the whole truth?

For example, certain secret commitments were entered into at Tehran and Yalta which sold the freedom of half a billion people down the river. They were not disclosed to the Congress or to the American people. Does anyone believe that, had they been submitted to the American people for debate and to the Congress for decision, that they would ever have been approved? That is where we lost the peace and wandered into the land of hot and cold wars.

Debate founded on the full disclosure of the whole truth and free of these gadgets is the stuff that can save freemen.

Think about it.

OUR SACRED HONOR

I would like to explore this old virtue of truth, integrity, and honor in public life a little further.

Congress can well widen the laws so as to clutch the new kinds of bribes and benefits they have discovered. But Congress cannot reach intellectual dishonors.

Part truth, concealment of public commitments, propaganda and its gadgets and failure to enforce the laws are but part of them, and there are group pressures "to get theirs" which smell from both the decay of integrity and the rotting of patriotism, and some persons arrive at their morals with a divining rod that measures morals in terms of votes.

The Congress, from its own inquiries, is confronted with the fact that sacred honor cannot always be tested by legality or enforced by law. In its frustration, the Congress is groping for some sort of code of ethics, which with a prefix "new" might protect the citizen from his own officials.

Might I suggest that there are already some old and tested codes of ethics? There are the Ten Commandments, the Sermon on the Mount, and the rules of the game which we learned at our mother's knee.

Can a nation live if these are not the guides of public life?

Think it over.

OUR RIGHT TO COMPLAIN

The American people have a right to bitter complaint over these disclosures of dishonor in high places. The duty of public men in this Republic is to lead in standards of integrity—both in mind and money.

Dishonor in public life has a double poison. When people are dishonorable in private business, they injure only those with whom they deal or their own chances in the next world. But when there is a lack of honor in Government the morals of the whole people are poisoned.

The drip of such poisons may have nothing to do with dishonor in some college athletics or the occasional policeman on the beat. But the rules of the game have been loosened somewhere.

Some folks seem to think these are necessary evils in a free government, or that it is smart politics. Those are deadly sleeping pills. No public man can be just a little crooked. There is no such thing as a no-man's-land between honesty and dishonesty. Our strength is not in politics, prices, or production, or price controls. Our strength lies in spiritual concepts. It lies in public sensitiveness to evil.

Much as the Congress has my good wishes, something stronger than a new code of ethics is needed by America. The issue is decency in public life against indecency.

Our greatest danger is not from invasion by foreign armies. Our dangers are that we may commit suicide from within by complaisance with evil. Or by public tolerance of scandalous behavior. Or by cynical acceptance of dishonor. These evils have defeated nations many times in human history.

The redemption of mankind by America will depend upon our ability to cope with these evils right here at home.

Think about it.

CONCLUSION

But I do not wish to leave you, the neighbors of my childhood, with any implication of pessimism. I speak to you of some of our weaknesses, not because of frustration or despair, but to urge remedy. The fact that we are vigorously washing our dirty linen in the open is a sign that moral stamina still survives.

Without bitterness in our hearts, we are raising our eyes to the Creator of man who assured us that in American soil we can find the moral and spiritual forces which make free men and women. In His guidance we shall find the fortitude to correct our errors, to straighten our courses, to resurrect the spirit that made our America so free and bountiful a nation.

For reassurance in the future I need only to turn my thoughts to my grandparents who came to this State in the covered wagon. Here they and my parents toiled that their children might have greater opportunities than had been theirs. Here they worshipped God. Here they lived out their lives in the faith and hope of Americans. They lie buried on an Iowa hillside.

Therefore, here in this State where I was nurtured, I cannot but feel a strength that comes up from the deep roots in the very soil on which we stand. That strength is in character and truth and decent living. And it will triumph.

It will triumph because I know America is turning its face away from the maudlin leftisms and the spread of untruth of the past two decades. We sense the frauds on men's minds and morals. Moral indignation is on the march again.

Death of Abraham Cahan

EXTENSION OF REMARKS OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Thursday, September 6, 1951

Mr. LEHMAN. Mr. President, on Friday, August 31, Mr. Abraham Cahan, long one of the leading citizens of New York City, entered into his eternal rest at the age of 91.

Mr. Cahan, an old and dear friend of mine, had an extraordinarily useful life. For half a century he was an outstanding leader in the fields of journalism, labor, philanthropy, and in the fight against communism. He was a man of unusual courage, vision, and energy.

I ask leave to have printed in the Appendix of the RECORD an article which appeared in the New York Times this morning entitled "Ten Thousand Five Hundred Pay Tribute to Abraham Cahan," as well as a telegram which I sent on September 1 to Mr. Alexander Kahn, manager of the Jewish Daily Forward. This message reflects my high estimate of the character and leadership of this great American.

There being no objection, the article and telegram were ordered to be printed in the RECORD, as follows:

[From the New York Times of September 6, 1951]

TEN THOUSAND FIVE HUNDRED PAY TRIBUTE TO ABRAHAM CAHAN—MAYOR, SECRETARY TOBIN AMONG THOSE AT FUNERAL SERVICE FOR EDITOR OF FORWARD

A funeral service for Abraham Cahan, retired editor of the Jewish Daily Forward, was held yesterday at 175 East Broadway, the home of the newspaper he had headed for more than 40 years.

Five hundred persons filled a second-floor auditorium while 10,000 others jammed the surrounding streets to pay a final tribute to the Socialist leader and the lower East Side's first citizen.

The simple, non-religious, 80-minute service for Mr. Cahan, who died Friday night in Beth Israel Hospital at the age of 91, was conducted by Alexander Kahn, general manager of the newspaper.

Long before the service was scheduled to begin at 1 p. m., thousands queued up in front of the 11-story newspaper building from which Mr. Cahan warred vigorously against communism, on behalf of labor and social reform and the transition of large masses of Jewish immigrants to a new way of life.

When the doors were closed on the 500 inside the building, Deputy Chief Inspector John Ferretti, in charge of a detail of 30 policemen, said 10,000 persons filled Strauss Square and Seward Park. They and others who took up points of vantage in tenement windows and on fire escapes heard the service through loudspeakers.

ALL WALKS OF LIFE

Taken together they were representative of every stratum of official life, of other faiths and every economic station. The stillness both inside and outside the building was broken by the rumble of nearby traffic and the muted strains of organ melodies, but the people were silently unanimous in their reverence for the man whose name was a byword among his own people.

His oak coffin, blanketed with gladioli, lilies, smilax and red roses, stood in the center of Forward hall just in front of a small stage crowded with floral displays. At 1 p. m., Lazarre Weiner, the organist, tread softly on his pedals and opened the service with Chopin's Funeral March. Ase's Death, from the Peer Gynt Suite by Grieg followed. Alexander Kahn then arose and spoke of his former colleague.

"He was of the first to fight Communists," Mr. Kahn said. "He was of the first to relegate party tradition and support Roosevelt. His idealism was always guided by a sense of the real and when the interests of the people and his country came into conflict with any tradition or dogma he resolved in favor of the interests of the people."

Mayor Impellitteri said it was his privilege as mayor to pay tribute to "the late, great Abe Cahan" on behalf of the city's 8,000,000 people.

"His was a powerful voice for justice and equal opportunity for all men," the mayor said. "Our troubled era will surely miss the greatness that was Abe Cahan, but his works and his writings will sustain us in the job of building a better world for everyone."

Maurice Tobin, Secretary of Labor, eulogized the founder of the Forward as "a great fighter for free trade-unions." He said not only Americans, but workingmen throughout the world "suffered a great loss" in Mr. Cahan's death.

LAUDED FOR AID TO LABOR

Praising Mr. Cahan for his contributions to improved living standards, Mr. Tobin said the former editor "lived to see the American worker getting the best minimum wage of the entire world." He paid warm tribute to

Mr. Cahan for his leadership of the Jewish daily, which he held played "a great part in the elimination of sweatshops and tenement slums."

"We should as Americans say 'Thank God' for the day Abe Cahan arrived in the United States," he continued.

David Dubinsky, president of the International Ladies Garment Workers Union, recalled the role played by Mr. Cahan in staving off Communist control of his union. Were it not for the courage of the Socialist leader, Mr. Dubinsky asked, "how many unions would have been captured and how many workers would have been enslaved?"

Abba Eban, Israeli Ambassador to the United States, brought tributes from the Government and people of Israel. Alluding to Mr. Cahan's roles in furthering social progress and in Yiddish journalism, Ambassador Eban said he preserved Jewish consciousness and culture against the tide of assimilation.

Others who spoke were Justice Jacob Panken of the Domestic Relations Court, Alex Rose, president of the United Hatters, Cap and Millinery Workers Union; Harry Rogoff, editor of the Forward; Nathan Chavin, educational director of the Workmen's Circle; Joseph Baskin, general secretary of the Workmen's Circle; Raphael Abrahamovitch, for the International Socialist movement, and Reuben Guskin, president of United Hebrew Trades.

Five cars, heavily banked with flowers, led a 50-car procession to the cemetery. Burial was in Mount Carmel Cemetery, Queens.

WASHINGTON, D. C., September 1, 1951.

MR. ALEXANDER KAHN,
Jewish Daily Forward,
Brooklyn, N. Y.:

Word of the passing of my old friend, Abraham Cahan, has filled me with the deepest sorrow. I hope you and members of his immediate family can be comforted in the knowledge that your loss was the loss of the countless legion of friends Abraham Cahan has throughout New York, the Nation, and the world. You must be further comforted in the knowledge that he had lived a long life studded with accomplishments such as fall to the credit of few men. He was known and loved as a great American as well as a leader of thought among those of our faith in this country. He was a man of courage, of integrity, of vision, and of learning.

He was the spokesman for ideas which were bold in his time but which came to be accepted by most of his fellow citizens. He fought the good fight when the battle was hard. His reward was in the impression his work left on his community, on his State, and on his country. That work will never die. Like the newspaper he built to greatness Abe Cahan's work will long survive him. He was my friend and my coworker in many a good cause through the years. I mourn him but know that my feelings are shared by thousands.

HERBERT H. LEHMAN.

Price Control and the Capehart Amendment

EXTENSION OF REMARKS OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES
Thursday, September 6, 1951

Mr. ROBERTSON. Mr. President, last week when Mr. Charles E. Wilson was testifying before our Banking and Cur-

rency Committee concerning the amendments to the Defense Production Act which he was recommending, I asked him if he wanted a price-control bill or profit-control bill. He promptly replied that he wanted a price-control bill. I then pointed out the language of the conferees which I had proposed, and which the conferees adopted, which declared the legislative intent of the so-called Capehart amendment. Mr. Wilson replied that OPS could not carry out that legislative intent unless the language of the Capehart amendment was modified. I suggested that he prepare appropriate language which in his opinion would make the Capehart amendment workable. He did so, and his suggestions were embodied in an amendment offered last week by the chairman of the committee, the Senator from South Carolina [Mr. MAYBANK]. It is my purpose to support that amendment, or appropriate language to the same effect.

In explanation of the position I have taken that the Capehart amendment should be modified but not completely repealed. I ask unanimous consent to have printed in the RECORD an analysis of what is involved by the well-known New York economist, Harold Fleming, published in the September 4 issue of the Christian Science Monitor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SQUEEZE PLAY SEEN TRIED ON BUSINESS
(By Harold Fleming)

NEW YORK—Some people here are inclined to feel that the administration, in its continued opposition to the so-called Capehart and Herlong amendments in the new Defense Production Act, is trying to use the defense program for a new type of squeeze play on American business.

The gist of their reasoning is that farmers have escalators, labor has escalators, but the administration doesn't want business to have escalators. An escalator, in economic and political slang, is something on which one can stand still yet ride upward—that is, have his own prices lifted whenever other prices are lifted. The farm escalator is parity price support, which rides up with the farmer's living costs; labor's escalator is the cost-of-living clause. The nearest thing to an escalator for business is the "pass through" of costs permitted the manufacturer in the Capehart amendment and the inclusion of "historic" percentage markups in distributors' ceiling prices.

SQUEEZE BETWEEN OFFICIAL PRICE FLOORS, CEILINGS

Were the Congress to accede to the President's astonishing request for the elimination of these two clauses, the effect would be to put business in the grip of a more effective vise than it has yet been put in during the last 20 years. Whichever way the course of prices were to move, business would be squeezed between official price floors and official price ceilings.

For were prices to continue downward, the prices received by distributors and manufacturers would drop freely, while farm prices and labor's wages would be held up at officially supported levels. But were inflation to return, the prices received by businessmen would soon, despite the Capehart and Herlong amendments, be bumping against semi-rigid ceilings, while farmers and wage earners would merely stand still and ride up their

escalators. Heart of the businessman's problem is that under price control as now preached by the administration, his prices would have ceilings but no floors, while farm prices and wages have floors but (in practice) no ceilings.

For even with the Capehart amendment the pincers of this vise are clearly in evidence for the manufacturer. In a falling market his prices have no floor, like those received by farmers and wage earners; but in a rising market he cannot add any costs to his ceiling beyond those he paid up to July 26, 1951. The amendment merely releases him from the squeeze he was already in. Were such a drastic inflation to develop as the President keeps warning of, rising costs, including particularly wages and farm prices, would soon rise about him like flood waters round a man locked in a basement.

HOW THREE GROUPS HAVE FARED

How these three broad general groups—farmers, labor, and business—fared under the post-Korea inflation may be seen roughly from the following figures:

	1950	1951	Percent increase
Consumers' price index, June	170.2	185.2	10.9
Average weekly earnings, June			
All manufacturing industries	\$58.65	\$65.44	11.0
Average hourly earnings, June			
All manufacturing industries	\$1.453	\$1.604	10.4
Prices received, all farm products, June	247	301	21.9
Parity ratio (prices received by farmers versus prices paid by them) June	97	107	10.3
Corporate profits after tax (annual rate, billions) second quarter	\$20.6	22.0	7.0
Wage and salary receipts (annual rate, billions)	\$141.1	166.1	17.7

Not all these figures can be fairly compared. It is not entirely fair, for instance, to compare corporate profits after taxes with wage and salary receipts, which are before taxes. On the other hand the comparison is fair in the sense that any persons receiving dividends out of these corporate profits have to pay taxes on these dividends.

From the other angle, however, it is not fair to compare corporate profits with average weekly or hourly earnings. The fair comparison is with total wage and salary receipts; for while the latter reflect an increase in the number of people working, the corporate profits come from an increase in the number of jobs done.

In any case the above comparisons indicate that (1) Farmers and wage earners improved their position compared to corporations; (2) the purchasing power of average wages stayed approximately abreast of living costs while (3) that of farm products gained substantially but (4) that of corporate earnings declined substantially.

TRFND S EEN CONTINUED THIS SUMMER

These trends probably still continue this summer since (1) prices received by corporations are lower generally than in the second quarter, (2) wages continue upward; (3) farm prices are down near support levels; and (4) more corporations are shifting to defense work, where the profit-margin is smaller.

In view of these trends, the President seems to have indulged in a slight exaggeration in his recent message to Congress when he said that "the fact that (the Capehart) amendment was not needed is amply demonstrated by the remarkable level of business profits during the last few months."

But perhaps the heart of the President's attack was expressed in his statement that "All along the line, under the Capehart amendment, business is protected. Business is told that it need not absorb rising

costs. But no such assurance is extended to the consumer, the wage earner, and the people living on pensions and other fixed incomes. They stand at the end of the line."

This statement so confuses matters that fact needs to be disentangled from fancy. To begin with, there is no line with an end to it. There is a circle, in which money circulates. Everybody is at both the beginning and the end of this circulation. Many businessmen are inclined to feel they are at the short end.

Second, the bunching of wage earners with people living on fixed incomes is very confusing. Only a few days before the President's speech the Wage Stabilization Board had agreed that labor was entitled to upward adjustments for future cost-of-living increases—that is, that it need not absorb rising costs. And only a few weeks earlier than that new 1951 support rates for leading farm crops were announced, higher than last year, on the parity-price philosophy that the farmer need not absorb rising costs.

Visit of Governor Dewey to Ketchikan, Alaska

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. BUTLER of Nebraska. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a newspaper story from the Ketchikan Daily News, of Ketchikan, Alaska, for August 23, entitled "Thomas E. Dewey Entertained in Ketchikan." In this story, Governor Dewey is quoted as wanting to know more about the Alaska statehood question before definitely making up his mind about the statehood proposal. Previously, Governor Dewey has been somewhat of a supporter of statehood. Apparently, as a result of his trip to Alaska, he has had more of an opportunity to see both sides of the question, and has begun to have doubts about the advisability of taking that step at this time.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THOMAS E. DEWEY ENTERTAINED IN KETCHIKAN—IS IMPRESSED WITH BIGNESS OF TERRITORY—WANTS TO LEARN MORE ON ALASKA STATEHOOD QUESTION

Exhibiting the dynamic personality which has twice made him a candidate for the highest office in the land, and placed him in the driver's seat of his home State for the second term, Gov. Thomas E. Dewey, of New York, took over the city of Ketchikan last night while making a brief stop here on a grass roots tour of the Territory.

The Governor appeared before a representative group of Ketchikan residents at the Elks' Temple last night and after being presented with a basket of seafood, especially prepared for him at the Fishery Products Laboratory, admitted to be tremendously impressed by the elegant and fabulous land of our last great frontier and the wonderful hospitality and friendship of its people.

"This trip to Alaska," the Governor said, "has been one of the most amazing and revealing experiences of my entire life and I am glad I came. No one," he continued,

"who has not been to Alaska could possibly appreciate the tremendous size, the impressive ruggedness, and the grandeur of this great land and I find it clean and refreshing after the oppressive lands of the Orient."

The Governor entertained his listeners for a period with anecdotes of incidents which happened on his 40,000-mile swing through Asia and Australia and then turned his attention for a moment to one of the major problems of Alaska.

"Before I came to Alaska," he said, "I was of the opinion that everybody favored statehood for this country. I am now beginning to realize how wrong I was, for the more people I meet the more the argument over statehood seems to grow and I admit I am now definitely confused over the issue, but perhaps that is a good thing, for they say the knowledge of ignorance is the beginning of wisdom, and I now feel in a position to begin to learn the true facts."

Governor Dewey had previously told a reporter in Juneau that he always favored statehood but in response to a question from a reporter here last night, he stated, "I would certainly not favor statehood for Alaska unless the admission bill contained adequate assurances the new State would receive sufficient finances to make it self-supporting. I have been led to believe the statehood bill was well drafted but if it does not provide adequate protection for the new State I would never support it."

The Governor was entertained at the Elks Temple with a buffet dinner, and following his brief talk took a stand near the center of the floor and shook hands with all of the 200 people in attendance.

Upon his arrival at the Coast Guard Base at 5:30 p. m. the Governor was met by a welcoming committee of the Chamber of Commerce, composed of Mayor George Beck, Chamber President Herb Hetherington, Secretary Bill Boardman, W. A. Bates, Howard Stevens, Pete DeBoer, Mel Roe, and attorney Lester O. Gore, and he and his party were escorted to the Ingersoll Hotel.

Arriving with Governor Dewey were Governor Gruening, his military aide, Capt. Donald Morrison, USCG, Paul Lockwood, formerly Dewey's secretary, now a member of the Public Service Commission of the State of New York, Ray Borst, veteran newspaperman of the Buffalo Evening News, and Tom Galvin of the New York State police.

En route from Juneau the party stopped at Waterfall where Governor Dewey was impressed with the modern salmon cannery and the high speed lines there.

During the early part of the evening the welcoming committee took the visiting Governor and his party through the cold storage plant where Al Whitmarsh of Polar Fisheries explained the complex operations of the plant, and a drive was taken to the site of the pulp mill at Ward Cove.

Upon their return, the party stopped at the home of Mayor Beck, where over an hour was spent in general discussion. The group then left for the buffet dinner at the Elks Temple.

This morning Governor Dewey and party were taken aboard the yacht *Manana II* for a salmon fishing trip to Vallenar Point, and they will be picked up there by plane this afternoon and flown to Tracy Arm, where they will spend the night aboard the Fish and Wildlife Service vessel *Brant* before returning to Juneau.

Salmon Derby, chairman, and District Forest Supervisor C. M. Archbold, and Chamber of Commerce, President Hetherington were in charge of arrangements for the fishing trip.

Governor Dewey admitted to his audience last night that he is not a fisherman at heart but consented to the trip in deference to Lockwood and Borst, who have been stricken with the strange form of insanity which afflicts fishermen the world over.

"I accompany them," Dewey said, "because I would lose a million constituents in my home State who would not consider me worthy of office if I visited Alaska and failed to take part in your wonderful fishing."

Aid to Free China and Spain

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. JENNER. Mr. President, the American people are determined to cooperate with Spain and Free China, two of the most stalwart opponents of communism, but we must not be misled by the statistics. Military aid to Formosa and to Spain are both subject to control of the State Department. I ask leave to have printed in the RECORD two excerpts from an article by Frank C. Hanighen which appeared in Human Events, 1710 Rhode Island Avenue NW., Washington 6, D. C.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

ACHESON STILL OVER SPAIN

When the military finally overrode the State Department opposition and achieved a deal with Spain, the general opinion here was that State would swallow its disappointment and collaborate in making Spain a real military bastion of defense. Like many other general opinions, this one has now proved faulty, although the real news has not yet reached the public prints.

Dean Acheson—who in 1946, together with the Red Dean of Canterbury, led a Communist-inspired rally against Franco Spain in Madison Square Garden—is not so readily converted. We learn from unimpeachable sources that, on the morrow of Admiral Sherman's agreement with Franco, Acheson sent his aides to the Defense Department. Their line ran, as follows:

"Yes, we must make Spain a bastion of our defense. But military aid cannot prove successful without economic aid—to raise the standards of living of the people. That's our province. We propose that a State and ECA mission go to Madrid to examine and supervise thoroughly all economic aid expended in Spain."

This proposal, we hear, has aroused angry opposition and apprehension in the Pentagon. The Pentagon people fear that the State Department would utilize such a mission to create confusion, if not chaos, in Spain, by withholding funds from one faction and tendering them to a rival, thus playing one against another. State Department agents, still trying to overthrow Franco, would upset all the Defense Department's plans for a stable Spain, certainly a prime necessity for construction and operation of our bases there.

It might be added that these Pentagon fears are seeping into committees on Capitol Hill which are examining requests for foreign aid. The reaction of Congressmen is, "Let the generals and admirals supervise any money for Spain."

FORMOSA

The announcement that some \$300,000,000 of proposed foreign military and economic

aid funds will be allocated to Formosa has given the dubious impression that the State Department has changed its spots. Last spring, the Acheson team reversed itself on the Formosa problem, verbally admitting that the island is a bastion of our strategic defenses. Actually, the State Department language was tricky, and this column warned that Acheson's boys had not abandoned the idea of ousting Chiang Kai-shek, who rules the island. In reality, State no more wants Chiang on our side than it does Franco—and is attempting to lay the groundwork for a policy to undermine the Generalissimo's power in Formosa.

Last week, we revealed how State now seeks to infiltrate Spain with its agents, under the guise of administering economic aid, and how the United States military fear that State will thus cause much trouble, if not confusion damaging to military plans. This week, the same pattern of Acheson activity is seen in the announcement that \$300,000,000 will be allocated to Formosa. The proposed grant is contained (according to the Washington Post, August 9) in the mutual security program now before congressional committees. While the Post news story speaks of arms to modernize Chiang's army on Formosa, it also mentions that almost half of the appropriation would be for economic help.

It is through this back door of economic aid that, just as in the case of plans for Spain, State Department agents would enter the Formosan situation and exert influence not of a kind to strengthen the Chiang regime on the island. It is noted that Assistant Secretary of State Dean Rusk's name is associated with the aid project. Rusk is the Acheson aide who used the "tricky" language last spring to give the impression that the Department supports the Nationalist Government. More and more it is feared that Acheson's men have not changed their long-term plan to get rid of Chiang Kai-shek.

Proposed Establishment of National Citizens Advisory Board on Radio and Television

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. BENTON. Mr. President, this morning the Subcommittee on Radio, Television, and Telecommunication, of the Committee on Interstate and Foreign Commerce, presided over by the distinguished majority leader [Mr. McFARLAND], heard a series of very remarkable and extremely interesting witnesses. Their testimony dealt with the problems involved in the future of television, and with the joint resolution and bill introduced by the junior Senator from Wyoming [Mr. HUNT], the junior Senator from Ohio [Mr. BRICKER], the senior Senator from Massachusetts [Mr. SALTONSTALL], and myself.

Three of the statements are brief, but they are very interesting and illuminating. They bear directly on the questions which are being asked of many of us by our constituents. I ask unanimous consent to have them printed in the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

TESTIMONY OF DR. EDGAR FULLER, EXECUTIVE SECRETARY, NATIONAL COUNCIL OF CHIEF STATE SCHOOL OFFICERS, ON S. 1579, BEFORE THE SUBCOMMITTEE OF THE SENATE INTERSTATE AND FOREIGN COMMERCE COMMITTEE, SEPTEMBER 6, 1951

Mr Chairman and members of the committee, I appreciate this opportunity to testify concerning Senate bill 1579, which would establish a National Citizens Advisory Board on Radio and Television as an adjunct of the Federal Communications Commission to evaluate radio and television programs and to report thereon to the Federal Communications Commission and to Congress.

This testimony is presented in a dual capacity. My regular work is as executive secretary for the superintendents and commissioners of education of the 48 States and the Territories and Island dependencies. These chief State school officers, as important State officials and heads of the State school systems, are especially concerned about what the effects of television may be on elementary and secondary school pupils. They are also interested in the quality of programs offered to the general public. The second capacity in which I testify is as chairman of the Joint Committee on Educational Television, which is composed of seven organizations, as follows. American Council on Education, Association for Education by Radio, Association of Land-Grant Colleges and Universities, National Association of Educational Broadcasters, National Association of State Universities, National Council of Chief State School Officers, National Education Association of the United States. The membership of these organizations constitutes the vast majority of educators in the United States, and the committee attempts to be of service to more than 30,000,000 elementary, secondary and college teachers and students throughout the country. The proposed National Citizens Advisory Board on Radio and Television should be an excellent influence on behalf of these millions of teachers and students as well as on behalf of the general public.

Mr Chairman, it is unthinkable that the limited number of television channels may be allowed to become monopolized for selling goods. Television is expensive and its monetary value for selling is great. The history and present status of radio has demonstrated that the rituals of the sellers demand monotonous repetition of the trade-mark and the trite cliché. Such repetition, carried to excess, spoils programs and stultifies thinking. Television is a more powerful medium than radio, and the public interest demands even more insistently that it diversify its offerings to maintain entertainment of good quality and public information programs beneficial to good citizenship.

There is reason to believe that governmental censorship of mass communications media can become dangerous to freedom, and we are opposed to official censorship for that reason. Thus we have a peculiar situation in which it seems best that the Government which represents the public should refrain from official action on behalf of the public. Assuming such governmental restraint, the problem is how to insure that there shall be a variety of programs, that the television medium shall not be commercially monopolized and that there shall be an impartial, authentic, and noncommercial avenue for public expression concerning the kind and quality of radio and television programs. This is long overdue, and will be done one way or another.

It is reasonable to suppose that the National Government, while refusing to evaluate radio and television programs itself

through administrative action by the Federal Communications Commission or through direct legislation, should cooperate to assist the public to express itself, and a less offensive or less dangerous way than that proposed by S. 1579 could scarcely be devised. We are especially pleased that the distinguished Chairman of the Federal Communications Commission is supporting this legislation.

It is difficult for us to understand why commercial broadcasters should oppose such a National Citizens Advisory Board as S. 1579 proposes. The Board would be entirely unofficial and advisory, and it would have no powers of censorship. It would be legal for both the Federal Communications Commission and Congress to ignore every suggestion it might make. Do the broadcasters suppose that there will be no organized groups of any kind whatever to suggest to them what the public opinion is concerning their presentations on television? Are the commercial broadcasters going to refuse to cooperate with any such groups of citizens? If they take an attitude that all the television channels belong to them, to use as they please to bombard the people in any way that will earn them the most dollars, the alternatives of the general public may be limited to less desirable types of action to protect itself. The groups I work with very much prefer the route of cooperation.

Mr Chairman, I would like to include here some of the officially approved statements made by these groups. The National Council of Chief State School Officers in its annual meeting about 2 months ago unanimously approved the following resolution:

"Inasmuch as the available television channels are limited in number and are in danger of being monopolized by commercial interests in ways which will not protect the high general educational level upon which our way of life depends, the council requests that the Federal Communications Commission take action to

"A Reserve permanently at least one very high frequency channel for educational broadcasting in every metropolitan area and major educational center.

"B Require that noncommercial broadcasts be given priority and be produced regardless of commercial interests on all channels for a reasonable length of time each day at hours convenient for public listening

"C Reserve permanently a number of ultra high frequency channels for future educational broadcasting adequate to provide such service to all the people of the United States wherever they live

"We commend the Federal Communications Commission for the beginnings of such reservations for noncommercial educational television as exemplified in its third tentative allocation of March 22, 1951. We also commend the Ford Foundation for its generous support of educational objectives in television."

Mr Chairman, we sincerely hope the self-regulation of the broadcasting industry will make it unnecessary to press for reservation of time for noncommercial broadcasts at good listening hours on all stations, either before the Federal Communications Commission or in the Congress.

I also quote a paragraph from the official policy of the Joint Committee on Educational Television:

"The general policy of the Joint Committee on Educational Television shall be to concern itself with education as it does or does not appear on television screens of the United States from whatever source. Its attitude shall be one of realistic cooperation and of realistic appraisal with respect to performance by both educational or commercial television stations and/or networks. It shall conduct its activities in terms of long-range objectives based on the belief that democracy requires a well informed public,

It will represent the special needs and duties of education in this newest and most potent of the mass media, with the understanding and belief that the principles and objectives it seeks must be measured in terms of several generations."

Here, once again, there is an expressed interest in the general quality of all television programs. That interest is expressed not only on behalf of the millions of students and teachers at all educational levels which constitute some 20 percent of the entire public, but also on behalf of adults generally. All television has an educational effect one way or another, and in a free nation all adults are or should be students in a general sense, in order to be good citizens.

Mr Chairman, commercial broadcasters will be very unwise if they oppose any and all efforts to make the citizens' voice heard in the field of radio and television in the manner assured by Senate bill 1579. It may be said that the industry can regulate itself and that the broadcasters have already taken steps to form such internal regulatory bodies. This is all right as far as it goes, but it doesn't go very far. Senate bill 1579 is entirely in accord with all the commercial broadcasters may do toward self-regulation, but there is no reason to suppose they can shake off the powerful commercial pressures unaided. If the commercial broadcasters are really sincere in their desire to maintain good-quality programs on television screens in the interests of the general public, as we believe most of them are, they should welcome such aid as the proposed National Citizens Advisory Board on Radio and Television will be able to extend to them.

They should also welcome similar groups in the States and perhaps in the local communities as well. The commercial broadcasters need the cooperation of such groups. The laudable objectives of freedom under self-regulation and the prevention of additional official regulation will come to commercial broadcasting only as it takes the people into its confidence and demonstrates capacity to regulate itself. If broadcasters resist any effort of the public to express itself, such as through the proposed National Citizens Advisory Board, their motives at once are suspect. Many people may come to believe that they do not really want to regulate themselves in a manner generally acceptable, that they do not want suggestions from the public, and that what they really want is license to follow the dollar sign wherever that dollar sign may lead.

These are the principal reasons, Mr. Chairman, why I have appeared here to support Senate bill 1579 today, and I would like to express again my appreciation for the privilege of doing so.

Thank you.

STATEMENT ON BEHALF OF THE CONGRESS OF INDUSTRIAL ORGANIZATIONS BEFORE THE SUBCOMMITTEE ON RADIO, TELEVISION, AND TELECOMMUNICATION OF THE SENATE INTERSTATE AND FOREIGN COMMERCE COMMITTEE, PRESENTED BY STANLEY H. RUTTENBERG, DIRECTOR OF THE DEPARTMENT OF EDUCATION AND RESEARCH, CIO, SEPTEMBER 6, 1951

I wish to express my great appreciation for the opportunity to appear before this committee and indicate the complete support of the Congress of Industrial Organizations for S. 1579, the proposal to establish a National Citizens Advisory Board on Radio and Television.

The interest of the Congress of Industrial Organizations in the future of television is based upon two extremely important factors. In the first place, our organization represents the overwhelming majority of the men and women employed in the manufacture of television sets. The degree to which television programs are responsive to the needs and wishes of the American people and thus assure a healthy future for the industry

plays an important part in the future well-being of these thousands of workers in the industry.

In the second place, the membership of the CIO represents one of the largest organized consumer groups in America. The degree to which television programing not only entertains the public but also elevates its cultural standards, provides useful educational and informational services, and generally advances the cause of good citizenship is of tremendous importance to our 6,000,000 members and their families.

While we are all particularly concerned with the presently inadequate educational service which television is rendering our children, I do not wish in the brief moments available to speak to that very important aspect of the problem before us. In the millions of CIO families, there are millions of children who should now be served with more educational programs and better entertainment programs than are now being provided by our program sponsors. Our concern is identical with that of all other parents and educators. But I am sure that this problem has been adequately discussed by competent educational authorities during the course of these hearings.

Of equal importance to the problem of child listeners is the question of the values which can be obtained for adult listeners by the proper utilization of the great potential inherent in television broadcasting.

More than 100 years ago the leaders of organized labor of that period were actively participating with other groups in the effort to establish a free public-school system. The expansion of education at all levels both for children and adults, has been a constant objective of organized labor during the years. American democracy, with its dedication to the concept of equality of opportunity, is dependent upon expanding mediums for education and information for all of the people.

If the great problems of our age are to be understood by all of the people, and information, reason, and logic are to be the tools with which the people are to understand and solve them, no educational medium—least of all television—can be left solely in private hands for the purpose of profits based primarily on the provision of entertainment. The Congress of Industrial Organizations does not seek to deprecate those entertainment programs provided by private sponsors which meet acceptable standards. Certainly our members want to continue to see, hear, and enjoy the Jack Bennys and Bob Hopes, the quiz shows, and athletic events. The basic question, however, is simply whether the great educational potential of television shall be stultified and this important medium only used for purposes of entertainment. Will this dangerous trend, which has already been set in motion in television programing, be allowed to continue unchecked and follow the unfortunate pattern already established by commercial radio broadcasting? There are evils in the pattern which must be opposed in the interest of the American people and this is even more true in the case of television because its educational possibilities are many times greater than that of radio. Certainly most educators agree that what is seen has more impact on the mind than words that are heard or read.

It is our belief that working people desire the best in television entertainment. But they want much more. The millions of wage and salary earners of America who have been deprived of higher education and who have been forced to pursue their own educational advancement through correspondence short courses and night schools are a group whose educational needs can be tremendously enhanced by effective educational television programing. Why should not television now bring to the homes of all American workers the opportunity to

receive information and knowledge which circumstances beyond their control have prevented workers from enjoying as students in the classrooms of our universities and colleges? In addition to television instruction in home economics, in mechanics, and in the arts, millions of adult Americans seek an opportunity to learn more about good books, about American history, about the operation of their Government and the laws under which they live. Even more important, since we live in an age of controversy, the American adult seeks to understand the issues which he must face in order to be an intelligent voter and citizen. Therefore, there is an increasing need for the type of television programs which present responsible discussion of public issues and which help the listener to understand them.

Certainly it is not to condemn the advertisers of soaps and automobiles if the type of programs which we have discussed do not interest them. With few exceptions, commercial sponsors avoid "public interest" programs that involve controversial discussion because they fear so-called unfavorable reactions. Or they avoid the so-called educational programs because they presume that they are dull and that the American people do not want them and will not listen to them and therefore will not buy their products. Or, perhaps, the commercial advertisers avoid these programs for the reason that they believe they had best be left to those who are professionally trained in the field of educational broadcasting.

Whatever the reason, it should be apparent to all that the public interest in the development of our fast growing television broadcasting industry must be protected. A large part of television time should rightly belong to the entertainment field and continue to be sponsored commercially as long as standards of diversity and good taste are elevated. But much of television time must be reserved for more serious purposes and it is the responsibility of Congress which represents the interests of all the American people to see that this is made possible. Not only must educational agencies be protected and encouraged in their desire to provide educational and public service programs through television but there is also a related responsibility to see that these types of programs—no matter who sponsors them—are allotted portions of the broadcasting day and night when those who desire to enjoy them are free to listen.

In television it is not true that the air is free. Because of the limitation on the number of stations which can transmit television programs through the air at any one place, monopolies inevitably are established. It is the view of the Congress of Industrial Organizations that the United States Congress must safeguard the public interest now before it is too late by establishing the National Citizens Advisory Board, called for by the bill which is before us. Through this objective body, divorced from any personal financial interest, the American people can hope that American television will serve in the future the great potential entertainment, cultural, educational and public service which the people so badly need and want.

TESTIMONY OF WALLACE J. CAMPBELL, DIRECTOR, WASHINGTON OFFICE, COOPERATIVE LEAGUE OF THE UNITED STATES OF AMERICA, BEFORE THE SENATE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE IN BEHALF OF S. 1579, SEPTEMBER 6, 1951

My name is Wallace J. Campbell. I am director of the Washington office of the Cooperative League of the United States of America, a national federation of consumer, purchasing, and service cooperatives. The league's membership is made up of local and regional cooperative organizations whose total membership is nearly 2,000,000 families. I am also president of a small FM radio

station, WCFM, owned by our member organizations, the Cooperative Broadcasting Association here in Washington.

Our organization is happy to support S. 1579, introduced by Senator BENTON for himself and Senators HUNT, BRICKER, and SALTONSTALL, to establish a National Citizens Advisory Board on Radio and Television.

The Cooperative League has long been interested in the mass media of communication and in the practical job of adult education which, in our view, must continue long after formal schooling is completed if we are to build an educated and effective democratic movement.

Because of this keen interest, our cooperative associations have taken the leadership in the development of various techniques of adult education. Perhaps the most effective are the advisory council work in the State of Ohio and the study group movement in Nova Scotia, Canada, which together combine the best elements of an all-round program of adult education. Thousands of farmers in Ohio meet in their neighbors' homes once each month throughout the year in groups of a dozen families to discuss the practical problems that face them. These advisory councils are interested not only in the problems of the operation of their cooperatives, but in general education, economic, and civic problems on a community, State, and National basis.

Let me give you some examples of the importance of radio to our adult education and information program.

In Nova Scotia the cooperatives have had the active support and assistance of St. Francis Xavier University, a small Catholic college which pioneered in adult education. When their study-club movement reached such proportions that it was difficult to keep up with it with available manpower, friends of the college applied for a license for a broadcasting station and established station CJFX in Antigonish, Nova Scotia. Although it supports itself by commercial advertising during parts of the day, its main function is providing a channel for continuous adult education. For example, the university adult-education staff conducts its own discussion groups around the microphone at stated times. The local groups meet around their radios and listen to that discussion and then continue their own discussions in their own homes. The Canadian Broadcasting Corp. has a similar program, the Farm Forum, which serves as the nucleus for discussion groups across Canada.

In the State of Ohio, the farm-bureau cooperatives took the initiative in establishing the People's Broadcasting Corp. which now owns stations WRFD in Worthington, Ohio, and WOL in Washington, D. C. Farm groups in Nebraska have just started a similar station in Lexington. The Ohio station has created a new pattern for farm radio. It is a day-time AM-only station devoted specifically to the service of farmers of Ohio. It is noted for its complete weather coverage designed to be of assistance to farmers. It provides extensive market and crop reports, news coverage every hour on the hour, and good music aimed at the farm family. Too much of American radio is city oriented and is troubled with "urbanitis." Apparently no regular commercial station was interested in doing this kind of job. The result is that WRFD already has the second largest radio audience in the State of Ohio.

Here in Washington a group of listeners—or rather at that time prospective listeners—formed the Cooperative Broadcasting Association. They were granted the first FM license in the city of Washington and are just completing 3 years of FM broadcasting. WCFM is establishing new patterns in radio, primarily because it is listener-owned and listener-oriented. It is owned by 2,700 individuals and 10 consumer associations serving this area.

Because it is listener-owned, it crowds more news coverage into its broadcasting time than does any other Washington station. It has a series of outstanding commentators, many of whom serve without compensation because they are interested in the station.

Its Capital Events coverage of Washington conferences and important meetings is unique in this Capital City; and because it is the Capital City the talent available is abundant.

WCFM's programs include the National Gallery of Art Symphony Orchestra concerts which are broadcast every Sunday evening. A new feature, sponsored by the listeners themselves, is a 3-hour program of fine music and drama produced by the British Broadcasting Co. and available only on a noncommercial basis. In cooperation with the Library of Congress we conduct our own poetry program.

With this background you can see why our cooperative associations are keenly interested in radio and in the prospects for enlarging television broadcasting as well.

These illustrations are not given to advertise the station or to boast of their accomplishments. As a matter of fact, the accomplishments are very small compared to the opportunities in the field. What accomplishments have been made have been made the hard way. Our people are amateurs in this field. But they felt there were important services which were not being rendered or were being performed inadequately or being shoved aside to poor times by more profitable accounts.

We try to be a yardstick in the industry, but there are many things of a civic, educational, and cultural nature which we cannot do but which the major networks and other independents could do if given the encouragement of a citizens advisory board.

We would like very much, as a part of our program of public service, to put the Senate of the United States on the air every day it is in session. There are a great number of people who would like to follow these sessions carefully who could do so most effectively through radio. There would not be the continuing huge following of the Kefauver hearings. And perhaps the Senate would not pull as large an audience as John's Other Wife. But seriously, we would like very much to give the public the opportunity to hear these sessions. As a small non-profit station, we could make time available which a commercial station or network might find difficult to remove from advertising commitments. We do not believe the Senate of the United States should be sponsored by Carter's Little Liver Pills.

We feel that the Government, which owns the wave lengths upon which both radio and television depend, should have a responsibility for helping to shape the general direction in which this programming should go in order to provide the greatest possible public service. We feel that the Government should encourage experimental stations and those which will provide a yardstick for public service broadcasting. We feel that it also should encourage nonprofit organizations engaging in radio and television broadcasting and should give particular encouragement to consumer-owned and listener-owned radio stations.

We do not wish or request subsidy of any kind from the Government. The National Citizens Advisory Board should bring the spotlight of attention and approval to those things which are in the public interest and report to the FCC and the Congress programming and practices which tend to degrade this important public instrument.

A board of highly competent and well-known citizens devoted to the public interest could do much through the voluntary

recommendations of the committee to help shape the policy for the radio and television industry which would move it away from the present trend which at times seems to be to seek the lowest common denominator in the radio audience and direct all of the programming toward that lowest common denominator. Only when the public interest becomes the predominant interest in radio and television will these media achieve the stature which they deserve.

The Japanese Treaty

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the RECORD an excellent editorial by Frederic Nelson entitled "Japan's Treaty Delegates Must Be Slightly Puzzled," which appeared in a recent number of the Saturday Evening Post.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JAPAN'S TREATY DELEGATES MUST BE SLIGHTLY PUZZLED

The treaty which the Japanese are being asked to sign in San Francisco this week is more than generous. In contrast to the Treaty of Versailles and in defiance of all the Morgenthauism that was being thrown about at the end of the war, this treaty offers a defeated nation political integrity, considerable economic freedom, and a fresh start in the family of nations. It speaks well for the wisdom and skill of Mr. John Foster Dulles, who had an important part in drawing up the treaty, and for the Administration which let him do it. What kind of treaty Japan would have got if we were not working like beavers to line up allies in the cold war is another matter.

Nevertheless, there is considerable doubt as to whether we shall get full value for this commendable, if shotgun type, generosity. The doubt is based on what orientals must think of our over-all performance in the Far East. The Japanese delegates arrive here, knowing that, contrary to the advice of General MacArthur, we pulled our punches in the Korean War, and were then trapped into armistice negotiations which were dragged out beyond all reason. The Communists desired the respite in order to build up their strength, while we were supposed to relax. A Japanese, reading Admiral Joy's charge that the Communist delegates had come to the conference to state your political price, must have been amazed at our innocence. Communists invariably regard negotiation as a step in the master plan. Will the country which exhibits such naiveté assure the Japanese that, even with our protection, they are safe all alone in the new Red Asia?

If it isn't to be a Red Asia, the Japanese delegates must be saying to each other: Why was the United States so reluctant to list Nationalist China among the signatories to the peace treaty? Soviet Russia, which fought the Japanese for 5 days, is represented at San Francisco—much to the embarrassment of the geniuses who bribed Stalin to come in. China, which fought Japan for 15 years, was not invited, although Nationalist China is still recognized by the United States.

The Japanese may well wonder whether we left Nationalist China off the roster because we secretly expected the Chinese Communists eventually to be recognized, after an appropriate amount of pressure from Messrs. Nehru and Morrison. Or did we leave her off in an effort to appease communism throughout Asia?

Neither question is calculated to reassure the Japanese gentlemen that we are the most sapient allies one could have. The Japanese are under tremendous pressure from communism in Asia. Their livelihood depends on their ability to trade on some terms with the Asiatic mainland. To see us unwilling to take a stand behind the anti-Communist Chinese, while being chivvied into an unprofitable talkathon at Kaesong, could make the Japanese wonder just how smart we are. However, since the immediate power is on our side, and the treaty is a generous one, they will presumably sign—if they haven't when you read this. It is a pity, though, that the circumstances create so many doubts.

The Merit System and the Whitten Rider

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. O'CONOR. Mr. President, in justice to the great number of conscientious, hardworking Government employees, whose services to the people of this country are of the highest order, it is urgent that fullest consideration be given to any legislative proposals which might work to the detriment of this great body of loyal citizens.

I make this observation as a result of reading the article in The Federal Diary by Jerry Kluttz in the Washington Post of September 4 concerning certain alleged discriminations which would be caused by the Whitten rider which was affixed in the House of Representatives to H. R. 5215, the supplemental appropriations bill for 1952. Because of the unusual nature of the proposals of this rider, and because also of the very detailed criticism of the proposals by the writer, who is recognized as one of the most authoritative commentators upon Federal employment proposals, I ask unanimous consent that pertinent excerpts from the article by Mr. Kluttz be reprinted in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FEDERAL DIARY

(By Jerry Kluttz)

BASIC MERIT PRINCIPLE OF UNITED STATES EMPLOYMENT CORRUPTED BY RIDER

You, the Federal employee, would be the victim of rank discrimination and the basic merit principle of filling a Federal job with the best qualified person available would be corrupted by the Whitten rider which has been voted by the House.

Worst of all, you would be penalized because of the simple fact that you are working for Uncle Sam. Outsiders would be free to

come in and take over the better Government jobs without restriction. Your incentive to work for and be promoted to a better job for which you could qualify would be shattered by the far-reaching rider. To be blunt about it, the rider would lead the way toward mediocrity in Government.

That is a sweeping indictment against the personnel rider guided through the House without a single protest by Representative JAMIE L. WHITTEN, Democrat, of Mississippi, whose sincerity in doing it is not being questioned. This is the bill of particulars to support the indictment:

The rider would require employees to wait at least a year between each grade promotion; promotions of two or more grades would be outlawed.

In Government are thousands of youngsters who enter at low grades. They go to night school and they take training courses to equip themselves to qualify to be lawyers, scientists, technicians, accountants, FBI agents, and so forth. They are then free to take Civil Service or agency competitive tests for the better-paying jobs. Those who qualify are then eligible for appointments under the present sound career service principle.

The Whitten rider would hamper this practice of self-training and promotion for the qualified. A grade 4 clerk, for example, who sweats and slaves to put himself through law school and who qualifies for a grade 7 legal job through a competitive test, couldn't be appointed to it under the Whitten rider. He could only be given a grade 5 job; he'd have to wait several years before he could get a grade 7.

The grade 4 clerk, who has had valuable Government experience and who may be the very best man for the legal job, would have an anchor around his neck. But an outsider, one with no Government experience whatsoever, who qualified at a lower grade for the grade 7 legal job could be appointed to it without restriction.

There isn't an agency of any size in the Government that doesn't encourage its lower-grade people to train themselves to qualify for its better jobs. The Federal Deposit Insurance Corporation, for example, carefully screens youngsters it appoints to its grade 5 accounting jobs. Those who get the jobs must undergo agency training, take college courses in banking, and pass agency competitive tests to get trainee bank examiner jobs at grade 7 and later examiner jobs at grade 9. The FDIC system has proved to be most successful.

Thousands of young college graduates are in Government today who are hired at trainee jobs; those who successfully complete their training assignments have been promised promotions to so-called journeyman jobs, promotions that usually carry a two-grade jump from grade 5 to grade 7. The Whitten rider would disrupt these programs which have paid big dividends to Uncle Sam. It would destroy the incentive of these people to work for better jobs and, without doubt, drive many of them out of Government.

The civil service rule is to have a two-grade spread between that of a bureau chief and his assistants. Let's assume we have a grade 15 bureau chief who retires and the department desires to follow the well-established career principle and appoint to it a grade 13 assistant who is eminently qualified for it. Under the Whitten rider, it couldn't be done, but the grade 15 job could go to an outsider.

The above are just a few of the terrible injustices that could, and would, happen under the Whitten rider. It would be the good and able people and with something to offer the Government who would be hurt by the rider. The inefficient and the drones, the target, apparently, of Representative WHITTEN, would be unaffected by it.

Some Uncensored Footnotes to the Forrester Diaries

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very excellent article entitled "Some Uncensored Footnotes to the Forrester Diaries," written by William Bradford Huie. It is interesting in that it shows the extent to which the Communist Party line will go to smear a really great American.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOME UNCENSORED FOOTNOTES TO THE FORRESTER DIARIES

(By William Bradford Huie)

With the publication this month of the Forrester diaries, thoughtful Americans can reflect further on the story of James Forrester, America's first Secretary of Defense, whose brilliant career ended in the predawn hours of May 22, 1949, when his body came hurtling 16 floors to the pavement at Bethesda Naval Hospital.

Those who expect to study the published diaries should do so with these reservations in mind:

1. The diaries have been censored. The two men who suffer most in comparison with Forrester, and who possess none of his vision, are President Truman and Defense Secretary George C. Marshall. Yet, after Forrester was discharged, his papers for many months were in secret custody at the White House, and it is admitted that the Defense Department, under General Marshall, withheld some of the papers "in the national interest."

2. The papers were purchased and prepared for publication by a newspaper that supported many of the policies Forrester so courageously—and so futilely—opposed.

With these reservations, the diaries should be examined for the many evidences of Forrester's remarkable foresight, of which these are the finest examples:

In 1943, while most other men in our Government thought otherwise, Forrester repeatedly warned that Russia was not an ally but a treacherous enemy. He urged President Roosevelt to impose stern terms on Russia before our invasion of Normandy, and his first advice to President Truman was that Russia be dealt with as a dangerous probable enemy.

In 1945, while Alger Hiss, Dean Acheson, and others were urging President Roosevelt at Yalta to yield to the Russian's concessions that would lead inevitably to such disasters as the Korean war, Forrester pleaded with the President not to make those concessions.

In 1946, while Marshall, Acheson, Hiss, Philip Jessup, John Carter Vincent, and Owen Lattimore were favoring the Chinese Reds by trying to enforce a coalition government in China, Forrester opposed the coalition policy and warned General Marshall of its consequences. Forrester went further: Supported by the Secretary of War, he addressed a note to the State Department demanding to know if it was the policy of the United States to desert the Nationalist Government of China.

From the time of the inauguration of the Manhattan project, which developed the atomic bomb, Forrester was deeply concerned over the protection of our secrets. He warned President Roosevelt that security was

being violated, and in 1945 he battled to have the bomb's further development kept within the custody of the military.

In 1947, when traitors prepared to hand over additional atomic secrets to scientists who were shuttling our secrets directly to the Russians, it was Forrester alone who came to the aid of Senator BOURKE B. HICKENLOOPER, chairman of the congressional Committee on Atomic Energy, and prevented the transfer of the secrets.

In 1949, while Forrester was battling to prepare the country's armed forces for such eventualities as the Korean attack, Truman fired him and brought in Louis Johnson as Defense Secretary to implement the politically expedient policy of retrenchment.

Despite the handicaps of censorship, however, the published version of the diaries should convey an inspiring portrait of a type of American who may fast be disappearing—a patriotic public servant with wisdom. And between the lines, perhaps, there will be new clues to the individual himself—a complex personality beset by all the dilemmas of his time.

Jim Forrester—his mother always called him Vincent—was reared at Beacon, N. Y., on the Hudson River. His father, a modestly successful contractor, was a devout Catholic born in Ireland, and a Cleveland Democrat. Because he was the bantam in a family of 6-footers, Jim Forrester developed the pug-nacious drive that sent him bounding through life with an energy that dismayed his friends as well as his competitors. His broken nose, suffered in an early boxing match, gave him his scarred-bulldog look. At Princeton, he was the sort of student who not only works his way through school, but accumulates money and influential friends in the process.

Before he was 50, Forrester had reached the traditional goals of the ambitious American boy: he had made a million dollars in Wall Street; he had traveled extensively and attained a confident, world viewpoint; he had married and reared two sons; he was the \$180,000-a-year president of Dillon, Read & Co.; and he was ready to quit business and serve his country when it needed him in a crisis.

When Roosevelt made him Assistant Secretary of the Navy, he quickly attracted attention; he had the fiercest energy ever seen in Washington. He'd dictate letters while riding to the golf course; then he'd go charging around the course, often alone and in the rain, determined to keep physically fit.

He was capable, on occasion, of being quiet and warm, as when he sometimes sat over luncheon and talked with a close friend like Navy chaplain Msgr. Maurice S. Sheehy, of Catholic University.

What made Forrester appear most unusual in Washington was that when World War II ended, everybody but him relaxed to celebrate the peace. Indeed, he seemed to gain momentum with the peace; he refused to accept peace as a reality, and instead went charging along as though the war had reached a deadlier stage.

In December 1947, when France was paralyzed by a general transportation strike, Forrester summoned his most trusted friends to Washington and told them that necessity demanded the use of dollars in Europe for bribes. He explained that he had spent all the Defense Department's "nonvoucherable funds" as well as much of his own money and that more was needed. His friends produced \$50,000 immediately; the money was carried that night to Paris by a Naval intelligence officer and paid the next day to a prominent Communist leader. The strike ended within 12 hours.

In the spring of 1948, during the Italian elections, Forrester acted in the same forthright manner. He summoned his friends and told them that the election would be lost unless dollars were used to overmatch Red

payments to Italian propagandists. His friends produced what is believed to be in excess of a million dollars, and this money was carried in cash to Italy and paid out in the most effective manner.

Before he permitted large dollar contributions to the De Gasperi campaign fund, Forrestal received a promise that never, under any circumstances, would De Gasperi allow Communists in his government. This was at a time when representatives of our State Department were still advocating the formation of coalitions with Communists.

In addition to private money, Forrestal employed deception in Italy. He had no authority to give American tanks to the Italians, but he was, with authority, shipping tanks to Greece. He arranged for freighters loaded with Greece-bound tanks to refuel at Naples, and while the ships were refueling, American troops in civilian clothes "broke in" the tanks by driving them down Italian streets in parades with Italian soldiers, thus giving the impression that the tanks had been delivered to Italy.

After the election, an Italian cardinal declared: "The Communists blame Mr. Forrestal for this defeat. They have marked him as their No. 1 enemy. He understands them too well."

It was during the Italian elections that the pro-Communists in America began plotting Forrestal's destruction. Forrestal made his most powerful enemies, however, when he declined to take an active role in trying to reelect Truman. This enraged the political gang around the White House, and immediately after Truman's inauguration in 1949, they launched the scurrilous get-Forrestal campaign that resulted in his discharge, his crack-up, and his death.

The country has never witnessed a more dishonest smear campaign. Forrestal was accused of having defrauded the Government in a tax case. He was a Fascist, a warmonger, a racist, a bedfellow of I. G. Farbenindustrie, a dealer in near eastern oil. As a climax, Drew Pearson screamed that Forrestal was a personal coward, that he had once run out of his house and abandoned his wife to burglars.

The smear effort raged through January, February, and March, and by March Forrestal appeared dazed and depressed. On April 1, Forrestal attended the swearing-in ceremony for his successor. He wept openly. The President insisted on decorating him—and Forrestal wept while the President was pinning on the medal, for he considered the gesture an insult. He walked back with Admiral Louis Denfeld, and told the admiral he was going to Florida to play some golf.

On April 5, Ferdinand Eberstadt in Washington phoned Robert A. Lovett in Hobe Sound, Fla. Mr. Eberstadt reported that Forrestal was ill.

Four hours later, just at dusk, a big Air Force Constellation, the *Dew Drop*, circled and landed at a small, deserted field near Hobe Sound. Waiting was a single automobile in which were Mr. and Mrs. Lovett and Mrs. Forrestal. The door of the airplane opened, and a small ladder was dropped.

"I looked up and saw him standing in the door," Mr. Lovett recalls, "and he looked so pitiful. He was alone. And he didn't look like the man I had known at all. He looked like a little, old Irishman. His eyes were sunk, and I couldn't see his upper lip. As he came stumbling down that ladder, I reached up and caught him under the arms."

After he had greeted the two women, Forrestal stood under the tail of the airplane and told Mr. Lovett that "they" had got him, that he was being followed, that his telephones were tapped, and he broke into tears as he said: "They're going to catch us unprepared, Bob; American soldiers will be dying in a year."

During the evening he was quiet, but the following day he was worse. Mr. Lovett telephoned Washington and next day

Forrestal's personal attorney, John Cahill, of New York, arrived with Dr. William Menninger and Dr. George Raines. The illness was diagnosed as occupational fatigue, and Forrestal was returned to the Naval Hospital.

Perhaps the diaries will shed some light on what happened during the 7 weeks Forrestal was at Bethesda.

Forrestal, in his sixteenth-floor suite, spent most of his time entirely alone. Mrs. Forrestal sailed for Europe on April 12. Two of the people who visited the hospital were his older brother, Henry Forrestal, and Monsignor Sheehy.

Early in 1949, Forrestal had asked Father Sheehy, along with his brother, to help him return to the Catholic Church. To facilitate this return, some investigation had been made into Mrs. Forrestal's previous divorce.

Forrestal was admitted to the hospital by Capt. B. W. Hogan, and Captain Hogan noted that Forrestal insisted on being listed as a Catholic. His first request was to see Father Sheehy. This request was noted by Captain Hogan, but for reasons not yet explained, Captain Raines, the psychiatrist in charge, kept delaying a meeting between Forrestal and Father Sheehy.

On April 12, Henry Forrestal visited the hospital and talked with his brother as well as with Captains Hogan and Raines.

"Jim looked better than I expected," Henry Forrestal recalls. "His eyes seemed clear; he was sharp and incisive. He said, 'I'll be all right. We'll pull out of this.'"

What worried Henry Forrestal was the confinement in Bethesda. He told Captains Hogan and Raines: "What my brother needs is not to be cooped up there on the sixteenth floor. He needs to be on an estate somewhere, among friends, where he can walk around in the sun. He has been an exceedingly active man."

Mr. Forrestal asked Captain Raines, "Is my brother fundamentally okay?" Captain Raines said, "Yes."

Henry Forrestal also told the doctors that his brother wished to talk with Father Sheehy. Captain Hogan replied, according to Mr. Forrestal: "Yes, he has asked to see the father several times. And, of course, he will."

On May 10, 11, and 12 Henry Forrestal again visited the hospital. Meanwhile Father Sheehy had visited the hospital six times, each time asking to be allowed to see Forrestal and each time being denied permission.

Father Sheehy got the impression that the doctors were under orders in the case, so he sought the aid of John L. Sullivan, Secretary of the Navy. Mr. Sullivan called Dr. Raines and was assured that Father Sheehy could see the patient in time. But the time never came.

Henry Forrestal had a travel reservation to Washington for Sunday, May 22. He was going to make another effort to obtain his brother's release. But this effort, too, was too late.

Around midnight on Saturday, May 21, high up in the white monolith of the hospital, Forrestal sat reading Greek poetry and thinking back over his life. As he reflected, with his frustrations welling up inside him, he apparently concluded that he had lost his reasons for being.

He slowly read and pondered the chorus from Sophocles' *Ajax*:

"Oh, when pride of Gracia's noblest race,
Wanders, as now, in darkness and disgrace,
When Reason's day
Sets rayless, joyless, quenched in cold decay,
Better to die, and sleep
The never-waking sleep, than linger on,
And dare to live, when the soul's life is gone."

Forrestal then laid aside his book, pulled his robe around him, peeped cautiously into

the hall, then dashed into a pantry, shoved out a screen, and plunged to his death.

The greatness of men is determined by what happens after they die. If events disclose that they were possessed of vision, then they were great and valuable; if only trouble comes as the result of their decisions, then they were less than great. By this rule, Forrestal will probably be acclaimed a great American long after the lesser men who contributed to his destruction have been forgotten.

Aid for Nationalist China

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. JENNER. Mr. President, we are constantly told of the billions we gave to help Nationalist China. I ask unanimous consent to reprint in the *Record* an article by Ching-fan Chen which appeared in the *China Monthly* for November 1949. It will help put us on guard against rosy figures of aid to the Chinese Government on Formosa.

There being no objection, the article was ordered to be printed in the *Record*, as follows:

MONEY DOWN THE DRAIN?

(By Ching-fan Chen)

Many newspapers and columnists have complained that the United States has poured billions of dollars down the drain in China during the last decade. But was this money wasted? Or has it been used for the purposes intended?

Financial transactions are officially estimated by the American Government at three billions and a half, but many debatable items are included. For example, nearly all the loans made before Pearl Harbor, or prewar loans, were repaid. There is a difference of \$600,000,000 in the Chinese and the American estimates of the postwar lend-lease. Part of the money was used to repatriate the Japanese in the China-Burma-India theater and part of lend-lease supplies sent for Chinese account to India was diverted to British and Indian forces, chargeable against Allies other than China. Finally, nearly half of the amount listed as surplus property to China was repayment due China for wartime maintenance of American Armed Forces. The final total is about two billions, of which only one billion went to China during the period of American-Japanese fighting.

Beginning in 1938, American financial advances to China have fallen into three classes. Prewar loans were commodity credits, most of which have been repaid, sometimes well ahead of schedule. Financial advances in the war period included lend-lease and inter-Treasury credit. Financial transactions in the postwar period included surplus property arrangement plus Export-Import Bank credits, relief grants, and the China-aid program which is still going on.

All these advances were motivated by commercial, military, and diplomatic calculations. Prewar loans were made to strengthen the American domestic economy in the depression of 1937 and 1938 and to help China in its war against Japan. After Pearl Harbor, financial advances were made because, China, worn out from four-and-a-half years of single-handed fighting against the Japanese, was needed as an ally in the war against Japan. Postwar advances, among other reasons, were made to bolster the

reconversion of the United States from a war to a peace economy, to repatriate the Japanese in China, and to prevent the growth of anarchy along the China coast, the traditional center of Chinese trade with the Western World and of western business with China.

Pre-Pearl Harbor advances, amounting to \$120,000,000, bore interest at the rate of 4 percent per annum. They included four barter credits; that is, the tung oil loan of \$25,000,000 was made to support the Chinese fighting spirit; the tin loan of \$20,000,000 to champion the National Government of China and to denounce the puppet government of Ching-wei Wang in March 1940; the tungsten loan of \$25,000,000 to react against the Japanese occupied northern Indochina in September, after the fall of France; and the metals loan of \$50,000,000 to negate the Japanese formal recognition of the Ching-wei Wang puppet regime at the end of 1940. These credits were for purchase of American trucks, gasoline, chemicals, and construction materials for China's war needs. They were repaid in commodities; that is, America swapped her credits for China's tung oil, and strategic materials, such as tin, tungsten, and antimony, all of them considered vital to America's national defense.

The tung oil loan was authorized in December 1938, after the Japanese had occupied the key commercial cities, Canton and Hankow along the Yangtze River. With Japan already in control of nearly all the southeastern part of China, American commercial rights and interests in China were jeopardized. The provisions attached to the tung oil loan agreement are typical of American prewar advances. First of all, it was a "tied loan." Every dollar lent had to be spent in the United States. China could buy only American agricultural and manufactured products. Even China's receipts from the sale of tung oil after paying the loan had to be spent in the United States. Under this arrangement, each dollar advance by the American Government would lead to the sale of \$3 worth of American products. In addition, all shipments had to be made in American vessels. Finally, insurance had to be placed with American underwriters, and insurance premiums were collected by their firms.

After the battle of Britain had forestalled a quick Axis victory, the lend-lease bill of March 1941, "An act to promote the defense of the United States," was designed to trade material aid to Britain and Greece for time, so that the United States could prepare its own defense. Lend-lease was not extended to China until 2 months later, that is in May 1941.

Pearl Harbor shortened the time of preparation, and the military posture of the Allies was poor. On December 13, Guam, and on December 24, 1941, Wake fell to the Japanese. The Japanese quickly overran the Philippines. Hong Kong was taken by the Japanese on December 25, 1941, and the mainland of the Malay Peninsula was abandoned by British forces at the end of the year. In February 1942, Singapore was taken by the Japanese with the capture of something over 60,000 British troops, and much equipment. This was one of the greatest single British defeats of the war.

In order to help China fight the common foe, she had to be strengthened and encouraged. Assistance during the war years was mostly granted under lend-lease. Lend-lease aid to China from 1941 to the most recent date available is officially listed as \$1,627,000,000, although actual aid received by China was less. Wartime lend-lease allotments to China were at most \$846,000,000, or 1 percent of the total. This compares with eleven billion to Russia, where transportation difficulties were almost as great. Lend-lease to China, during 1941 through 1944, ranged between \$90,000,000 and \$40,-

000,000 a year. If a curve were to be plotted with the figures for these years of Allied warfare in the Far East, it would be a curve of descending order, starting with \$88,000,000 for the lend-lease period of March 1942, whereas China's resistance to Japanese aggression was an up-hill fight, getting more and more bitter and costly.

Comparing lend-lease aid to various countries, the United Kingdom had the lion's share, thirty-one billion, or 63 percent. Soviet Russia stood next to the United Kingdom with eleven billion, or 22 percent. France and its possessions received three billion. China, the first and most populous country to resist the Axis early in 1931, having received 1 percent of wartime lend-lease, got, according to the highest estimates, including postwar lend-lease, \$1,627,000,000, that is, 3 percent of total lend-lease aid.

Unfortunately, lend-lease to China disturbed Allied relations during China's darkest hours. In the summer of 1944, when the Japanese were making a last attempt to knock China out of the war, Winston Churchill, in a speech in September, emphasized that though China had received lavish American help, she suffered severe military reverses. Statistics refute the charges of lavish aid, and the severe military reverses were in part due to the heavy losses China suffered when the United Kingdom closed the Burma Road and abandoned Hong Kong and Singapore.

After VE-day lend-lease to China was increased. It amounted to a billion—war and postwar—in 1945. This amount was partly used to evacuate the Japanese in the China-Burma-India theater; to that extent, it should not have been considered a proper charge to the Chinese account only.

Before the war ended, the Yalta "trade of China's territory" was made by Roosevelt and Stalin. Russia's claim to the restitution of her 1904 "sphere of influence" was granted, and China had to give up lands, rights, and interests vital to her national defense and security. After the Soviet Army had occupied Manchuria, it took war booty estimated by American officials at around two to three billion dollars. These industrial plants and equipment were essential to China's postwar reconstruction. Their loss more than cancels all American war and postwar aids to China.

Regarded as the "financial counterpart of lend-leasing war materials," an inter-Treasury credit of \$500,000,000 was granted to China in February 1942. Two-fifths of this credit was used as backing for dollar certificates and victory dollar bonds issued to the public in China. The purpose was to check inflation. Another \$220,000,000 was used to purchase gold in the United States for free market sale, an unsuccessful attempt to halt inflation. Of the balance, \$55,000,000 was spent for printing Chinese bank notes in the United States, and \$25,000,000 for importing textiles into China.

Postwar financial transactions included sale of surplus property, the Export-Import Bank credits, the foreign relief program, and the China aid program of 1948. Surplus properties summarized the various fixed installations and movable properties transferred to China from the United States Army, Navy, and Maritime Commission. They included the bulk sale agreement of 1946 amounting to \$175,000,000, the United States Navy vessels transfer estimated at procurement cost of \$141,000,000 and other items. These properties were stored on Pacific islands and in the China-Burma-India theater. They were scattered, often left in the open and not well guarded. Due to the deterioration of these supplies, their value dropped and though they could not be considered as merely scrap, they were not in good shape. It would have been more expensive to ship these materials back to the United States than to sell them where they were

stored. Furthermore, disposal of these supplies facilitated the repatriation of American personnel.

Total surplus property transactions amounted to \$381,000,000 at the highest estimate. Of this, \$205,000,000 was payment to China for outlay she had made, including the 1946 bulk sale agreement for nonmilitary supplies valued at \$175,000,000. The actual negotiations on that agreement were complex. An item of \$150,000,000 was due China from the United States for wartime supplies to the American Armed Forces. Another \$35,000,000 was due from the American Government for the expense of, and the purchase of properties for the embassy and consulates, and \$20,000,000 was made available for the Sino-American cultural and educational program. The balance of \$30,000,000 covered American payments for cost of shipping and technical services arising out of the United States surplus property transfer. In other words, of \$381,000,000 charged as surplus property under aid to China, not more than half were gratuitous.

Referring to the prices charged to the surplus property transaction, a comparative study shows sales to India at 7 cents on the dollar, and to the United Kingdom, Greece, and Turkey at 10 cents on the dollar. China paid 20 cents on the dollar.

After the war, loans of \$82,000,000 were extended by the Export-Import Bank for seven different projects involving the purchase of industrial and transportation equipment and of textiles. At the end of 1948, \$65,000,000 was drawn and \$12,000,000 repaid.

Since 1947 the American Government has granted \$46,000,000 for relief work in China. Eighty percent was spent on food, and the remainder for shipping cost, medical supplies, seeds and pesticides. Food was rationed and sold at low prices, and food sales were to be spent for relief work in China.

The China aid program of 1948 had a fund of \$400,000,000. Of this, \$275,000,000 was for use by the Economic Cooperation Administration for economic aid, and \$125,000,000 was additional assistance for military supplies. The purpose of this program was to help retard economic deterioration and to provide a breathing space in which the National Government could stabilize her economic and military situation. In the field of economic aid, both rural and industrial, plans have been projected.

Of the total \$275,000,000, the following three major programs were under consideration: Namely, \$204,000,000 for commodity purchase, such as cotton, food, petroleum, fertilizer, and coal; \$67,500,000 for industrial replacement and reconstruction; and \$2,500,000 for rural projects. Less than \$200,000,000 has been spent of this \$275,000,000, and more than \$80,000,000 is still undisbursed. Of \$125,000,000 military grants, the American Government has allocated the total sum, but the latest figures for the end of 1948 show that only half the amount of materials sold has been shipped to China.

Of American financial advances to China in the last decade, the four prewar commodity credits have been almost fully repaid. Lend-lease included some items not properly charged to the Chinese account. Of the postwar financial transactions, surplus property barely balanced the American debts due China; \$12,000,000 has been repaid; and \$100,000,000 has not been disbursed to China. This factual presentation suggests that the money did not go down the drain; if any did, it was peanuts.

Certainly, \$2,000,000,000 of financial advances to China for the last 12 years looks like a large sum of money. Even one billion, i. e., what China really received since Pearl Harbor, is a great deal, though only equal to the yearly United States postwar expense on Japan.

Yet, the Chinese people have made a substantial contribution to the defeat of our

common enemy. In the Second World War, the fighting in China held down 2,000,000 Japanese soldiers who might have been deployed elsewhere to the discomfiture of China's allies. Victory in Europe was possible, because China held down the Axis forces in the Pacific and the China-Burma-India theater. One should not forget how close the German armies in the Caucasus came to combining forces with the Japanese who were attacking India. If the Japanese had attacked Russia with their forces at the time of Stalingrad, how far would the German armies have penetrated into Russia?

Chinese direct war casualties were conservatively estimated at more than 10,000,000, of which 4,000,000 soldiers were dead, wounded, and missing, and 6,000,000 civilians were killed. The number of civilians who were wounded or who died from starvation is estimated at many times these figures. The Chinese people think that they have paid a heavy price to help save Europe which is nearer and closer to the United States. After all the factors are considered, can we still claim that the United States dollars spent on China were totally wasted?

Voting "No" on Ruinous Military Outlays Strikes a Responsive Chord

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial from the Council Bluffs Nonpareil, one of the leading dailies in the State of Iowa:

AN UNUSUAL CONGRESSMAN

Congressman HOWARD BUFFETT, of Nebraska, was one of two members of the House of Representatives who voted against the \$56,000,000,000 military appropriation.

In his report to the voters of his district this week, he tells why he did it.

Britain, France, Canada, Italy, Belgium, Holland, our principal allies are spending only about \$9,000,000,000 this year on defense. Part of that they get in free gifts from the United States.

The \$56,000,000,000 is not all the United States is spending for military purposes. It doesn't include the costs of the Korean war, billions for defense housing, and other billions for air bases all over the world, etc., etc.

Of course it doesn't include the billions we are giving other countries for economic rehabilitation.

Congressman BUFFETT voted against the \$56,000,000,000 military appropriation bill because he believed we are overcommitting our economic strength and jeopardizing our economic system.

He suggests we are making the same mistake the French made between 1918 and 1939. They voted so much to the military that the civilian economy of France came apart at the seams. The result was their national defense became a hollow shell.

BUFFETT believes a vote that overloads America is a blow against America, a victory for communism.

He finds no evidence that we can carry on current military spending without ruining our economic system, so he votes against reckless spending.

National security, as he sees it, depends upon the integrity of the dollar and a free

economic system, just as much as it does on radar, jet planes, and the atom bomb.

He is well aware that his stand isn't popular with a lot of people. Many Members of Congress, he observes, believe a "No" vote on any appropriation label "military" is like taking carboic acid. They regard such a vote as political suicide.

"Maybe it is," he says. "That factor is not important, except as the Member regards his own reelection as important to the Nation."

An unusual Congressman, HOWARD BUFFETT. When he believes anything he stands foursquare and votes accordingly.

The future of our country would be a lot brighter if there were more Congressmen like HOWARD BUFFETT.

Communists in the United States

EXTENSION OF REMARKS

OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Our New Privileged Class" by Eugene Lyons, published in the September 1951 issue of the American Legion magazine. It deals with Communists in the United States.

I have been informed by the Public Printer that the manuscript is estimated to make three and one-fourth pages in the RECORD, at a cost of \$266.50.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR NEW PRIVILEGED CLASS

(By Eugene Lyons)

Late and slowly, a shocked America is becoming conscious of the nature and size of the Red conspiracy in its midst. It is natural, under the circumstances, that Communists and their fellow-travelers should find the going tougher; that the pink past of a few actors, public officials, scientists, and teachers should catch up with them.

Here and there some dabbler in treason, or outright Communist, is dislodged from a spot where he worked Red mischief with impunity. Here and there an institution long infested by Kremlin termites takes measures, in simple self-defense, to smoke them out. Because the problem is new for America, because the very survival of our Republic is at stake, the process is not always free of error and excess.

But the notion that merely to be accused of Communist affiliations brings down the lightning of society's wrath is just untrue. It is a propaganda myth, cunningly promoted for the purpose of shielding the conspirators.

For every crimson professor flushed out, a hundred of his ilk continue to mold the mind of our youth. Scientists clearly implicated in the Soviet atomic thefts remain free to ply their trade. Men and women publicly identified as habitual Red-fronters still write and perform for radio and television. The spectacle of known Communists brazenly defying congressional committees remains standard on Capitol Hill.

The truth of the espionage revelations by Whittaker Chambers and Elizabeth Bentley has been confirmed by jury trial in every

instance when it was thus tested; yet nearly all those whom they named carry on unmolested. Virtually all the organizations identified as subversive by the Department of Justice are doing a brisk business at the old stands; and the Supreme Court in a recent decision has made their official tagging a lot more difficult. Although Alex Bittelman and a batch of other top-shelf alien Communists were picked up for deportation over 3 years ago, most of them are still here and free to exploit the opportunity. It appears that Uncle Sam, who has no trouble deporting hundreds of thousands of ordinary alien criminals and others illegally in the country, is always stymied when Stalin's criminal agents are in question.

On the rare occasion when a Kremlin "plant" is exposed and expelled from some sensitive spot, cries of anguish rend the air. We are warned that the whole structure of American freedom is about to cave in. The average American, deeply concerned by any threat to personal rights, is alarmed by such warnings. Before his common sense is drowned out by the choral caterwauling, let us therefore look at the whole picture.

We may begin with a true—and what's worse, a typical—story. It is about two Hollywood people who lost their jobs, in both cases because of the Communist problem. One was a writer who had battled the Reds, the other an actress who played footsie with the Reds. Now you would expect, in ordinary logic, that the plight of the jobless anti-Communist would stir up at least a gust of indignation, while the discomfiture of the woman accused of procommunism would be applauded, or she would be ignored.

But amazingly—and that's the point of the story—exactly the reverse happened. The punishment meted out to the patriot made no dent on the public conscience, the chances are you've never heard of Jack Moffitt. But the dismissal of the lady in red raised a hurricane of protest and touched off an orgy of soul-searching. Overnight it lifted Jean Muir, until then relatively unknown, to the status of public martyr No. 1.

The contrast is worth pondering, as a symptom of these Alice-in-Wonderland times. Certainly two wrongs don't make a right, and no one in his senses condones unfairness. Yet it seems to me humanly understandable that Americans charged with being anti-American should meet with robust hostility in America. But that Americans known to be pro-American and anti-Soviet should be maligned and boycotted adds up to suicidal lunacy.

Mr. Moffitt for years had fought the Communist gang then in control of the Screen Writers Guild, and Muscovite monkeyshines in the movie industry generally. His ability assured him steady work notwithstanding, besides which he served brilliantly as film critic for Esquire. In the fall of 1947, however, he went too far. As a witness before the House Committee on Un-American Activities, he dared denounce Stalin's Hollywood playmates.

On returning to the cinema capital he found himself, like others among the so-called friendly or pro-American witnesses, a target for foul insults, a pariah—and without work. He was sacked by Esquire and no more assignments came to him from the studios. Nobody seemed to notice, let alone protest, this injustice and the victim retired to lick his wounds in obscurity. Fortunately he has begun to emerge from that obscurity through his anti-Communist column, the Cracker Barrel, in the Los Angeles Herald and Express.

The Jean Muir side of the story is all too celebrated. To people in show business, fighting party-line influences in actors' guilds, she was known chiefly as a bitter and fervid adversary. Last year a documented compilation of radio and TV people

mixed up in Red-front enterprises, Red Channels, was published by Counterattack, a weekly newsletter dedicated to exposing Communist skulduggery. Miss Muir appeared in the line-up, along with a few items from her political biography.

When she was assigned, soon thereafter, to a role in the television version of the Aldrich Family show—displacing Lois Wilson, a forthright foe of the Communists who had carried the role competently on the radio—a number of irate citizens protested to the sponsors. The latter proceeded, maybe too hastily, to cancel the assignment, paying her off in full, reputedly to the tune of \$10,000.

Instantly the incident was seized upon by the left-wing howling squads in the press and on the air. Their carrying power again proved awe-inspiring, drawing impassioned echoes not merely in the southpaw press but in papers like the New York Times. In record speed the affair was belloyed into a cause célèbre. The Muir name became a banner, a slogan, and a club with which to beat "Red baiters."

In the floodtide of angry editorials, resolutions, forum arguments, sermons, everyone overlooked the minor fact that the Red Channels information was substantially correct, that Miss Muir had indeed figured as vice president of the subversive Congress of American Women, and sponsored and supported other Stalinoid outfits. Counterattack, driven by the furor to dig more deeply into the lady's career, dredged up and published a dozen or so additional samples of her fellow-traveling—which the press did not deign to report. Nor did the people who were doing the protesting notice that the actress, having threatened to file libel suits, discreetly refrained from doing so, although her spouse is a lawyer.

The Muir uproar, we may be sure, sounded ironical to the anti-Communist Mofitts—to the throng of writers, artists, educators, and just Americans who had been abused and penalized for attacking the Kremlin and its obscene works. They could not help recalling that there had been no hollering about justice and jobs, no storms of sympathy, when they were being pushed around by Stalinists entrenched in the publishing and entertainment fields, on the campuses, in Government agencies.

The villain of the piece, of course, was Counterattack, put out by ex-FBI men who specialize in the underworld of Red subversion. And here we must consider another Alice-in-Wonderland contrast.

Exposure—by private groups—of people considered dangerous to the community is hardly a new phenomenon. The Better Business Bureaus have been doing that for the past 30 years, with the support of the courts and public opinion. They have warned against swindlers of every variety, naming names. But no one has screamed "private vigilantes" at them—that smear was reserved for Counterattack, which has exposed ideological swindlers and confidence men whose political rackets are infinitely more dangerous to American society.

At the political end, a good many private organizations—Friends of Democracy, for instance, and the Antidefamation League—have long been exposing alleged subversives of the non-Communist brands. In 1944, to cite a specific case, Friends of Democracy filed with the Civil Service Commission a list of several thousand persons it accused of being Fascist, among them eminent Americans who were outraged by the charge.

We need not enter here into the pros and cons of such exposures. The significant fact is this: The papers and people who ganged up on Red Channels were strangely silent about similar and far more reckless listings of non-Communist types of subversives by other private groups. Even in the war years, when the label of Fascist was far more damaging than the Red label today, they somehow for-

got to lambast outfits doing the Red Channels type of job on a larger scale.

Not until the exposures hit the Stalinist gentry, apparently, were the alarms about the Bill of Rights, due process and job tenure sounded. Can we be blamed for surmising that some of the howlers, at any rate, are more concerned with protecting the Communists than protecting personal freedoms?

Consider yet another contrast, this one in the area of religion. Two men of the cloth, Rabbi Benjamin Schultz and Rev. John Howard Melish, both lost their pulpits in recent years—the rabbi for attacking the Communists, the rector for defending them. Whatever the rights and wrongs of these cases, we might expect normal Americans to rally around the patriotic rabbi and to denounce the clerical fellow traveler. But once more precisely the reverse came to pass.

Dr. Melish was removed as rector of a Brooklyn church by his Protestant Episcopal bishop. The conflict revolved around the frankly pro-Soviet activities of the clergyman's son and assistant, Rev. William Howard Melish, then head of the National Council of American-Soviet Friendship and a familiar figure in other pro-Soviet undertakings.

Quickly the Melish episode was inflated by liberal publicity into a burning challenge to freedom of faith. There was a spate of sympathetic editorials. Thousands of clergymen were mobilized to support the rector's legal battle for reinstatement. Though he lost in the courts, he was victor all the same: at this writing it appears that part of the congregation is trying to install the Red-fronting son as successor to the father.

Benjamin Schultz, rabbi of Temple Emanuel in Yonkers, N. Y., for over 12 years, had long been troubled by the progress of Communist corrosion in religious life, Jewish and Christian alike. In October 1947, he therefore wrote three articles in the New York World-Telegram documenting and warning against this danger. It was a sober, balanced, irrefutable presentment.

Punishment followed swiftly. The Yonkers temple fired the rabbi within a month after the articles appeared, and he has been without a permanent pulpit since. The Leftist press, reinforced by a vile whispering campaign, impugned his character and branded him a "Fascist." In effect his pulpit career was wrecked.

Neither the civil libertarians nor the press, neither the commentators so sensitive on issues of thought control nor the clergy came to his defense. Rabbi Schultz had shown the articles on the Jewish phase of the subject in advance to the Anti-Defamation League, and made the few minor corrections it suggested. Yet when the rabbi became director of a newly formed American Jewish League Against Communism, the Anti-Defamation League released a vicious attack on him; befuddled little men in other Jewish organizations picked up the cue and to this day continue to take swipes at Rabbi Schultz.

How does it happen that public opinion is always aroused in behalf of the Melishes and Muirs, rarely on behalf of victimized foes of communism? The answer is that this is no accident. It is the result of careful party-line strategy, organized and staffed by experts. There is an array of Commie-front pressure groups, their agents spread through the land, trigger-ready to defend the fellow-traveler or outright Communist who gets into hot water. Because these groups fly the flags of civil rights and justice, they can always round up the support of people honestly concerned with such values.

But the decent American who suffers at the hands of Sovieteering enemies stands almost alone. There are no patriotic counterparts of the Civil Rights Congress, the

Lawyers' Guild, the Committee for the First Amendment, to mention a few of the party-line "defense" groups. There is no one whose task it is to publicize interference with the livelihoods and personal freedoms of anti-Communists. The American Civil Liberties Union, which rushes into action to defend the lowliest Communist in trouble in the backwoods of Arkansas, remains as calm as a Buddha when anti-Communists are in difficulties.

When Mrs. Mester McCullough faced ruinous libel suits—her reward for protesting against pinko entertainers in her own community—there was no society geared to share her burden. Had she been a Muscovite fellow traveler, there would have been a great "National Committee To Defend Mrs. McCullough," you may be sure, with hundreds of ministers, professors, artists, and other "prominent Americans" on its letterheads and its fund-raising activities. Neither did anyone give a helping hand to Mrs. Lela Rogers, mother of Ginger Rogers, when her attack on Red marauders netted her a libel suit.

The late James McGuinness was the boldest fighter against movie-land Reds; he compounded this "crime" by testifying against them in Washington. Soon thereafter he was eased out by M-G-M. His friends insist that this expulsion hastened McGuinness' untimely death. Be that as it may, the fact is that there was no outcry such as accompanies the loss of a job by prominent pro-Communists.

Belatedly the country begins to take the measure of the ersatz revolution that came to Hollywood. Those de luxe proletarians and three-car peasants, paying the Union Square racketeers for the fun of playing at cocktail communism, may seem comical to normal minds. The stuff of a great farce awaits the hand of a Morrie Ryskind. But it has been no joke to actors, writers, directors who refused to conform.

Only those close to the scene know how the disciplined, ruthless Red minority ruled the roost for a dozen years and more; how they beat down newcomers unwilling to toe the party line; how they logrolled one another into jobs and power. Ten years ago, in *The Red Decade*, I wrote of Hollywood:

"Under the tomfoolery there was plenty of tough self-interest. For the younger members of the colony, avid for the fatter fleshpots, Stalinism became the short cut to success. At 'cause parties' they rubbed shoulders and bosoms with big shots they could not have met otherwise. Those who tried to detour the revolution, unless they were stars well fixed in the firmament, found themselves slipping from favor. It was at once a movement and a lobby, a religion and a racket."

Little changed in the years that followed. Not until they were kicked in the box office by congressional hearings did the movie industry leaders even bother to recognize the existence of the problem. Their attitude toward the handful of picture people who dared tell the unpleasant truth—Mofitt, McGuinness, Adolph Menjou, Fred Niblo, Jr., John Lee Mahin, Rupert Hughes, Ryskind, and the rest—was especially shabby. A local author and college instructor who knows the score, Oliver Carlson, in an article in *Plain Talk* (August 1949), explained with respect to the friendly witnesses:

"They have suffered long enough for being good Americans. . . . The movie moguls did nothing to protect them from the insults, slanders, and character assassinations of the pro-Communist stooges within the industry. On the contrary, aid and comfort was always forthcoming to the host of Stalin-lovers."

During the war, Patsy Ruth Miller, former star and successful writer, was assigned to do a movie script. Suddenly she was in-

formed that the deal was off. Under her insistence, the director finally blurted out the reason. "A lot of people around town," he explained, had warned him that she was a notorious Fascist and reactionary—the standard accolades she had won for fighting the crimson locusts. Postscript: there was no Miller case to match the future Muir case.

Bert Kalmer, song writer and lyricist, joined the one daring anti-Communist group in Hollywood, the Motion Picture Alliance. Immediately he found himself under furious attack as a Jewish anti-Semite. There followed a campaign of threats, both against himself and his son, then trying to get started as an actor, and Kalmer was forced to resign. Had it been just a matter of his own livelihood, he explained, he would not have yielded, but he felt he should not jeopardize his son's chances.

Referring to the activities of a couple of commissars in the movie city, labor columnist Victor Riesel wrote recently: "They conspired to kill jobs and reputations of good Americans so well that one patriotic specialist is now working as a machinist in Lockhead to keep from starving." The familiar pattern.

Even so firmly rooted a Hollywood figure as Hedda Hopper is not immune to the rawest kind of threats. Having mentioned in her column that she knew the names of Communists in the industry, she was subpoenaed by the House committee. Instantly, a piece of unsavory intimidation appeared in Variety.

Miss Hopper, the article generously conceded, has "a perfect right" to say what she wishes—but, "She is largely dependent on studio press aid for news, and there's some questioning as to whether such cooperation should be continued." The industry, Variety reminded her, doesn't like exposure of Communists "and there's no reason for a supposedly proindustry columnist to force a prolonging of the agony." In other words, her news sources would be shut off unless she held her tongue.

The article then followed up with a remark which, against the background of the Korean casualty lists, deserves some sort of Oscar for profit cynicism: "It's a long-range dollars-and-cents proposition to the studios, who have in the can valuable properties of some of those already mentioned and others on whom Miss Hopper's testimony might throw doubt." Luckily, Miss Hopper, who has been consistent in her Americanism, is not one to be scared silent.

The rest of the entertainment fields are no less polluted. Show people who stuck out their necks in defying Red cliques in the guilds knew they were staking their professional heads. When Eddie Wragge came to the fore against the comrades at an AFRA meeting in Boston, he was aware of the risks. Sure enough, when his radio show ended there were no others; he took a job in a department store.

As an index to the extent of communism among radio and TV scripters, here is what amounts to a public boast. The National Council of the Arts, Sciences, and Professions is Moscow's leading cultural front in this country. Among other things, it runs a school for writing and advertising craftsmen, and the school advertises in the Communist Party press: "Writing taught by top radio-television script writers." Could anything be cozier?

About a year ago the ABC network produced a notable series of anti-Communist documentaries. They proved sensational and brought orchids to the brilliant young script writer, Morton Wishengrad. But he, too, apparently had to pay the price of patriotism. He had negotiated a big television contract which was about to be signed. As soon as his anti-Communist show went on the air, the contract was mysteriously called off.

Let us turn to the academic world. If there were a roster of living patriots, Prof. Arthur P. Coleman would merit an honorable place on it. Had he been a fellow traveler fired for party-line shenanigans, you would surely know the story; the howling squads would have seen to that. But it happens that he gave up his university post, after two decades of teaching, in protest against Communist shenanigans—so he got only the Moffitt-type silent treatment.

Professor Coleman's field is Polish language and literature. In 1949 the Red puppet regime of Poland offered to endow a chair at Columbia—a brazen piece of Red infiltration. The university saw fit to accept the gift. The first installment was paid by the Red Ambassador at a cocktail party in the home of Prof. Ernest J. Simmons, an ornament of the Sovietsteering crowd in those precincts.

All anti-Communist faculty members were shocked by the episode. Professor Coleman decided to do something about it. He offered his resignation, specifying the reason. It was accepted. Professor Coleman was out in the cold, and worst of all, his sacrifice went unnoticed. The same public that is driven to near-apoplexy when some Stalinist teacher is ousted blissfully ignored the whole affair.

In any inventory of Red-front supporters, professors always make up the largest single group. Names like Harlow Shapley, Ralph Barton Perry, Corliss Lamont, Dorothy Brewster are typical of hundreds; no great university is without its quota of Kremlin enthusiasts. Thus Communists are being mass-produced on our campuses, thus young minds are being softened for the Red virus.

The biographies of Alger Hiss, William Remington, Judy Coplon, Lee Pressman, Whittaker Chambers, and Miss Bentley provide case studies of the malignity; each of them was first twisted toward Moscow in college years. In the whole tongue-tied crew brought before the House committee in 1947 in connection with Soviet espionage and infiltration, there was no farmer or workman or so-called common man. Without exception they were college graduates, doctors of philosophy, summa cum laudes, and Phi Beta Kappas from Harvard, Yale, Princeton, and other great colleges.

The public indifference to this menace to its children, once more, can be explained only in Alice-in-Wonderland terms. The occasional half-hearted effort to deal with the problem churns up cyclones of synthetic anger. Physicists who figure in the atomic espionage charges for which two culprits await death in the electric chair still teach in our halls of learning; one of them, Clarence Hiskay, was recently rehired by a Brooklyn institution after he was cleared, on a technicality, of contempt for refusing to answer congressional questions about his Communist connections. Aaron Copland, a composer whose fellow-traveling record fills two full pages in Red Channels, has just been appointed to the Charles Elliot Norton Chair of Poetry, one of the most coveted professorships in Harvard. Small wonder that the bolder anti-Communists on the faculties have found the going as difficult, the abuse as vicious, as their equivalents in Hollywood.

For years the appointment of the late Benjamin Stolberg to a teaching post in Columbia was mysteriously stymied. Shortly before his death he told me in detail how Stalinoid professors had managed this boycott.

Dr. J. B. Matthews, a professor who was sidetracked into fellow-traveling, had been in terrific demand as a university lecturer as long as he toed the Moscow line. He gave 250 talks in 48 States during 17 years. But since he broke with the comrades and turned crusader against them, he has not been honored by a single invitation from any of those universities. For counterpoint,

let it be noted that Gerhart Eisler, Moscow's cocky little emissary, spoke several times on university campuses while awaiting deportation.

This strange design holds true in the Federal Government, which is still crawling with people known to have been mixed up in Red activities. Some have been technically cleared, others are shielded by statutes of limitation, but everyone in Washington—and the FBI in particular—knows they are there. The attempt to dislodge one of them is fought every inch of the way, to the drumbeat of national publicity.

Yet scores of big and little anti-Communist officials and diplomats, including eminent personalities like William C. Bullitt, Joseph C. Grew, Gen. Patrick J. Hurley, Adolf A. Berle, Jr., Arthur Bliss Lane, have been hounded out of public life without the American people seeming to be aware of it. Men directly responsible for steering American policy into the tragic cul de sac of a Sovietized China and war in Korea—Acheson, Philip Jessup, John Stewart Service, John Carter Vincent, et al.—have been retained or promoted. But Angus Ward, one of the few who stood up to the Chinese Reds, has been sentenced to the obscurity of a minor job in Africa (For the whole sad tale, see the new book by Freda Uteley, *The China Story*).

I come finally to the area with which I am most familiar, journalism and literature. Here something close to an intellectual Red terror reigned in the heyday of Communist influence. We faced a GPU of the mind that succeeded—through intrigue, calumny, and job pressures—in directing cultural opinion into totalitarian ditches.

For a great many years famous and able journalists—John T. Flynn, Stolberg, Freda Uteley, Irene Kuhn, Charles Yale Harrison, to mention a few—were virtually barred from magazines which had previously welcomed them. Their sin, of course, was that they had been rough on Stalin and his entourage. Such writers soon became aware of strange pressures against them even in the more conservative publications.

William Henry Chamberlin, long a contributor to the Atlantic, found its pages closed to him after that monthly abruptly turned left. Stolberg, long a contributor to the Saturday Evening Post, was no longer welcomed on Independence Square after a fellow traveler objected to being called a fellow traveler. The man whose job it was to promote one of my own books was overheard telling book critics, on the eve of publication, to just ignore it.

No one denies the right of editors to choose writers to their own taste. But let us keep the record straight now that sentiment at long last is veering against the Muscovite fraternity. They were pitiless and utterly cynical in persecuting anti-Communists when it was still smart—and lucrative—to be Red.

Recently I received a letter from Alice Leone-Moats, an American journalist residing in Mexico. Miss Moats was stationed in the Soviet Union in the earlier period of the Russo-German war. It was a time, let us recall, of hyperbolic adulation of everything Soviet, with Mission to Moscow setting the pitch and the OWI press-agenting the Kremlin's democracy. It called for real courage to write a sharply anti-Soviet book, which Miss Moats had the temerity to do in *Blind Date With Mars*.

"At this time," she writes me, "when there is so much talk about witch hunting and Red baiting, it might be salubrious for the American public to learn about the witch hunts and baiting to which anti-Communists have been subjected. . . . I was smeared as a Fascist, a dangerous woman, a troublemaker. My career as a political reporter was ruined as effectively as the career of some Government official dismissed

for being a commie. But I could do much less about it, and nobody sprang to my defense."

Miss Moats speaks for any number of Americans who were smeared and economically punished for forthright support of American ideals. Any one of a thousand anti-Communists could recount an Ordeal by Slander to make Owen Lattimore's whimpering lament under that title look like a picnic. The gang-up on W. L. White (Journey for Margaret, They Were Expendable, etc.) after he wrote his Report on the Russians is now a familiar classic of the comradely technique.

The commie smeared followed some writers beyond the grave, as witness the case of the late Jan Valtin. His *Out of the Night* was one of the worst blows suffered by world communism. So, in the words of a recent Saturday Evening Post editorial, "through their fellow travelers in the press and in the Government of the United States, the commies set to work." Their work paid off. It produced, among other things, an order for Valtin's deportation. Fortunately the Government could not find a judge heartless enough to ship him back to the Nazi butchers of his native land.

The main item in the smear on Valtin was the lying claim that he was an "admitted Gestapo agent." The mendacity of it was obvious to anyone who read his book. After years in Hitler's torture chambers and with the consent of his then-Communist comrades, Valtin pretended to enlist in the Gestapo; a trick enabling him to escape abroad, where he soon blasted both the red and brown afflictions. Yet when Valtin died last January, some obituaries—among them one in the New York Times—repeated the Commie calumny as if it were a fact. The long arm of Red vengeance reached into editorial offices to befoul the memory of a dead man.

The story of Angela Calomiris is well known through her book, *Red Masquerade*. Here was a girl, a photographer by trade, enlisted by the FBI to infiltrate the Communist movement in New York. This she did as a wartime duty, at considerable risk and without pay. Her role was disclosed when she appeared dramatically as a witness against the 11 top Communists.

Except in Alice's Wonderland, she would have been treated as a heroine. Through long years she had carried the hated Communist stigma as a patriotic chore. But strangely, many of those who had done business with her when she was known as a party stalwart now boycotted her. She was bitterly assailed, for instance, by the photo editor of the *Ladies' Home Journal*, one John Morris, a fellow who had lectured at the Stallhold Photo League. Never again, he informed Miss Calomiris when she came for an assignment, could he look upon her as a photographer, but only as "a spy." On the same theory he would presumably have refused to deal with Nathan Hale.

The plain fact, savored to the full only by its victims, is that until quite recently outspoken opponents of Red fascism risked their reputations, their livelihood, their peace of mind. I have alluded to typical episodes almost at random. The full story of their ordeal is too long, and to the uninformed must seem too incredible, to be recounted in an article.

Moreover, of necessity I have dealt with victims whose names mean something. But there are thousands of nameless ones, workers in Red-controlled trade-unions, "little guys" in Government agencies and school systems and private offices, whose refusal to play along with the Communists cost them their bread and butter. Anyone close to the merchant marine was aware of men with families to support who were kicked off ships for opposing the Communist clique in the maritime and communications unions. Ditto for the electrical and upholstery and office

workers unions during their period of Red control.

Today public opinion is swinging against the Communist conspirers. More and more of the shocking facts are being revealed. In the slow surge of popular resentment, a few dim-witted henchmen of treason and even innocent bystanders may be hurt. We must do our utmost to prevent this. Each time an innocent is punished, the guilty have cause for jubilation.

At the same time, however, we need to distinguish between honest champions of personal freedoms and the civil libertines interested only in shielding the conspirators, as evidenced by their failure to speak up when the shoe was on the other foot. They do not come into the court of public opinion with clean hands unless they also rallied to the defense of Mrs. McCullough, Rabbi Schultz, Ben Stolberg, Flynn, Moffitt and their kind. Sudden zeal for the Bill of Rights is suspect in persons who have not given unequivocal evidence of awareness that the greatest threat to all American values—and to civil liberties in particular—is represented by communism.

Moreover, we need to refute the exaggerations, as I said at the outset. The loudest wall of all was set up by Owen Lattimore. His case is far from closed. But already no margin for doubt remains that he played the game on the Kremlin's side, with dire consequences to his own country. Yet he is in greater demand than ever as a lecturer; according to his own account he is treated as a hero by the Johns Hopkins faculty. The only economic sanctions he could cite as a result of his "ordeal" was the cancellation of an order for some of his books by a small college.

Even Alger Hiss, after 8 out of 12 jurors in his first trial voted to jail him and the facts that ultimately convicted him were spread on the record, continued to lecture at a Quaker seminar and elsewhere. He remained on the Carnegie Foundation payroll until the day he was indicted, which was long after the famous "pumpkin papers" and his own tangled testimony had pointed to his guilt. Meanwhile Chambers had lost his job on *Time*—which was not restored to him despite his full vindication.

A few of the denizens of Red Channels have been removed from the airwaves. But the overwhelming majority of those listed continue to function as usual. One cannot switch on a radio or TV set, indeed, without hearing or seeing Philip Loeb, Leon Janney, Will Geer, and the rest.

I trust I have made clear that this is not a plea for indiscriminate boycott. On the contrary, I believe we should bend backward to avoid punishment of innocents and to help former Reds honestly desirous of living down their blunders. But we need balanced judgment and perspective.

If there are people too ready to assume the guilt of anyone accused, even more automatically do other people assume innocence and rush to smear accusers of Reds. Recall, as an example, how the New Yorker hastened to defend Hiss, then Remington, and to attack Chambers and Miss Bentley respectively. Few accused or even proven Stalin agents have suffered a tithe of the putrid abuse that has been the lot of people like Louis Budenz, Miss Bentley, Chambers, Joe Zack, Benjamin Gitlow, Paul Crouch—men and women whose Communist past is being atoned for by subsequent services to their country.

We must give no quarter to excess. But the greater danger is that the organized wailing and howling may put brakes on—or even paralyze—the effort to unmask the Red conspiracy. For this, let it be remembered, is the objective of the howlers and wallers. They are frightened by the fact that the old apathy and indifference of the American people seem to be breaking down at long last.

It was that apathy which made it possible for a small but energetic and disciplined minority to undermine American thinking and infiltrate American institutions. The urgent need today is for countermeasures on the part of the decent, patriotic majority. Our civic, religious, business, labor, fraternal and professional organizations, though many of them give lip service to the fight against communism, are still dragging their feet. They are content to applaud others, while doing nothing themselves.

The American Legion has a great historic opportunity to provide leadership and inspiration to the rest of our country. In helping to expose and neutralize the Communist threat it can safeguard the human values for which generations of Americans have been ready, and are still ready, to stake their lives.

We Need Immigrants

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. JAVITS. Mr. Speaker, the appended article from the Catholic Digest—under the distinguished Managing Editor Father Paul Bussard—of September 1951 has been condensed from the article in the New York Times Sunday magazine of July 8, 1951. It reflects again the vital interests of Americans in the revision of our immigration policy to modernize it in order to meet the requirements of our national interest. We are engaged in a great program of self-help and mutual co-operation with practically the whole free world. This means not only defense, finance, and the movement of goods, but the free movement of peoples, as well, where they will do the most good for the development of family life, for freedom, and for human brotherhood.

WE NEED IMMIGRANTS—AMERICA GREW GREAT WHEN THE GATES WERE OPEN

(By JACOB K. JAVITS)

(Condensed from the New York Times)

The wealth of America is its people. We are a conglomerate Nation, drawn from every race of men. Out of diverse talents and traditions we have distilled something unique and priceless, the American character. That character has made us the strongest, freest Nation in history.

But by our immigration policy of the last two decades we have reduced infusions of foreign blood that have vitalized our life stream. We have adopted a policy of exclusion.

That policy was temporarily broadened in 1948 by the Displaced Persons Act, admitting an average of 205,000 immigrants a year. But when that program is completed this year we will revert to the outmoded restrictions of the past. The moment has arrived for the question: Why must this great democratic Nation, with its record of compassion for the oppressed of the world, once more slam shut the gates of hope and opportunity?

My proposal, which I will offer as Representative in Congress for the Twenty-first District (Manhattan) of New York, is a goal of not fewer than 10,000,000 new immigrants during the next 20 years at the rate of 500,000 a year. No preferential arrangements

should favor one nationality over another. We should guard against infiltrating enemies. We should guard against admitting the chronically ill and incompetent or irresponsible who might become public charges. But otherwise our gates should be open to the oppressed and uprooted peoples of the world who are willing to work and sacrifice to make a home in America.

I know that the scope of these numbers will shock many people. But I believe we have the need and capacity to absorb 10,000,000 new residents from foreign lands during the next 20 years. We should do this not only in the name of humanity but in our own enlightened self-interest.

Additions to our population by means of immigration have always produced new jobs, new consumers, and new forms of industrial expansion. Immigration brought us the wealth and talents of every race on the globe. Alexander Graham Bell and Emile Berliner immigrated here to pioneer the telephone; John Philip Holland, the submarine; John Ericsson, the ironclad steamship; David Lindquist, the electric elevator; Mathias Schwalback, the typewriter; Ottmar Mergenthaler, the linotype machine; Carl Hestrom, the motorcycle. Conrad Huber, the flashlight; Victor Bendix, the self-starter for automobiles, and Octave Chanute, the glider.

Andrew Carnegie developed our great steel industry; Herman Frasch, chemist, discovered the initial process for refining petroleum. Charles Steinmetz and Michael Pupin were the twin geniuses of electricity; Bellanca, Seversky, and Sikorsky contributed much to American preeminence in aviation. Einstein and Meitner were distinguished in atomic development, and William Knudsen was the mass-production genius of the automobile industry—to cite only a few.

States with the largest proportion of first- and second-generation immigrant families, like Rhode Island, Connecticut, New York, Pennsylvania, New Jersey, and Delaware, have shown up best in terms of per capita wealth and income and in education and social betterment. This cannot be attributed to natural resources (Rhode Island, for example, is near the top of the list but its natural resources are small).

In the face of all this we are operating under restrictions clamped down during the great antiforeign hysteria that engulfed the country after the First World War. At that time we had been frightened by the success of the revolution in Russia and were in the first great wave of isolationism.

The Immigration Act of 1924, still the law of the land, established a quota system for immigration based on national origin. The quota for each country is determined by the number of persons born in that country who were living here in 1920. Theoretically, admission of 153,174 immigrants a year is possible under the act. Actually, only about half the quota has been used or the average. The reason is that in countries with large quotas, like Great Britain, there is only a small demand for immigration. In other countries with relatively small quotas, like Poland, Italy, and Greece, there is a huge demand. This law discriminates against southern and eastern Europeans on the basis of prejudice. It is more in keeping with Nazi race theories than with our Constitution.

It was adopted in the first place as an ill-conceived defense against a nonexistent danger; we feared subversive activities from the persons thus excluded. And the law has worked immeasurable hardship and misery to millions abroad, meanwhile depriving us of the brains, skill, and productive wealth which substantial and continuing immigration would have brought.

The Displaced Persons Act, expiring next December 31, provides only temporary and inadequate relief. It represented American leadership in resettling about 1,110,000 people found in Germany, Austria, and Italy by

General Eisenhower's forces. They had been transplanted by oppressors from their native Poland, the Ukraine, Czechoslovakia, Hungary, and the Balkan and Baltic states. Of the 1,100,000, this country is taking in not more than 341,000, and probably only 305,000 DP's.

One of the most urgent arguments for opening our doors is the fact that our population cycle is slowing down while our age level is rising. Those now over 65 represent 7½ percent of the total population. The ratio is likely to double by 1975, although the gross increase in population will not exceed 10 to 15 percent.

That confronts us with an ominous dilemma; our declining population curve is in stark contrast to an upswing in population in most other parts of the world. Experts tell us that in another 20 years, assuming no change in our present situation, the United States with its aging population will face youthful, vigorous peoples on both sides of the ocean.

But the experts warn us, the period of alert in which we are now involved is to persist for 10, and possibly even 20 years. Our industries and farms simply have to have more workers than are promised by the currently visible supply.

We now have a leeway in our civilian labor force of only about 1,600,000 persons. The total available workers number 62,800,000. Of these 61,200,000 already have jobs. That leaves 1,600,000 unemployed—many by choice, since they normally are housewives, students, or retired persons—from whom the rapidly expanding needs of the defense program are to be met. Those needed in the next couple of years are expected to total between 3 and 4 million workers. Under the law we can meet that demand in two ways. One is to pull into the labor market the housewives, students, retired persons and physically handicapped much as we did during the Second World War. This has many obvious social disadvantages, particularly its effect on home life. It also lowers the general level of industrial efficiency and output of our country.

The second way is to increase the work week above the present average of 41 hours. It is estimated that each hour of overtime, applied throughout industry generally, is the equivalent of adding 350,000 new workers. But this is costly both in dollars and efficiency; it turns back the clock of social progress; and would be unnecessary if we followed a sensible immigration policy.

Serious labor shortages already are showing up in some areas. Demand exceeds supply, for example, for engineers and draftsmen, for machinists, metal workers, and pattern makers. In some areas there is even a shortage of semiskilled workers. Shortages in domestic help are as acute as they ever have been, and are an added deterrent to building up the work force with mothers and housewives.

Farm labor represents another critical shortage. There are 300,000 fewer farm families this year than in 1950, and the number of hired farm hands is also down. Congress has been fumbling with adjustments, but they are unrealistic and inadequate. No one seems willing to attempt a quota excluding the limit of 153,714 immigrants in any 1 year.

Against this rather negligible figure are the International Refugee Organization estimates. There are at present from three to four million workers and members of their families in Europe anxious and ready to emigrate. Some eight hundred thousand to a million can be moved for immigration in a year. This includes about two hundred and twenty-five thousand remaining DP's, perhaps one million Volksdeutschen who have been expelled from Eastern Europe by the Communists, and possibly two million surplus workers from Italy, Austria, Greece, and

the Netherlands for whom there is little prospect of full employment. The IRO has found that the cost of resettlement is only \$301.50 per person.

What stands in the way of substantial, effective reform? I find that the arguments boil down essentially to two: prejudice and economic competition.

With respect to the first of these, many of the objections are implied rather than stated. Racial and religious intolerance are involved. There is also an element of bigotry; a contempt for and distrust of all foreigners. Another quite powerful factor, one that is freely stated, is the fear that many present-day immigrants from Europe are imbued with socialist and even Communist views. They might turn out to be subversive.

On the economic side, the fear seems to be that large-scale immigration will create a future unemployment problem. The newcomers might become public charges and a drain on our social services. Another argument is that they would intensify the pressure for housing and other basic facilities already in short supply.

To the arguments, intolerance, and bigotry, there is, of course, no use of answering rationally. Such views are so contrary to our American tradition and heritage as to represent only a small minority. As to subversive or other criminal tendencies, it is highly significant that of 220,630 displaced persons admitted between July 1, 1948, and January 31, 1951, only three have been deported for cause.

The economic arguments, it seems to me, are practically self-defeating. We have always proceeded in this country on the basis that we have an economy which flourishes on increased production. As of today, we are approaching the \$300,000,000,000 level of national income, our problems of defense mobilization and civilian supply can be solved only by more production; and a deficit of manpower to run the machines and till the farms is already visible. Unless we adopt a defeatist attitude and say that a depression and mass unemployment are inevitable, there are no grounds for fearing that immigration will depress the job market in the United States, now or soon.

There is much more reason to believe that we will need these additional hands and skills and brains to keep our productive mechanism going full blast in the decades ahead.

Nor is there any problem of geographical capacity to absorb 10,000,000 immigrants over the next 20 years. Most population experts (including Lotthrop Stoddard, who helped write the present restrictive immigration law) agree that there is ample room in the United States for 200,000,000 as long as we maintain our high standard of living. But it would take us until the year 2000 to achieve that level at our present ratio of births to deaths and our present level of immigration accepted by this country.

The time has come to reform our immigration policy not according to fears but according to needs, resources, and hopes.

British Meat Ration

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. BUTLER of Nebraska. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a

very short clipping from the Washington Post, for September 4, 1951, entitled, "British Meat Ration Boosted; Bacon Cut." The clipping states that British consumers will now be permitted to buy the magnificent quantity of 28 cents worth of meat per week. Until this week, British consumers were permitted only 25 cents worth of meat per week, so this order represents an increase in the ration. For purposes of comparison, I have learned from the Bureau of Agricultural Economics that in America the average consumer bought \$1.43 worth of meat per week in 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRITISH MEAT RATION BOOSTED; BACON CUT

LONDON, September 3.—The British weekly meat ration was increased to 2 shillings' (28 cents) worth for each ration book tonight, effective September 9. The old ration was 1 shilling 10 pence (25 cents).

The Ministry of Food ordered the bacon ration cut from 4 to 3 ounces weekly.

Korea: As Seen From a Fox Hole

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 8, 1951

Mr. TEAGUE. Mr. Speaker, having served as an Infantry battalion commander during World War II, I have maintained a soft spot in my heart and a very warm feeling for the combat infantryman. To my way of thinking, he has carried the brunt of the war, and no one knows better than he, why he is fighting. We need the other services, but when the chips are down, and it reaches the point where actual occupation of the area settles the question of whose territory it is, ours or the enemy, it is up to the infantryman to move in against the unknown.

I have read many articles covering the war in Korea written by correspondents and military writers, but when it comes to getting the true picture, you should consult the combat infantryman, the man who is part of the thin black line in the newspaper map known as the front line. For that reason, under leave to extend my remarks in the RECORD, I would like to insert an article written by a Corp. Charles Francisco, a machine gunner on the Korean front which appeared in a nationally syndicated column. Further, many articles appear from time to time stating that our soldiers do not know why they are fighting. It is interesting to note in Corporal Francisco's article, he makes the flat statement that he and his buddies know why they are fighting.

KOREA: AS SEEN FROM A FOX HOLE

(By Corp. Charles Francisco)

IN KOREA.—What is it like in Korea? What is it like to the men who are here? I think of three things around me—mountains, loneliness, and death. I think of rotation and home and the future. And I know that

those things are in the minds and bones of most infantrymen in Korea.

As a soldier lies in his fox hole and tries to peer through the mist that covers the top of a mountain he thinks of many things. This is the war in Korea as I see it.

It seems to me that civilian writers covering the war have not made enough mention of the hills. At any rate, the hills have a major bearing on the job of the individual soldier and the entire tactical situation.

Put yourself in the place of any man here. You're no military superman. You're just an average guy carrying around 50 or 60 pounds of equipment on your back. Your job is to climb, sometimes 2,000 and 3,000 feet almost straight up, find the enemy, and either kill him or drive him off. There are no paths or footholds so you usually are forced to walk the ridge lines. That puts you right in the enemy sights. It's just a matter of when he decides to open up.

It seems to me that the fighting in Korea is much like the island warfare in the Pacific. Here each hill is an island fortress. Artillery and air soften them up, and then the infantry must go it alone.

Mountains and weather—enemies which have proved as effective against the U. N. forces as the Reds themselves. Last winter it was cold and snow. You've heard about that. So far this summer the temperature has averaged in the humid eighties. When it isn't hot, it's raining. Steady downpours for 2 and 3 days straight.

It's a strange war here in Korea. It's a strange soldier we fight. Reports from intelligence speak of such things as "the Chinese may be waiting for a full moon" or "expect an attack if we get three straight days of rain." The Chinese are superstitious. They frighten easily and they fight fanatically.

Every soldier dreads nightfall. The Reds love to infiltrate at night and launch wild whistle-blowing banzai attacks. The enemy uses his artillery most at night. Unlike most wars there are no clear-cut front lines in Korea. The enemy can be any place at any time.

A combat infantryman doesn't have much time to think about the grand philosophy of war. But the American soldier is no machine. He walks hand-in-hand with death. No matter how brave or patriotic or religious he might be he can't forget that each minute could well be his last.

I remember the first man I saw killed. We had been joking about how easy we had it. Then the artillery came in. He was dead. The same shell was close enough to have gotten me but it didn't. Incidents like these encourage the foxhole faith you read about in civilian life.

Then there's the matter of heroes. Before I entered combat I thought heroism was a rare and individual thing. Long ago that was true. But today any man who performs his duties well under fire is a hero for my money. A knight of old may have single-handedly slain dragons but a modern soldier cannot do hand-to-hand battle with shrapnel.

At least one good thing comes of war—teamwork. I don't mean the military teamwork of infantry, artillery, air, etc. Even more significant is the comradeship of men in battle. In my own regiment (Seventeenth Infantry) racial or religious prejudice is unheard of. A man soon learns to appraise the guy beside him by his courage under fire. That's where men are made.

I sometimes wonder if war isn't more of a personal fight than it seems. A man seldom has time to consider world ideals. It usually narrows down to kill or be killed. There is no pretense among men in battle. The will to live tears away the protective veil we sometimes wear in civilization. Everyone is afraid at times. But most men fight fears as they fight the enemy.

Many men now in the front lines were only recently removed from civilian life by the draft. They dream about getting back to the work they love. They worry about the long delay in their chosen careers. They wonder how it will affect their future.

Soldiers, as always, have their gripes. Rotation is wonderful, but sometimes it seems awfully slow in coming around. When they see stateside papers with Korean news mentioned briefly on page 3 they wonder if the people back home know or care why this war is being fought.

The men here know why they're fighting. I was amazed when I first arrived in Korea at the difference in attitude about the war. Sure you hear, "Why not give them the place; it isn't fit to live in anyway." But when you talk seriously with these same men, most of them will admit they were only letting off steam.

After the last big Allied offensive we discovered we can defeat the Communists no matter how many men they have. We threw back everything the Reds had to offer and we had them running when the cease-fire talks opened. We, as no one else, pray for peace. But if it doesn't come, we can still whip them.

One thing is certain. Every man here has learned the horror and waste of war. We're happy it's happening to us instead of those we love. Our only hope is that in waging this isolated war we have proved to our potential enemies that it will not pay to test our strength in our own backyard.

Diversion of Cattle and Beef

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. BUTLER of Nebraska. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Cattle Disappearance," from the Omaha Daily Journal-Stockman for August 30, 1951. This editorial points out how severely present OPS regulations are disrupting the normal operations of the meat packing industry.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CATTLE DISAPPEARANCE

Continuing its reports on the diversion of cattle and beef, the American Meat Institute says this week:

"For the 12th week the country's normal beef business registered severe dislocation. Last week 95 leading beef-producing plants were able to buy only 68 percent of the number of cattle they bought during the corresponding week of a year ago. In other words, their purchases were down 32 percent. At the same time during last week the receipts of cattle on 12 leading markets were down only 2 percent from the corresponding week of a year earlier. During last week the 95 plants were able to buy under OPS ceiling compliance regulations 104,479 cattle; against 153,202 they bought a year ago. Receipts at the 12 leading markets last week totaled 195,231; a year ago the receipts totaled 199,113."

Mr. DiSalle finally admits that something of the kind may be going on, and has his scouts out to detect and correct. He could

correct this deplorable situation overnight if he really wanted to, by simply getting out of the picture, which of course, he won't do so long as the law permits his monkeyshines. And as for detecting, that will prove to be for the most part wasted time and money.

National Science Foundation

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, September 7, 1951

Mr. KILGORE. Mr. President, the appropriations bill passed by the House provides for 2-percent support for basic scientific research. The modest \$14,000,000 appropriation requested for the National Science Foundation has been slashed to less than one-third of one million. This is a cut of 98 percent.

Two-percent support for basic scientific research as we move into the second half of the twentieth century, an ever increasingly scientific age, when it is imperative that we maintain our pre-eminence in science, is false economy in its most dangerous form.

I have had a part in the legislative beginnings of the foundation. The National Science Foundation idea has developed and grown over a period of nearly a decade. After the most thorough study, the foundation was established in the Eighty-first Congress.

Dr. Alan T. Waterman, an outstanding physical scientist and former chief scientist of the Office of Naval Research, was appointed director of the foundation. The foundation's 24-man board, with James Bryant Conant, president of Harvard, as chairman, includes some of the most able and distinguished men in America.

A statutory limit of \$15,000,000 was set for the current budget. An appropriation of \$14,000,000—a million dollars less than the statutory limit set by Congress—was requested. It is this amount which has been slashed by 98 percent.

Basic research, which the National Science Foundation is designed to encourage, is imperative if our store of basic knowledge, from which come all our developments in applied science for peace and war, is to be constantly built up and increased.

As a member of the Appropriations Committee, I shall vigorously urge the restoration of the full \$14,000,000 for the National Science Foundation.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on the subject from the New York Times and one from the Washington Post.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times]

KILLING THE SCIENCE FOUNDATION

The House has cut by 98 percent the \$14,000,000 appropriation which was requested by the National Science Foundation. This fund was set by the foundation for the fiscal year

1952 as a modest Federal investment, but a vital one, in the scientific future of the Nation. The slash by the House is absurd. Practice of the most stringent economies in the face of a frightening military budget cannot ignore the value of science and the almost unanimously voiced appeal of the Nation's leading scientists.

The foundation, though a newcomer among Federal agencies, has been in the paper-planning stage since 1941. All the kinks have been ironed out. Last year Congress passed enacting legislation, after 9 years of study, and provided a first-year fund of \$225,000 for administrative purposes. The foundation's distinguished 24-man board, with James Bryant Conant, president of Harvard, as chairman, met six times during the winter to figure out where to put its limited funds in order to accomplish the most good. Since the Nation annually spends over \$2,000,000,000 for research in the physical sciences, a \$14,000,000 fund could not change things overnight. But the National Science Foundation was set up to provide a few dollars here and a few dollars there for "seed" money. It would support projects that just don't sound money-making to the average Federal, industrial, university, or philanthropic investor. From such unpromising-sounding ideas have come nuclear weapons and radar, as well as the sulfa drugs, penicillin, and cortisone.

In the House hearings, scientists never pressed their case in the usual way. Their request was for only \$14,000,000. This drop in the bucket drew only magnificent public indifference. The \$300,000 appropriation which was finally approved by the House is worse than useless. It will relegate the foundation's scientific staff of 30 persons to another dreary year of shuffling papers in Washington in the vague hope that something will eventually be done, but without assurance that it will be done in time.

The Senate has still to consider the scientists' request. The American Association for the Advancement of Science, among other senior scientific societies, alarmed by the House action, has taken the unprecedented step of advising its members to write their Senators. The influence of science on Congress has been proved to be negligible; perhaps the rest of us can assure the Senate Appropriations Committee that the foundation's \$14,000,000 is a sound investment.

[From the Washington Post]

FORECLOSING SCIENCE

It is astonishing in this day of \$56,000,000,000 defense budgets that the House Appropriations Committee should boggle over a \$14,000,000 fund designed to replenish the armory of scientific ideas from which defense draws its strength. In cutting the request for the National Science Foundation by 98 percent—from \$14,000,000 to \$300,000—the House committee has virtually shut the door on any effort to stimulate more basic scientific research. The \$14,000,000 asked was below the \$15,000,000 annual authorization set by Congress when it established the foundation last year. In view of the many difficulties which preceded the establishment of the foundation, this new blow is profoundly disheartening.

The foundation, under direction of Dr. Alan T. Waterman, had proposed to spend \$8,000,000 in support of basic research and \$5,000,000 for 2,100 graduate fellowships in the sciences and engineering. Some basic research is being done—by universities, by the Atomic Energy Commission, Public Health Service, Department of Agriculture and to a limited extent by the armed forces themselves. But there is no coordination, no effort to survey the field and plug the gaps. Likewise, the demands of the military are constantly increasing the need for scientists, but the supply is diminishing.

In these circumstances \$14,000,000 for the Science Foundation is not a luxury, but a remarkably small and prudent investment. The United States has been a Nation of applied science; Americans have been geniuses at developing the basic ideas borrowed from others—as, for example, on the atom bomb. But Dr. James B. Conant, who heads the foundation's advisory board, has repeatedly pointed to the need to concentrate more effort on the fundamental research of which applied science is made. The Science Foundation needs help in its job of promoting the raw material of scientific ideas without which technology alone would soon falter.

Proposed Steel Mill in New England

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, September 7, 1951

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed by my colleague, the junior Senator from Connecticut (Mr. BENTON), to the editor of the New Haven (Conn.) Register, and published in that newspaper under the headline "Senator BENTON defends support of steel mill."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SENATOR BENTON DEFENDS SUPPORT OF STEEL MILL

(A letter to the editor of the New Haven (Conn.) Register)

TO THE EDITOR OF THE REGISTER:

The Register recently reprinted an editorial from the Lakeville Journal vigorously attacking the proposed New England steel mill. In reprinting, the Register complained that I had failed to answer the Journal's questions and it also implied that the Journal's criticism was unanswerable.

I know that you are anxious to open your columns to a fair and factual discussion of the steel-mill project; the biggest and most vital industrial project ever proposed for New England, and I am only too glad to send you my views.

There is now taking place in the United States perhaps the greatest expansion in steel-making facilities this Nation has ever known. This expansion is due to the stepped-up demands of the rearmament program and also to the discovery of vast deposits of iron ore at several points along the rim of the Atlantic Ocean—notably in Labrador, Venezuela, and Africa.

These new ore deposits are bringing about a radical shift of the American steel industry, with the new mills being located closer to the Atlantic Ocean. The United States Steel Corp. is now starting construction on one of the biggest mills in the world in eastern (not western) Pennsylvania.

Some years ago, an organization of far-sighted businessmen foresaw a coming industrial shift and started laying plans to make sure that New England not only protected what it had, but also got its share of the new industrial expansion. I refer to the New England Council, one of the most representative business and industrial groups in the whole New England area. The council knew that New England had been losing its shoe and textile industries at an alarming rate and that if it lost its metal workers, because of cheaper steel available elsewhere,

the result would be little short of disastrous.

The council put up its own money to make an exhaustive study of the probable effects of Labrador ore upon the New England economy. The study made by the council was nonpartisan and nonpolitical. It was designed for one purpose only—to assemble and interpret the economic facts. The council's investigation disclosed that a ready market exists for the output of a steel mill in New England and that its construction is highly desirable to insure the economic growth of the New England area.

In its editorial, the Lakeville Journal makes the ugly sneer that the steel mill project is simply a slick scheme of my colleague and myself "to swing the State into the Jackass Camp for the good and all." Naturally the Journal had to invent this in order to tag the word "political" on the steel mill project. The Journal would not dare make this unjust accusation against the honorable and highly respected members of the New England Council. The Journal would not dare make the absurd charge that in sponsoring a steel mill for New England, the Council had nothing more in mind than to advance the fortune of the Democratic Party.

Isn't it true that the man who has a bad case usually finds a false premise on which to base it?

MAINTAINS POSITION

I readily confess my keen disappointment at the fact that the big steel companies have failed to cooperate with the New England Council and New England industry by contracting to build the New England mill. But I don't for a moment concede that this means the project is economically unsound.

The big steel companies have, of course, actively opposed the construction of a mill in New England. The fact is that these companies do not compete against each other in the traditional American sense. If you doubt this, I suggest you consult the nearest steel buyer. The result of this is a terrible economic handicap for the whole New England region.

In the last few years, steel mills have been built in California, in the sparsely settled State of Idaho, and one is now being constructed in Texas, a State industrially relatively undeveloped in contrast to Connecticut. Despite dire predictions of economic failure, the record shows that the California and Idaho mills have been highly successful and I predict the Texas mill will be so also.

New England is the oldest industrial area of the United States. Its life blood depends upon securing sufficient steel at reasonable costs to keep its shops and mills and factories in operation. The man who says Texas can support a steel mill, and Idaho and California, but New England can't, is something more than a pessimist. In my opinion, his judgment and his motives should be subjected to the sharpest scrutiny.

A thoroughgoing study of New England steel products has recently been made by H. A. Brassert & Co., admitted experts in this field, and that company found there was ample market here for a good-sized mill. It is admitted everywhere that few men in the country have had more experience than Mr. Brassert in the steel industry and on just this kind of problem.

The Lakeville editorial writer brings into the steel mill discussion a host of extraneous subjects, a custom not unusual among those not too well acquainted with the primary subject. He demands to know why he has not heard a word from me about the effect of Federal spending on the New England economy.

I shall answer that question even though the answer depresses me. The truth is that New England is booming with war orders. The \$70,000,000,000 which the Federal Government is pouring into armaments this year

has brought a kind of prosperity to our area just as it has every other section of the country.

Three or four weeks ago, as a member of the Senate Small Business Committee, I sent two investigators into New England. I was prepared to arrange hearings by a subcommittee into hardship cases. In 10 days or so they could not find enough to justify hearings. The hearings, already announced, were called off. With all our complaints, we are in a war boom.

FALSE PROSPERITY

Naturally I want New England to have its share of rearmament orders. But this is false prosperity—it is prosperity based on something fundamentally alien to the peaceful purposes of our people, and there isn't a fair-minded person in New England who thinks it can go on indefinitely.

Some day, please God, this dreadful armaments race must stop and when it does—I want New England to be in a position to compete for the peacetime markets of the world. To be in this position, we must have our steel mill. It may prove to be the steel mill—or growing concentration and reliance on insurance, education, and tourists as sources of out-of-State money. I am not prepared to surrender those great qualities of ours which, given an even break, can insure our continued industrial vitality.

The Bethlehem plant at Sparrows Point attracted more than 400 metal-fabricating plants to that immediate area. If history repeats itself in Pennsylvania, where only 200 miles away, United States Steel is now building, from where will these plants move? From New England, as seems likely for a high percentage. The public man who tries to gloss over this danger to New England's future is doing an immense disservice to his State and to his region. Many in our business community who gloss it over have no real familiarity with the problem—or have made their pile, or inherited it, and are not accustomed to thinking of the welfare of Connecticut and its people.

For New England, a steel mill is something more than a luxury: It is essential to New England's industrial future. Anyone who opposes the mill must answer this question: Is he prepared to throw in the towel on New England's industrial future?

If other sections of the United States win the right to process Labrador ore, and not New England, then we shall be compelled to reconcile ourselves to the most bitter setback in the region's economic history.

Very sincerely yours,

WILLIAM BENTON,
United States Senate.

Address by Gen. Douglas MacArthur in Cleveland, Ohio

EXTENSION OF REMARKS OF

HON. ZALES N. ECTON

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, September 7, 1951

Mr. ECTON. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the address delivered last night in Cleveland, Ohio, by Gen. Douglas MacArthur.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is gratifying indeed to have this opportunity to address the citizens of Cleveland and of the State of Ohio—a State which

has contributed so abundantly to America's leadership both past and contemporary. Indeed, indications multiply that this leadership may even increase in the not-too-distant future.

No section of our country symbolizes more forcefully the pattern of our national progress than does this great Midwest, whose fertile fields and thriving industry combine to reflect the constructive energy of our people. You have molded a standard and pattern of life known to no other nation of the world, and I pray that we will have the vision and courage and statesmanship to keep it that way—that we will preserve an America which will provide increasing, not diminishing, opportunities for human advancement.

We have just passed another anniversary of the end of the war with Japan. Six years ago, with a few strokes of the pen, a calm descended upon the battlefields of the world and the guns grew silent.

Military victory had been achieved for our cause and men turned their thoughts from the task of mass killing to the higher duty of international restoration, from destroying to rebuilding, from destruction to construction. Everywhere in the free world they lifted up their heads and hearts in thanksgiving for the advent of a peace in which ethics and morality based upon truth and justice would thereafter fashion the universal code.

THE WORLD WAS LEFT EXPOSED

Then, more than ever in the history of the modern world, a materially strong and spiritually vibrant leadership was needed to consolidate the victory into a truly enduring peace for all of the human race. America, at the very apex of her military power, was the logical Nation to which the world turned for such leadership. It was a crucial moment—one of the greatest opportunities ever known.

But our political and military leaders failed to comprehend it. Sensitive only to the expediencies of the hour, they dissipated with reckless haste that predominant military power which was the key to the situation. Our forces were rapidly and completely demobilized and the great stores of war material which had been accumulated were disposed of with irresponsible waste and abandon.

The world was thus left exposed and vulnerable to an international communism whose long-publicized plan had been to await just such a favorable opportunity to establish dominion over the free nations. The stage had perhaps been unwittingly set in secret and most unfortunate war conferences.

The events which followed will cast their shadow upon history for all time. Peoples with long traditions of human freedom progressively fell victims to a type of international brigandage and blackmail and the so-called iron curtain descended rapidly upon large parts of Europe and Asia. As events have unfolded, the truth has become clear. Our great military victory has been offset largely because of military unpreparedness, by the political successes of the Kremlin.

Our diplomatic blunders increased as our senseless disarmament became a reality. And now the disastrous cycle is completed as those same leaders who lost to the world the one great chance it has had for enduring universal peace, frantically endeavor, by arousing a frenzy of fear throughout the land, to gear anew our energies and resources, to rebuild our dissipated strength, and to face again a future of total war.

Our need for adequate military defense, with world tensions as they were and are, is and should have been completely evident even before the end of the war. By what faith, then, can we find hope in those whose past judgments so grievously erred—who deliberately disarmed in the face of threaten-

ing communism? Can they now be blindly trusted as they so vehemently demand to set an unerring course to our future well-being and security? There are those of us who, from neither partisan affiliation nor with political purpose, think not.

INHERENT WEAKNESSES IN U. N.

At war's end the main agency for maintaining the peace became the United Nations. The organization was conceived in a common desire that the scourge of war should not again be visited upon the earth. It was dedicated to the principle that all mankind of inalienable right should live in justice and liberty and peace. It represents perhaps the noblest effort man has yet made to evolve a universal code based upon the highest of moral precepts. It became the keystone to an arch of universal hope.

Yet, in practice its efforts become increasingly doubtful of ultimate success. Its organization is inherently weak, legislatively, judicially, and executively.

It lacks legislative strength because its members, not being elected but merely appointed, are not answerable directly to their people. It lacks judicial strength because there is no accepted international code of sufficient moral authority or purpose to mould and guide its decisions. It lacks executive strength because it controls no agencies of sufficient power to enforce its mandates.

It threatens to fail, if the innate selfishness of its members does not yield to universal needs; if the mechanics of its operations are not corrected to prevent the will of one nation from counterbalancing the collective will of the others; if it does not obtain acceptance by member nations of its lawful decisions; if it does not stop obstructionist tactics, even by expulsion if necessary, of its own unruly members; if regional military alliances must be organized within its membership to undertake collective security measures against threat from other members; if it allows itself to be reduced to a mere forum for meaningless and acrimonious debate, and a springboard for propaganda.

Unless a strong and dynamic sense of responsibility emerges within its ranks capable of rallying the forces of good throughout the world; of establishing a higher moral tone of its deliberations and activities; of correcting its existing institutional and mechanical weaknesses, the United Nations may well go the way of its predecessor League of Nations and perish as a force to guide civilization.

But the great moral and spiritual purpose which animated its formation—the abolition of war from the face of the earth—will always live and a way must be found to achieve that purpose. This way cannot be found, however, if nations are so blind as not to see their own weaknesses—so weak as not to correct them.

JAPAN'S RECOVERY

In this post-war period of general failure to attain real peace one of the bright spots has been conquered Japan.

That nation and its people, long boasting of many centuries of unbroken military successes—a self-sufficient warrior race with a history of almost complete isolation from the rest of the world—at war's end was reduced largely to rubble, with its people impoverished and broken in mind, body, and spirit. The sudden and general destruction of Japanese institutions brought about by complete defeat left a spiritual vacuum in Japanese life, to be filled either by a philosophy of good, or a philosophy of evil.

Fortunately for Japan and for the free world, the country was spared the dreadful consequences of a Soviet military occupation and was brought instead within the benign guidance of the American people. Under this beneficent influence, the Japanese gradually lifted themselves from the ashes of

defeat and started to build a new nation—a nation dedicated to the pursuit of new concepts and new ideals, fashioned from a blend between the best of their own ancient and those high precepts of ethics and morals which have been the great pillars supporting America's origin and growth.

This oriental nation under the shadow of a continent plagued by the cruel misery of unending wars, pillage, and natural disasters, proved willing and adept under the guiding hand of an occupation not conceived in a spirit of vengeance or mastery of victor over vanquished, but committed to the Christian purpose of helping a defeated, bewildered, and despairing people recreate in the East a nation largely designed in the image of the West.

New Japan was thus erected upon free institutions, somewhat similar to our own, which permitted the development of a moral base which cannot fail to favorably influence the course of events in Asia for generations to come. Discarded is the traditional intolerance of human rights, the restrictions upon human liberties, the callousness to human life, and in their place have been accepted and fused into the Japanese heart many of the Christian virtues so predominantly embodied in the American character.

LAND SYSTEM HAS BEEN REFORMED

An enlightened constitution has become the great charter of Japanese liberty, with enabling laws which give full effect to its immutable precepts. The Government has become truly representative of the popular will, deriving its just powers from the consent of the governed. The principle of local autonomy has been established. This permits the balance of political power to rest with the citizen at the community level and thus serves as a constant check against the excesses of centralized authority.

The hated system of land tenure, so contributory to general unrest in Asia, has been abolished. Every farmer is now accorded the right and dignity of ownership of the land he long has tilled. He thus reaps the full fruits which result from his toil and labors with the incentive of free enterprise to maximize his effort to achieve increasing production.

Representing over a half of Japan's total population, the agriculture workers have become an invincible barrier against the advance of socialistic ideas which would relegate all to the indignity of state servitude.

Labor, through the protection of modern laws, has come into a new and heretofore unknown dignity and is making rapid strides along the course of a sound and healthful movement. The schools have been rid of the strictures upon academic freedom and public education is provided to all of the youth of the land.

Universal suffrage has been established and the women of Japan have assumed their rightful role in the political life of the nation. With dignity and resolution they have brought to bear upon public affairs the morality which centers in the home and are progressively asserting a strong and healthful influence upon the course of Japan's political destiny.

The courts are proceeding in their administrative and judicial roles with universally accepted principles of justice firmly implanted in the norm of their procedure. The police have ceased to be masters and have become, instead, servants of the people, with a decentralization in organization which permits exercise of their functions at the community, rather than national, level of government.

A POLICY OF ECONOMY

The economy of Japan has made rapid and effective advances toward the full restoration of stability and self-sufficiency and has achieved a sound basis for a frugal public administration. For the past 3 years, the

national budget has been in complete balance, with savings to permit substantial reductions in the tax load upon the people and corresponding raises in their living standard.

Japan's present course in the economy of public administration follows closely the pattern sagely advised by Thomas Jefferson when he warned in speaking of our own Government:

"I place economy among the first and most important virtues and public debt as the greatest of dangers to be feared. To preserve our independence, we must not let our leaders load us with perpetual debt. We must make our choice between economy and liberty, or profusion and servitude. The same prudence which in private life would forbid our paying our money for unexplained projects, forbids it in the disposition of public money. We are endeavoring to reduce the Government to the practice of rigid economy to avoid burdening the people and arming the magistrate with a patronage of money which might be used to corrupt the principle of government."

If Japan continues to heed this farsighted warning and our own leaders who pretend to be disciples of the Jeffersonian teachings continue to ignore it, the time may well come when the Japanese people will be firmly established within the protective folds of our own cherished liberties, while we ourselves shall have lost them because of the assumption by our leaders of that patronage of money with its consequent corruption of government against which Jefferson so clearly warned.

In such a tragic eventuality, we would be hard put to it indeed to answer the charge of our children and our children's children that we had recklessly squandered their rightful heritage of liberty, resource, and opportunity.

JAPAN'S POWER OF DEFENSE

This is but a brief outline of the new Japan which is about to be restored to a position of international dignity and equality under a peace treaty, which, as presently proposed, while far from flawless, embodies much of human justice and enlightenment.

It is a Japan which may now assume the burden of preparing its own ground defense against predatory attack and thus in short time release our own beloved divisions for return home. With our air and naval support, Japan can with no great difficulty defend its own homeland which forms so vital a sector of the island defense system buttressing freedom and peace on the Pacific. It is a Japan in which we of the free world may find an alliance which shall merit our full faith.

I realize well that there are nations who fought with us to victory while suffering grievous hurt from Japanese depredation who understandably disagree in whole or in part. It is hard for them to accept the realistic but tragic fact that in modern war the victor is also the loser. He suffers materially with the vanquished—oftimes more than does the vanquished. Indeed our own country, in the aftermath of victory, pays with a burden of accumulated debt such as to place a mortgage upon the energy and resource of many future generations.

May we not hope that eventually through wise statesmanship and Christian tolerance the scars still left in war's wake may be finally healed and that victor and vanquished, as befits the sacred cause of human freedom, will be invincibly bound together in mutual preservation.

Since my return from service I have enjoyed the privilege, the freedom, and the opportunities of private citizenship. I have seen many new and wonderful things but some which to me create a disturbing outlook for the future. Possibly one of the most pernicious is our steady drift toward totalitarian rule with the suppression of those personal liberties which have formed

the foundation stones to our political, economic, and social advance to national greatness.

Our Government now differs substantially from the design of our forefathers as laid down in the Constitution. They envisaged a federation of sovereign States with only such limited power resting in the Federal authority as became necessary to serve the common interests of all.

But under the stress of national emergencies during the past two decades, there has been a persistent and progressive centralization of power in the Federal Government, with only superficial restoration to the States and the people as emergencies subsided. This drift has resulted in an increasingly dangerous paternalistic relationship between Federal Government and private citizen with the mushrooming of agency after agency designed to control the individual. Authority specifically reserved to the States by constitutional mandate has been ignored in the ravenous effort to further centralize the political power.

ROLE OF THE STATE DEPARTMENT

Within the Federal Government itself has been a further and dangerous centralization. For example, the Department of State, originally established for the sole purpose of the conduct of foreign diplomacy, has become in effect a general operation agency of Government, exercising authority and influence over many facets of executive administration formerly reserved to the President or the heads of other departments. The Department of State indeed is rapidly assuming the character of a prime ministry, notwithstanding that its Secretary is an appointed official, neither chosen by nor answerable directly to the people.

This drift toward totalitarian rule is reflected not only in this shift toward centralized power, but as well in the violent manner in which exception is taken to the citizen's voice when raised in criticism of those who exercise the political power. There seems to be a determination to suppress individual voice and opinion which can only be regarded as symptomatic of the beginning of a general trend toward mass thought control.

Abusive language and arbitrary action, rather than calm, dispassionate, and just argument, ill becomes the leadership of a great nation conceived in liberty and dedicated to a course of morality and justice. It challenges the concept of free speech and is an attempt at direct suppression through intimidation of that most vital check against the abuse of political power—public criticism. If long countenanced by freemen, it can but lead to those controls upon conviction and conscience which traditionally have formed stepping stones to dictatorial power.

ISSUES "CLEARLY DEFINED"

The issues which today confront the Nation are clearly defined and so fundamental as to directly involve the very survival of the Republic.

Are we going to preserve the worth-while heritage in that of our progeny?

Are we going to continue to yield to personal liberties and community autonomy to the steady and inexorable centralization of all political power or restore the Republic to constitutional direction, regain our personal liberties and reassume the individual State's primary responsibility and authority in the conduct of local affairs?

Are we going to permit a continuing decline in public and private morality or reestablish high ethical standards as the means of regaining and diminishing faith in the integrity of our public and private institutions?

Are we going to continue to permit the pressure of alien doctrines to strongly influence the orientation of foreign and do-

mestic policy or regain trust in our own traditions, experience and free institutions and the wisdom of our own people?

ENCOURAGED FOR THE FUTURE

In short, is American life of the future to be characterized by freedom or by servitude, strength or weakness? The answer must be clear and unequivocal if we are to avoid the pitfalls toward which we are now heading with such certainty. In many respects it is not to be found in any dogma of political philosophy but in those immutable precepts which underlie the Ten Commandments.

During the 5 months since my return, I have been encouraged to believe that our citizens will not complacently tolerate further incursions against their cherished liberties and will move to correct this drift away from truly religious base to our origin, our growth, and our progress, or yield to the devious assaults of atheistic or other anti-religious forces.

Are we going to maintain our present course toward state socialism, with communism just beyond, or reverse the present trend and regain our hold upon our heritage of liberty and freedom?

Are we going to squander our limited resources to the point of our own inevitable exhaustion or adopt common-sense policies of frugality which will insure financial stability in our time and a representative government? I have found this encouragement in the rare opportunity to search the faces of millions of my fellow countrymen.

Therein I have been given understanding of the meaning of Abraham Lincoln when he said: "To the salvation of the Union there needs but one single thing—the hearts of a people like yours. When the people rise in a mass in behalf of the liberties of the country, truly it may be said that (nothing can) prevail against them."

I have seen in the faces of the American people that to which Mr. Lincoln prophetically referred. I have clearly seen that the soul of liberty is still living and vibrant in the American heart. It is neither Democratic nor Republican, but American. It will assert itself by constitutional process and with invincible force in the battle to save the Republic. The people will still rule.

Fiscal Policies of the Truman Administration

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, September 7, 1951

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial from the Baltimore Sun of August 14, 1951, in which very deserved credit is given to the Senator from Maryland [Mr. O'Connor] for his efforts to preserve the fiscal solvency of our Government.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR O'CONNOR POINTS OUT SOME ECONOMIC FUNDAMENTALS

In a statement marked by unusual economic insight, Senator O'Connor has launched what amounts to a head-on attack on the fiscal policies of the Truman administration. From a number of striking truths in the

statement, consider for a moment the passage which reads:

"The effects of taxes in restraining inflation have been overestimated by the administration."

It is necessary to note that Senator O'Connor does not argue against increased taxes in these times of stress. But he has the wit to see and the courage to state that there is a limit to the effectiveness of taxes as an anti-inflationary weapon.

The reason taxes are not the whole answer is obvious to thoughtful people. The Government taxes in order to spend. The money collected in taxes is immediately pumped back into circulation, chiefly in the form of wages and salaries. The higher the taxes, the more the Government is able to put back into circulation. The more money in circulation, the more severe the pressure on prices, the more danger of inflation.

Of course, if the money collected in taxes were used to reduce the Federal debt the effect would be deflationary, rather than inflationary. Thus the real problem is one of balancing the forces at work, so as to hold the economy steady. But to do this is to run counter to the pressures constantly exerted by the numerous pressure groups—organized labor, the farmers, the do-gooders who want the Government to finance their favorite projects, and so on.

All these things Senator O'Connor has discerned, and it is good to be able to give him credit for having the courage to point out how the pressure groups are being carefully cultivated by an administration with its eye on the elections of 1952. The great word now is defense, and one of Senator O'Connor's objects is to point out the kind of projects which today are being impudently marshaled under that banner.

For instance, that hoary project of the political pedagogs, Federal aid to education, is now being put forward on the ground that fundamental education is essential to national service whether in the Armed Forces, in industry, or on the farm. The unwarranted assumption here, of course, is that to provide fundamental education the Federal Government must muscle in.

Also under the defense label are proposals for a dozen or more expensive Federal projects—one of them is the St. Lawrence River scheme—which couldn't possibly be finished in time for any war to be fought in this generation. This alone would be sufficient to justify Senator O'Connor's charge that under the guise of preparing for war, the administration is really proposing to alter the bases of our economy.

For those who feel the need for additional evidence on the way the minds of the administration's henchmen are working, we commend the hand-out of the Federal Trade Commission which was published over the country yesterday. The general purpose of this hand-out was to prove that the country's basic industries are garnering in profits at, presumably, a wicked rate.

We hold no brief for industries which are in fact profiteering, assuming that they can be found in this competitive economy. But it is certainly true that to compare the rate of profits in 1950 with that of 1940 is to obscure the true situation for the unwary reader. In that 10 years, the value of the dollar has been cut in half. If a corporation is to maintain its margin of profit today, it must earn at least twice as much, dollarwise, as it earned in 1940. Also, it should be remembered that after the profits are distributed to the stockholders, the Government takes a much larger cut today, in the form of income taxes than it took a decade ago. To argue that profits are higher and then stop there is to ignore some of the basic factors in the situation.

Besides, what is wrong with adequate profits? They are distributed among more

than 10,000,000 Americans, all of whom are consumers and contribute to the upkeep of the economy. At least a part of them are turned back every year for the further expansion of industrial production, to the greater material good of all of us.

Mr. O'Connor might well follow up his disclosure of the hidden evils in the President's budget with an examination of the implications of this hand-out by the FTC. In it he will surely find confirmation of his growing doubts of the fiscal responsibility of the Truman administration.

They Are Gouging Soldiers Again

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, September 6, 1951

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. Booton Herndon, which appeared in the February 1951 issue of Redbook magazine, which relates the poor conditions around our military camps. This revealing article confirms and emphasizes the facts about these conditions as recently reported by the Johnson Armed Forces Subcommittee.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THEY'RE GOUGING SOLDIERS AGAIN

(By Booton Herndon)

What are your strongest memories of World War II? Do you thrill when you remember the Army's smashing invasion of Normandy? The marines on Guadalcanal? The great naval battle of Midway? Or the daring raid on Tokyo?

Or is your strongest memory of World War II a bitter one? Do you remember the greed of the civilians more than the heroism of the fighting men? The callous gouging by the local landlords?

If not, you're lucky, but there are such people with such memories. A young lieutenant colonel talked to me dispassionately of being captured in the Battle of the Bulge, but his hands trembled when he told me of the contempt and rudeness to which fellow Americans subjected his wife and children.

An Air Force major talked about the one-room children's playhouse his wife rented in Tampa, Fla. They couldn't stand up straight in it, but the rent was \$150 a month.

Those, too frequently, are the memories of World War II. What kind of memories are we storing up today? Has anyone done anything about housing around Army camps? Is any effort being made to keep prices down—whether of milk or of beer? These are the questions to which I have, in a cross-country tour of military establishments, tried to find the answers. On my tour, however, I was amazed at the bitterness still ranking in the souls of men and women all over America.

Take Master Sgt. William F. Vining at Camp Pickett, near Blackstone, Va. He and his wife live on the post, rarely go to town. Even today, 9 years after their first time in town, they remember it too well. They had skimped for months on Bill's \$34 private-first-class salary, so she could come to see him. They couldn't find a place to be together and had spent the night in camp—

she in a dormitory, he in his Army barracks.

Sunday morning they went to church in Blackstone. A member of the congregation welcomed them, heard of their plight, and invited them to his home. They had little privacy because members of the family kept charging through their room during the 2 nights they spent there. They were, nevertheless, deeply grateful to their host. As they were leaving, they tried to tell him so. He waved away their thanks.

"That'll be \$13," he said, "\$6.50 a night."

People remember everything about Leesville, La., near Camp Polk—the heatless pigsty sheds, each big enough for only a double bed and with 50 families of soldiers sharing one filthy toilet, which the landlady kept locked most of the time to conserve water.

"Leesville," said a reporter for the Washington Post in 1943, "was the most unsavory, chaotic, and humiliating picture that I have ever had of our American civilization."

Even babies weren't safe in Leesville. Their mothers were sold inferior, unpasteurized milk—more than one child remained there forever.

Yes; that was our America of the camp communities 8 years ago. What is it like today? Once more husbands and fathers are entering our Armed Forces to protect this country and this country's way of life. Has anyone done anything to protect their wives and children from greed, misery, and squalor?

The answer, I have found through visits to communities all the way across America, and through conferences with the few people interested in the problem is yes—and no. For once, we are not caught completely flat-footed.

On the other hand, whatever steps that have been taken have been hesitant and hamstrung.

Tighe E. Woods, Federal Housing Expediter, found rent gouging ranging from 100 to 500 percent in small communities around recently reopened Camp Atterbury, Ind.

Woods says he hasn't the staff to check conditions in other camp areas.

Last summer, after the invasion of South Korea, the Armed Forces hastily gathered up fighting men from all over the country and sent them to repel the invaders.

And this time, the landlords in the towns about the camps discovered one in every four soldiers was married, and most of them had children. The kids of World War II had become husbands and fathers, and the wives and children of those husbands and fathers did not intend to sit at home and wait for them to come back.

They followed them to training camps, and they followed them to staging areas. Early in the Korean war, when men were piling into west coast camps to wait for transport, their wives and children piled right into the communities after them.

When first I began my research for this article, I was advised to go to California. At Pittsburg, serving the Army staging area of Camp Stoneman, and at Oceanside, near the Marine staging area of Camp Pendleton, I was told by welfare agencies, the deplorable conditions of World War II were repeating themselves. I went there, and while I by no means found another Leesville on the west coast, I, too, found, "a humiliating picture of our American civilization."

I also found men and women of good will, doing their best to ameliorate that picture.

But I found no one, no one except me, interested in these west coast communities as a preview of what was to happen as dozens of other camps went into full capacity.

The men went by troop train, and the wives and children followed by train, by bus, by car. Some wives sold their furniture in order to be with their husbands those last few days. After they got to California they

spent the money they'd kept for the return trip on housing and food, and many became dependent on charity to be sent back where they came from.

Even the charities bogged down in confusion and lack of funds. At Camp Stoneman, a Red Cross representative said his own opinion was that the wives had no business being there.

At Oceanside, however, the Red Cross stepped right in and within a few weeks was spending \$10,000 a month in that one little area. Nearly all of it went to dependent wives of servicemen.

The Army Emergency Relief took over in many cases.

Before I left Oceanside, I made one more visit. I talked to Zandra Outain. I think every American ought to know the story of Zandra Outain.

When Sgt. Benjamin F. Outain was sent to Korea, his wife, Zandra, with 3-year-old Wanda and 18-month-old Steven, set out to find quarters off the post.

Lost, bewildered, confused, Zandra scoured the area by bus and by foot. Once she found a place she could afford—a dirty shed with no toilet and no heat—in the hills back of town, but the thought of living there with her children until her husband got back, if he got back, revolted her. She would have taken a place only slightly better, for \$50 a month and extra for electricity and water, but the landlady backed out at the last minute. If Zandra would get rid of one of her children.

Finally Zandra found a nice unfurnished apartment, rent \$60 a month. The lady next door said she'd take care of the children for 75 cents a day so Zandra could get a job to augment the \$75 she'd eventually get from her husband. But what about furniture? Nobody, of course, would sell furniture on time to the wife of a marine.

Zandra's husband had a friend in the furniture business, though, and he said he'd help her—for friendship's sake.

Then the lady next door moved, and Zandra could find no one to take care of her children for less than \$5 a day. She couldn't earn that much. Her allotments had still not come in, and the Red Cross was advancing her money for food. She missed a payment, and the good friend came to take the furniture away.

Finally, the Marines got her into the project at San Diego. With Wanda and Steven, she started out early one morning, made the hour's bus ride to San Diego, and signed the necessary papers. Then it was necessary to travel by bus another 15 miles to make a deposit. Then back to San Diego, where, as the three of them got off the bus, Wanda fell and hit her head. Already tired, the little girl broke down and sobbed. Finally, late in the day, they got back to Oceanside.

That was the evening I dropped in on Zandra. She had cooked supper, fed the children and bathed them, and washed out a few clothes. Her face was drawn with fatigue, and there were deep circles under her eyes. But she smiled as she told me about her new apartment.

"Today's my birthday," she said. "Wasn't that a wonderful birthday present?" Zandra sighed, like an old, old woman. "I'm 20 years old today," she said.

The President's Committee on Religion and Welfare in the Armed Forces had been in existence for 2 years when the cold war turned hot. I've had long talks with both Mr. Well, a New York attorney and its chairman, and Charles K. Brightbill, the executive secretary at the Washington offices, and they're both fine men.

This committee was set up to encourage and promote the religious, moral, and recreational welfare and character guidance of persons in the Armed Forces and thereby to enhance the military preparedness and security of the Nation, and at first, housing of dependents was pretty far down its itemized program. At that time, the great proportion of servicemen were teen-agers, without need of civilian housing. Nevertheless, it soon became obvious that the housing shortage was affecting even their morale.

So, in 1949, the President's Committee called together representatives from all three services to discuss housing. It was the first time such a meeting had been called, although the housing shortage had been acute for years. Since then the Wherry bill providing for housing near permanent installations has become law.

The Committee has a budget of only \$100,000 and only four field men to cover the entire country. It has been active primarily in the intangible fields of recreation, welfare, and religion. Still, it was one agency more, in the summer of 1950, than we had at the time of Pearl Harbor.

After Pearl Harbor, camps sprang up all over the country, accompanied by, in too many cases, terrifying conditions of greed, venality, corruption, and downright cruelty. One of these camps was Camp Pickett, near Blackstone, Va. It was better than some, worse than many.

After Korea, Camp Pickett once again became an active camp, home of the Forty-third Division, a New England National Guard outfit, and other units which brought the total strength up to over 30,000. I'd heard a couple of stories about the town of Blackstone, and I visited it, shortly before the vanguard of the division arrived.

I found a town of about 3,000 people, over 50 percent colored, with precious little housing of any kind. Every decent place in town was rented when I got there, and almost every other kind of place. The camp's commanding officer, Col. Leslie E. Babcock, a slim little man with a deep bass voice and sympathetic blue eyes, was deeply concerned with the problems of the wives and children of the men who would come to his camp. Already he had heard of price increases in restaurants and grocery stores. Already dependents of soldiers had been treated unfairly by persons hungry for money. One of them was the wife of Warrent Officer Robert A. Hanna.

Mr. Hanna had been flown from Camp Pickett to Korea, leaving his wife in a comparatively pleasant little apartment near the camp. In the inevitable Army red tape, his allotment of pay did not get to her by the first of the month, and she was late paying her \$75 rent.

Three days later she received a letter from the owners, telling her, A, that she had broken her lease by being late in her rent, B, that the owners wanted the apartment and she should get out, and C, that in case she wanted to stay, the rent was \$150.

As Mrs. Hanna looked at the note, the thought came to her that her husband had been in the combat zone less than a month. She went to Colonel Babcock, who made it possible for her to stay on a few days while she straightened out her affairs. She then left Blackstone with no great regret.

In the meantime, a representative of the President's committee visited the camp. A committee on housing was formed. I was at one meeting which was attended by civic-minded people from the entire area. They seemed sincere in their desire to help, but they stated plainly that they were not, and did not intend to become, a policing agency against their own people.

I was blandly told that one Army complaint had been investigated and found to

be groundless. The case so whitewashed was the get-out-or-pay-more ultimatum with which I was familiar.

Just as at Oceanside, I found a vast difference in attitude between the people who had a place to sleep and those who hadn't. While I was listening to the platitudes of the housing committee, my wife, representing herself as the wife of an incoming officer (not because we're snooty, but because everybody knows enlisted men can't afford apartments anyway) and the mother of two children, was looking for a place to live. Even though it was play-acting, she was actually cross and tired and bitter when we met later that evening.

At one place she was shown a room in which the floor was patched with old license plates. Generally she was shown fairly decent furnished rooms, nearly all at \$10 a week. However, they were purely academic. When the landladies heard about the two children, the discussion was ended.

The only home she found was in a big, old building which had once been a boys' military school. A local man had bought it and made an apartment building out of it. Out of 70 apartments, there was only one four-room apartment left.

A congressional committee has begun an investigation into many varied charges against both camp and community, and a Senator has introduced a special bill to take care of what he described as a desperate need for homes. Since then, also, the President's committee has worked closely with the camp and with civic leaders. Just a day ago I got a special-delivery letter from Charles Brightbill saying that they are "really beginning to get results in holding rents down." The President's committee, incidentally, is also proud of the communities of Mount Clemens, Mich., near Selfridge Field, and Ogden, Utah, near the Hill Air Force base. In these two towns the citizenry has worked most wholeheartedly with the committee to make the soldiers welcome.

When Camp Polk was reactivated, the present clean-government mayor and council went contrary to legal provisions in refusing to accept fees and issue licenses for new saloons in the town. Even after they were forced by the State to permit new gin mills to open, the council grimly promised to padlock the doors of any bar that stepped over the bounds of decency. In Leesville, La., that was tantamount to social revolution.

The clamor of commerce set about finding rooms and inspecting them for cleanliness and price, and the camp was made eligible for Wherry bill housing which was restricted to permanent Army installations. There was a change in attitude—Leesville just felt better to be in. However, it was still a matter of pure comparison, for with 25,000 men in the camp, 6,000 of them married—with a total estimate of 13,000 dependents—there could not possibly be enough housing for all, let alone decent housing.

And another problem for which there is apparently no answer whatsoever—the dependent of Negro troops. At El Paso, Tex., where segregation is practiced far more rigorously than in the paternalistic South, the Negro population is about 2,600. Double that number of troops were ordered into near-by Fort Bliss, with, of course, the average number of dependents. Every garret, every basement in the colored section was instantly filled, and when they were gone, everything was gone.

Even in El Paso, however, the town did something that no one even thought of last time. It collected \$3,000, enough to open and maintain for a few months a little center

in the colored section where a Negro soldier in town could at least go to the toilet.

Yes, it isn't so bad, for the young man. But if you're the wife of a soldier, if you're the mother of his children, and if you love them both and want to be with them both whenever and wherever and as long as you can, you're going to have a tough time.

One answer is, of course, that you stay where you are and keep the home fires burning until his return. It would certainly be more practical, and the military advises it. The commanding officer of the Forty-third Division, Maj. Gen. Kenneth F. Kramer, as a matter of fact, ordered the wives of the soldiers in his command not to come to Blackstone. That solution to the problem, however, was quickly eliminated, for, the general discovered with some discomfiture, few of them had paid any attention to him. It may not be wise to follow your man, in short, but no one can stop you.

If you do, as thousands have done before you, there are one or two rays of hope. It is true that now there are people, influential people, who have realized that your problem exists, and have taken steps to help you. Houses are being built, in certain communities. Committees are trying to hold down rents in certain communities. There is hope for you in the future.

But right now, even after the example of the greedy, hideous, shameful nightmare of World War II, you might as well accept this for a fact:

There are not enough people in this country for which your husband is ready to lay down his life tomorrow who care where you or your children sleep tonight.

Question of the Week

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. BENDER. Mr. Speaker, whatever happened to local civil defense?

The Benton Amendment to the Mutual Security Bill

EXTENSION OF REMARKS OF

HON. BLAIR MOODY

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, September 7, 1951

Mr. MOODY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Still Fighting the Last War?" written by the distinguished columnist Thomas L. Stokes. His is the first report I have seen in the press commenting on the Benton amendment to the mutual security bill. This amendment came up in the Senate late in the evening, after most morning news stories had been written, and secured but little press coverage. It is, in my judgment, one of the most important declarations of policy made by the Senate in connection with United States leadership

of the free world, and I hope it will receive the serious consideration and approval of the House of Representatives.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STILL FIGHTING THE LAST WAR?—THE CONTEST FOR MEN'S LOYALTIES ALL OVER THE WORLD MAY BE WON OR LOST WITHOUT ROCKET OR ATOM BOMBS

(By Thomas L. Stokes)

A hard-boiled Regular Army colonel who was in Europe toward the end of the Second World War came here, after the war, for a refresher course at the Army War College. During his student days here he remarked rather cynically:

"They are still fighting the last war over there at the college, just as we were fighting the First World War when the Second came along."

That all seems to be rectified now, what with rockets, atom bombs, radar, and even talk about space ships and whether we or Russia will get to the moon first and liberate that mild-mannered planet in the name of democratic capitalism or Communist imperialism, quite an ambitious venture since we haven't found out yet how to run this planet. War has been taken out of the classroom on tactics into the scientist's laboratory. In the laboratory we seem to be fighting tomorrow's war or day after tomorrow's war—so we are at least up to date.

That war possibly could be made more likely by an attitude that might be expressed by paraphrasing the colonel and saying that we are still haunted by the First World War in making delayed peace for the Second.

This is dramatized by current developments—in the Japanese Peace Treaty up for signing at San Francisco and in some pertinent facts about what is happening in Europe brought out in recent Senate debate over the ECA bill.

Anybody who has had any contact with John Foster Dulles, the architect of the Japanese Peace Treaty, knows his deep concern that it should not repeat the mistake of the Versailles Treaty after World War I by imposing upon the Japanese people impossible burdens, as were laid on Germany after the First World War. Some historians hold those burdens responsible for the eventual rise of Hitlerism, which seems oversimplified.

The Japanese Treaty is, indeed, liberal and generous, to the extent that the Japanese Government is given the right to abandon reforms carried out in our occupation under Gen. Douglas A. MacArthur's administration.

Our aim was to "democratize" Japan by various changes, including wider distribution of land among her people and, perhaps more important, breaking up the great monopolistic combinations of finance and industry known as cartels. These were all-powerful. They dominated the government through a few families and inspired Japanese conquest in the Pacific—for trade and business sake—just as the same sort of cartels used Adolf Hitler as a pawn in Germany for the conquest of Europe.

After the war we sent teams into both Japan and Germany to conduct what we known familiarly as "antitrust" operations. In seeking to avoid one mistake of Versailles, we may be stretching our generosity to the point of nullifying their work—one of our chief World War II aims. That was, simply stated, to get government into the hands of the people in Germany and Japan so they could live decently in a free, competitive society and not be led off to aggressive wars to despoil other nations.

How much had been achieved by our Japanese reform program is a matter of dispute—but even that now apparently is to be forfeited. We already have learned how the German program fell far short of its aims

and we know also that cartelization—giant monopoly control—still exists all over Europe among our Atlantic Pact allies as well as getting a new lease of life in Germany.

How this is hamstringing the real purposes of our ECA program of recovery was forcefully presented during Senate debate by Senator BENTON, Democrat, of Connecticut, himself a businessman. He showed how recovery has not extended down to the people, declaring the unhappy truth about Europe in recent years is that the rich have been getting richer while the masses of people are no better off than before the war, and, in many cases, worse off. This is through the nice and pleasant and orderly way of the monopolists who, by reducing competition, guarantee a nice fat profit at a nice fat price. He also cited tax favoritism for the big industrialists. These conditions invite Communist exploitation and, beyond that, some of the industrialists prefer to deal with Communist unions, thus strengthening the latter and contributing to the disruption of a stable order, which is the Communist aim rather than helping the workers.

Senator BENTON got the Senate to include in the ECA bill an amendment stating that it is the policy of Congress in ECA to discourage cartel and monopolistic practices in European business and to encourage and strengthen the free labor movement of Europe.

That was something.

It is possible that this contest for men's loyalties all over the world may be won or lost without the firing of any of those rockets or atom bombs or the maneuvering of space ships, but by simpler weapons that reach down to human needs.

Ambassador Harriman and Dictator Tito

EXTENSION OF REMARKS

OF

HON. JOHN O. PASTORE

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Friday, September 7, 1951

Mr. PASTORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an open letter dated Wednesday, August 29, 1951, addressed to Ambassador Harriman by Il Progresso Italo-Americano.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO AMBASSADOR HARRIMAN

You are in a unique position to render a great and indispensable service to the cause of world peace and freedom. At Tehran, you have been able to make even the stubborn and short-sighted British show some slight readiness to come to a just and amicable arrangement with the Iranian Government. Your sterling services in Iran have won for you enhanced admiration and confidence of the American people. We now look forward to your aiding the cause of peace at Belgrade.

At this grave juncture of world affairs, your visit to Belgrade is an event of major import. You have a real opportunity to raise the hopes of those who sincerely believe in a united democratic Europe as a foundation for world peace. We firmly believe that the idea of furthering this great goal inspired your trip to Yugoslavia. With the prestige and prowess of the United States behind you, we have every reason to hope that you shall have been able to register at Belgrade real successes toward this end.

In this light, we place before you the burning urgency of utilizing the occasion of your visit to Yugoslavia for the purpose of improving the relations between Italy and that country through expediting the prompt return of Trieste to Italian sovereignty where it rightfully belongs. You will, of course, have discussed with Dictator Tito the problem of further American military aid to his regime. We do not object to our Government providing such assistance as long as Yugoslavia co-operates loyally with America and the other democratic nations in resisting Russian imperialist expansion and aggression. What we do emphasize is the need for correlating such aid to Tito with the fundamental objectives of our Nation's foreign policy and with the basic aims and interests of the members of the Atlantic alliance. Obviously, the mere granting of aid to Tito is in itself no source of strength to every member to this alliance and to world peace. What has to be done is to enable Yugoslavia to take her place—to the fullest extent of her capacities—in the ramparts of resistance to Russian aggression.

But this cannot be done unless Yugoslavia is able to live fully at peace with her democratic neighbor Italy, which is a member of the Atlantic alliance. We are sure that you realize that such peaceful relations between the two countries will be impossible as long as Tito stands in the way of the restoration of Trieste to Italy. You certainly can appreciate that the Italian people can never fully trust the Yugoslav Government's peaceful and honorable intentions as long as it holds by force even an inch of Italian soil—soil filched from our Atlantic alliance partner by a so-called peace treaty despicable in its intentions and destructive in its consequences.

Moreover, as a skilled statesman devoted to the cause of international justice, you also realize that Italy likewise cannot make her full contribution to the cause of world peace as long as she is kept weak and her people feel the sting of the abominable injustice inflicted on them by tearing Trieste out of their homeland. That is why we hope that you have made clear to Tito that he must get off his high horse and stop trampling on Italian aims and interests. It is highest time that he cooperate with America, Britain, and France in helping them make good on their repeated promises to return Trieste to the Italian people.

We simply refuse to believe that an experienced and astute diplomat like you could go to see Tito merely to arrange for more American help without any services in return, without any reciprocal action on his part in the cause of world peace. Being so deeply involved in the cause of international harmony and the molding of American foreign policy, you have been fully aware of the acuteness of the Trieste issue as a source of friction and conflict between Rome and Belgrade. As an ally of Italy, our country can hardly feel justified in continuing to aid the Tito regime unless and until it stops hurting the prestige and interests of Rome—that is, unless and until Trieste is returned to the Italian people.

There can be no sound relations or lasting peace between peoples unless they are based on justice. The first and absolute requirement for such harmonious relations is an application of the principle of reciprocity. If America helps Yugoslavia, the latter should at least not hurt any of America's friends and partners in the cause of peace. Our country would be really asking very little from Yugoslavia, if you were to insist that Tito demonstrate at least a minimum of good faith, an appreciation of our life-saving aid to him by having his regime remove the obstacles and end its opposition to the immediate return of Trieste to Italian sovereignty. Surely, now that Tito is no longer

a member of the Cominform, he has no further interest in promoting chaos and demoralization in Italy. He should, therefore, gladly desist from doing anything at all which plays into the hands of Russia's agents and subverters inside Italy and which weakens Italy as a loyal and friendly neighbor who might well render him decisive aid in the event of a Moscow assault on his domain and the peace of Europe and the world.

We cannot, therefore, emphasize too strongly that we are counting on you, upon your return to Washington, to urge with all the influence and power at your command that our Government should clearly and forcefully say to Tito: "If you want further help from America, act in a just and peaceful manner toward America's friend and partner, democratic Italy. Join us in restoring Trieste to the Italian people. If you want to help ward off and smash Russian aggression and the destruction of the national independence of Yugoslavia, then stop weakening your friendly neighbor and cooperate sincerely and fully with her in the cause of peace. Demonstrate your new attitude toward democratic Italy in deed—by joining with us in returning Trieste to Italy. There is no better way in which you can earn and hold the full trust and confidence of the members of the Atlantic Alliance whose aid and friendship are essential to your national survival and prosperity."

After your distinguished services in Tehran, your voice and influence will be more weighty than ever in the councils of Washington. We hope that you will leave nothing undone to have our State Department act with fullest vigor and greatest promptness to bring Tito back to his senses and Trieste back to Italy.

IL PROGRESSO ITALO-AMERICANO.

A Plan for Railroad Peace

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, September 7, 1951

Mr. HUMPHREY. Mr. President, on behalf of the senior Senator from Montana [Mr. MURRAY] and myself, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the New York Times of Wednesday, September 5, 1951. This editorial describes the impasse now existing between the railway operators and three railway labor brotherhoods—the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, and the Order of Railway Conductors—in connection with their dispute over wages and working rules. The editorial suggests a plan for producing a settlement of this long and bitter dispute, and deserves the most careful consideration by the administration.

It will be recalled that the Senate Committee on Labor and Public Welfare made an investigation of this dispute, and reported thereon to the Senate. The investigation revealed the basic causes of the restlessness of railway labor, namely, a deterioration in railway wage rates as compared with other industries, and threats to alter fundamentally working rules which have become traditional in

the industry. The investigation also disclosed that Government seizure and operation of the railroads is a token seizure under which railway management continues to operate the railroads with merely nominal supervision by the Army.

As a result of the dispute, the railroads were seized by the Government on August 25, 1950, and are still operating under Government seizure. It seems to me that this governmental involvement in private industry is unwholesome and ought to be terminated at an early date. It can only be terminated, of course, when the dispute is settled. As the New York Times editorial recommends, the administration ought to take constructive steps to bring about early settlement.

It must be remembered that the Brotherhood of Railroad Trainmen has reached agreement with the carriers. Two of the other brotherhoods involved in the dispute, namely, the Firemen and Enginemen, have not had the benefits provided by the Railway Labor Act for the mediation of disputes. No fact-finding board has investigated and made recommendations with respect to their dispute. The plan for railroad peace suggested by the New York Times is therefore highly practicable and appropriate. It suggests that the President "name an inquiry board to investigate the dispute in all its ramifications and to make recommendations to the President." As the Times points out, such a board "would have to consist of a team with the highest technical proficiency, experience, and probity, whose members have in no way been entangled in the controversy." The Labor Committee in its report, and I in several statements, have pointed out that the reference of the dispute to a new set of mediators would, in itself, afford a strong hope of settlement, because it would remove the issues from the bitter personal differences which have grown out of the long struggle.

In view of the settlement with the Trainmen, I am sure agreement can be reached between the other brotherhoods and the carriers. I believe that the administration has a splendid opportunity for constructive labor statesmanship. I sincerely hope the administration will act on this opportunity at an early date.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PLAN FOR RAILROAD PEACE

More than a year ago President Truman ordered seizure of the Nation's railroads when trainmen and conductors threatened a strike. The carriers had accepted and the unions had rejected an emergency board's recommendations. The dispute over wages and working rules not only affected the trainmen and conductors but also the engineers' and firemen's brotherhoods. The trainmen and the managements made their peace last May. The other disputes have dragged on interminably, embittering the relations of the carriers and the employees and seriously affecting administration of the Railway Labor Act and its machinery for adjustment of disputes.

The managements would naturally prefer to settle with the three hold-out unions on the basis of the trainmen's contract,

which was predicated on a memorandum of agreement signed by them and the four brotherhood chiefs in the White House last December but later repudiated by the unions' general chairmen.

Meanwhile, conferences by the parties with the National Mediation Board and occasionally with each other have continued, but the deadlock remains unbroken. The unions took their case to Congress and a senatorial committee has completed its long record of public hearings without result so far. If, as has been indicated, a senatorial committee asks President Truman to request or direct the parties to submit the dispute to arbitration the move will probably fail.

But somewhere and somehow a solution must be found. At this late date it would be useless to attempt an assessment of the exact reasons for the prolongation of this tangled controversy. Not the least of its bitter side is the blind resentment of the rank and file against what they term "token" Government seizure, though they perhaps forget that it was their leaders who actually begged for this procedure.

What is the way out? The situation calls for a new and fresh approach. A solution suggests itself. If the President were to name an inquiry board to investigate the dispute in all its ramifications and to make recommendations to him he would fill what is now a vacuum. This step would be a face saver all around and end what is now a merry-go-round of bickering and deepening resentment.

Such a Presidential board would have to consist of a team with the highest technical proficiency, experience, and probity, whose members have in no way been entangled in the controversy. Even if a board so constituted hewed close to the settlement in the trainmen's case the result would probably be accepted by the engineers, firemen, and conductors who are so reluctant to do so now.

The President owes it to the Nation as well as the managements and employees to direct a reexamination of the unfortunate dispute as it exists today. To name a board of the highest caliber for this all-important task would be a deed of the highest statesmanship.

Grayson Keeps the Faith

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, September 10, 1951

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks I made at the Farmer's Day program, at Felts Park, in Galax, Grayson County, Va., on September 8, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It always gives me pleasure to visit the district of my good friend and able congressional colleague, Tom STANLEY. While the law is valuable training for a legislator, so many problems of government these days are purely business problems that any district is fortunate in being represented in Congress by a practical and successful businessman like Representative STANLEY.

I have personally known all of the Representatives of the Fifth District for the past 50 years and during that first half of the most momentous century of recorded history

no district in Virginia or of the Nation has been more ably represented than the Fifth Virginia District. When I was a boy in Rocky Mount, Claude Swanson was your Representative. He is the only Virginian of the past half century and one of the few of all time who has served in both branches of Congress, as Governor of Virginia, and as a member of the President's Cabinet. In 1906 he was succeeded by Judge Edward W. Saunders, of Rocky Mount, justly rated as one of the most skilled parliamentarians who has ever served in the House. And Judge Saunders was not only a statesman but a great jurist, resigning from the House after 16 years of service to become a member of the Virginia Supreme Court of Appeals. He was succeeded by that splendid businessman from Danville, Rorer A. James, who unfortunately died before the expiration of his first term. Then you had two splendid lawyers in Murray Hooker, of Stuart, and Joseph Whitehead, of Chatham, and then another outstanding businessman in Thomas G. Burch, of Martinsville, who represented the district in an outstanding way for 16 continuous years, retiring from the House to accept appointment as United States Senator. And he, of course, was succeeded by Mr. Stanley.

While those Representatives of the Fifth District were making history in Richmond and in Washington, Grayson County was making some history of her own.

In my youth, Germania, the country home of Gov. Alexander Spotswood, was owned by my mother's father, the two families having intermarried. In 1720, a new county near the historic city of Fredericksburg was formed and named Spotsylvania, in honor of Governor Spotswood. From that county were later formed the counties of Orange, Augusta, Botetourt, Fincastle, Montgomery, and Wythe, and in 1792 Grayson was formed from Wythe. Fifty years later Grayson gave approximately half of its total area to form the county of Carroll, which now has 496 square miles as compared with Grayson's 425.

Two of my direct ancestors, Col. James Gordon, of Lancaster, and his nephew, James Gordon, of Orange, and one collateral ancestor, Benjamin Harrison, of Charles City County, were members of the Virginia Convention which ratified the Philadelphia Constitution. Prince William County was represented by the distinguished William Grayson. He and Richard Henry Lee were Virginia's first two United States Senators. William Grayson served on General Washington's staff and distinguished himself at the Battle of Monmouth. Patriots from the area of what is now Grayson served under him during the Revolutionary War. For him Grayson County was named.

On January 20, 1775, a group of them had assembled at the old lead mines on the edge of Carroll and prepared the famous Fincastle Declaration in which they said:

"We by no means desire to shake off our duty, or our allegiance to our lawful sovereign, but * * * if no pacific measures shall be proposed or adopted by Great Britain and our enemies attempt to dragoon us out of these estimable privileges which we are entitled to as subjects, and to reduce us to a state of slavery, we declare that we are deliberately and resolutely determined never to surrender them to any power on earth but at the expense of our lives."

At these same lead mines 350 militiamen assembled under Col. William Preston on February 10, 1781, and 18 days later participated in the victorious assault on the British at Guilford Courthouse, N. C.

The July 1950 issue of Virginia and the Virginia County was devoted to the remarkable development of the counties of Carroll and Grayson. No one who was not familiar with this part of the State 80 years ago can fully appreciate how remarkable that development has been. And no one who does not know the history of the stout-hearted, fighting patriots who settled this area can

adequately understand how the development could have been achieved. My friend, Lud Lake, of Fauquier County, one of the largest and most successful cattle dealers of that fine horse and cattle country, comes to Grayson to get his feeder stock. Recently, at Senator Byrd's apple picnic, Lud told me that early in the month he had sold his steers, that they averaged 1,350 pounds and they brought him 35½ cents per pound. I said: "Lud, those steers must have graded at least Good," and he promptly replied: "Nearly all graded Choice and the remainder Prime." There is one county in southwest Virginia that produces more cattle than Grayson, but none more purebred cattle. Few counties in the State have more bluegrass pasture land and none a better type of bluegrass. The same type of white-marbled meat which is supposed to be produced only in the feed lots of the Middle West can be shipped straight from the pastures of Grayson County. And no county in the State has as large a milk condenser plant as Grayson and, in fact, there are only four larger in the entire United States.

By taking advantage of the Federal soil conservation program, which has had my active support in Congress, Grayson has been able to triple the productive capacity of its pastures. I do not have the figures on the total gross-farm income in Grayson in 1950 but in 1947 it was \$4,500,000, which was three times what it was 20 years earlier.

The development of the county's resources also indicates that this income has not been squandered but that the people of Grayson have had the same forward-looking attitude as the colored man in Mississippi who contracted to buy a piece of land for \$2,000. When he went into a lawyer's office to sign the papers he said:

"Lawyer, I want to pay cash for that little farm I am going to buy."

"You do?" said the lawyer. "Well wait until I go into my rear office a minute."

The lawyer went into his rear office, called the sheriff on the telephone and said to him, "Sheriff, come to my office quick. A colored man in my office has just opened up a shoe box and has \$2,000 in it, and I think you will need to investigate that situation."

So a few minutes later the sheriff entered the office and said to the colored man, "I understand that you have \$2,000 in that shoe box."

The colored man said, "Yes, boss."

The sheriff said, "I want to know where you got all that money."

The colored man said, "Mr. Sheriff, Mary and me saved that money by doing without the things we had to have."

Everyone who eats beef has a personal interest in the cattle industry. The measure of that interest is indicated by the fact that of the 144 pounds of all meats which the average person in the United States consumed last year, 63 pounds was beef.

The concern of those of you engaged in the cattle industry over the outlook for its future is shared by others, not only because they eat beef but also because of the importance of the cattle industry to our economy. We learned after World War I that when the farmer loses his purchasing power the wheels of industry begin to slow down and the next depression has started.

This is true nationally and it is true locally. I do not have to remind the merchants and other nonfarm residents of Grayson County how dependent they are on the \$4,000,000 to \$5,000,000 of annual gross farm income produced in this county, around three-fourths of which comes from livestock.

Knowing your deep interest in this matter, I asked the Department of Agriculture to give me the latest available information on the outlook for the cattle industry. It advised me that the prospects are generally favorable. There is no expectation of a marked weakness in prices in the near fu-

ture and the tendency toward future declines because of increased production may be offset by increased consumption of beef if, as is expected, employment and consumer incomes are kept high by our defense program, which will soon be at the rate of a billion dollars per week.

I was told that the cattle cycle is on an upward swing, with the number of animals on farms and ranches at or near an all-time peak, while the number slaughtered this year has been smaller than last year. The South Atlantic States have led the Nation in percentage of cattle increases. Slaughter has been smaller because of the large proportion of young stock and a tendency to retain them for addition to breeding herds or for feeding and also because the good condition of pastures and ranges has encouraged holding cattle on grass.

Another factor, of course, was the uncertainty about price controls and other legislation which caused cattle to be held off the market until conditions were less unsettled. When we had the amendments to the Defense Production Act of 1950 under consideration, I predicted that if we let the growers know where they stood and assured them of fair treatment, there would be no shortage of beef. The proposal of Mr. DiSalle to roll back the price of beef an additional 9 percent was a political gesture to consumers that would have resulted in curtailed production, black-market operations, and ultimately higher prices. Therefore, I opposed it.

During the first 6 months of this year 9 percent fewer cattle and 18 percent fewer calves were commercially slaughtered than during the same period in 1950 but in August, after we had acted on the defense production bill, slaughterers reported for the first time that they had gone above the level for the same date last year and that they expected this condition to continue for the remainder of this year.

We all recognize the danger of excessive prices that will reverse the trend toward greater consumption of beef from which the cattle industry has profited. That happened after World War I when the price of cattle in 1920 dropped 50 percent and broke many cattle dealers. However, the Department of Agriculture reports that although the average retail price of beef was up 10 percent this summer, as compared with the summer of 1950, there was a corresponding increase of around 10 percent in the disposable income of consumers and demand for meat traditionally has closely followed changes in income. All beef consumers think the present price of beef is too high and maybe it is. But the fact remains that the per capita consumption of beef is higher than in the depression years while the percentage of the average family income that goes for the purchase of beef is lower.

Grayson farmers were among the first in the State to learn that it does not pay to plow a hillside that will produce bluegrass. But on a limited area not subject to erosion 279 Grayson farmers have been supplementing their farm income through the production of a fine type of burley tobacco that has averaged better than a thousand dollars per acre. Last year 114 farmers grew 36 acres of Turkish tobacco, an aromatic and free burning but very expensive type of tobacco that goes into the manufacture of all cigarettes.

In an area that is to a large extent a plateau, containing the two highest mountains in the State, and which 50 years ago had neither a railroad nor improved highways, one would not expect to find a splendid industrial development. Yet, Grayson has large furniture plants, textile mills, a large Carnation Milk plant, to which I have previously referred, and a Grayson man, operating five plants, is one of the largest producers of mirrors in the country.

All of which goes to prove how right the Reverend Benjamin Floyd Nuckolls was when

he said in his book, *Pioneer Settlers of Grayson County*, published in 1914:

"The times, opportunities, and surroundings have changed so much since the early settlement of this country that the people of the present generation do not realize what were the labors, privations, cares, and anxieties of their ancestors. They were such as to try the nerve, strength, and fortitude of mankind.

"History proves to us beyond a doubt that our noble ancestors, by strenuous labors and perseverance, changed the face of this country, which they found wild and uncultivated, and that we now enjoy the fruits of their labor, while they 'Rest from their labors and their works do follow them'."

Europe had great universities, great manufacturing plants, artistic and technical skills and accumulated wealth when the early settlers of this country were building their simple log cabins with one hand and fighting the savages with the other. It was no accident that the Grayson settlers changed the face of Grayson County. It was no accident that the United States of America became the richest and the most powerful nation in the world. It was strenuous labor and perseverance that changed the face of our wilderness and gave us the highest standard of living in the world. The mainspring of that personal effort was our private enterprise system under which those of superior brains, character and perseverance could expect a superior reward. I have visited the countries of Europe and observed the creeping paralysis of socialism and of communism which deny to a man the fruits of his own labor and kills his incentive to produce. I have watched with deep concern the trend in our own country to statism and a gradual reversal of the Grover Cleveland philosophy that it is the duty of the citizen to support the state. Turning down offers of private employment far more lucrative than my public service, I have dedicated the best years of my life to the preservation of those priceless principles of political and economic freedom that were born of the brain and purchased by the blood of our founding fathers.

Both here and abroad those principles are being seriously threatened. At home they are threatened by the same type of demagogue who threatened the great Athenian philosopher Isocrates 353 years before the birth of Christ and of whom he said

"When I was a boy, wealth was regarded as a thing so secure as well as admirable that almost everyone affected to own more property than he actually possessed, because he wanted to enjoy the standing which it gave. Now, on the other hand, a man has to be ready to defend himself against being rich as if it were the worst of crimes, and to keep on the alert if he is to avoid disaster; for it has become far more dangerous to be suspected of being well off than to be detected in crime."

The American system of private enterprise to which we in Virginia have always subscribed was aptly expressed by Abraham Lincoln, when he said:

"No man living is more worthy to be trusted than those who toil up from poverty. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him labor diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

In all ages a share-the-wealth program has ended in a share-the-poverty program.

Our democratic institutions are likewise threatened at home by unnecessary and extravagant public spending, the end-product of which is printing press money and ruinous inflation. Our political and economic freedom is threatened from abroad by the ruthless leaders of the Soviet Politburo who re-

alize that if men know the truth it will make them free. Therefore, they keep their subjects in ignorance behind an iron curtain while massing a vast military force on land, on sea and in the air to crush by superior force the truth of democracy.

Until the danger of a physical attack from enemies abroad is past, it will be necessary for us to maintain for the defense of our country a military establishment comparable to the police force we maintain to protect our homes from thieves and robbers. For several years such a program will be so costly that real financial sacrifice will have to be made. So I hope there will be no Grayson farmer like the farmer I heard about who was attending a Methodist revival meeting when the minister was preaching about hell, saying:

"Hell is a lake of brimstone and fire and sinners will be plunged into that seething caldron and there they will simmer and boil throughout all eternity."

After the meeting the freedom-loving farmer approached the preacher and said:

"Parson, did you say that hell was a lake of brimstone and fire?"

"Yes, brother, that's what the Good Book says, and that sinners will be plunged into that seething caldron and there they will simmer and boil throughout all eternity. Yes, brother."

"Well, Parson, I just want to tell you—the people won't stand for it."

I am happy to be privileged today to visit a county where the fundamental principles of our forebears still are cherished and where the people will stand for whatever sacrifices are necessary to preserve our constitutional liberty. I wish I had it in my power to make the Galax Leaf a national and international symbol, not only of honor and distinction but likewise a symbol of the perpetuity of those fundamental democratic principles which Thomas Jefferson gave to the Nation and to the world.

Attitude of Russia in International Affairs

EXTENSION OF REMARKS

OF

HON. JAMES H. DUFF

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, September 10, 1951

Mr. DUFF. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address I delivered at the national convention of AMVETS in Boston, Mass., on September 1, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Horrible as the prospect is, the world is on the verge of another appalling conflict. Russian imperialistic communism, of all the powers in the world, is alone responsible for our being on the edge of this frightening precipice.

At the end of World War II the United States and the other free nations liquidated their armed might in the sincere belief that it was the intention of all people to move into an era of peace. But Russia, determined on a course of grasping aggression, went in the opposite direction and continuously prepared for more war.

As the result of the enormous growth of Russian military power, while the power of the free nations was declining in a military way, the Communists developed a tremendous temporary military advantage and have continuously used that advantage to gobble

up their neighbors and to menace the whole world.

Here in America nobody but a fool wants war today, knowing how terrible the present instruments of destruction are and how vast our living advantages are in America. Every condition of self-interest in America points towards peace.

The American people enjoy the highest standards of well-being of any people in the world. To sacrifice this advantage to engage in another war of our own choosing would be the action of madmen. But nobody but a fool would imagine that we can prevent war if we permit the Russians to escape unchallenged with the false propaganda that the United States is for war and that they are for peace when every informed person knows that the exact opposite is the fact.

Russia alone is responsible for the current world turmoil. The Communists scheme to prevent peace. Every time the United States makes a move in the direction of peace, the Soviet press and the Soviet stooges world-wide come out with charges of warmongering against us.

Before the North Atlantic Pact was signed the hysteria and hate vomited over the world by the Russians was without parallel. The Communists are beginning to subject the world to the same routine prior to the San Francisco Conference on the Japanese Peace Treaty.

Terrible as the prospect of war is, the time has come when we can no longer permit ourselves to be bully-rugged and bamboozled and lied about by the fakels in the Kremlin and their stooges.

With fakery and deception the Russians talk peace but they constantly manipulate in the direction of war.

Fearful that the San Francisco Conference will be successful, the swindlers of the peace from the Kremlin have already made their arrangements to try to sabotage what goes on in San Francisco.

This week the leading newspapers of Russia joined in a terrific and vicious propaganda attack against the United States. They accused us of aiming at war with China and with Russia. Yet these same warmongers, are in San Francisco right now for the sole purpose of endeavoring to sabotage the peace and to spread further unrest in the world.

Gromyko, with his fellow travelers in the Kremlin, are the swindlers of the peace of today's world. And they ought to be so charged every day around the world.

Everybody knows except the Russian people, from whom the truth has been concealed, that if it had not been for American military might and American productive capacity and American generosity, Russia would have been destroyed by Hitler in World War II. For our aid in actually saving the life of the Russian nation we have been repaid by Russia with hate, with vituperation, with misrepresentation, and with trickery.

Our supposed friend has proven to be not only our greatest enemy but the greatest menace to freedom that has ever existed in the modern world.

The Russian Communists are a false and ungrateful people. The complete falsity of everything that the Communists say and everything they stand for and everything they do can be nailed down with hard facts.

The Communist record is one of repudiation of agreements, of stabbing friends in the back, and of violating every precept of humanity and decency recognized by the civilized people of the world. It is a record of tyranny and treachery and death without parallel in history.

To prevent these very same people from being destroyed by Hitler during World War II, the American people, out of unexampled generosity, advanced to Russia in lend-lease \$10,776,176,000.

And now these fantastic swindlers offer to settle with the United States for the comparatively puny sum of \$240,000,000—one forty-fifth of our loans.

In reverse lend-lease we received from Russia the mere pittance of less than \$2,250,000.

During the war the United States transferred to Russia 710 ships with the agreement that at the end of the war they would all be returned to the United States. Did Russia keep that agreement? Of course not.

The Communists faked that agreement the way they fake every agreement with everybody everywhere.

Of the 710 ships that they solemnly promised to return and which we lent them for the purpose of saving their country and their lives, they have only returned 37. And the miracle of it is, in view of their complete repudiation of everything, that they gave us back a single one.

This is proof that an agreement with the evil men in the Communist government today is not worth the paper it is written on. They have no more hesitation about violating their agreements than they do about eating a meal. They seem to enjoy breaking every agreement they make.

In World War II the United States furnished Russia with 14,795 airplanes, 7,056 tanks, 51,503 jeeps, 375,883 trucks, 35,170 motorcycles, 8,071 tractors, 1,981 locomotives, 11,155 freight cars, 105 submarine chasers, and 197 torpedo boats. These are a mere sample of the things that we did for the Russians to save their lives. In repayment the Communists are trying to set up a conspiracy world-wide to destroy the United States and the American people.

The present government in Russia has no conception of an obligation. No obligation has any binding force with them.

Between 1925 and 1941 Russia signed a number of nonaggression and neutrality pacts. Eleven of them were violated directly by Russia.

Between 1935 and 1950 the present government in Russia signed 18 military alliances. Fifteen were broken or violated by these same notorious breakers of pledges.

Between 1928 and last year the Soviet Union participated in seven important international peace moves, with the ostensible purpose of trying to promote peace, but in each case they actually worked for their destruction.

The continued fakery of the Reds in Korea with reference to the cease-fire agreement is merely another proof that no dependence can be put upon what they say.

Let us examine their attitude in other fields.

The Russians joined the United Nations. Once joined it was soon evident that their only purpose in joining was to wreck it.

The Russian Communists make a pretense of being interested in the underprivileged. Let us examine their performance as compared with their pretensions, as a member of the United Nations, in endeavoring to aid unfortunates in the world.

The Soviet Union contributed not 1 cent to the International Children's Emergency Fund; not one cent to the Palestine Refugee Organization; not one cent to the International Refugee Organization; not one cent to help finance the International Bank, formed to aid downtrodden people; not one cent to the suffering people in Korea, a million of whom have already died. And every death is directly chargeable to Russia, because without Russia that war of aggression would not have started.

While Russia has faked and falsified its interest in other people, the generous American people have given more than \$80,000,000,000 in foreign aid during and since World War II.

And yet the representatives of the swindling group in the Kremlin have the audacity

to send Gromyko, one of their chief swindlers, to the United States to again perpetrate falsity, and perfidy, and crookedness.

In Czechoslovakia—one of Stalin's Red satellites—Bill Oatis, an American newspaperman was arrested and thrown into jail for 10 years. Oatis, in the eyes of the Communists, committed the crime of reporting facts in news stories.

And yet this Gromyko, representing these same evil men in the Kremlin, is here to defame the United States right in the face of our people.

It ought to be made clear to this swindler and all those who sent him here that by their conduct in the treatment of American citizens they are an offense to the nostrils of the American people.

For Gromyko to have the audacity to come to America and insult our people, when an American citizen is in jail in one of Stalin's stooge countries merely because he was telling the truth, is the kind of thing that ought to awaken the American people to the fact that they are dealing with the biggest group of fakers and bandits ever organized for the purpose of international crime.

And when Gromyko goes back to Russia with his minions, after spewing his venom here in the United States, he ought to take back with him the faker the Communists sent here the other day from Czechoslovakia to represent them as an ambassador.

And then let us remember this. The Soviet Russian Communists in the guerrilla warfare in Greece kidnaped 28,000 children and are making slaves out of them in Russian satellite countries.

Also remember that 250,000 Japanese prisoners of war, in violation of all the rules of war and of humane conduct, have been kept as work slaves, hidden somewhere in Russia, building up the power to try to destroy the rest of the world.

Millions of displaced people have disappeared into Siberia, into concentration camps, removed from their families, from their friends and from the society in which they lived, as part of the Red purpose of again building up this vicious and terrible power that is represented by Gromyko here in San Francisco.

These are the things these swindlers and fakers are doing everywhere in the world. And they have the crudity and the vulgarity and the audacity to send their agents to America to say to us that we are warmongers when we are helping people world-wide and they are trying to destroy free people by every engine and ingenuity of wickedness that diabolical scheming can devise.

Here at home let us not forget that these same Communist conspirators have penetrated into important places in America. They have succeeded in fooling some American citizens into giving up the greatest birthright in the universe and to contribute with them to the enslavement of the world.

If we are going to get tough with the Communists from over there, let's get tough, too, here at home with the fakers among our own people who prefer what the Communists stand for to what the American birthright should mean to them.

But above all else let us in America realize—

No. 1: The only thing in the world that the Russian Communists respect is brute force—the kind of force strong enough to win when it gets in a fight.

No. 2: This being so, despite our tremendous desire for peace, we must permit nothing to stand in the way of the advancement of the power of the United States and the other free peoples in the world. We must be strong enough to move in on these people the first time they make another aggressive move anywhere.

That means complete military preparation—not preparation for war but preparation for peace. We will never be safe from

continuous and outrageous attacks from the men in the Kremlin until they know that we are so strong that if they do make a sneak attack our retaliation will be so great that we will destroy them.

General Ridgway has pointed out and significantly summed the world situation in a paragraph.

"The real issues are whether or not the power of western civilization, as God has permitted it to flower in our beloved lands, shall defy and defeat communism; whether the rule of men who shoot their prisoners, enslave their citizens, and deride the dignity of man, shall displace the rule of those to whom the individual and his individual right are sacred; whether we are to survive with God's hand to guide and lead us, or to perish in the dead existence of a Godless world."

Government and Financing of the City of New York

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, September 10, 1951

Mr. CAIN. Mr. President, I have never personally met Mr. Robert Moses, construction coordinator of the city of New York, but I have recently had reason to correspond with him. In answer to an inquiry, he provided me with a copy of a letter he had written under date of August 9, 1951, to Mr. Lazarus Joseph, New York comptroller, on the question of the work of New York City's Management Committee. In my view, the Moses letter is an extraordinary and remarkable document. It includes observations which will be of interest to every reader of the RECORD. I ask unanimous consent that the letter be printed in the Appendix to the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CITY OF NEW YORK,
OFFICE OF CITY

CONSTRUCTION COORDINATOR,
New York, N. Y., August 9, 1951.

Hon. LAZARUS JOSEPH,
Comptroller of the City of New York,
New York, N. Y.

DEAR SIR: The management committee of which you are chairman and of which I am a member has now been in existence for almost 2 years. The city has approved an expenditure of more than \$2,000,000 for the surveys thus far authorized, not including overhead contributions of city agencies. It seems high time to clarify the committee's objectives as a step toward measuring progress.

I accepted membership on this committee reluctantly at the insistence of Mayor O'Dwyer. At one of its early meetings, I strongly urged that its activities be confined to a few definite, specific subjects where technical advice from outside would bring about genuine improvements in administration and actual economies. I suggested several such subjects. Some were adopted but, generally speaking, the scope of staff work has been greatly expanded and, as I feared, extravagant expectations have been aroused as to anticipated achievements. The public is beginning to believe that sufficient savings can be made in various departments to meet the increased cost of salaries and services.

The time has now come to take stock, to inform the public as to what we are actually driving at, whether or not there will be any substantial savings, to correct misapprehensions and to fix attention on the basic problems of the city.

I have had considerable personal experience with the improvement of forms of government and have for some years followed efficiency and economy studies, in the Federal field from Mr. Taft to Mr. Hoover, in the State from Governor Smith to Governor Dewey, and in the city from John Purroy Mitchel to the present mayor. I was responsible for the staff which prepared the plan of State reorganization for Governor Smith, and was recently identified with Mr. Hoover's commission.

I have also had responsibility over the years for administration on a fairly large scale and for the expenditure of considerable sums of public and quasi-public money, and have even drawn from ultraconservatives the grudging comment: "What you build costs a lot, but we get something for our money." Bearing in mind that some of our wealthier citizens regard all government as an organized conspiracy against the taxpayer, this comes as close to praise as anyone who tolls in the vineyards of Uncle Sam, mother Empire State, or Father Knickerbocker can get.

This experience has taught me to be wary of salvation by new organization charts and efficiency installations and extremely suspicious of extravagant claims of net dollar savings in government. Men, not charts and measures, make good government. The ideal thing, of course, is to have first-class men operating first-class machines, but first-class men can operate any machine and third-rate people can't make the best and most modern gadgets work. Budget, efficiency, and planning surveys usually avoid the big immediate problems in favor of small economies or propose long-range revolutionary plans not realizable in our lifetime.

I have learned that government is not just another business with the profit motive left out—a business which, once divorced from politics, can readily be improved by itinerant experts armed with the lingo of efficiency. The electorate is not exactly like a group of stockholders who choose directors to run a corporation, and the mayor is expected to have qualities, loyalties, and compulsions quite different from those of a bank or business president. It has even been suggested that the mayor is the conscience of the community as well as its housekeeper.

Capitalism, whose practices government is asked to imitate, has not always been internally healthy and without sin, and it has even been whispered among the unregenerate that great corporations have their own diseases paralleling those of government, including politics, deadheads, nepotism, illusions of grandeur, hardening of the arteries, gout, and the Chinese rot.

My hunch is that Mr. Waterman, the fountain-pen manufacturer, who ran against the Honorable James J. Walker for mayor in 1925, and is the only honest-to-God businessman in my memory who actually took the plunge, would, if he had won, have been the greatest flop in the history of city hall. I am supported in this cynical observation by practically every reporter, taxi driver, bartender, and other trained observer, philosopher, and pundit in a fairly wide acquaintance.

With these generalizations, let me turn to the big problems of New York City's administration and financing. We must keep in mind that the city is still growing in population, that it has 8,000,000 people today, that the population in 5 years will be 8,225,000 and in 10 years 8,555,000. Recent metropolitan increases have been accompanied by

tremendous geographical shifts from the city to the suburbs, from central areas in the city to outlying areas, from one borough to another, and public and quasi-public housing have brought about complete changes in entire neighborhoods. With these shifts, enormous problems involving old and new schools, recreation facilities, hospitals, roads, transportation, health, sanitary, and other services have arisen.

It should be noted in passing that the city has plans and specifications, some preliminary but many detailed and final, for well over a billion dollars in capital and assessable improvements, none of them extravagant or frivolous, and that civilian defense will require additional capital and expense appropriations. Increased appropriations are also required to pay for the installation and upkeep of new facilities. Debts must be amortized and interest must be paid on them in the expense budget, and personnel and maintenance must be provided for. Recently high prices and inflation, for which the city certainly is not responsible, have raised costs, and Federal controls have made orderly city planning difficult.

Meanwhile, the demands of the people have increased. Life, liberty, and the pursuit of happiness have acquired new meanings in terms of municipal expenditures. People are no longer satisfied to live in slums. They properly demand a fair share of the good things of life and look to government, and particularly to municipal government, to provide them. There are more old people than there used to be, and there is more leisure time for recreation. No administration can be elected, and certainly none can survive, which does not recognize these facts. This is the democratic process as we practice it.

New York had a disgracefully inadequate borough park system when Mayor LaGuardia took office in 1934. Since then we have doubled its acreage, raised the number of playgrounds from 117 to 550 and quadrupled other recreation facilities, but we have had no proportionate increase in our budget. The same legislators—State and National—who write urging us to keep on temporary summer employees throughout the winter, scream for cuts in our budget and prompt laying off of superfluous employees. Apparently these statesmen see nothing inconsistent in these two positions. We have so few attendants and police that vandalism and violence are rampant and cannot be checked. The rank and file of our men are scandalously underpaid and are hardly able to pay for their overalls. Our receipts have risen from \$373,773 24 to \$1,855,747.

What would the people of the city do? Reduce these facilities? Stop the growth of the system? Leave the old, neglected, and newly populated neighborhoods as they are? Would they raise the entrance charges at swimming pools and cut out the free periods? Would they put turnstiles and meters on beaches such as Coney Island where we have 10,000 people to the acre on good summer days? We can indeed raise our revenues and in the process freeze out a third of our children and adults. Shall we feed sawdust to the animals in our zoos? Is that what the city wants? Will itinerant management experts from Oshkosh, who never operated a peanut stand, tell us how to run one of the greatest municipal recreation systems in the world?

We are in the midst of a \$150,000,000 hospital expansion program. The new beds must have doctors, nurses, equipment, bandages, food, fire, and current. New parks and playgrounds must have attendants. New schools require teachers, janitors, and supplies. New streets must be swept and lighted. Expressways must be policed. Slums, parking, traffic congestion, smoke, dirt, pollution, disease, gambling, ignorance, dope, organized crime,

rackets, vandalism, the law's delay—everyone demands a sustained drive against them, but nobody wants to pay the bill.

Business and industry also make demands on the government for the many improvements which require the power of eminent domain and the expenditure of public funds to furnish the framework in which private enterprise can flourish, and to enable local business to compete successfully with business in other progressive and ambitious communities. A good example of this is our waterfront, which is so important to the economy of the city that it must be subsidized.

All these factors contribute to a steadily mounting municipal budget, and no management survey by this committee or any other, by the present staff of outside experts or any which can be recruited, will change this situation. The city budget is bound to go up. An honest effort should be made to anticipate and publicly explain the curve of increase, to keep it within reasonable bounds, and to get a dollar's worth for each dollar spent.

Economy is, of course, indispensable, but the notion which has been assiduously cultivated by various civic agencies and the press that enforced efficiency and economy will actually result in tremendous net cuts in the city's expense budget and make it possible to meet inescapable demands for increases in pay and services within the present total and without new taxes, is just so much moonshine.

I recommended and voted for the present director of the management survey. I am for genuine economy, for cutting out waste, for the smallest practical number of competent, decently paid and well-treated employees, and for savings which do not cut services, but I ask that the experts on whom we are spending \$2,000,000 concentrate on the big problems of financing and refrain from making mountains out of molehills. We are attempting to balance the budget of what we hope will continue to be the world's first city. We are not rewriting Poor Richard's Almanac, or reestablishing the economic and civic standards of the nineteenth century.

There is undoubtedly waste in our municipal government, and it should be mercilessly exposed and rooted out, but not at the expense of morale and service. There are too many professional employees on the permanent payrolls preparing specifications and inspecting contract work which could be done faster, cheaper, more smoothly, with less overhead, stalling and clockwatching, if it were farmed out on a contract basis to the best firms in private business, firms which have to meet payrolls, rent, and light bills to live. The costs of plans and inspection in some departments are astounding. Instead of a maximum of 4 percent for design and a similar amount for supervision, charged by private firms, the costs rise to 8 and 12 percent and even higher for each. Here is room for savings in both capital and expense budgets. But it is one not welcomed by some of our organized civil-service groups.

Better executives in all departments will get long-term economies, but they are not easy to find. The incentives become less rather than greater when investigating committees from Washington dominated by men like Senator Tamm, by clear implication, characterize the entire city service as corrupt and incompetent, and imply that men like Costello and Erickson, whom most of us never saw until the Kefauver committee televised them, run the city's entire business. I personally never laid eyes on or even remotely heard of these characters in the course of 17 years in major city work. It is senseless to foul our municipal personnel

with unproven charges of general corruption and then demand that better people hurry into government service.

That the standards of government, the levels of public morality and the ambitions of the young will be permanently elevated by the appearance and sworn testimony of such ineffectual characters as Virginia Hill—whose performance my ribald friends unanimously hold to have been the high point of the greatest minstrel show on earth—is a proposition which only professional believers in good clean fun will advance. Miss Hill was no more relevant in the Kefauver investigation than Morgan's midjet at the stock-market investigation.

To paraphrase the sapient words of the immortal bard, there will be cakes and ale, wagering and other sports after Senators KEFAUVER and TONEY have returned to the hills of Tennessee and New Hampshire from whence, as the Bible says, "cometh our help." Wise reformers don't give too many cathartics. A few more doses of Senator TONEY, and the town will be thirsty for another Jimmie Walker.

Spasms of reform and efficiency get us nowhere. We need firm objectives. These are orderly growth, wider horizons, decent standards. Toward their realization we require steady, reliable sources of income.

There has been a deal of loose talk about patronage in the city service. There are, to be sure, political jobs in every government but the possible savings claimed by eliminating them have been fantastically inflated. There are in all 532 exempt positions in our municipality, including elected officials, commissioners, etc., controlled by the city. The salaries attached to these positions aggregate \$3,151,492 out of a total personal service appropriation of \$693,000,000. If half of all these exempt places could be dropped, the net saving would be less than \$2,000,000, or two-tenths of 1 percent of the total.

We must not forget that in the total current annual expense budget of \$1,322,181,423.09, mandatory items amount to \$402,000,000. Anyone who believes that these mandatory appropriations can actually be substantially reduced with legislative and public approval must have the mentality of a particularly glib child.

It is an undeniable fact that the same individuals and groups who demand drastic economies are equally vociferous in shouting for additional expenditures for their pet projects, groups, and causes. Among the economy minded are found those who insist that the city increase the salary of huge numbers of employees. Some are particularly interested in police, others in teachers, still others in transportation workers or nurses. Some are trustees of private hospitals, and in this capacity demand that the city pay these hospitals full cost of maintaining city charges in private institutions. Some are trustees of semipublic educational institutions, museums, foundations, theaters, concerts, and what not, and in this guise urge greatly increased city appropriations for these excellent causes. They point out that we cannot live by bread alone, that culture, too, counts, and claim with considerable truth that the city is not living up to its moral and contractual obligations to the arts and sciences. Often the same critics demand lower assessments on real estate on one day, and on the next claim payments or awards in condemnation far in excess of assessed values. It all depends upon whose blocks are gored. Ambitious parents of small means look to the board of higher education to make the gates of our city colleges wide enough for every qualified applicant, but what does "qualified" mean? In theory we might restrict the professions to a small number of the most brilliant students, but that is not the way democracy looks at it. It means more buildings, more teachers, more

upkeep. It's very expensive, but we are committed to it.

Vociferous shouters for economy include prominent figures who for years in the LaGuardia administration supported the 5-cent fare on the ground that the social implications of a higher rate would be terrible. They prevented the building of new subways when prices were low and materials available. They created our worst budgetary problems, and blame subsequent administrations for them.

When the sales tax increase was debated earlier this year, Mr. Walter Hoving charged that receipts from this tax for the current tax year were deliberately and maliciously underestimated by the city finance department to the extent of \$31,000,000 and that an increment therefore was unnecessary. When the chips were down, however, the able chief accountant of the comptroller's office, Mr. Julius Wolff, proved to be within 2 percent of perfect in his February 9, 1951, estimate and Mr. Hoving was shown to be wholly wrong. It is fortunate that Mr. Hoving was not an official estimator, for if he had been, the city would have been in real trouble.

Let us consider inevitable increases in the salaries of underpaid city employees.

The total number of city employees is about 217,000.

Here is a table of conservative increases:

Police	\$16,000,000
Firemen	9,000,000
Sanitation workers	2,500,000
Teachers	40,000,000
Board of transportation employees	25,000,000
Park employees	1,500,000
Water supply, gas, and electricity	500,000
Clerical and stenographic forces	3,500,000
Nurses and doctors	5,150,000
Other professional and technical forces	500,000
Welfare and court workers	4,350,000

If we add these together we see that we require, beginning in 1952, not less than \$100,000,000 for increases in wages alone.

Now to this total must be added the cost of additional police, teachers, and other employees which will bring the total required for expansion of forces to \$10,000,000. To these figures must be added the costs of amortization, interest charges and upkeep arising out of a considerable amount of additional capital construction, totaling another \$20,000,000. The grand total of inescapable additions seems, therefore, to be about \$130,000,000.

How can any sane and honest person claim that any such sum can be saved by efficiency studies and relatively small economies. For example, improved business methods in the police department will not save more than a small fraction of the cost of more officers to make life safe, and sufficient pay to enable the average policeman to keep his family decently and to resist the temptations to which underpaid men are subject. An adjustment in the age of retirement is certainly in order, but this can't be made retroactive, may be applied only to newcomers and therefore means little for many years in terms of savings. Let us anticipate also that at the first public hearing in this matter there will be critics now screaming for economy, who will question whether vigorous young thugs can be caught by worn-out, middle-aged policemen.

Let me give another example. We have just been forced, because of largely unavoidable delays in the building of new incinerators, to extend the dumping of garbage, refuse, and ashes. In the process we prudently reclaim meadow marsh and lowlands and lands under water for parks, roads, and other future public improvements. This reclamation program means ultimate economy, but

the immediate effect is an increase in the budget to furnish better barges, trucks and machinery, dikes, water gates, hydraulic fill, more men and supervisors, etc. No immediate savings in the sanitation department by efficiency installations will offset these increases, and only tricky minds can make such a claim.

The net reductions in the 1952 expense budget, through real economies brought about by this management survey cannot possibly exceed \$10,000,000. I am all for saving this \$10,000,000, but am not for ignoring the \$130,000,000 which can be reduced only by injustice to underpaid employees and by curtailing vitally needed services.

The question arises how these bills are to be met and this should be answered by the committee, its director, and his staff. The establishment of full, true value of real estate will permit an increase in the budget and in borrowing power without imposing new forms of taxation. Do the director and staff recommend an additional Federal and State aid? Do they recommend attracting more private capital into quasi-public enterprises such as slum clearance? Do they recommend increased fares and other changes? All these are matters which require study and honest presentation, and it is unfortunate that the management committee has been pictured as an agency which can meet these problems simply by improved efficiency and small savings. I want to see something more substantial come out of all this than slogans for the next municipal campaign.

In conclusion, let me suggest that the management committee ask the director and his staff and consultants to furnish the following important information:

1. How much more money is required in the expense budget for personal service, including net increase in the number and pay of employees? When will we have this estimate?

2. What will the budget increase be to meet the amortization and interest for needed public improvements?

3. What will the budget increase have to be to meet increased cost of food, drugs, equipment, and other materials which the city must buy?

4. How long will it take and how much will it cost to put the reclassification of personnel into effect?

5. In what departments can substantial immediate net savings be made, and what is the total of such savings?

6. What does the aggregate of all anticipated dollar savings due to efficiency and economy amount to?

7. How shall the net increase reached by deducting No. 6 above from the sum of Nos. 1, 2, 3, and 4 be provided for?

8. What legislation, State or local, is required to carry out the committee's recommendations and when will it be ready for introduction?

Sincerely,

ROBERT MOSES,
Construction Coordinator.

Inharmonious Harmony

EXTENSION OF REMARKS OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, September 10, 1951

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address entitled "Inharmonious Harmony," by

Adrien J. Falk, president of the California State Chamber of Commerce, at the host breakfast in Sacramento on September 1, 1951.

There being no objection, the address was ordered to be printed in the *RECORD*, as follows:

In his epistles, Horace, the immortal Latin poet, coined the phrase "concordia discors," which, literally translated, means "inharmonious harmony." He was referring to the underlying principle of the philosophy of Empedocles, who held that the life of the world is due to the perpetual conflict of love and hate.

Today we reject that narrow concept, but most of us do recognize that life and growth and human relations are largely shaped through a conflict of opposing forces and that the most peaceful and purposeful progress or harmony results when such forces are brought into reasonable balance or concordance.

Certainly that is the fundamental that governs our free way of life, which is founded on agreement out of disagreement. It excludes appeasement, but admits compromise when such is for the common good, though never at the sacrifice of principle.

This great Republic was born in an atmosphere of travail and contention. The Declaration of Independence was proclaimed on July 4, 1776; the Constitution adopted on September 17, 1787, after 4 months of debate and negotiation that often seemed hopeless; it was established by ratification of the ninth State on June 21, 1788. Rhode Island, the thirteenth and last of the Original States to fall in line, acted on May 29, 1790. Thus, for more than 10 long years the very existence of the Republic wavered in the balance. But finally "inharmonious harmony" prevailed and brought about a meeting of minds in a compromise of conflicting interests.

Compare the difficulties faced by the founding fathers in securing the unity essential to the drafting of the Constitution and the molding of the Republic into a nation with those with which the Union is confronted today. Then there were 13 disunited States, a population of about three and one-half million, no national government, no army or navy, no established system of education. The loose federation known as the United States was bankrupt. There was not enough money in the Treasury to pay the interest, let alone the redemption charges, upon the loans that France, Spain, and Holland had advanced to the cause of the American Revolution. Tariff barriers existed between the States; there were rival monetary schemes and disputes over navigation rights. A large part of the population was unemployed and poverty-stricken. Agricultural prices had descended to their lowest levels. There was a welter of social disorder, religious disturbance, and insurrection, culminating in Shay's rebellion. There was no sense of security and had been none since Washington disbanded the Continental Army 4 years earlier.

When we consider the magnitude of the task essayed by the founding fathers and the success they finally achieved in conciliating differences among themselves and between the States, thereby establishing a sound, effective national government, dedicated to liberty, tolerance, and human rights, of which we are the fortunate heirs, we must pull up with misgiving when we contemplate the uncertainty and often the inadequacy, with which this great and powerful Republic meets the crisis of today.

Now we are a Nation of more than 154,000,000, possessing limitless resources of mind and material, a form of government proved and entrenched by tradition and experience. We have maintained our basic freedoms and still chart our own course. Our economic system has provided the highest

standards of living known to man. Inherent in our very way of life are moral and spiritual values that restrain and channel for human welfare our unparalleled economic accomplishments.

If the founding fathers succeeded in doing so much with so little—of what, then, need we be afraid? What did those 55 men who sat in Constitutional Convention 184 years ago this very day have that this generation hasn't got?

Historians agree they were an exceptionally gifted body of men—each a predominant figure in his community or in his State—each an expert in the field of government. Wisdom, devotion to duty, and integrity—such as they possessed would stand us in good stead today. They realized that unbridled democracy would trample liberty to death, just as surely as absolutism would crush it, and so they wisely shaped a middle course.

Franklin expressed their attitude when it came his turn to sign the Constitution. He said he did not entirely approve the document, but he was not sure he would always entertain such doubts. He had often been moved by better information to change his opinion, and he hoped that other members who had objections would, with him "doubt a little of their own infallibility" and to manifest unanimity, sign the instrument.

This exemplified the spirit of compromise in which our free institutions were evolved; the willingness to accept less than the full measure of our personal desires; concession of part in order that the whole structure may be somewhat advanced.

If it is true that a free society rests on agreement out of disagreement then, it follows, that disagreement itself is an essential of liberty. Lord Balfour said that our whole political machinery presupposes a people so fundamentally at one that they can safely afford to bicker. It is impossible to conceive freemen holding collectively to one opinion on all issues; such is the very antithesis of free thought; it is also the essential yet unattainable objective of despotism, and inevitably brings about its downfall. John Stuart Mill said "If all mankind, minus one, were of one opinion, and only one person were of contrary opinion, mankind would be no more justified in silencing that one person, than he, if he had the power, would be justified in silencing mankind." Voltaire, in his famous quotation, put it more tersely "I disapprove of what you say, but I will defend to the death your right to say it."

The liberties we enjoy carry with them definite obligations. The obligation of the right to disagree is that disagreement shall be founded in fact, framed with integrity, and be devoted—not to self-service—but to the common welfare.

Our free way of life is a voluntary way and it exists on free trade in ideas. Its very being rests on moderation and tolerance and recognition of the dignity of the individual, for it is only where these prevail that liberty of thought and word and act can long endure. Its authority stems from the people. Its processes cannot be frozen but must ever be open to change at the will of the people. Article I of the Constitution of the State of California describes it thus: "All political power is inherent in the people. Government is instituted for the protection, security and benefit of the people, and they have the right to alter or reform the same whenever the public good may require it."

The will of the people can no longer be determined in town meetings, but must be the result of a studied and guarded process. Otherwise, liberty can swiftly degenerate into license, for people in the mass are often moved by impulse and emotion rather than by reason. That calls for government strong and pliant enough to preserve, as Madison put it "the rights of the minority in all cases where a majority are united by a common interest or passion."

So the founding fathers, in their great understanding of human nature, created a representative government of checks and balances; a federal republic of limited power, dedicated to personal liberty.

Our Nation has undergone many changes since the drafting of the Constitution. Then the population numbered about 3,500,000; the economy was basically agricultural. Seventy percent of the people lived from the soil. How different today. Now 16 percent of our population produce almost all the food and fiber consumed by our 154,000,000 people, plus vast surpluses to meet the needs of other nations. With the development of the industrial era, our population has largely centered in and about great cities. Standards of living have increased immeasurably. Our whole fabric of life is complicated by the swift and ever-increasing tempo of transportation and communication, and by the constant shuffling of a highly keyed and sensitive economy, with its concomitant social, economic, and political fluctuations.

Jefferson's axiom that the best-governed people are the least governed still holds true, but it takes a lot more government to meet the pressing issues of today than it did in his time. And because government inevitably feeds on itself, and most office holders, with human appetite that can be understood but not always condoned, seek to retain and even extend their power and authority, it is up to those who love liberty and believe that the State was created to serve man—and not man the State—to be sure they don't get more local government in their personal affairs, more State government in their local affairs, and above all, more National Government in all their affairs, than is absolutely necessary to maintain "a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare and secure the blessings of liberty to ourselves and our posterity."

In our zeal to maintain human rights and protect minorities, we must not lose sight of the fact that majorities have rights, too, and strange as it may seem, sometimes they are in need of safeguards. Lincoln gave this warning: "In giving freedom to the slave, we assume freedom to the free." This paradoxical situation arises out of the very immensity of our country, our constant growth, our great prosperity, the diversity of our origins, cultures, pursuits, and interests, and to other factors. As individuals our influence on legislation is nil; therefore, groupwise, we organize to protect and advance what each conceives to be its welfare. "Organized cooperation is the mightiest engine in the universe when men lay hold of its power," says an anonymous author, and politically, pressure groups certainly know how to throw their weight around in these United States.

No question but that it is proper and sometimes necessary for agriculture, business, labor, racial, and other groups to act collectively in order to obtain equality of treatment and to prevent discrimination, but when they push beyond such legitimate objectives and use their combined strength to reach for special privileges that tend to throw our social mechanism out of balance, they undermine the very processes that assure their liberties. Eternal vigilance is not the only price of liberty. We must pay for that precious boon in many ways—in our daily doings, in services performed for the common good, in concessions made to bring harmony out of inharmonious, and thus maintain a balanced and free society.

The conflict between self-interest and the common good—between freedom and force—between the voluntary and the regimented way of life—is as old as relations among men and goes back to the first instance when some stronger or craftier cave man sold his weaker or less alert neighbor, by force or by persuasion, the idea that he would be better off if he exchanged his labor and his sub-

servience for food and shelter. When time came to give this relationship a name it was called slavery. The present-day slickers refer to it by the more enticing term "security."

We search vainly through recorded history for a single instance wherein government, in any form, has ever achieved absolute or lasting security for its people. Our personal experiences—our common sense—tell us that security must be built from within—security buttressed by self-reliance, morality and faith and recognition of the obligations we owe our fellow men. Every man born of woman knows or comes to know both happiness and trouble, sickness and health, success and failure and all the other conditions that comprise the gamut of human experience. And none will ever come to know security from cradle to grave—or freedom from want and fear.

Most of us think that catching phrase "freedom from want and fear" was first used to describe the "four freedoms," when in fact it predated that fervid speech. I quote: "We shall banish want. We shall banish fear. The essence of national socialism is human welfare. There must be cheap volkswagen (automobiles) for the workers to ride in, and broad autobahns (highways) for the volkswagen. National socialism is the revolution of the common man. Rooted in the fuller life for every German from childhood to old age, national socialism means a new day of abundance at home, and a better world abroad." Who uttered those noble words? An inspired National Socialist—Adolf Hitler, of course, whose distorted philosophy and ambitions brought Germany and half the world to waste.

What makes people fall for such high-sounding, sophistical, cheap slogans? Let us analyze a couple. Karl Marx said, "To each according to his need; from each according to his ability." That simply means that government will put its finger on every individual and decide just how much he must contribute to society and just how much he will receive in return.

Regard the proclamation of the British Labor Party. "Fair shares for all." What fair shares? What all-wise power will evaluate them? Or will it elect to disregard individual contributions, requirements, tastes, and capacities and feed us all at the same public trough?

Clement Attlee, the British Prime Minister, said within the past 2 months, "Our socialist movement is not merely out to change things—it is out to change people." Now Government is going to shape individual character. That rings of omnipotence—and as soon as it succeeds there will be no further need for God, for then man will be made in the image of his government.

Isn't it about time for the American people to take stock of themselves—to evaluate their accomplishments, their problems, and their purposes realistically, in the light of experience and of the proven verities? Saint Paul said: "Prove all things—hold fast that which is good."

Today the lines of battle are clearly drawn. The world is divided into opposing ideological camps—one committed to the free way of life—the other, the compulsory way. It is a conflict between a totally materialistic philosophy and one predicated on the principle that materialism must be guided and controlled by moral law. It is a test to determine whether free men are fitted to govern themselves or whether a despot, a clique or a relatively insignificant minority shall direct the destinies of mankind. It is not a new conflict, though it has assumed many different forms throughout the ages.

Those who think the clash of ideas and interests between free government and communism is of recent origin, should read the prophetic words of Alexis de Tocqueville, a French liberal politician and author, who wrote over 120 years ago when America was

an adolescent, sprawling agricultural nation, and Russia a mighty semi-barbarous despotism:

"There are at the present time two great nations in the world, which started from different points, but seem to tend towards the same end. I allude to the Russians and the Americans. Both of them have grown up unnoticed; and while the attention of mankind was directed elsewhere, they have suddenly placed themselves in the front rank among the nations. . . ."

"All other nations seem to have nearly reached their natural limits, and they have only to maintain their power; but these are still in the act of growth. All the others have stopped, or continue to advance with extreme difficulty; these alone are proceeding with ease and celerity along a path to which no limit can be perceived. The American struggles against the obstacles that nature opposes to him; the adversaries of the Russian are men. The former combats the wilderness and savage life; the latter, civilization with all its arms. The conquests of the American are therefore gained by the plowshare; those of the Russian by the sword. The Anglo-American relies upon personal interest to accomplish his ends and gives free scope to the unguided strength and common sense of the people; the Russian centers all the authority of society in a single arm. The principal instrument of the former is liberty; of the latter servitude. Their starting point is different and their courses are not the same; yet each of them seems marked out by the will of Heaven to sway the destinies of half the globe."

It was the same de Tocqueville who said, "Despotism may govern without faith, but liberty cannot."

Truer words were never spoken. America must have faith—faith in the divine providence that shapes our ends, faith in our free way of life, faith in our destiny, faith in ourselves.

Let us free ourselves of all cheap slogans and foreign isms, and returning to our American tradition be guided by those fundamental principles which have been for our country, through all the years, even when in the wilderness of war and of depression, a pillar of cloud by day and a pillar of fire by night.

Let us seek leaders in whom we can have faith—leaders with everyday probity and with intellectual integrity, with vision tempered by knowledge and common sense, with burning patriotism that rises above political considerations, with conviction that holds fast to principle yet recognized the essentiality of concordia discors—agreement out of disagreement—in a free society. Such potential leadership exists, for in this great land, the spirit of Washington and of Lincoln persists in the hearts of the people.

He leads us still. O'er chasms yet unspanned Our pathway lies; the work is but begun; But we shall do our part and leave our land The mightier for noble battles won.

Here truth must triumph, honor must prevail;

The Nation Lincoln died for cannot fail!

Suspension of Deliveries of Fresh Beef

EXTENSION OF REMARKS OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, September 10, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a memorandum from Earl C. Gibbs, of Cleve-

land, Ohio, a large independent meat packer, and also a press release issued by him, in regard to the suspension by his firm of deliveries of fresh beef, and thus the cessation by his firm of the meat-packing business, because of the OPS regulations. The memorandum to which I refer is a notice which that firm has sent to all its customers in its territory.

The Gibbs firm is the oldest meat-packing establishment in Cleveland. Its normal distribution amounts to from 400,000 to 500,000 pounds of fresh beef a week.

The memorandum and the press release bring very forcibly to the attention of the Senate some of the confusion which is resulting because of impractical rules and regulations issued by the Office of Price Stabilization.

There being no objection, the memorandum and press release were ordered to be printed in the RECORD, as follows:

SEPTEMBER 8, 1951.

To Our Customers:

Effective Monday, September 10, 1951, deliveries of fresh beef will be terminated until some relief is granted by OPS for beef slaughterers. We have very reluctantly taken this step and this is the first time in the 40 years of our company's existence that our customers will not be able to get normal deliveries of beef but after careful consideration of all the facts we find that this step is necessary because it is impossible for us to continue to serve our customers' beef requirements in anywhere near a normal manner. We have worked diligently and at considerable expense to attempt to find a way to continue and have been told that some price relief was to be forthcoming from OPS for a number of weeks. Until some relief is granted it will be impossible for us to operate.

Sincerely,

EARL C. GIBBS,
President, Earl C. Gibbs, Inc., 3378
West Sixty-fifth Street, Cleveland,
Ohio.

PRESS RELEASE FOR IMMEDIATE RELEASE FOR
SEPTEMBER 10, 1951, BY EARL C. GIBBS, INC.,
3378 WEST SIXTY-FIFTH STREET, CLEVELAND,
OHIO

Earl C. Gibbs, Inc., today suspended deliveries of fresh beef for the first time in its 40 years of existence to all of its customers. This includes about 600 retail stores in greater Cleveland.

We normally distribute four to five hundred thousand pounds of fresh beef each week to retail stores in greater Cleveland. We have reluctantly taken this step because of the inconvenience that it will cause to our customers and in turn the inconvenience to the consuming public served by our customers.

But after careful consideration of all the facts we find it impossible to continue our operation until some workable program is set forth by OPS. OPS has acknowledged the fact that relief is necessary for these beef slaughterers to operate and has promised relief for a number of weeks. This relief has not been forthcoming and we do not find it possible to continue unless we engage in some manner of Federal price evasion. This we will not do.

The reason that the price squeeze has developed for beef slaughterers is: The price of fresh beef was established at a fixed level by OPS and in establishing the level of beef prices a ceiling price was also established on hides and tallow which is a slaughtering byproduct. Hides and tallow are now selling below the prices fixed by OPS. This reduction in these items amounts to more than the profit allowed by OPS for the slaughter of a beef animal.

Government Controls

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, September 10, 1951

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Controls Confusion Confounded," written by Royce Brier, and published in the column entitled "This World Today," in the San Francisco Chronicle of August 25, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS WORLD TODAY

(By Royce Brier)

CONTROLS CONFUSION CONFOUNDED

One of the melancholy aspects of the controls issue in the United States is that we, the consumers, are compelled to listen to such arrant nonsense about it from the control boys in Washington.

It isn't, and never has been, an intelligent device for regulating the American economy during an inflationary trend. It is a device for accumulating what political capital may be lying around, and for re-summing, behind the mask of an emergency, those demolitions of a free economy which were the natural recourse of a nation at war, but were rejected by the people as a nuisance and a freedom-destroying impertinence when the war was ended.

All controls which go beyond simple regulation designed to protect the public welfare from economic abuses, are steps to a socialist collectivism, and those who advocate them outside warfare are quite aware of this and are intrinsically collectivists, though they plausibly deny it and conceal their true aims with learned talk of technology, change, and necessity. The controls people swarm Washington and the regional offices like excited bees, and they multiply by the thousands when the season is on, and there isn't a rookie stenographer among them but will give you the technology-change-necessity lingo if the subject is brought up.

Not all those resigned to controls, as many Congressmen and businessmen are, are collectivists, but they are confused by distortions of the price structure, and stampeded by the job-holding collectivist horde which orders them controls as an oplate guaranteed to kill their pain.

The most casual comparative study, however, of controls as practiced and advocated in the United States reveals them as an early stage of what has now been reached by British socialism, bringing on a pattern of economic activity so sluggish and so creaking with bureaucratic burdens as virtually to paralyze the British people historically.

Any difference is quantitative, not qualitative. Present American controls are a first step, openly advocated controls are halfway, and barely concealed purposes of the Washington controllers are all the way to the British system. And the British system has nowhere to go but back to a reasonably free economy, or forward to more controls until it resembles for all practical purposes the economic determinism practiced in the so-called Marxist societies.

To get back to the nonsense (and the news), the Washington people, with Mr. Truman as inevitable spokesman, but many bees far busier than the President can be, have a story. You've been bombarded with it for

several years, and it never changes. Prices are high. Give them controls and they'll stop the inflation.

So they got some controls. Then they got an anxiety neurosis as to how we'd take them. So they resorted to expediency in applying them. When they did apply them, as in the case of meat, nothing special happened. Some meat went up and some down, the average went up a trifle. Then they said meat would have gone up far more without controls, so give us more controls and we'll bring it down. But the housewife, who is no idiot, saw that this was sweet talk, and the Congress, which doesn't go in for trying to fool the housewife, wouldn't give them more controls. This was a horrible set-back, and Mr. Truman and Mr. Disalle were both indignant, and everybody scattered around to make speeches, saying: "You'll be sorry, you'll be sorry."

Another part of the story is that the controls people know infallibly what's going to happen in the American economic future if the people and the Congress don't grant them whatever control powers they ask right now—today. It's runaway inflation. And they say, if you don't do it, why, Pilate-like, we wash our hands.

This is nonsense because infallible prediction is always nonsense. An intelligent economy, a going society, cannot be predicated on infallible prediction, especially the infallible prediction of some deputy administrator of something addressing a luncheon club.

All this is just collectivist beehive work, and it's using your economy for a political football, too. Mr. Truman and his party are not alone responsible. Many harvesters see hay in controls. The President has been mulling over how to get more controls than the modified law already gave him, calling the boys in for sessions. So he came up Thursday with a special message seeking repeal of three sections of the control law he doesn't like.

In what the dispatch called a surprise move, Republican Senators FERGUSON, NIXON, and WELKER introduced a bill to grant the President's request. They explained they believed the President was playing politics with controls, so they would give him what he wants, and thus the administration will have to take the blame if controls fail.

It is submitted here that this dubiously plays politics to counter dubious political playing, and it is further submitted that your economy, which means what you eat, wear, own, and earn deserves more responsible treatment than a frantic endeavor to prefix blame for some economic disaster which has not yet occurred.

The Flood in Kansas

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, September 10, 1951

Mr. SCHOEPEL. Mr. President, in July of this year my State of Kansas and the States of Missouri and Oklahoma suffered what is the most devastating flood in their history. The loss in money will mount to the billion mark.

The loss to those who have lost their homes and possessions, accumulated often over the period of a lifetime, cannot be calculated.

On August 31 I voted, with four of my colleagues, against the tremendous Eu-

ropean-aid bill. My reasons for so doing could not have been better summarized than in the resolution adopted by the Fredonia chapter of the Veterans of Foreign Wars, and I ask unanimous consent that this resolution be inserted in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

CARL GILL POST, No. 3018,

VETERANS OF FOREIGN WARS,

Fredonia, Kans.

Be it resolved by Carl L. Gill Post, No. 3018, Veterans of Foreign Wars of Fredonia, Kans., That Kansas and her neighboring States have just suffered the most devastating floods that have been recorded in any section of this Nation at any time; and

That this flood damage is still beyond comprehension in the destruction of highways, bridges, business buildings, railways, utilities and personal effects of the flood victims but that this damage can be easily assessed at this time as equal to or greater than the war damage to the European areas during World War II; and

That this Government has been dealing out billions of dollars in grants to war stricken areas of Europe and has under proposal now, additional billions for this same purpose; now

Carl L. Gill Post of the Veterans of Foreign Wars, United States of America, calls upon the congressional delegation of the State of Kansas to demand from their colleagues in the House and Senate, that no more aid to Europe be voted except that an amount equal to such proposed aid shall be automatically appropriated in money and goods to the flood stricken areas of the Middle West

Carl L. Gill Post, No. 3018, Veterans of Foreign Wars, Fredonia, Kans., is not condemning aid to sufferers in Europe but believing that charity begins at home and that these flood sufferers of this area of the Middle West have supported the aid to Europe in years past with their tax dollars, have now the right to expect first call from a spendthrift administration in this, their hour of need, and Carl L. Gill Post, No. 3018, Veterans of Foreign Wars, United States of America, Fredonia, Kans., tenders this resolution to each member of the congressional delegation from Kansas with the request for their serious consideration of the action requested.

CARL L. GILL POST, No. 3018,

VETERANS OF FOREIGN WARS

Lincoln's Handling of Peace Conference Offers Lesson for Korean Negotiations

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHAFER. Mr. Speaker, mention has recently been made of the fact that while the Korean truce talks had lasted 60 days when they were suspended by the Communists, it took only 5 days to secure a cease-fire ending World War I and only 2 and 4 days, respectively, to gain a cease-fire in the European and Pacific phases of World War II.

Much more* to the point, it seems to me, is the fact that it required only 4 hours to determine that peace negotiations designed to end the American Civil War were premature and nonproductive.

These historic negotiations, in which President Lincoln personally participated, were held aboard a Union transport at Hampton Roads, Va., February 3, 1865. Any comparison of these negotiations with those at Kaesong must, of course, take into account one important difference. Both sides in the Hampton Roads Conference were represented by reasonable men, by men of honor, sincerity, and integrity. Even so, I believe the present administration could have profited—and might still profit—by the example set by President Lincoln in those proceedings 86 years ago.

The meeting at Hampton Roads was attended by President Lincoln and Secretary of State Seward, for the Union, and by Vice President Alexander Stephens and two other representatives of the Confederacy. It was the result of a volunteer peace move initiated by the venerable Francis P. Blair, of Maryland. Blair, in January 1865, secured Lincoln's permission to visit President Jefferson Davis. Blair had the dream that the North and South might agree to suspend their war to launch a joint expeditionary force to drive the French Emperor Louis Napoleon's stooge, Maximilian, off the Mexican throne. This project did not have Lincoln's endorsement, but he had no objection to Blair's meeting the Confederate President.

Blair brought back a letter from Davis stating that he—Davis—was willing to send commissioners to discuss restoration of peace "between the two countries." Lincoln then gave Blair a letter saying he was willing to receive southern representatives to confer informally "with a view of securing peace to the people of our one common country." The issue of the supremacy of the Union reflected in the wording of those two letters became the point on which the negotiations collapsed. Nevertheless, Lincoln and Seward did meet with the southern representatives in a historic 4-hour conference, details of which Lincoln later reported, with full documentation, to the Congress—in itself a precedent which the present administration would do well to note.

Here are a few of the features of this conference which, I believe, offer a timely lesson for present or future American negotiations in Korea:

First. The Hampton Roads conference was held at a location designated by President Lincoln, within Union territory.

Second. Lincoln, in advance of the conference, wired General Grant, top Union commander:

Let nothing which is transpiring change, hinder, or delay your military movements or plans.

There was no let-up on the enemy.

Third. Lincoln dramatically proved his desire for peace by his personal participation in the conference—but there was no display of overcagerne's which would weaken his position or suggest a

willingness to compromise or appease for the sake of peace. At the outset, Lincoln made it clear that "restoration of the national authority throughout all of the States" and abolition of slavery were absolute requirements for peace and were matters not subject to discussion, debate, negotiation, or compromise.

Fourth. Finally, Lincoln flatly rejected any proposal for a truce of ceasefire prior to acceptance of these basic terms. He spurned the idea of the Mexican undertaking as the basis for a possible future agreement to reunite. Agreement to reunite, he insisted, must come before peace or anything else.

The conference itself was conducted by both sides in an amicable, reasonable, and courteous atmosphere. Lincoln's firmness permitted no misunderstanding. He stopped every shrewd effort to get a foot in the door so far as compromise was concerned. He made it clear that so far as basic principles were concerned there was, in MacArthur's recent phrase, "no substitute for victory." It took only 4 hours to agree that there was not and could not be agreement. The victory came less than 3 months later—by force of arms.

How desperately the United States needs the same Lincoln clarity, firmness and hard-headed good sense in dealing with today's ruthless and unscrupulous enemies.

Cocke Defends Legion's Activities

EXTENSION OF REMARKS

OF

HON. ERNEST W. MCFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. MCFARLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Cocke Defends Legion's Activities," written by Erle Cocke, Jr., national commander of the American Legion, substituting for Drew Pearson in writing the column entitled "The Washington Merry-Go-Round," published in the Washington Post this morning.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WASHINGTON MERRY-GO-ROUND COCKE DEFENDS LEGION'S ACTIVITIES

(While Drew Pearson is on a brief vacation, the Washington Merry-Go-Round is being written by distinguished guest columnists. Today's is Erle Cocke, Jr., national commander of the American Legion.)

It's very seldom the American Legion gets the chance to tell its side of the story—the side some folks don't bother to determine.

PRESSURE GROUP, WARMONGERS, TREASURY RAIDERS, HOODLUMS

We've been called all those names in our 33 years. But, as Al Smith used to say, "Let's look at the record."

Pressure group? To this one we plead guilty—all 4,000,000 legionnaires and auxiliarians. We pressured into being the spending of \$87,165,759.18, raised by our own efforts, to help the Nation's needy children.

We organized more than 16,500 junior baseball teams—teams that gave supervised

recreation with citizenship training for more than a million teen-age boys every summer. We sponsored nearly 4,000 Boy Scout troops.

We created a Boys' State program through 18,000 selected high-school students who learn by doing the way our Government operates.

We conduct an annual national oratorical contest in which 350,000 high-school students write essays on the Constitution and Bill of Rights.

PRESSURE FOR DEFENSE

Sure, we're a pressure group. Pressure against juvenile delinquency.

The vacationing Drew Pearson will know what it means to be called a pressure group. Throughout the years his pressure has caused fear and consternation in Fascist and Communist circles, and today his friendship balloons are piercing the iron curtain in Czechoslovakia, into the very heart of communism.

Warmongers?

No, but like our great Secretary of Defense, George C. Marshall, we admit pressurizing for preparedness. We authored the universal military training bill and hope to see a thoroughly integrated program become law before another year has passed. Of course, the Kremlin has its own slant on "warmongering" and we are proud to be No. 1 on their warmonger list.

The American Legion has been a great and constant force, at home and abroad, for Godliness, for Christian philosophies, for moral backbone and for civic virtue. Perhaps some people call that warmongering.

It was the American Legion that brought to attention Communist infiltration into our labor unions and farmer guilds. We exposed the Communist infiltration in our legal profession and in our courts. It was the Legion that exposed the way Communist teachers infiltrated our schools, and we formed neighborhood groups of vigilant parents to defeat the Communist Kiddie-Klubs.

FIGHT COMMUNISM

It was a commander of one of the 17,330 Legion posts who started the longshoremen's refusal to load or unload Communists' ships of supplies bound for Communist troops.

Yes, we have fought communism with every means at our command and we intend to continue fighting it until it no longer menaces the free world we live in.

For that we have been called warmongers.

Treasury raiders? No, but we do demand that wounded and disabled service men and women get fair treatment. We were the authors of the GI bill of rights, which has provided higher education and vocational training for 7,500,000 veterans of World War II, the greatest stimulus to education in history.

Fair compensation for war wounds has always been our demand. Hospitalization and domiciliary care, yes. But in all fairness, is that Treasury raiding?

Hoodlums? There never has been a city that housed our national convention that has not asked us back again. Miami, our host city this year, has invited us to make Miami the perennial convention city and according to their editorial writers and those of other cities, American Legionnaires are the best behaved of any national convention.

And why not? After all, the American Legion is America. Certainly no one else has a finer cross-section of citizens as members. We are proud of our membership comprising the President, 25 State Governors, 55 United States Senators, and 237 Representatives. Along with them we have members in about every category known to our country.

THE CASE RESTS

Thrice we have been called upon to defend our country in war. Thrice we have given America victory. Thrice more shall we do the same if necessary.

We are proud that in the past 2 years we have collected and distributed more than 10,000,000 toys—distributed them to the underprivileged children of Europe and the Pacific.

We are proud that it was Legionnaire Pearson who aided the American Legion in getting this program under way. We are proud that it was he and our past national commander, George Craig, who originated this program.

That's the American Legion many do not know. That's the American Legion that has been called all those epithets over the years.

Pressure group? Treasury raiders? Warmongers? Hoodlums?

We rest our case.

Horse Sense and Honesty in Government

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. TAFT. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address on the subject Horse Sense and Honesty in Government, delivered by me in Rockland, Maine, on August 22, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is always a pleasure for me to come to Maine. I do find the summer here somewhat more pleasant than the winter, however, because the last time I visited your State we had to come down in the snow on the Kennebec River when the State airplane decided it could no longer continue to fly.

I was glad to accept an invitation to make a Republican speech in Maine at this time, because what we need more than anything else in Government in Washington is a return to those virtues of thrift and honesty and truth and horse sense which have characterized the residents of Maine since the earliest days of the Republic. There never was a time when those virtues were more neglected or more needed in Government.

It is always a pleasure to be associated with my old friend and classmate, OWEN BREWSTER, who has battled for sound principles in Washington now for a great many years. I have enjoyed my association with your junior Senator, MARGARET CHASE SMITH. She has well represented the people of Maine in her consistent votes for economy in Government, and against those pressure blocs—whether in the field of labor or business or agriculture—who sometimes seek more for their own special interest than they are entitled to in an economy based on equality and justice. I particularly appreciated her votes against the attempt to repeal the Taft-Hartley law.

Congress is in session today, and OWEN BREWSTER and I have to explain our absence from Washington by pointing out that we had every reason to expect that the Congress should and would be adjourned by this date in August. And we would have adjourned except for the breakdown of the Democratic Party as a party, and the complete absence of a legislative plan. There is a good deal of loose talk about differences among the Republicans. I can only say that I feel confident that the Republicans in 1952 will present a united front. They can be easily reconciled because they agree on certain fundamental principles of government—on honest administration, on progress through

more individual and local liberty, and not by more and more power in a control government and not by more and more spending and taxation. But the real split in Washington is in the Democratic Party because half of them are left-wing socialists who dominate the executive administration, but can't control the Democratic Congress. The failure of this Congress to do anything promptly, or to accomplish anything substantial at all is due to that determined split which has prevented any kind of a planned program from being considered by this Eighty-second Congress.

Certain measures, of course, are forced upon us by the threats of Soviet Russia. The regular appropriations, the necessity of extending the Draft Act to provide the necessary armed forces to meet the present emergency, the new military program and the incidental aid to foreign governments for military purposes, the new taxes to meet the vast expansion of public spending, the defense controls to prevent the inflation produced by that spending, are all bipartisan measures based on the general agreement of all that we must meet the Russian menace. But even this program has been long delayed. The administration's proposal for foreign aid was not even presented to Congress until May 24. The huge defense appropriation bills did not even reach the House of Representatives until May 1. In the Senate, at least, we did not receive the tax bill until nearly July 1.

The people can well compare the record of this Eighty-second Democratic Congress with the comprehensive and efficient record of the Eightieth Republican Congress. We adjourned in 1947 on August 1, and in 1948 before the first of July. In those periods, we enacted every appropriation and a long series of additional programs, carefully planned, including the repeal of war controls and the return to a free economy, the unification of the armed services, and a 70-group Air Force, later cut down by President Truman, the Taft-Hartley law, the Aiken agricultural policy and price-support law, the Marshall plan to combat communism abroad, the only tax reduction bill we have seen in many a New Deal year, a constructive reclamation program, the first revelations of communism in the Government, and many other substantive laws. These laws, even those passed over the President's political vetoes, have been the basis of all government policy since, because they were based on horse sense and sound principle. The Eightieth Congress also initiated the studies which resulted in bipartisan social-security amendments, and also the Atlantic Pact.

In that Congress we Republicans had only two more than a majority, but we retained our majority on every important vote. Today, of course, we are the opposition party without control of the Congress or its committees, but only a Republican victory in 1952 can restore harmony between the executive and Congress, and a constructive program of legislation.

In its foreign, as in its domestic program, the administration is wavering and uncertain. The most important of all the proposals before us today is that of the size and strength of the Armed Forces. On a definite plan for such Armed Forces depend the need for drafting all boys in this country for 2 years' service in the Armed Forces, the size of appropriations, the extent of the additional taxes to be levied, the character of the price and wage control and Government regulation essential to prevent the inflation which naturally results from such a tremendous Government-spending program. But this administration's defense program is characterized by the same wavering uncertainty and lack of planning which has characterized its foreign program. After the last war they assumed that no military threat remained in the world and they utterly failed to realize the character of the com-

munist of Soviet Russia, or its aggressive intentions. I certainly assumed, relying on the advice of the military, that the expenditure of \$13,000,000,000 or \$14,000,000,000 a year on the Armed Forces, 10 times what we were spending before the war, would be amply sufficient to provide adequate armed forces and defense for the United States. No one yet has been able to tell us just what did happen to the \$50,000,000,000 appropriated in the 3 years after the war. We know that President Truman refused to use about \$750,000,000 appropriated for a 70-group Air Force. It was as late as March 1950, only 18 months ago, that General Bradley testified that in his opinion \$13,000,000,000 was approximately enough to provide a completely adequate defense for the United States. He stated that the Joint Chiefs of Staff might like a little more, but that they never went along with the big figure of \$20,000,000,000 and that if he should recommend \$30,000,000,000 a year, he probably ought to be removed as Chairman of the Joint Chiefs of Staff. You will remember that at the time General Eisenhower criticized the budget.

Today the Joint Chiefs of Staff are not satisfied with a total expenditure approaching \$60,000,000,000 a year. Of course, the Korean attack occurred in between, but we are told correctly that the end of the Korean war will make no difference in our military program. We are arming to meet the power of Soviet Russia, just as well known before Korea as since Korea. The administration was still fooling itself and the Nation, as it did at Tehran, and Yalta and Potsdam, because of its sympathy for communism, and its failure to understand its true nature.

At the time of Korea, we had about a million and a half men in the Armed Forces. In July we were asked to raise the number to 2,100,000 men. By the time we reached Washington in December, the Joint Chiefs were asking for 2,270,000. Thirty days later, in January, they were up to 3,325,000. The April 30 budget asks for 3,339,000 and now they want 3,500,000. All of our plans have been made on the basis of about 3,500,000 men, but now within the past 2 weeks the President suddenly suggests that the Joint Chiefs of Staff are preparing a much larger program with more men and more money. The question at least suggests itself whether we are not under military influence now overdoing the job as much as under military influence we underdid the job in 1950.

In my opinion there is a definite economic limit to what the United States and the people of the United States can do in time of peace without wrecking the whole economy of the country. It is not possible to impose the same sacrifices or the same controls on people in peacetime as in wartime. It is not wise to impose the same limitations on civilian economy for a 10- or a 20-year period as it is possible and wise to impose for a war period whose end is within sight in 2 or 3 years. At the present time we are raising about \$60,000,000,000 in taxes at the highest tax rates this country has ever seen, except at the very peak of the last war, and they will soon be higher than that. We are proposing to spend \$70,000,000,000 this year, requiring \$10,000,000,000 more in taxes, and about \$90,000,000,000 next year, which would require an additional \$20,000,000,000 in taxes. The President's last suggestions seem to indicate a total expenditure of at least \$100,000,000,000 a year, and in my opinion it is utterly impossible to raise the taxes necessary to meet this tremendous spending without doing more harm to the people than good. If the enlarged program is adopted, I am afraid the Government will be borrowing \$25,000,000,000 a year for 2 years, which would destroy all confidence in the value of Government bonds and make inflation almost certain, with all of the social consequences and the labor disturbances and the interference with production which such inflation

must bring. Perhaps it is necessary, but I don't believe it is, and certainly that necessity must be clearly proved. Furthermore, it is not possible to put more than 3,500,000 men in the Army without requiring our young men to serve probably 3 years in the Army instead of 2, a serious interference with the life of every boy and a sacrifice which certainly must not be imposed unless it is absolutely essential.

What seems clear is that there has been no intelligent program worked out and that the plans change from day to day. While each department of the Government and of the Armed Forces may be making intelligent plans in its own field, there is no overall brain operating with the horse sense to assure that the whole program is efficient for its purpose, and not as destructive as war to the liberty of the people. We certainly do not have the kind of intelligent leadership which the people of the United States deserve.

Apart from the lack of intelligence, I have repeatedly pointed out that there is no truth or sincerity in the programs which are presented, assuming that there is any thinking behind them at all. Each program is presented as a solution of the entire problem, although it is certain that the administration knows it is coming in next year with something much larger. They frankly have no confidence in the intelligence of the people. They feel that in order to put over their programs they have to fool the people by making them think that it is much smaller and requires much less sacrifice than it actually does. Just consider the history of gifts and loans to foreign nations. Before the war was over, we had presented to us the two Bretton Woods plans—the International Bank and the International Fund. According to Mr. Morgenthau and the officials of the Treasury, these two programs were going to stabilize the world and represented the total contribution that America would have to make. It was claimed by some at the time that this plan was insufficient and ineffective and that a loan would have to be made to the British, but this was vigorously denied by the Treasury officials. No sooner was Bretton Woods adopted, however, than we were asked for \$4,000,000,000 for a direct loan to the British. This was to solve the entire economic problem of the world. It was to be paid back by the British in due time at a low rate of interest. The British loan lasted about 1 year instead of 3 years, and thereupon we faced the \$17,000,000,000 of the Marshall plan. That plan was to be the final weapon against communism and to prevent the further spread of communism throughout the world, and to be definitely completed in 4 years. But as soon as the Marshall plan showed signs of completion, we had point 4 to encourage economic aid to all the countries in the world.

We had been considering the Atlantic Pact as a joint agreement to stand against aggression in Europe as we had already signed the Inter-American Pact to stand against aggression in South and Central America, but in 1949 we had added to a simple defense treaty the demand that we provide arms for the other members of the pact. Senator Vandenberg succeeded in limiting this proposal to approximately half-a-billion dollars a year, and it was adopted largely on the basis that that was the contemplated expense. Now we are asked to provide more than \$6,000,000,000 a year for arms to European countries. Not only that, it is now said that it is essential that we provide American soldiers as well to be stationed in Europe, although this intention was absolutely denied by the administration when the Atlantic Pact was being considered. Either the administration had no plan, or it was deliberately deceiving the American people as to its real intentions, for fear they might be rejected.

If there is any uniform philosophy underlying the administration's foreign and domestic policy, it is more and more spending by the Federal Government and more and more power for the Federal Government. Just when the people indicated in 1950 they were opposed to this philosophy in domestic policy, the administration was able to find in foreign policy the justification for engaging in an even vaster spending program. And there is no end to it. Two weeks ago the President hinted that 3,500,000 men in the Army was only an interim goal and we hear of additional appropriations which may add ten to twenty billion dollars a year to Armed Force spending. Secretary Acheson sends word to the Foreign Relations Committee that \$25,000,000,000 in 3 years is a substantial underestimate of foreign aid. But these additions as usual are being held in reserve until Congress approves the present program.

A large expenditure is undoubtedly necessary, but that necessity must be proved. It must not be spending for the sake of spending and power. No matter what the administration may say about a reduction of this spending within 2 years, the record shows that there will never be a reduction in spending until the present administration is removed from office. This vast expansion of the power of government can only be brought to an end by the election of those who really believe in thrift and in telling the people the truth and letting the people decide.

Last week the President angrily attacked slander-mongers and scare-mongers and hate-mongers because he said, "They are trying to get us to believe that our Government is riddled with communism and corruption—when the fact is we have the finest and most loyal body of civil servants in the world." In short, everyone who has said that there is Communist influence in the Government, and not only that, but everyone who says there has been corruption in Washington, is a liar. The fact that the President of the United States can so blithely dismiss the proved charges, in many cases brought out and substantiated by Democratic committees, is evidence of the low standard he accepts himself and hopes will be accepted by the people. He fails to answer any specific charge, or to point out any specific falsehood. Is it a lie to say that General Vaughan received a deepfreeze for using his influence in behalf of perfumery importers and their representative Maragon, and that Maragon is now in jail and that Vaughan is still in the White House? Is it a lie to say that one of the President's secretaries received free hotel accommodations for influence used with the Reconstruction Finance Corporation, or that a White House stenographer received a \$9,500 mink coat in connection with another RFC loan? These facts have all been publicly printed, and no one has even replied to these statements. Is it a lie to say that the Department of Justice neglected to make any real investigation of the vote frauds and stealing of ballots in Kansas City until the statute of limitations expired? Is there any doubt about the sordid story of influence peddling detailed in the minority report just published on the RFC investigation leading to the doors of the White House? The President condoned this kind of immorality by calling Senator Fulbright's criticism, in his interim report, asinine. If anyone doubts the low state of public morals I urge him to read this report, as well as the Look article entitled "The Scandalous Years." I suggest the President point out the lies instead of shouting "liar." The President evidently hopes that some of the charges of communism against members of the administration have been successfully repudiated, and so for the first time he ties charges of corruption in with charges of communism. But what about the charges in the field of communism? Is it a lie to say that Alger

Hiss was convicted of perjury in denying his Communist connection, after the President himself said that the investigation was just a red herring? Isn't it a fact that Marzani was convicted of perjury because he was a Communist? Didn't Wadleigh, in the State Department, admit that he passed out documents to the Soviet conspiracy? Isn't it a fact that only recently Remington has been convicted of lying about his Communist experience? Isn't it a fact that the Institute of Pacific Relations tied right in with the State Department and was dominated by Communists? Isn't it a fact that hundreds of top-secret documents were found in the office of Amerasia, the Institute's magazine, stolen or obtained from traitors in different departments of the Government?

The President's outburst must be based on the assumption that the people have forgotten all the facts and have lost all the standards of honesty and Americanism which are basic to the success of any democratic people. His attitude is shown by the fact that no one of those men whose conduct is condemned by honest men, whether immoral or illegal, has been dismissed from his Government post. It is a contrast indeed to the honesty of Calvin Coolidge. When the Teapot Dome scandals broke, he called in outside prosecutors. The crooks were promptly removed from the Government and convicted where they had violated the law. Standards of honesty were returned to Washington. These standards can never be returned to Washington under this administration, or until the administration itself is removed from office.

This Nation can be destroyed by dishonesty and immorality, by unlimited and uncritical spending, by lack of intelligence. Those are the qualities which seem to dominate the present scene in Washington. So Republicans offer to America a return to the New England virtues—the virtues of a rugged country, the virtues of a people who had to conquer the wilderness to establish the right of their children to freedom—the virtues of horse sense in dealing with the fundamental problems of foreign and domestic policy, the virtues of thrift and honesty and truth.

New Floods in Kansas-Missouri Valley Emphasize Extent of Relief Job and Necessity of Immediate Action To Make This Area Floodproof

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 20, 1951

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix to the Record, I wish to include an article by W. H. Lawrence, of Kansas City, Mo., published in the New York Times of Sunday, September 9, 1951, as follows:

**NEW FLOODS EMPHASIZE EXTENT OF RELIEF
JOB—KANSAS RIVER VALLEY WANTS FEDERAL
FUNDS AND AN INSURANCE SYSTEM**

(By W. H. Lawrence)

KANSAS CITY, Mo., September 8.—The agriculturally rich and industrially important Kansas River Valley missed another major flood by inches this week, at a time when the area barely had started climbing up the ladder of economic recovery after mid-July's inundation—the most costly natural disaster in American history.

President Truman himself was on the scene for a personal look-see on Thursday as the battered, partially repaired dikes contained the boiling dirty-brown waters.

The new flood threat, which had been serious enough to cause precautionary evacuation of three major industrial sections in both Kansas Citys, underlined both the high cost of the first flood and the necessity for prompt governmental action at local, State, and national levels to repair the damage and take what steps are possible to avert similar disasters in the future.

LOST IN THE FLOOD

Rated as five times more damaging than the great Ohio-Mississippi River flood of 1937, the rampage of the Kansas River in July displaced 350,000 persons and destroyed property worth \$2,500,000,000, while ravaging an estimated 5,500,000 acres of the most fertile farm land in America.

Eight weeks after that July black Friday the 13th not even the surface damage has been removed and, while the railroads and some of the bigger industries are getting back into production, thousands of small businesses have made no start at all toward reopening. Hundreds of persons working with the most elementary tools are trying to clean out the mud and slime from homes that were damaged but still are rated structurally safe; but no start has been made at all toward replacing the thousands of structures which have been condemned.

In brief, it has been estimated that perhaps 10 percent of the rehabilitation job has been done, thus far.

Not even the dikes have been repaired sufficiently to afford as much protection as they did in June, and they won't be in such condition for another 6 or 7 months—at a cost of approximately \$11,000,000. To make the valley more or less floodproof would cost an estimated \$300,000,000 and take 3 to 5 years to complete under the best of conditions.

FEDERAL ASSISTANCE URGED

This has been a disaster of such magnitude that there is general agreement among Republicans as well as Democrats, out here at least, that it is absolutely essential for the Federal Government to intervene both with money and a coordinated recovery plan. So far, the Federal Government has committed itself to spending \$25,000,000 and private agencies have spent approximately \$7,500,000 in emergency relief work.

One probable result of this week's flood threat will be to bring new pressure upon the Congress for action upon Mr. Truman's proposed \$400,000,000 rehabilitation program.

Mr. Truman's plan addresses itself to several difficult aspects of long-term recovery affecting both agriculture and industry.

Of the 5,500,000 acres of damaged farm land it has been estimated that farmers can, with their own efforts, get approximately 2,000,000 acres back into shape for seeding this fall. Extensive State and Federal assistance to restore regular drainage facilities and other anti-erosion measures will be necessary to bring back into production another 2,500,000 acres, and the time is running short for getting ahead with this job if there is to be a wheat crop next year.

There are major credit problems now slowing the rebuilding both of industry and of homes, and two of the most controversial features of Mr. Truman's new program are aimed at relaxing if not removing these barriers.

The individual home owner and the small-business man have to a large extent found themselves with their assets gone and their debts remaining now that the flood is over. It is difficult to borrow money to build a new home or store if there are still long-term mortgages to pay off on property that was destroyed in July. There is not now available any general system of flood insurance,

and only a very few of those suffering damage had insurance upon movable equipment.

TRUMAN'S PROGRAM

Mr. Truman has proposed, therefore, both a partial indemnification program to take care of part of the recent loss, and establishment of a broad system of flood-disaster insurance similar to the war-damage insurance system offered during World War II. It is these two features which are likely to cause the most controversy in Congress.

The need for a flood-insurance program was argued by Mr. Truman in his August 20 message, pointing out that lack of such a system is a "major gap in the means by which a man can make his home, his farm, or his business secure against events beyond his control."

"It is a basic requisite to the reopening of plants in the flood region, where dikes cannot be rebuilt for some months, and companies are unwilling, in some cases, to undertake the risk of being inundated in the meantime," Mr. Truman said. "Once such a system of flood insurance is in effect there should be no need in the future for a program of partial indemnities such as is now proposed for Midwest flood victims. As a permanent national policy, insurance is far superior to direct payments."

The insurance plan calls for purchase of policies from private insurance companies with reinsurance provided by the Federal Government. It would be similar to the war-risk insurance in effect from 1942 through 1945, on which, by the way, the Federal Government made a considerable profit.

Both Kansas and Missouri are expected to summon special legislative sessions as soon as Congress enacts the new bill and the requirements of State action become more clear. Until now the States have had little money to spend on flood relief and repairs.

Report to the People of Pennsylvania by Hon. Edward Martin, of Pennsylvania

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the Record the text of a broadcast by me to the people of Pennsylvania in the series entitled "Happenings in Washington," this broadcast being program No. 49.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 49)

(Text of broadcast by United States Senator Edward Martin, of Pennsylvania)

This is Ed MARTIN, speaking to you from the Nation's Capitol and bringing you another discussion of Happenings in Washington.

In this broadcast I want to talk about the kind of government the American people are receiving from Washington—government by defiance of Congress; government by defiance of the Constitution.

For many years we have heard repeated warnings against the growing centralization of power in the executive department of the Federal Government.

We have seen the rise of a socialistic trend which would concentrate all political and

economic control in a giant bureaucracy at Washington.

We have seen the administration ignore the constitutional limitations and usurp legislative functions vested by the Constitution in the Congress of the United States.

All of this reflects the growing tendency on the part of the White House and the executive department to go their own way, no matter what Congress does in the exercise of its rightful function as the law-making branch of our Government.

If the average citizen of our country should so conduct himself, in blunt defiance of the law, he would soon find himself in jail. But this administration seems to regard itself as above and beyond the law. Its flagrant disregard for the will of Congress has led it into countless blunders which have seriously hurt our Nation, but government by defiance of Congress continues, nevertheless.

Let me give you a few examples.

In my last report to the people of Pennsylvania I told you of the President's industrial dispersal order. That is the most recent major example. Before the order was issued, administration supporters tried to have the Defense Production Act amended so that it could force new and expanded industries to locate in areas dictated by the Government. In the House this proposal was defeated by nearly 2 to 1. In the Senate it was beaten by better than 2 to 1.

In other words, Congress made it overwhelmingly clear that it opposed any program which would let the bureaucrats tell a man where he must build his factory. It refused to give the administration the right to take industry from Pennsylvania and other industrial States and give it to undeveloped areas in the South and West.

But within a few weeks President Truman defied the express will of Congress. He issued an Executive order putting into effect a national dispersal policy which could place all defense production under a virtual dictatorship.

Under this order an industry can be denied materials for new construction or expansion unless it builds where the bureaucrats say it must build.

But that's not all. Unless industry submits to this new form of control it can be denied defense contracts, emergency Government loans, accelerated tax benefits, and allocation of critical defense materials.

Now let me remind you that the President did not ask Congress to enact legislation to carry out his dispersal program. He did not ask Congress to place a limit upon the distance that industry might be required to go in order to minimize the danger of atomic attack.

Oh, no—he simply ignored Congress and resorted to legislation by Executive order.

That is government by defiance of Congress.

Now let me give you a few other examples.

Congress, upon the recommendation of the Navy Department, decided that the Nation should have a giant aircraft carrier, a super-carrier, for whatever might lie ahead. The law was passed, the money was voted, and the keel was laid.

Then, after \$20,000,000 had been spent, President Truman stepped in and ordered construction stopped. He decided that the project should be abandoned. That was in defiance of a law which had been voted by the House and the Senate and signed by President Truman himself.

Now, here is the unusual part of it. The administration has ordered work resumed on the same aircraft carrier. But the price of materials and wages have gone up, and the cost of the vessel will be at least \$50,000,000 greater than if it had been built in the first instance.

If the President had not defied Congress, the great carrier would be completed, commissioned, and in the fleet today. It would

be a warning to all aggressors that we can deliver the atom bomb by planes launched from the deck of an aircraft carrier, appropriately named *United States*.

Here's another example.

The Eightieth Congress was deeply interested in the problem of a strong and powerful Air Force to protect us against the growing threat of Communist aggression.

You may remember that we voted funds to provide a 70-group Air Force. President Truman, governing by defiance of Congress and the law, directed the Secretary of Defense to place the money in reserve. He refused to let us have a 70-group Air Force.

Since then, Russia has built a larger and more powerful air force than ours, and Mr. Truman, who blocked the 70-group Air Force, now puts out messages frantically demanding an Air Force much larger than the 70-group strength he had overruled.

That was defiance of the Congress and the law.

The greatest defeat this Nation has ever suffered—anywhere—at any time—has been in China, where the friendly government of Chiang Kai-shek gave way to the Red Communist forces, armed and equipped by Soviet Russia. There we lost 400,000,000 people to the iron curtain—a really crushing defeat.

Congress tried to block this tragic development. It sought to aid the Chinese Nationalists and to prevent all of China from going under Communist domination. There are many examples of how the President and the State Department defied Congress and helped to turn China into a Communist state. Let me remind you of just one of them.

The Eightieth Congress voted \$125,000,000 to provide arms and munitions for the Chinese Government to fight the Reds. Again the President defied the will of Congress.

He held up the program for 3 months and, as a consequence, the first shipment did not reach China until 9 months after the money was appropriated.

That was government by defiance of Congress—and the tragic price was paid in the lives of American boys who died fighting in defense of human freedom in Korea.

Back in 1946 the Seventy-ninth Congress—a Democratic Congress, by the way—voted substantial funds for flood control, particularly in the Midwest. On the day that Congress adjourned, the President issued an Executive order curtailing the program by about \$300,000,000.

That was government by defiance of Congress. Had the work gotten under way, much of this year's terrible flood conditions in Kansas and the President's home State of Missouri might have been averted.

Now, let me tell you about lend-lease, under which we gave Red Russia more than \$11,000,000,000 in military goods during World War II.

We gave them ships, tanks, aircraft, ordnance, and supplies of all kinds. We gave them \$4,000,000,000 worth of farm machinery and industrial items.

By act of Congress lend-lease was terminated on December 1, 1946. At that time, most Americans realized that all freedom in the world was threatened by the advance of Communist domination over free people in Europe and Asia.

The termination date of lend-lease found many millions of dollars' worth of goods still in this country but allocated for delivery to the Communists.

The act of Congress said they should not go abroad as lend-lease. The Comptroller General of the United States ruled that it would be illegal to give them to Russia.

But the President and his Secretary of State ignored the will of Congress. They ignored the ruling of the Comptroller General. They found a way to benefit Russia at the expense of the American taxpayer.

They acted on the theory that the Communists already had title to these goods and therefore were entitled to receive them.

Through this fantastic interpretation millions and millions of dollars' worth of American supplies went behind the iron curtain as a gift to help build Communist strength for aggression and conquest.

That brings me to another chapter in the development of government in defiance of Congress.

An act passed by Congress and approved by President Truman on September 27 of last year provided that no economic or financial assistance was to be given to any country whose trade with Russia or its satellites was found by the National Security Council to be contrary to the security of the United States.

But the National Security Council did nothing—nothing at all—and Marshall plan countries, receiving millions of dollars in aid from the United States, continued to sell strategic war materials to Communist countries, including Red China and North Korea.

Then, on May 10, of this year the third supplemental appropriation bill was amended. The amendment—and it was signed into law by President Truman—provided that economic and financial assistance should be shut off automatically to any country which continued to sell war materials to the Communists. It was passed with a clause which permitted the administration to make an exception where it was in the national interest.

The language of the act was plain. It means that Congress, reflecting the desires of the American people, wanted to stop the flow of war goods to the Communist countries which we are now fighting and those which we may have to fight in the future.

Now, what did President Truman's National Security Council do? With his approval it suspended the entire war-goods amendment for 90 days.

Congress said that it might make certain exceptions in the national interest. But the Security Council, a direct arm of the White House, made everything an exception. It suspended everything in the amendment that Congress had adopted.

That was government by defiance of Congress and defiance of the law.

My fellow Pennsylvanians, many other examples could be given of government by defiance of Congress and the law.

They all point to the great need in Washington for a return to constitutional government. If we are to survive as a free nation we must return to the fundamental American principle of government by law and not by men.

When the President ignores the express will of the representatives of the people, the chances are that the national interest will suffer, just as it has suffered in each example I have given you.

The United States will never be conquered by invading armies, but if constitutional government is allowed to break down we will face a far greater danger—self-destruction.

That is why government by defiance of Congress and defiance of the law must stop.

This is Ed MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

Brig. Gen. David J. Crawford

**EXTENSION OF REMARKS
OF**

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD the text of a letter I wrote on September 7, 1951, to Hon. Frank C. Pace, Secretary of the Army, respecting my request for the court-martial of Gen. David J. Crawford.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

The following is the text of a letter sent today by Senator HARRY F. BYRD, Democrat, of Virginia, to Secretary of the Army Frank C. Pace, Jr., in connection with the case of Brig. Gen. David J. Crawford who recently was removed from his position as commanding general of the Detroit Ordnance Tank Automotive Center:

SEPTEMBER 7, 1951.

HON. FRANK C. PACE,
Secretary of the Army,
Washington, D. C.

MY DEAR MR. SECRETARY: I have received and noted your letter of August 31 replying to my letters of August 8 and 29 in which I requested a full report of the Inspector General's investigation into the improper conduct of Gen. David J. Crawford as commanding general of the Detroit Ordnance Tank Automotive Center.

In my letter of August 8, I protested against transferring General Crawford to a position in Heidelberg of responsibility, dignity, rank, and compensation equivalent to the one he previously held. I note that this assignment has been canceled and that General Crawford has now been assigned a position of special assistant to the commanding general at Aberdeen Proving Ground, where he will enjoy at least the same rank and compensation.

Your letter emphasizes, however, that General Crawford will be entrusted with no procurement responsibilities at Aberdeen. Is this to be interpreted that you no longer have confidence in General Crawford's integrity and that for this reason he has not been assigned to duties involving Government procurement which has been his customary work?

You state that—

1. General Crawford, commanding general, Ordnance Tank Automotive Center, Detroit, Mich., accepted free hotel accommodations, on certain dates mentioned, from a representative of business firms performing and negotiating for contracts with the Ordnance Tank Automotive Center. (I understand that General Crawford, while accepting these free accommodations, drew his traveling and subsistence allowance.)

2. General Crawford accepted a keel for his personal sail boat from an official of a company which was performing and negotiating for contracts with the Ordnance Tank Automotive Center.

3. General Crawford converted Government material to his own use in the construction of pleasure boats at Wayne, Mich.

4. General Crawford transported personal property in a Government vehicle from Detroit, Mich., to his home in Maryland.

In my judgment, such acts constitute malfeasance in office; and no mention is made in your letter of the fact that General Crawford was quoted publicly as saying everybody was doing it, and that he was "just one who got caught." If he was quoted accurately, it is a reflection upon the integrity of every other officer in the Army which, of course, should not be allowed to stand unchallenged. He should be compelled to give the names of those who committed such dishonest acts.

All of this combined shows a lack of conception of public duty and a breach of public trust which, unless severely punished, will tend to lower the moral standards of the Army and the Government in general.

The facts you have presented would indicate that General Crawford does not merit assignment to any important position. The

fact that you have removed him completely from all procurement responsibilities would suggest that you, also, to some extent at least, hold this opinion.

The armed services shortly will be spending at the rate of \$60,000,000,000 a year. Most of the contracts for purchases, as you know, will be awarded on the basis of negotiation, and not necessarily to the lowest bidder to be determined through the public advertising procedure. This will place a great responsibility upon the moral integrity of those in high position in the Military Establishment, civilian and military.

After full consideration of the facts I have, including those you have submitted, and from my general knowledge as a member of the Senate Armed Services Committee, I respectfully suggest and request that General Crawford be court-martialed in the interest of discipline and as a warning to others that unethical and dishonest acts will be summarily punished. We must keep our Government clean.

Cordially yours,

HARRY F. BYRD.

The Tragedy of the Hungarian Nation

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD remarks made by Hon. Edward M. O'Connor, Commissioner of the Displaced Persons Commission, on the Tragedy of the Hungarian Nation.

This address was delivered at a celebration of the nine hundred and fiftieth anniversary of the crowning of St. Stephen in Staten Island, N. Y. It is noteworthy that at this celebration resolutions of gratitude to President Truman and Secretary Acheson for their efforts in behalf of the Hungarian people were adopted.

We Americans are gathered here today to commemorate the nine hundred and fiftieth anniversary of the crowning of St. Stephen, the first Hungarian King. This anniversary has been given significance in America for a great many years because our Nation has been blessed by the talents, the skills, the hopes, and the dreams of several hundred thousand immigrants from Hungary. These immigrants came to our shores in generations past, in the period of the building of our great democracy, and their contributions, with those of their children and their children's children, form a most significant part of the history of our beloved country. But today this anniversary has more important meaning than ever before. The sad and tragic events which have taken place in Hungary since 1945 are a matter of grave concern to all of us.

The glorious history of the Hungarian people begins with the reign of King Stephen. At the age of 20 years, Stephen, son of Geza and great-great-grandson of Arpad, became King of Hungary. This was in the year 997. He was the first leader of the Hungarians to accept, with full heart and mind, Christianity and western culture. The first 3 years of his reign were devoted to the establishment of a Christian state. In the year

1000 he appealed to Pope Sylvester II for his investiture as a Christian king and for his crown—symbol of the ruler of an independent country.

A special envoy of Pope Sylvester II brought to him the crown which comprises the upper part of the present-day holy crown of Hungary. This same crown was used for more than 900 years in crowning all Hungarian Kings, and is even today recognized as the traditional and supreme symbol of State authority. The Hungarian people, in keeping with this centuries-long tradition, rightfully associate their liberties and freedoms with the holy crown.

Stephen was a firm and consistent advocate of a peaceful state and sought the cooperation of all other peaceful rulers in his goal for a universal peace. His deeds were always governed by Christian ethics. Stephen outlined his principles in his admonitions to his son Prince Imre. There is a very beautiful and timely excerpt from these admonitions which I would like to quote here:

"If you wish the honor of kingship, be peace loving. Rule over all without anger, pride, or hatred, but with love, tenderness, and humanity. Remember always that each one of us has the same standing; nothing exalts a man but humility; nothing humiliates more than haughtiness and hatred—peace-loving monarchs rule; the rest only tyrannize. Be patient toward all, influential and destitute alike."

King Stephen was the founder of a new principle—that of peaceful evolution of a nation. His achievements in this respect had a profound effect upon the entire civilized world. Peaceful evolution in matters of state is today a keystone of western civilization. The strong foundations built by King Stephen prepared the Hungarian people for their heroic role.

The Valley of Karpath down through the centuries has been the outpost of western culture and civilization. The Hungarian people, in arms with all other people in this territory, withstood wave after wave of invasion. Thus, Western Europe on many occasions was saved by the tenacity of the Hungarian people. One such epic is even now remembered daily by millions of Europeans through the Angelus. Soon after the fall of Constantinople, in 1453, Hunyadi began a campaign to drive the Turks from Belgrade (Nandorfehervar)—then a Hungarian fortress. Church bells throughout all of Christendom were tolled at noon each day, reminding the people to pray for the success of Hunyadi's campaign.

With the rise of the twentieth-century tyrants in Europe and their struggle for world domination, western civilization was ill-prepared to defend itself. For a time the tyrants Hitler and Stalin were locked together as comrades, thus joining their evil purposes. This development upset the traditional balance of power and in the end prevented those nations with western culture and traditions from forming an alliance to defend themselves against these evil forces. When the tyrants fell out, each one seeking to be sole ruler of the world, many nations who detested both these forms of pagan life were caught between them. There was no neutrality for any nation on the Continent, they had to choose one side or the other, or else be completely overrun and absorbed. Hungary was one of the nations caught in these powerful pincers, and thus became an unwilling participant. During the war years the Hungarian people had to struggle against becoming a subject state of the Nazis and at the same time to struggle against the penetrations of world communism. How obvious it now is that no matter which of the tyrant powers were victorious the Hungarian people would be the losers.

This conclusion is borne out by a study of events which took place during, and immediately following, the war. The first signs of brutal revenge became apparent as the Soviet armed forces entered Hungary. Rape and pillage was the order of the day. Chaos reigned until the political commissars of Moscow came upon the scene, headed by Marshal Vorosilov. Then the pattern changed; a handful of Hungarian Communists headed by one Rakosi began laying the groundwork for the political take-over of power. The first tactics were to show favor for democracy—create slogans to catch the imagination of the people, and to make alliances with splinter political parties. The Social Democrats were deceived by this maneuver, and in joining hands soon found themselves being liquidated from within.

People's courts were set up, and, of course, mostly "workers" were called to sit on these courts. It turned out that "workers" meant only those who worked in certain factories and carried the Communist Party card. The secret political police were organized under the direction of Marshal Vorosilov, and their job was to take into custody all dissident elements. Those who were brought to trial had their fate determined by the loaded and Communist-controlled people's courts.

Organized religion fell under attack, but only by skillful diversion rather than outward violence. By skillful though misleading maneuver, the groundwork was laid for the destruction of all religion.

In November of 1945, the national parliamentary elections were held. These elections were held largely because of the demands of the western nations. With over 600,000 Soviet troops quartered in Hungary, and with open pressure from Marshal Vorosilov, the Communist Party was only able to secure 17 percent of the popular vote. The Smallholders Party received 57 percent of the vote, and thus won a clear majority. Nevertheless, and contrary to the expressed will of the people, the Soviets forced the Smallholders Party to form a coalition government.

Soon the Smallholders Party received demands for the removal of certain alleged non-democratic-minded members of the Parliament. Again under pressure, they yielded to these demands. There followed additional demands of this character, which were backed up by Soviet military power and action committees formed by the Communist Party. This maneuver had for its purpose the destruction of the majority political party, and this purpose was accomplished. After the Smallholders Party was destroyed, the Communists demanded new elections in the summer of 1947. In this so-called election, the Communists set up a coalition of subservient parties, and through this means took over total power in Hungary.

It was after this that direct and open efforts were started to destroy the Catholic Church. Soon thereafter, the persecution of the Protestant churches began. All leaders of religion and of the national spirit were singled out as enemies of the state. All business and enterprise was nationalized, the school systems put under rigid control, land which was distributed to the people by the first coalition government was nationalized through the Kolchoz system of collective farming.

When the people had lost all hope in the remaining political parties of Hungary, they all turned to Cardinal Mindszenty for leadership in preservation of their basic rights and freedoms. He was the national hero of the people regardless of any differences in religious belief. It was apparent to the Communists that he was the rallying point for all patriotic Hungarians—this then made him the special target of their destroying

tactics. He was arrested on trumped-up charges and tried by a kangaroo court under a scheme planned and directed by the masters of the Kremlin. Events which have happened since his desecration make it more clear why they persecuted him. They knew he stood firmly by the teachings of St. Stephen as defender of the dignity of man, that he would fight for the rights of the people, and that he would shelter and protect the persecuted, just as he did under the yoke of the Nazis. All of Hungary knew what he had done to save persecuted people during those dark days. Christians and Jews alike were his concern when their dignity as human beings was in danger.

A similar fate has befallen thousands of other freedom-loving Hungarians. Time and space do not permit me to list all the martyrs who stood in defense of freedom and religion.

The civilized world has been shocked again by the most recent atrocities taking place in Hungary under the Communist reign. The mass deportations which are again under way demonstrate clearly that a plan has been set in motion to exterminate the Hungarians as a race of people. Leaders in all walks of life are being arrested in the dead of night and carried off to parts unknown. Their families are left destitute or moved to distant areas of Hungary where there is no housing for them, and where there is little or no chance for them to survive. Just how many thousands have been, and are being, deported to the Arctic areas of Siberia is not known, as yet. No one is safe from the terror of the Communists—fear is the means being used to hold these people in subjugation. The vicious cycle that has been established is explained by the Communist Government as "the removal of the internal enemy."

The internal enemy is, of course, anyone who refuses to adopt the ideologies of communism and who does not cooperate with the regime. If the Communists are to hold power, they must continue this vicious cycle because the great masses of the Hungarian people will not adopt the pagan teachings of Moscow. Thus, the present regime in Hungary is proving to the freedom-loving nations of the world that they knowingly and willingly are engaged in the international crime of genocide. With each passing day they are providing ample evidence which one day will confront them as they stand before a bar of justice made up of representatives of the free world.

It would be a grave mistake for anyone to assume that these crimes are just receiving passing notice. These mass deportations are a matter of official concern to the Government of the United States. President Truman, on July 27, 1951, made the following pronouncement:

"The Government of the United States is giving the closest attention to the deportations in Hungary with a view to taking such steps as may appropriately expose this situation to public view and judgment and render the Hungarian government accountable before the world for its infamous conduct."

Secretary of State Dean Acheson, in reaffirming the statement of President Truman, had this to say on the matter:

"The United States Government is also taking careful note of the identity of individual Hungarian officials, including the highest authorities, who have participated in any way in carrying out these mass deportations in order that their responsibility may be made fully known and their acts publicly stigmatized."

The fate of the Hungarian nation is very much like that of all other people under the oppressive and bloody yoke of the Kremlin. From the Baltic to the Adriatic, and eastward to the Pacific Ocean, there is a huge

concentration camp wherein 700,000,000 people suffer a somewhat similar fate. And behind all this sits a handful of men in the Soviet Politburo. These same men would seek to completely conquer the world by the process of deterioration from within, followed by military invasion when the time is ripe.

But, please God, the free nations of the world have awakened in time, and having grouped themselves into mutual security arrangements, are preparing themselves for the defense of freedom-loving people everywhere. These free nations do not recognize the theory of peace at any price, because this would be no peace at all. It would be nothing more than an armistice with peace. Peace is indivisible—peace is a quality of life which may not apply to some and be denied to others. Peace throughout the world can be attained only when all men and all nations are free to choose and elect their own peaceful destinies.

As we review the tragic fate of the Hungarian people, brought about by a new type of invasion, one that seeks to turn back the pages of history 950 years by imposing a pagan and primitive way of life among the people, it is necessary that we arrive at some conclusions from these historic facts. The following conclusions and their logic in these events, and must serve as a warning to freedom-loving people everywhere and, I sincerely hope, added encouragement for those who suffer under the new tyranny:

I. That the spirit of the heroic Hungarian people, forged in the centuries of struggle against the barbaric hordes of the east, and tempered through the wise teachings of their great leaders, beginning with St. Stephen, will never be broken by the evil leaders who now seek to destroy their rich culture, religion, and traditions, and to make of them an uncultured and uncouth serfdom. The courage, faith, and love-of-country which has preserved them in the past will keep them strong until their day of liberation, when the holy crown of Hungary will be restored to their safe keeping;

II. That just as surely as history records the heroic defenses of western civilization by the sturdy Hungarian people against the barbaric invasions from the east—so it will record the liberation of the Hungarian people from their present yoke of tyranny by the freedom-loving peoples of the Western World;

III. That the leaders of the present illegal regime in Hungary, and those who voluntarily assist in carrying out their evil plans, are guilty of a long list of crimes against humanity—more specifically, they stand guilty of the international crime of genocide—and the day is inevitable when they will be punished accordingly by a world tribunal of justice. The time has come to forewarn them that it will not be possible for them to plead their case as unwilling or unwitting stooges of the Kremlin, because the masters of the Kremlin will continue as their full partners—before this same world tribunal of justice;

IV. That a new day will soon dawn for all the nations under the tyrannical yoke of the Kremlin, and in the glorious sunshine of that new day the people of Finland, Estonia, Latvia, Lithuania, Poland, Byelorussia, Ukraine, Slovakia, Czech, Georgia, Armenia, Rumania, Bulgaria, and Albania will once again with their Hungarian brothers breathe the free air of liberty and individual freedom. By the full exercise of the principle of self-determination the people of these nations will work out their own peaceful destinies, and will form such unions or federations as they, the people, freely decide are to their liking.

May God speed the happy day when all men are at peace with one another under a system of justice which guarantees freedom and individual liberties for all.

Drift Toward Totalitarian Rule

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "General MacArthur Sees Drift," published in the Washington Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GENERAL MACARTHUR SEES DRIFT—THREAT OF TOTALITARIANISM REVEALED BY TENDENCY TO CRITICIZE CRITICS SUCH, FOR EXAMPLE, AS HIMSELF

(By Lowell Mellett)

Take a few weeks' vacation and you are apt to be surprised by what happens during your absence from the seat of Government. For one thing, a drift toward totalitarian rule can set in. Other people may not have observed it, but it already has happened, according to Gen. Douglas MacArthur. It is revealed, he told an audience in Cleveland, by "the violent manner in which exception is taken to the citizen's voice when raised in criticism of those who exercise political power. There seems to be a determination to suppress individual voice and opinion, which can be regarded only a symptomatic of a general trend toward thought control."

Totalitarianism is bad business. We know what it meant in Hitler's Germany and Mussolini's Italy and what it means in Franco's Spain and Stalin's Russia. In the last-named country it means not only suppression of the voice but banishment of the person to Siberia or some other sort of liquidation. It isn't quite that bad in Truman's America yet. But the general, who, understandably, was thinking of his own experience, has plenty to complain about.

He has been banished to New York City, a locale of his own selection. He has been provided with comfortable offices in a Government building, which he preferred to the Pentagon in Washington. He has been given a staff of military aides, also of his own selection. He is comfortably housed in one of those Waldorf Tower suites you've read about, and he has passes to all the ball games. His travel is restricted, however, to the United States—unless he wishes to go abroad. He can make speeches whenever and wherever he pleases and he is not required to know what he is talking about.

But he has a real complaint. It is that some people criticize him. He has only to open his mouth and give tongue to any or all of the loose charges that accumulated against the present administration during his 17 years in the Pacific, when somebody ups and criticizes him. Now that shouldn't happen, if we are to preserve our cherished freedoms. As the retired general himself said, "It challenges the concept of free speech and is an attempt at direct suppression through intimidation of that most vital check against the abuse of political power—public criticism."

If you find that a little difficult to follow, read it again. It means that anybody who criticizes General MacArthur is against public criticism. Simple as that. And the next thing you know, we got totalitarianism.

The drift is in that direction. Another bit of evidence could have been used by the general had his native modesty permitted. President Truman, in his speech opening the

peacemaking in San Francisco, devoted only one paragraph to praise of MacArthur's accomplishments in Japan, instead of making that the whole theme of his address.

This drift will have to be stopped and the general is moving into position to stop it. A private organization called the National Republican Roundup Committee has published a poll of 3,000 Republican leaders—delegates to the last two national conventions, county chairmen, and such. It reports that Senator Taft is now first choice for the Republican nomination, but the second is not General Eisenhower, as you would have guessed, but General MacArthur. Senator Taft has been at it for years; General MacArthur only a matter of months. Give him another year and—well, his critics had better be thinking that over.

Congress, the Hope of the Nation

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent that an editorial entitled "Congress Is Our Hope," published in the Oil City (Pa.) Derrick of Tuesday, September 4, 1951, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS IS OUR HOPE

President Truman's blast against a Senate cut of \$964,250,000 in the administration's \$8,500,000,000 program for foreign economic and military aid was not unexpected. It's been his forte right along to severely criticize and abuse Congress in every effort to hold down Government spending.

Where the President is not, Congress of necessity must be realistic of the fact that a nation which continually and incessantly spends more than it has cannot forever endure. Government waste and extravagance, reflected in continued deficit spending, eventually could so diminish the economic resources of the Nation as to destroy it from within.

The little man in the big job has sought to use the world emergency as an excuse for spending endless billions on all kinds of wasteful schemes in the name of defense and security. In defiance of the warnings of fiscal experts, he has loaded his budget with a bevy of socialistic measures that would add needless billions to the Nation's tax bill; he has used the emergency to pad the Government payroll to a point greater than at the height of World War II; and he has prodded Congress continually for more and more billions to subsidize countries which to date have shown neither the will nor the inclination to carry their share of the burden in the fight against communism.

Since the beginning of World War II, nearly \$100,000,000,000 has been authorized by this Nation for foreign economic assistance and joint military security. This is equivalent to \$650 for every man, woman, and child in the United States; it is almost twice the total of all Federal taxes collected last year.

Is it any wonder Congress is moving to curtail these gigantic expenditures which are eating away at the heart of this Nation's strength? Is it any wonder that Senator TOM CONNALLY, an administration stalwart, recently accused the chief of the Economic Cooperation Administration with "trying to

cover the earth with money squeezed from the American taxpayers?"

America always has and will continue in every way possible to assist the free nations of the world in the struggle against the common Communist enemy. At the same time it must be realized that the source of that aid is not endless and there is a point beyond which the Nation cannot go without so diminishing our economic resources as to make an adequate military defense impossible.

Congress is the sole hope of the Nation against economic bankruptcy and socialism. Nothing but grief can be expected from the administration headed by the Pendergast politician from Missouri.

The Japanese Peace Treaty and the Kurile Islands

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter addressed to the editor of the New York Times by Stephan C. Y. Pan, a member of the Legislative Yuan of China.

As Mr. Pan states, the Japanese peace treaty, by letting Russia take the Kuriles, is giving the Russians a beachhead for further aggression against Japan. Alger Hiss at Yalta was a good and faithful servant but not of his own country.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of August 4, 1951]

ACCORD ON FORMOSA QUERIED—ISSUE TAKEN WITH INDIA'S POSITION ON GRANTING COMMUNISTS ISLANDS

TO THE EDITOR OF THE NEW YORK TIMES:

In the New York Times of July 30 it was reported that the Nehru government has insisted that in accordance with the Yalta agreement the island of Formosa be given to China in the future. If the reported Indian attitude toward the Japanese Peace Treaty and the Yalta agreement is correct, it is amazing that the Indian Government could link Formosa with the once top-secret document—the agreement regarding Japan.

Having studied practically all the available sources on the far-eastern agreement, I find nothing mentioned about Formosa or Taiwan. Perhaps another part of this document is still unknown to the Chinese National Government but is familiar to the Indian Government. If this is so, then I would not attempt to contradict the Indian argument on the Yalta accord with regard to Formosa.

It is interesting to note that while the Yalta agreement did not mention a word about Formosa, India still desires to deliver Formosa to Red China, basing her argument on a Yalta provision which does not exist.

It is equally interesting to note that when the draft treaty of peace with Japan gives to Soviet Russia more than the Yalta agreement intended, India's silence seems to indicate her approval. For instance, section (c) of article II of chapter II of the draft peace treaty with Japan stated:

"Japan renounces all right, title, and claim to the Kurile Islands and to that portion of Sakhalin and the islands adjacent

to it over which Japan acquired sovereignty as a consequence of the Treaty of Portsmouth of September 5, 1905."

While section (3) of article II of the Yalta agreement only stated: "the Kurile Islands shall be handed over to the Soviet Union," the draft provision seems to give the impression that Japan acquired all these islands only as a consequence of the Portsmouth Treaty. This is in contradiction of the late Secretary of State Edward Stettinius' views about these islands. Stettinius wrote:

"The Kurile Islands, of course, were Japanese territory before the Russo-Japanese War of 1904. During the nineteenth century both Russia and Japan had laid claim to the Kuriles and Japanese ownership was recognized near the close of the century."

Aside from legal considerations, it should be understood that by conferring extra-legal titles of the Kurile and Sakhalin Islands to Soviet Russia, it would mean placing the Kremlin in a convenient beachhead for further aggression in Japan.

If certain politicians wish to reward Soviet Russia or Soviet China in such a manner they should not arbitrarily change the facts of history and geography in advancing their own falsified interpretation of a treaty or an agreement.

STEPHEN C. Y. PAN.

WASHINGTON, July 31, 1951.

(The writer of the above letter is a member of the Legislative Yuan of China and the author of American Diplomacy Concerning China.)

The Brannan Plan

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Richmond (Va.) Times-Dispatch and communications I have received from farmers in Virginia giving their opinion of an effort that is being made by Secretary Brannan which they construe as being preliminary to adoption of the Brannan plan.

I desire to say, Mr. President, that I do not believe anything would be more destructive to the farming industry than the Brannan plan. It would destroy the initiative of the individual farmers and would mean nothing less than socialized farming.

There being no objection, the editorial and communications were ordered to be printed in the RECORD, as follows:

[From the Richmond, (Va.) Times-Dispatch of September 11, 1951]

GROWING REVOLT AGAINST BRANNAN'S MANIFESTO

In 1943 when Eric Johnston, now reportedly about to retire as Director of Economic Stabilization, was making a name for himself as president of the United States Chamber of Commerce, he published an article in Reader's Digest entitled "We're Not Washed Up," from which we quote:

"Our economic system is not dying of old age, it is dying from its chains—the restraints, the restrictions and exactions fastened on it by some trade associations, some labor unions and some governmental units * * * Our system suffers because of the

bureaucrat and the tax collector. There is one salvation for our crippled giant: Unbind him, strip the chains from his limbs, and behold him labor."

What Mr. Johnston wrote then is even more true today, for in the interim the tax collector has taken a huge share of the American citizen's earnings in order to support a vast and steadily growing army of bureaucrats.

Part of that bureaucratic army has become solidly entrenched in the United States Department of Agriculture. Of its more than 80,000 employees many do little more than clutter the mails with an avalanche of booklets, pamphlets, mimeographed gobbledegook and outright political propaganda, designed to glorify Secretary Brannan and the man who locks to him to capture the agricultural vote for the Fair Deal in 1952.

A particularly flagrant piece of propaganda, disguised as a plebiscite of farm families, was recently submitted for endorsement to the Nation's farm families actually to nominally autonomous county meetings dominated by Brannan's political proconsuls who operate under the leadership of State committees, each consisting of farmers appointed by Brannan.

It was largely the campaign propaganda disseminated by such toilers in the Truman vineyard that swung the 1948 election to the Fair Deal.

But during the last 3 years the farmers of Virginia have learned a thing or two. They have awakened to the fact that 2 minus 2 equals nothing; that their support (in 1948) of a reckless and profligate administration resulted in inflationary Federal spending which has more than offset whatever economic advantage they might have gained from special privileges and paternalistic largess.

To be brutally frank about it, the farmer has at last realized that his own dollars have been used to buy his own vote.

When the rank and file of organized labor, still bewildered by its sleight-of-hand economists, arrives at the same conclusion, and realizes that taxes and Fair Deal promoted inflation have progressively lessened the purchasing power of the pay-envelope dollar, union labor will be similarly disillusioned.

As for the Brannan manifesto, Virginia farmers who have attended county meetings in Greene, Culpeper, Dinwiddie, Fauquier, and Madison have minced no words in expressing their rejection of this latest attempt to pull the wool over their eyes and lead them to the slaughter in 1952.

Their expressions of contempt and disapproval at those meetings have an old-fashioned ring of down-to-earth common sense that indicates a revival of the spirit of 1776, when their forefathers revolted against oppressive taxation and arrogant bureaucracy also imposed by remote control.

To read the stenographic reports of those meetings is a heartening experience. These farmers are sick of being tied to the apron strings of the Federal Government. They are not unmindful of the benefits gained from scientific research in animal husbandry, soil conservation, and the like—but in the counties referred to farmers stood up on their hind legs and spoke up in open meeting to tell off the socialistic planner in Washington, who now has the gall to suggest more millions for an even greater army of USDA bureaucrats to carry the torch for the late Mr. Pendergast's protégé.

They demanded that Department of Agriculture expenses be cut instead of expanded, and like "the village Hampden who with dauntless breast the * * * tyrant of his fields withstood," they demand a return to genuine State autonomy, with a minimum of political and economic meddling from the north bank of the Potomac.

They spurned the mouth-filling phrases and fulsome clichés of the 121-page Farm Family Survey booklet—published at heaven knows how high a cost—with which Mr.

Brannan is trying to bewilder them into open-mouthed expectation—the time-honored technique of the sideshow spieler at a county fair.

C. D. Jordan, chairman of the Virginia State Agricultural Mobilization Committee, was quoted as saying that he welcomed criticism of this Nation-wide survey. He has been getting plenty to date.

We hope that this revolt of Virginia's farmers will spread to every county of the Old Dominion, and spark a rebirth of independence, among the farm families of the Nation.

CULPEPER, VA., August 31, 1951.

HARRY F. BYRD,
Senate Office Building,
Washington, D. C.

Your attention and appropriate action is requested in opposing hasty current activity by USDA in forcing a questionable and apparently socialistic program on the farmers of America.

A GROUP OF 25 CULPEPER
COUNTY FARMERS,
FRANK J. TOURAND,
Chairman,
L. E. MCNEMAR,
Cochairman.

Seventy farmers and the agricultural workers of the county, met in the Madison County War Memorial Building on August 31, 1951, at 8 p. m., to discuss the survey conducted by the USDA as set forth in the booklet entitled "Family Farm Policy Review," and generally purported to be a survey of grass-root thinking. The farmers were greatly disturbed by the lack of information on the subject resulting from a planned scarcity of the above said booklet and an insufficient amount of information offered by the professional agricultural workers. It was generally conceded by the farmers that the professional workers labored under the pressure of the nature of their employment.

Mr. Giles Miller, immediate past president of the Virginia Bankers Association, spoke before the group. His talk was on the general background of the Family Farm Policy and was well received by the farmers. The farmers drew up and passed the following resolutions unanimously:

(For further information please contact Col. George Ashworth, Orange, R. F. D., Va.)

"Whereas the farmers of Madison County have been requested to express approval or disapproval of changes in the United States Department of Agriculture programs; and

"Whereas they object to the use of appropriated funds by paid employees of the Department in attempting to instill into the minds of our farm people official thinking of the Department of Agriculture, then to have this echoed back through these same paid employees as grass-roots thinking; and

"Whereas we believe that many of the services now being made available by the Federal Government can better be made available by State and county agencies; and

"Whereas we believe that the present emergency situation in which the Nation now finds itself calls for the strictest economy in expenditures by all nondefense agencies of the Federal Government, and we in agriculture are willing to take our proportionate share of necessary cuts; and

"Whereas we believe that proposed United States Department of Agriculture policies and present trends endanger the farmers' status held by us to be fundamental rights as freeholders founded upon the Constitution: Therefore be it

"Resolved, That the farmers of Madison County, Va., represented at this meeting, oppose the methods of the Department of Agriculture in presenting the Family Farm Policy Review, oppose any expansion of the activities of the Department and recommend a curtailment of its activities as proposed in this review."

Fright Treatment Toward Russia

EXTENSION OF REMARKS

OF

HON. ZALES N. ECTON

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. ECTON. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "Fright Talk by United States Aids Kremlin" by David Lawrence, published yesterday in the Washington Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FRIGHT TALK BY UNITED STATES AIDS KREMLIN—RUSSIAN OFFICIALS LEAD NATION TO BELIEVE THAT AMERICA IS PRODUCING FANTASTIC WEAPONS FOR AGGRESSIVE WAR

(By David Lawrence)

No more striking illustration of the ineptitude of the American Government's psychological policies in the cold war could be given than in the start during the last few days of the so-called fright treatment toward Russia.

Beginning with the President's remarks at San Francisco about the fantastic weapons that are being fashioned, and continuing with the comments coming out of Congress about a hitherto unmentioned appropriation of \$5,000,000,000 for new weapons, the obvious objective has been to terrorize Russia.

The idea itself—to manifest military prowess—is logical in a situation where physical force is supposed to be the only language the enemy can understand but it is plain that the fright campaign is not being directed where it ought to be, that is, at the Kremlin alone and not toward the Russian people.

This results from a fundamental failure in American policy to declare the Kremlin the real enemy and to separate it from the Russian people very much after the fashion of the late President Wilson in the psychological warfare that was carried on by the White House and Department of State during World War I. It was made plain first when diplomatic relations were broken with the militaristic government of the Kaiser, and later, even when war broke out, that the fight was against the Imperial German Government and not the German people. This helped to shorten the war after America entered.

Today the mistakes of the Government here in failing to break off diplomatic relations with the Russian Government and to concentrate all propaganda against the Kremlin rather than the Russian people are readily appraised the moment one imagines oneself as a resident of Russia reading the American press dispatches. A Russian family is told in effect that the United States is preparing terrible weapons to destroy the Russian people. Every time the mention of weapons is made the Russian papers naturally reprint references to it with an accompanying propaganda accusing the United States of seeking war.

The Russian citizen is not informed that these weapons are intended solely for protection and reprisal in the event that the Kremlin starts a war. The Russian people are not told that while it is the intention of the United States to avoid war, this purpose can be accomplished more readily by the Russian people themselves in eliminating the evil men in the Kremlin. No word is going to the Russian people that the same billions now spent for armament will be spent in an extension of the Marshall plan

and mutual assistance pact to aid the Russian people in liberating themselves from the yoke of the tyrants in Moscow.

For reasons that have never seemed persuasive the American Government carries on an anti-Russian and anti-Communist campaign through the press and through Voice of America broadcasts but allows the impression to prevail through other official statements that it will negotiate and do business with that same group in the Kremlin at any time in the future. This is usually described as holding the door open for peace. Yet it is plain that nobody in the American Government—in Congress or in the executive departments—has the slightest faith in any agreement or treaty the Kremlin might negotiate.

The vague statement is often made here that someday the Kremlin will learn the error of its way or be frightened completely by the knowledge that fantastic American weapons are about to be produced and that an agreement with Moscow then will be made. That kind of argument is transparently illogical because it gives the Kremlin a chance to build up meanwhile among the Russian people a bitter sentiment against the United States and its allies. The Kremlin can point to American military preparations as aimed wholly at the Russian people, and until the people of the iron-curtain countries are told directly that no such purpose is in the minds of the democracies they will believe the Russian rulers.

If diplomatic relations were broken off, the Russian people would know that the price of reestablishing relations would be the elimination of the totalitarian government which has become a menace to world peace.

The principle that no government which is a threat to world peace should be permitted to remain in the United Nations is so sound that it could be the most impressive way to start the movement for a change in government in Moscow. The theory that the Kremlin would thereupon declare war as a reprisal is unrealistic, for, when the Russian people learn about the destructiveness of the new weapons, they will overthrow the Moscow regime rather than go to war. They would do so particularly if psychological preparation has been made in advance for that climax. That's why valuable time is being lost now talking about new weapons without drawing a distinction between the Kremlin and the Russian people.

DiSalle Might as Well Have Spent the Time in Fijis

EXTENSION OF REMARKS
OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Tuesday, September 11, 1951

Mr. THYE. Mr. President, in this day when there is so much discussion about price control and the failure of Congress to enact a proper price-control measure, it was most enlightening for me to pick up the Minneapolis Star of yesterday afternoon and read in it an article by Arthur R. Upgren. Mr. Upgren is a very able economist. This article gives a thorough explanation of prices, or what has brought about a change in prices. He does not give Mr. DiSalle as much credit for controlling the inflationary trends as might be done, but I think the article is a very enlightening one, and I ask unanimous

consent that it may be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

DiSalle Might as Well Have Spent the Time in Fijis

(To give you some idea of how much we need stabilizers, our economic consultant shows what forces kept prices on even keel, despite DiSalle and his crew.)

Washington price "stabilizers" have taken a great deal of credit in the last few months for holding prices on a fairly even keel since controls were instituted last winter.

What are the facts of the matter?

The plain fact is that Price Director Michael V. DiSalle could have taken his oath of office in Washington, then departed for the Fijis with his entire staff, and prices would have been just about where they are today.

There have been at work in the country since last March three powerful deflationary forces which have had much more to do with keeping prices where they are than any activities of the political price "stabilizers." For example:

In the second quarter of 1951 consumers lowered their rate of purchase of consumer goods by \$5,000,000,000. This was despite the fact that their personal incomes were increased by \$5,000,000,000.

Result: Ten billion dollars less spending upon what was proving to be an enlarged supply of available goods, and an increase of \$10,000,000,000 in our personal savings.

TAX DAMPER, TOO

Then the first quarter of 1951 saw a huge cash budget surplus. That increase in the "tax take" dampened spending too.

Finally, about 1st of February came another powerful force. That force was the restoration of independent control of the uses of bank credit by the Federal Reserve authorities.

As a result, longer term Government bonds were allowed to decline in price, and the yields on shorter term bonds were increased.

In addition, because bonds were no longer supported by the Federal Reserve System, Federal Reserve credit was not issued unstintingly at 100 or better for every Government bond.

When the Federal Reserve "paid par," that payment was made in that kind of high-powered money we call bank reserves. For every \$1,000,000,000 of bank reserves so created by the mere act of the purchase of Government bonds by Federal Reserve banks, the member banks, on the basis of this \$1,000,000,000 increase in their reserves, are able to lend \$6,000,000,000 more and yet maintain required reserves.

Thus we see the powerful forces of budget surplus, prospective inventory liquidation, and credit control have brought about deflationary trends in the economy.

Of these three forces, credit control has been important, and, it is to be hoped, will continue without further interference by Congress or the Treasury. The deflationary force of increased taxes appears to be reasonably certain in an amount of five to seven billion dollars.

These are the forces that have operated on the deflationary side of our economy. This year they have operated in such force that the index of wholesale prices, at an all-time peak of 184 last March, has been reduced to 176.4 at the present time.

The cost of living has now stabilized. It has actually gone up less in the last 6 months than in the same months of the last 11 years.

DO WE NEED THEM?

Against the case of Mike DiSalle (a genial and likable politician) is the fact that we

stopped inflation by credit control and tax policy. We did that in an especially difficult economic situation last winter.

If we can do it, with those instruments under the conditions that prevailed 9 months ago, we can do it again. We have learned how.

The great gain to all in not having DiSalle and the stabilizers is that we operate much more efficiently under the price and profit system than we do under bureaucratic ukase. We get more goods produced and we get them produced more economically.

As far as any need for the stabilizers is concerned, it can be said flatly we haven't needed them at all.

Prices would have leveled out anyway.

ARTHUR R. UPGREN.

Necessity for America Being on Guard

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Three Times in the Nation's History," by Bishop Fulton J. Sheen.

There being no objection, the article was ordered to be printed in the Record, as follows:

THREE TIMES IN A NATION'S HISTORY

(By Fulton J. Sheen)

In the lives of nations, as in the lives of individuals, there are three times: a time of grace, a time of blindness, and a time of judgment. Often, at the close of World War II, many statesmen said: "This is our last chance; we will not be given another." It will be recalled that at the time of the San Francisco conference, when the United Nations was formed, a great statesman of a foreign country arose to give a 7-minute speech. As everyone seemed proud that a charter of peace was drafted, this gentleman said:

"There is something in this charter which has been put in, but it should have been left out; there is something which has been left out which should have been put in. What was put in was the right of veto, which gives to any world power the right to cancel out all ethical considerations. What was left out is God, who is the Rock upon which the peace of all nations is founded. Our house is not built on a rock, and the winds and the seas shall come and batter it, and beat it to the ground. This is our last chance, we will not be given another."

Nations as individuals can fling away opportunities for peace as individuals can trample on the visitations of grace. Once more we see the gospel picture fulfilled: "And as He drew near and caught sight of the city, He wept over it and said: 'Ah if thou too couldst understand above all in the day and that is granted thee, the ways that can bring thee peace.'" As it is, they are hidden from sight. The tears of the Savior are for a lost opportunity of free men. Insensibility is the forerunner of destruction.

At the close of World War II we were lulled to sleep in the false belief that we had destroyed dictatorships, but there were a few who were not deceived. We now have to pay the penalty for that lapse of caution. But we are still not free from further deception, and there is a need for another warning.

Soviet Russia has three Trojan horses. Two have already been wheeled into the ramparts of western civilization. The first was antifascism, in which it doped the world into believing that it was opposed to totalitarian systems. Then suddenly communism entered into a union with nazism, as Molotov said to Ribbentrop: "Our friendship has been sealed in blood." But it was the blood of noble Poland as World War II was launched.

The second Trojan horse was democracy. Communism made itself appear as the "great defender of the democratic force of the world." That lie has now been punctured and it is believed only in two quarters, by a few intelligentsia who have been educated beyond their intelligence, and by a few who have no intelligence to be educated.

The third Trojan horse has not yet been taken out of Moscow's stables, but its snortings can already be heard. This new one is called peace and is the most dangerous of all. As antifascism ended in an alliance with fascism; as defender of democracy ended in the trampling underfoot of 36 out of every 100 people in the world, so peace will eventually mean war in the double talk of communism.

Russia has seen that its antidemocratic moves have been matched by our military preparedness. Its wars made us prepare for war. There is only one way left to deceive us, and that is to talk peace to put to sleep the free peoples of the world. This method will undoubtedly be successful, as the other two were successful. Being a naturally and truly peaceful Nation, we will begin beating swords into plowshares, university professors will talk Communist peace in their classrooms, and the whole Nation will let down its guard.

America be warned. "Three times in a nation's history." The third could be our ruin. Peace is not in words, but in the tranquillity of order—and order means giving to each freeman his due under God, who is also entitled to His due, which is our adoration, our service, and our love.

Proposed Telecasting of Three Navy Football Games

EXTENSION OF REMARKS

OF

HON. LESTER C. HUNT

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. HUNT. Mr. President, in view of the fact that the Naval Academy has seen fit to enter into a contract with private industry to televise three football games, instead of making the programs available to the public, I ask unanimous consent to insert in the RECORD this morning a letter from Mr. Edward Sullivan, adjutant, Robert S. Garrison Post, No. 3350, Veterans of Foreign Wars of the United States, with reference to ticket arrangements at the Naval Academy.

In the same connection, I ask unanimous consent to have printed in the RECORD a protest from the Fair Television Practices Committee with reference to the contract which the Naval Academy has entered into with private industry to televise the three Navy football games by box-office television interests.

There being no objection, the letter and protest were ordered to be printed in the RECORD, as follows:

ROBERT F. GARRISON
Post, 3350, VETERANS OF FOREIGN
WARS OF THE UNITED STATES,
East Rockaway, N. Y., September 6, 1951.
Hon. LESTER C. HUNT,
United States Senate,
Washington, D. C.

DEAR SENATOR HUNT: I should like to applaud your stand on the televising of football games played by the Naval Academy. And I believe it is high time for someone in authority to look into the manner in which this and other public institutions conduct themselves toward the public that support them.

You know for many many years it has been the custom for small groups of our organization to make reservation for various Navy games played in the vicinity of New York City. I'd like to tell you of my last such attempt. I believe it was 3 years ago, when in August I mailed in a reservation card with the proper amount of money to reserve four seats for a Navy-Penn game to be played in October in Philadelphia.

You may recall 3 years ago tickets were quite difficult to obtain and we were quite prepared for a rebuff. We were quite content to acknowledge preference be given people closer to the Academy than were we. However we heard nothing and as the weeks went by we felt our application for tickets had been accepted; and we made arrangements for the trip to Philly. On the Monday previous to the game, I received a refund of the money I had sent in with the reservation card, nothing else. No "I'm sorry, or we regret," just no nothing.

Naturally we were somewhat nettled and I wrote the Academy protesting such treatment, although acknowledging the prior rights of others to the tickets. In return some Captain (I forgot his name), suggested I read the back of the reservation card; and although I had been receiving reservation cards for 20 years, my name was dropped from the mailing list and I no longer receive these reservation blanks. Incidentally this is quite in contrast with the treatment accorded us by the various universities who treat every request with politeness, tact, and courtesy.

There isn't the slightest iota of consideration given by either Academy to the general public. And as a matter of fact you ride steerage strictly if you want to go along with them. And at quite a neat price for tickets if you compare them with other schools who require private funds for what the public pays for at Annapolis and the Point. I am by no means a reformer but if ever a situation required investigation, athletics in public military school does.

Thanks for listening, and congratulations on your fine work in the Crime Investigating Committee.

Sincerely,

EDMUND SULLIVAN.

FTPC PROTESTS NAVAL ACADEMY BO-TV CONTRACT

Jerome W. Marks, chairman of the Fair Television Practices Committee, has written to the Superintendent of the Naval Academy, Vice Adm. Harry W. Hill, protesting the contract entered into by the Academy which would permit exclusive telecasting of three Navy football games by box-office television interests.

Mr. Marks' letter follows:

"DEAR SIR: The Fair Television Practices Committee has learned with regret that the Naval Academy has assigned to a privately financed theater television network the rights to exclusively telecast three of Navy's football games during the coming season.

"Theater television is a commercial operation designed solely to obtain box-office receipts. It offers no public service features. The Academy, on the other hand, is entirely supported by public funds and presumably should be operated solely in the public interest.

"The FTPC believes that all Navy football matches should be freely available for telecasts for the general public benefit. It wishes to point out to you that among these who will be deprived of the opportunity to witness telecasts of Navy football games will be thousands of hospitalized veterans, soldiers and sailors, who obtain a sense of active participation in life through the medium of television. It appears to us that to these the Navy owes a primary debt.

"Furthermore the FTPC believes that in view of the present criticism of increasing professionalism and commercialism in college football, the Academy's arrangement with box-office television interests is an example of bad policy."

ANTITRUST INVESTIGATION OF COLLEGE TV PLAN REQUESTED

The Fair Television Practices Committee, a private group organized to represent the interests of television set owners, has requested Attorney General Howard McGrath to order an investigation of the plan of the National Collegiate Athletic Association which will severely limit telecasts of college football games during the coming season.

A letter to the Attorney General from Jerome W. Marks, New York attorney and chairman of the FTPC, requesting the investigation follows:

"MY DEAR MR. ATTORNEY GENERAL: The National Collegiate Athletic Association has adopted, and is enforcing, a plan to severely limit the number of college football games which may be televised during the season which will begin in September.

"The plan will result in the telecasting of a single intercollegiate football match a week. These telecasts will be carried by a single network under the sponsorship of a single advertiser.

"Not all member institutions of the NCAA have been agreeable to this plan but the association has forced compliance through threats by other members, actual or implied, to cancel games with the offending institution or institutions.

"This plan, according to reports in the press, has been arrived at in an effort to stimulate attendance at football games on the part of persons who have previously had the opportunity of watching football games on their television sets at home.

"Regardless of the sympathy with which one would regard efforts to solve the economic problems in which college athletics are at present involved, it appears to the Fair Television Practices Committee that the plan being enforced this year by the National Collegiate Athletic Association is a violation of the antitrust laws of the United States.

"This committee respectfully requests you to instruct the Antitrust Division of the Department of Justice to investigate thoroughly the plan of the NCAA and its operations.

"It is the belief of this committee that the failure of the Department of Justice to take action in this case will open the door to similar agreements on the part of others affecting other sports.

"This committee regards the plan of the NCAA both as illegal and the result of an error in judgment. The availability of telecasts of football matches may possibly have affected the attendance at college and high school football matches. But other important factors doubtless have played a part in declining attendance.

"We have witnessed in the last 25 years an enormous growth in football. Almost

every college and university—there are some notable exceptions—schedules games during the season which, itself, has been substantially lengthened. High-school football has had a similar growth. Professional football has developed entirely during this period.

"Stadiums have become more numerous and of vastly increased capacity. Coaching staffs have become larger and more highly paid; the costs of recruiting and maintaining players have risen, as well as the general expense of football operations.

"It is thus quite possible that football has grown more rapidly than its audience. It seems obvious that what in show business is called the 'nut'—that is the total expense which must be met before profits can be taken—has grown so great that a slight drop in attendance can cause financial embarrassment.

"It appears more likely that economic inflation and higher tax rates have done more to reduce attendance at football games than television. It seems reasonable to believe that the public is being offered more football than it can absorb at current admission prices. Yet television has been singled out by the NCAA as the sole culprit guilty of football box-office woes and as an answer the association has developed this plan of which we complain.

"We do not, of course, expect the Department of Justice to engage in an investigation of the woes of college football, but we do request a thorough investigation into the legality of the NCAA plan to force limitation of telecasts of games of its member institutions.

"Respectfully yours,
"JEROME W. MARKS."

The Position of India on the Japanese Peace Treaty

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter addressed to the editor of the New York Times by Taraknath Das, a Hindu scholar, who is professor of international relations at Columbia University.

Though I do not share Mr. Das' confidence that the Japanese-American security agreement leaves to us the defense of Japan, I am glad to put into the RECORD this excellent analysis of the position of India on the Japanese Peace Treaty.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of September 4, 1951]

NEHRU'S STAND QUESTIONED—REASONS ADVANCED FOR OPPOSITION TO JAPANESE TREATY DISCUSSED

TO THE EDITOR OF THE NEW YORK TIMES:

As one who for more than half a century has worked and hoped for Indian and Asian freedom, I feel morally obliged to comment on Prime Minister Nehru's opposition to the peace treaty with Japan proposed by the United States.

Mr. Nehru advocates the return of Formosa to Communist China. But Communist China is today carrying on an aggressive war against the United Nations and in particular

the United States. Communist China and Soviet Russia have concluded a 30-year treaty of alliance which will serve to combat Japan and any nation aiding Japan. As the Government of the United States is committed to helping Japan protect her sovereignty, the Soviet-Chinese alliance is virtually directed against the United States.

The Communist Chinese Government and Soviet Russia by not signing a peace treaty with Japan will continue to be in a state of war with that country. Since the United States has agreed to protect disarmed Japan from any attack, it can hardly be expected that the Government of the United States should agree to turn over Formosa to Red China. For in that event Soviet Russia and Communist China would be able to use the island as a submarine and air base against Japan and the United States.

IMPORTANCE OF ISLANDS

Mr. Nehru wants the United States to give up control over Bonin and Ryukyu Islands. If there were a Japanese Navy intact to tackle Soviet Russian-Communist Chinese naval forces stationed in various bases and islands from the Kurile Isles to the southern part of the China Sea, then Japan might now be given possession of these islands. As things stand today, however, to return Bonin and Ryukyu Islands to Japan would mean that Soviet Russia and Communist China would control a vital portion of the Pacific.

Surely, the United States of America did not fight Japan to her defeat in order to insure Soviet Russian control of the Pacific. America, under the present circumstances in world politics, will cooperate with Japan to arm her so that she may be able to assume full responsibility for her own national defense and check any further expansion of Soviet Russia and Communist China in east Asia. I am afraid Mr. Nehru does not realize that American-Japanese cooperation, leading to an alliance to counter the Soviet-Chinese pact, has already become a major factor in world politics.

The proposed Japanese Treaty gives Japan full sovereignty in matters of her own defense. However, by a Japanese-American agreement, American forces are to remain in Japan to defend Japan. As long as Japan agrees to an understanding with the United States for her own security, India should not oppose any such understanding. India cannot logically do so unless she is aligned with Soviet Russia and Communist China and against Japan. Will India fight to protect Japan from Soviet Russian and Communist Chinese aggression?

JAPAN'S FUTURE

Mr. Nehru suggests that Sakhalin and the Kurile Isles be given to Soviet Russia. Whatever happened at the Yalta Conference is in no way binding on Japan, and it is quite understandable that Japan may not agree to give up those islands which are so essential for her own security. Within 5 years, Japan with her more than eighty millions of virile and disciplined people will again become the most important power, economically, politically, and militarily in Asia, as Germany again will play the most vital role in rejuvenated Europe.

Mr. Nehru sincerely desires to lead a third force for peace, but in refusing to be a party to the Japanese Peace Treaty he actually aligns India with Soviet Russia and Communist China and against Japan and the United States. Indian freedom and peace and independence throughout Asia can be secured only by the closest possible collaboration between India, Japan, the United States, and a China which is not the tool of imperialist Soviet Russia.

TARAKNATH DAS.

(A Hindu scholar, author, and professor of International Relations at Columbia University. He knew Nehru when the latter was a young boy.)

New York, August 31, 1951.

Economic Controls

EXTENSION OF REMARKS

OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. BENNETT. Mr. President, the Defense Production Act was amended and extended by Public Law 96, signed by the President on July 31. That law was enacted as the result of long and conscientious study and debate by the Banking and Currency Committees of both bodies of the Congress, and by the individual Members in both bodies. It represented the best evidence of what the Congress considered to be the appropriate governmental policy on economic controls in this country. However, the President has seen fit to challenge the law on a political basis, and now continues what some have called the crusade for controls. I ask unanimous consent to reprint in the RECORD an editorial from the San Francisco Chronicle of September 3, an editorial which clearly traces and discusses some of the more important issues involved.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CRUSADE FOR CONTROLS

President Truman has sent a new message to Congress, asking more extensive economic control authority than was given him in the bill he reluctantly signed on July 31. He describes such authority as imperative to the waging of a successful struggle against mounting inflation. It is a highly appealing argument to use at a time when every American is feeling the pinch of mounting prices, and wondering where it will all end.

A healthily critical public, however, will want to raise a number of questions before it goes along with the President. It will want to know whether the President's program actually has the prospect of doing a more effective job on inflation than the program now in effect. It will want to know, as far as possible, what the long-range effects of the President's program are likely to be. And it will want to know something about the motives prompting the administration's program.

The answers, it seems to us, spring clearly and indisputably out of the evidence.

In the original Defense Production Act Congress, reacting to the rather violent stimulus of the newly joined Korean war, enacted a system of controls that were farther-reaching than even President Truman had dared ask for at that time. It authorized Government controls over wages and prices. It authorized the Federal Reserve Board to set up stern limits for consumer credit. It set up a system of allocations and priorities of strategic defense materials; stockpiling of strategic materials; authority for necessary loans to facilitate defense construction; import controls; payments of subsidies to encourage critical enterprise.

This was a stiff, but on the face of it, equitable program for coping with an emergency.

It had, however, all the usual encumbrances of any control system, including the fact that how well it would work would be dependent upon what wit and integrity it was administered.

FIRST VISIBLE DEFECT WAS COLLAPSE OF WAGE LINE

The first and most glaring defect was that the wage line gave way. While pegging prices at existing levels, the administration set the now famous 10-percent-increase formula for wages, ruling wages might be raised 10 percent above January 1950. With the lid unscrewed to that extent, really vigorous unions had no trouble in blasting it even higher.

Then came Mike DiSalle's pronouncement on beef-price rollbacks, which was heralded as a kind of pilot operation for rollbacks of many kinds. This had a fine, pleasant sound to it, consumerwise, but a conspicuous fault. As prices were rolled back, production began to drop off; the shrinkage of profits tended to discourage stockmen from growing beef. And housewives began to face the same old disgruntling situation as under OPA—beef prices were reasonable, but they couldn't buy beef.

There were various other matters in connection with the bill that seemed to Congress to demand righting. And there were phases of that same law that President Truman considered too mild and in need of tightening. So the debate waxed hot and heavy through the spring and early summer, and finally the President found himself facing the choice between signing a bill he didn't like, or letting the whole control program expire on July 31. He signed, verbally reserving the right to continue his fight at a later date.

The new measure continues the system of allocations and priorities, stockpiling of strategic materials, loans for defense construction, import controls, and subsidies for nonagricultural enterprises. It extends rent controls under a system providing for maximum 20-percent increases over 1947 levels, which keeps a fairly tight lid on rents generally. Small business is given a powerful assist by the creation of a Small Defense Plants Administration to make sure that organizations in this category get a fair share in the awarding of defense contracts.

CONSUMER CREDIT CONTROLS SHOULD HAVE BEEN KEPT

It does make certain modifications in the price-control set-up, and it refrains from doing certain new things that President Truman felt were important, which we shall discuss in a moment.

But the main error it commits, in our judgment, is the relaxing of consumer credit controls. By making it possible to buy goods in many categories with lower down payments it opens the way for far more extensive incurrence of debt and thereby contributes a direct inflationary pressure. Congress, by relaxing the credit controls, opened itself to the charge of reacting to cynical and dangerous private pressure.

President Truman did not, however, attack Congress on this point in his new message. And his failure to do so opens the way for legitimate speculation that his primary objective had nothing to do with curbing inflation.

His actual, voiced criticisms—some of them incorporated in the new message and some of them made earlier—offer additional justification for that suspicion.

For example, in the message to Congress he listed as No. 1 among the worst features of the new bill an amendment permitting manufacturers to pass on to consumers all direct and indirect cost increases since the Korean war. This was in keeping with an earlier Presidential expression of indignation that took this form: "We cannot ask the working people of the country to reduce their standard of living just to pay for the higher profits this act provides." What he overlooked, of course, was that the wage line had long since been shot full of holes. We're not taking a position against those increases. We simply believe, as Congress obviously did,

that when a company found its operating costs hiked by wage and other increases, it had a right to demand relief in the form of price increases.

WHAT'S HARD TO CATCH IS A DECENT CUT OF MEAT

The President also lashed out against the ban on livestock slaughtering quotas, saying this would mean black marketeering and higher meat prices and make the black marketeer harder to catch. We doubt it will work out that way. On the contrary, we have seen time and again where such orders as the one telling slaughterers how many cattle they could kill result, finally, in the failure of the ultimate producer to produce. The only thing that's been hard to catch under the existing set-up of quotas and frozen prices has been a decent cut of meat.

The President in his message was also indignant because Congress declined to give him blanket authority to build defense plants. Here is perhaps the boldest attempt yet by the administration to set the Government up in business in competition with private enterprise, and it was properly spikied. There is no reason to suppose private industry can't go on doing the industrial job better than Government—the best evidence of this is that it has done the job up to now a dozen times better than any foreign government is doing it. Existing measures afford the Government the means of aiding private enterprise in the performance of this vital job, but Congress rightly balked at giving the Government carte blanche to take the job over.

The President asked these more stringent measures on the broad plea that they were all essential to the control of inflation: "The greatest danger of high prices is ahead—and we need stronger, not weaker, laws to control it."

Undoubtedly fresh inflationary forces are gathering, but there is no shred of evidence to prompt the assumption that the way to cope with it is to give Government—already possessed of a vast array of emergency controls—even more dictatorial authority over this traditionally free economic system.

During the latter half of 1950, before the President invoked the controls Congress had voted him, the cost of living went up 7 percent.

After the invocation of controls, prices continued to rise steadily, though at a reduced rate. The increase during the first 4 months of controls was 2 percent. The main controls (except credit controls) that held the rate down to that figure are still in effect.

PRODUCTION IS WHAT WILL SIPHON OFF INFLATION

It may be that those basic controls are, for the moment, essential to maintain the equilibrium of a Nation in the grip of an emergency.

But if so, the bulk of the President's effort should be to step up production by private industry with the view of meeting the stepped-up demand and thereby dissolving the inflationary pressure at the earliest possible moment.

The method he is using is a sure-fire method of depressing production and driving goods of any price off the market. It is, besides, a fairly effective way of leading the Nation toward that condition of complete Government domination that is so well favored by a host of economic-control boys and bureaucrats and power-hungry social planners around Washington.

There are two solid reasons, therefore, why the American people ought to come powerfully to the support of Congress in turning back this effort.

One is because it is impractical. It neither restrains inflation, except superficially and temporarily, nor produces the goods-in-plenty that its advocates always preach.

You can prove this out by any fair comparison with the productive levels and living standards in Russia, where the experiment has gone the whole way, or in England, where they're only well into it.

The other is because it involves the sacrifice of the right of self-determination, the surrender of freedom. To hand over to Government the total control of the economy is to give Government the means of ordering, completely, the life of the Nation, right down to a determination of what you wear and eat, where you live, and what kind of work you shall do. If freedom is going to survive in the world it will be because the American people have the common sense and the will to defend it, not only against threats from abroad and from subversives within but against the economic do-gooders and long-haired planners in Washington who peddle collectivism under a false face.

The Public Debt of the United States**EXTENSION OF REMARKS**

OF

HON. ANDREW F. SCHOEPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. SCHOEPEL. Mr. President, under date of September 15 the News Bulletin, in a special edition, publishes a most informative and interesting statement. It shows that the public debt of the United States Government exceeds that of all other responsible governments in the world, excluding the Soviet Union, by more than \$100,000,000,000, with added borrowing due. It is a very interesting and informational news item, and I invite the attention of Senators to it. I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the News Bulletin was ordered to be printed in the Record, as follows:

PUBLIC DEBT OF THE UNITED STATES GOVERNMENT EXCEEDS THAT OF ALL OTHER RESPONSIBLE GOVERNMENTS IN THE WORLD EXCLUDING THE SOVIET UNION BY MORE THAN \$100,000,000,000 WITH ADDED BORROWING DUE

The daily Treasury statement for August 31, 1951, lists the gross public debt and guaranteed obligations of the United States Treasury at \$256,676,566,707.15 and the amount to the credit of disbursing officers and certain agencies of the Government on that date as \$56,765,037,920.45.

Although net budget receipts for the first 2 months of the fiscal year 1952 exceeded receipts for the same period in fiscal 1951 by \$1,424,599,209.79 the spending in the same comparative periods was greater by \$4,297,694,021 and the net result was to wipe out the accumulated budgetary surplus of \$3,509,782,624.25 reported by the Treasury for fiscal 1951.

With signs of stagnation appearing in various fields of endeavor outside of the national defense effort, and indications that the economic trend line is still pressing downward, in spite of a rise in disposable personal income during 1951 of more than \$2,500,700,000, there appears to be developing a buyer's market in many lines.

The big unanswered question in the minds of many Americans is how long can our economy stand the drain of new and heavier taxation to support our international adventures in almost every part of the world.

To present a comparative picture of our own financial position with that of the other responsible governments of the world, with the exception of the Soviet Union there is presented a summary of the public debts of countries in Europe, Asia, and Africa which make up the bulk of the responsible nations of the world.

**Population and public debt
of the United States:**

Public debt..... \$256, 676, 566, 707
Population..... 154, 000, 000

Other countries:

Canada:

Public debt..... \$16, 950, 000, 000
Population..... 13, 300, 000

In the table which follows, the debts of the respective nations have been converted to United States dollars at the rates of exchange reported in July by the International Monetary Fund which fund is closely allied with the International Bank for Reconstruction and Development in which 49 nations presently hold memberships on the Board of Governors, including Czechoslovakia, Finland, and Yugoslavia. Poland, a former member, withdrew March 14, 1950, and the Soviet Union never joined either the fund or the bank.

**TABLE 1.—Public debt of European nations
compiled from latest reliable statistical reports**

Country	Reported population	Public debt in United States dollars
Austria.....	6, 755, 000	\$1, 714, 700, 000
Belgium.....	8, 421, 000	4, 863, 000, 000
Denmark.....	4, 190, 000	1, 413, 000, 000
France.....	41, 500, 000	11, 808, 700, 000
Greece.....	7, 780, 000	199, 000, 000
Ireland (Eire).....	2, 997, 000	171, 360, 000
Italy.....	45, 373, 000	5, 812, 719, 000
Luxembourg.....	289, 000	97, 270, 246
Netherlands.....	9, 629, 000	5, 167, 843, 600
Norway.....	3, 181, 000	1, 233, 239, 854
Portugal.....	8, 402, 000	360, 000, 000
Sweden.....	6, 883, 000	2, 406, 180, 000
United Kingdom.....	50, 300, 000	73, 963, 000, 000
Total 13 countries.....	195, 700, 000	109, 240, 602, 700

¹ The French debt formerly reported at around \$21 billion was reduced by the devaluation of the French franc to a rate of .350 to 1 United States dollar.

² The Swedish kronor is currently valued at 5.180 to the United States dollar, which reduced the Swedish debt of 12,464,000,000 kronor to \$2,406,180,000 in United States dollars.

DEBTS OF IRON CURTAIN AND OTHER EUROPEAN NATIONS

The latest available report on the public debt of the Soviet Union as of 1947 shows that the external debt was \$26,208,000,000. The population of the Soviet Union at that time was 193,000,000.

In the table following there is shown the public debt of the so-called iron-curtain countries, the marginal country, Finland, and Spain and Switzerland.

TABLE 2.—Debts of iron curtain and other European countries

Country	Reported population	Reported public debt in United States dollars
Bulgaria.....	6, 993, 000	\$389, 082, 293
Czechoslovakia.....	12, 916, 000	1, 703, 428, 340
Hungary.....	9, 400, 000	549, 575, 000
Poland.....	23, 781, 000	3, 512, 479, 000
Rumania.....	10, 530, 000	295, 598, 634
Yugoslavia.....	15, 700, 000	703, 402, 000
Finland.....	3, 835, 000	628, 725, 020
Spain.....	27, 503, 000	4, 395, 304, 820
Switzerland.....	4, 547, 000	2, 016, 416, 650
Total.....	122, 325, 000	14, 194, 612, 357

PRINCIPAL AND OUTSTANDING FOREIGN DOLLAR BONDS OF 11 LATIN AMERICA COUNTRIES AS OF DEC. 31, 1948

Bolivia: Principal plus interest in default.....	\$59, 422, 000
Brazil: Principal plus interest in default.....	182, 246, 000
Chile: Principal plus interest in default.....	135, 402, 000
Colombia: Principal plus interest in default.....	138, 488, 000
Costa Rica: Principal plus interest in default.....	8, 102, 000
Cuba: Principal plus interest in default.....	81, 205, 000
El Salvador: Principal plus interest in default.....	7, 920, 000
Mexico: Principal plus interest in default.....	273, 582, 000
Panama: Principal plus interest in default.....	15, 083, 000
Peru: Principal plus interest in default.....	80, 444, 000
Uruguay: Principal plus interest in default.....	46, 033, 000

Total for 11 countries..... 1, 028, 017, 000

TABLE 3.—Debts of foreign governments reported by the International Monetary Fund as of December 1950

Country:	
Australia (Australian pound debt).....	\$3, 918, 656, 000
Egypt (combined foreign currency and pound debt).....	238, 342, 800
Iceland (krona debt).....	29, 891, 610
Japan (yen debt, Dec. 31, 1950).....	762, 360, 000
Union of South Africa (pound debt, 1951).....	2, 178, 960, 000
Venezuela (Bolivar debt, 1950).....	447, 000, 000

Industry and Government Should Give Continuing Consideration to Protection Against Bombing in the Location of New Industrial Enterprises

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 21, 1951

Mr. ELLIOTT. Mr. Speaker, whether we like it or not, it is, as I see it, definitely in the interest of the Nation's safety that our industry disperse itself so as to minimize the effects of bombing in the event of war. This is, of course, true regardless of whether the bombs used be atomic, hydrogen, or conventional.

Little can be done about factories already built where large sums of money

have been invested, and the labor to man the factories has been trained. In these areas, apparently the practical solution is to perfect and carry out the latest and best plans for the protection of the people of the area in the event of attack—all of which, of course, offers little protection against the destructiveness of falling bombs on the industry itself.

Even though established industries cannot be moved, continuing consideration should be given by industry itself to locations which present the greatest safety advantages against future bombing. Certainly our Government should abide by these common sense considerations in the location of the defense factories which it builds, in whole or in part, and in the granting of highly valuable amortization certificates to new industrial developments.

Mr. Speaker, this is not a new problem. It has been before us, at least since our atomic bombs were dropped on Hiroshima and Nagasaki in 1945.

I include an article dealing with the subject, entitled "Relocating Plants for Safety" from the August 13, 1948, issue of United States News and World Report:

RELOCATING PLANTS FOR SAFETY

VALUE OF SMALL-TOWN SITES IF WAR COMES

Owners of factories in big industrial areas are getting official advice to decentralize if they want to be safe in wartime. Small towns, not big cities, offer the best sites for firms in any future war. Underground factories are impractical on a large scale. Bombing, if war comes, is to be selective, is unlikely to hit isolated plants, suburban areas.

A guide is being offered to owners of industry who want to be as secure as possible in the event of future war. This guide calls for dispersal of plants in time of peace so as to be prepared for war.

Official advice to businessmen on how best to meet the threat of world war III is given by the National Security Resources Board. This Board, headed by Arthur M. Hill, is charged with planning to coordinate military, industrial, and civilian defense. Its advice, given in a report just made, is this:

Decentralization should be seriously considered by industry in its long-range planning, with a shift of new plants away from centers of industry.

Small towns offer the best opportunity for industries seeking safety in the event of war. Plants in these areas are least likely to be the object of bombing attacks.

Caves, deserts, other bizarre locations for industry need not enter calculations of businessmen. A shift of a few miles away from strategic areas is likely to be just as effective. Even remote locations will not be wholly immune.

Underground factories are not recommended. They would be too expensive, are considered impractical except for a few highly strategic plants. War, in spite of previous military reports, apparently is not to drive people underground even in the atomic age.

Businessmen, in this guide, are given the story of what to expect if war does come. The story is not quite what many expected in the light of tales about atomic weapons that might destroy entire States. Destruction in any foreseeable war is to be selective, the area of destruction not very widespread. But realization of what war is to be like must underlie planning of business and industry if that planning is to provide for the possibility of war.

War, as the official report sees it, is likely to involve these factors:

Attack, when it comes, will aim at a few key industrial centers. Warning may not be given. No location in the United States will be out of range of enemy bombers or enemy sabotage. Destructive effects may be many times those of Pearl Harbor. Attempt will be made to knock out key war industry with the first surprise blow.

Atomic bombs probably will be used. Those bombs, in the past, have been able to destroy nearly everything within a radius of half a mile from their center of detonation. They have caused moderate damage to all structures within another 1½ miles of that area. Allowing for future developments, the atom bomb is not expected to cause heavy damage beyond a distance of 3 miles from its point of detonation. Area destroyed by each bomb, thus, will be small.

Number of bombs used will be relatively small. They are highly difficult to make, will remain very expensive. Being scarce, they must be used on concentrated targets of great strategic importance. An enemy in the foreseeable future, thus, cannot bomb every big factory, even every big city.

What this means to the businessman is that his factory will be in danger of destruction in wartime if it is in an area that forms a strategic target, but the same factory will be relatively safe if it is away from such a strategic area.

Safest wartime sites for factories, as indicated in the chart on page 25, are to be areas with these qualifications:

Away from other plants: Sites should be at least 3 miles from other war industry which could become an atomic target, and well out of any industrial area larger than five square miles.

Away from big cities: Cities of 50,000 or more people could become targets for enemy bombs. Safe factory sites should be at least 5 square miles.

In hilly country: Hilly terrain is preferred over flat country, as possible atomic explosions nearby might be blocked off by intervening hills. Many factories were thus shielded from the Nagasaki bomb, second of those dropped on Japan in World War II, while nearly all were destroyed in the earlier blast on the flat area of Hiroshima.

Away from military installations: Atomic factory sites should be more than 3 miles from major air bases, air-supply depots, Army or Air Force posts, naval installations.

Away from dams, power plants: These power installations, too, might become prime targets in a surprise attack, should be avoided by several miles.

Where factories should be relocated for safety, thus, may be in any part of the country, just so the new sites are several miles from possible target areas. Decentralization alone may not be enough—each plant could still be subject to bombing if located too close to war installations. Idea is to plan future expansion so that new plants are located near, yet out of big cities, industrial areas, away from military and power installations.

In terms of cities, meaning of the relocation plan is this:

Detroit is probably the most dangerous area for factories in wartime. Here industry is concentrated, land is flat, population is large.

Pittsburgh, in contrast, is described as relatively safe. Industrial plants are spread out over a large area, terrain is hilly, no concentrated target is presented in spite of the large size of the city. Further decentralization, however, still is advised for such an area.

Chicago is between these two extremes. Land is flat, the lake front is dangerous in case of atomic attack, population is large. Yet industry is fairly well spread out, not concentrated.

Northeastern cities, as a group, are the most dangerous in case of war. Here, in 9 percent of the Nation's area, is concentrated about 65 percent of all United States manufacturing. This includes centers such as New York, Baltimore, Boston, Philadelphia, smaller manufacturing cities in New England.

Southern cities, over-all, are better off. Aside from a few areas such as Birmingham, there are no large concentrations of industry that would attract an atomic assault.

Western cities, in most cases, are in the most favored position. Grouping of industry is small, much of the land is hilly, power installations mostly are well away from factory areas, populations are smaller than in the East. With 61 percent of the Nation's area, the West now has only 11 percent of all United States manufacturing, plenty of room for new plants.

In terms of industries, the relocation plan means this:

Aircraft firms, especially susceptible to attack in wartime, must be further spread out for safety. These now are concentrated in half a dozen large areas, even though a few have begun relocation programs to get away from industrial areas.

Steel plants, those making ingots, are centered in too small an area for security. About 70 percent of total ingot capacity is located in western Pennsylvania, Ohio, Indiana, and Illinois. This endangers the steel industry even though 27 States now have steel-making facilities, 29 States have steel-finishing plants.

Oil firms, in many cases, have their refineries much too concentrated for safety in wartime. The recent Texas City explosion shows what may happen to such facilities in case of enemy attack.
